A YOUNG SUCCESS

GEOGRAPHY
HOMEWORK

“There must be a good reason why a vast majority of those who join Banks in India as Probationary Officers are NSB students.”

Obviously! Our un-matched Specialisation and Expertise.

Take, for instance, the results of last year's PO exams held throughout the country. A majority of students who were called for interviews for the post of Probationary Officers were NSB students.

This is possible only because of NSB's professional commitment in covering exhaustively all subjects for objective and descriptive tests through specialised practice papers and books.

A continuous research in past exams and on-going programme of preparing typical exam questions have also contributed to our present pre-eminence as the Central Institute for Bank Recruitment training in India today.

Success-oriented students join the NSB Courses and benefit immensely from them. The same opportunity is also open to you. So enroll now to reap a rich harvest of a rewarding career in India's fast growing Banking industry.

**The only thing Priya can do
with her eyes.... is cry.**

She doesn't remember seeing the sun rise, her mother's smile or even her own face. For her life now has only one colour. Black.

Priya lost her sight a decade ago. And as she grew up, she began to recognise the injustice of her handicap. She couldn't go to a regular school like others of her age. She couldn't play like other kids. She couldn't read. She couldn't see the flowers bloom. The colours in her dress. The laughter in her friends' eyes.

All she can do is cry. And each tear she sheds is a mirror of her own pain...fear...and loneliness.

But Priya's case is not without hope. Her blindness, like that of many others, is not without cure. There is a remedy that's simple, doesn't cost anything and is effective. Only it needs you.

A simple cornea transplant can restore her sight. The useless cornea, replaced by a healthy one. And the healthy one could be yours.

Eye removal leaves no scar or disfigurement. And once you've pledged to donate, you'll live with the gratifying emotion that your eyes will be useful longer than you. And that some

blind person will see... through them.

If your heart goes out to the blind during your lifetime, let your eyes go out to them after death. It's the most precious gift you can give them.

To know more about eye donation, and what kinds of blindness can be cured, send us the coupon for a detailed brochure.

Do it today. Remember, miracles can't cure the blind. You can.

I would like to know more about eye donation and cornea grafting. Send me a detailed brochure.

Sight. A gift only you can give.

INSTA-MEMORY

The trouble with most memory systems is that they try to train your memory without removing the mental 'road-blocks', without activating its inherent power, without giving it a chance to come into its own. The result usually is disaster... no real gain beyond (perhaps) a bag of memory tricks for after-dinner entertainment

INSTA-MEMORY is Permanent Memory. Because Insta-Memory does not give you awkward and troublesome memorization gimmicks. Instead, you'll learn the Extrasensory Instant Recall Technique that literally turns your memory into a power-packed mental magnet... makes forgetting virtually impossible.

INSTA-MEMORY is Automatic Success Power. In just a few hours after you master the simple Insta-Memory secrets, you'll be able to instantly memorize 20-digit numbers like 18765439086543214569 and recall them effortlessly a month later. Remembering telephone numbers and names will be no trouble at all.

INSTA-MEMORY is Effortless Memory. Insta-Memory requires no energy-draining efforts... no memorization... no word associations... no key words... no will power... no positive thinking tricks. In fact, no super-human efforts on your part!

Institute of Human Dynamics is a division of Business Development Associates.

INSTA-MEMORY is Result-oriented Memory. Insta-Memory will help you to master...

- Fool-proof Cure for Forgetting
- Secrets of Extrasensory Instant Automatic-Recall
- Techniques of Automatic Mind Search and Memory Scanning
- Art of Controlled Intuition and Mind Storming
- Ways of Strengthening Powers of Observation
- Craft of Instant Speed Reading
- Winning 'Exam Secrets'
- Public Speaking without Nervousness
- Dynamic Personality and Confidence Building
- Secrets of Extrasensory Perception

Plus, a whole wide range of tips on how to gain greater success, prestige, popularity and recognition.

INSTA-MEMORY—a U.S. Best Seller at Rs. 120/-... now yours for less than 1/3 the original price! Thanks to our exclusive association with the New York Institute of Personality Development, we are now able to offer you INSTA-MEMORY at 1/3 the original U. S. price (\$15). It will cost you no more than the price of a medium-priced briefcase: only Rs. 54/- (plus Rs. 6/- for postage, packing, handling). And you've our 7-day Full Satisfaction Guarantee—you pay nothing if not absolutely delighted!

Amazing Testimony about Insta-Memory—straight from U.S.A.

"I have had tremendous improvement in my job—my superiors are astounded with my super memory,"—Mr. H. D. (New York.)

"After going through your course I am a very different person"—Miss P.K. (Bombay)

"Insta-Memory has helped me to gain a new type of self-confidence"—Mr. S.P. (Poona)

INSTITUTE OF HUMAN DYNAMICS
(CCT-1) 3/305 Navjivan Society,
Lamington Road, Bombay 400 008

Yes! Please rush me your astounding INSTA-MEMORY Course by V.P.P. I will pay postman Rs. 54/- (Plus Rs. 6/- for packing and postage.)

I understand if I am anyway dissatisfied, I shall return the course within 7 days for a full refund (less packing and postage)

LETTERS

I'm An Indian

I came, I saw, I looted
I violated them, I butchered them, I roasted them alive,
my brethren
I set property afire and enjoyed the overture as well as
the aftermath of the conflagration.
I regale my friends now with my deeds of heroism
I am proud to be an Indian

Sanjay Bhatnagar, Jabalpur

Best Letter : Rs 40

How Civil

Democracy at one time used to be upholding of 'civil rights'. But today it is probably only 'civil riots'!

Lakshmi Kamelakar, New Delhi

Prize-winning Letter : Rs 25

Demons Gone Crazy

Most of us are victims of 'indifference' and when we do react, our anger is so negatively directed, especially of our youth, that democracy becomes a case of 'demons gone crazy'. Unless we collectively learn to react positively and intelligently, violence akin to that which took place after Mrs Gandhi's assassination will continue to occur, and we as a nation will continue to insult the very person we intend to idolise.

Ali Akbar Tehrali, Madras

The first reaction to Mrs Gandhi's assassination was one of disbelief. Next came a sense of shame. With the last three-and-a-half decades of stable democracy one had come to believe that this country was different from most of the Third World countries. But this seems true no longer. Two mad men have made us sit among those smaller countries where shooting down of leaders is part of politics.

Bhupesh, New Delhi

Let us shed hatred. Communal harmony is the need of the hour. It is the only tribute to our departed leader.

S. Sundera Rajan, New Delhi

Campus Chaos

Campuses have become educating grounds in political ferocity (*Hello Folks*, Nov '84). The patronage of political parties lends students the stamp of being youth leaders and provides a good deal of backing which is used to intimidate the forces of law and order. Whenever the police takes action against them a big hue and cry is raised about students being victimised. Consequently, they take it for granted that ultimately nothing would be done. The Nagpur incident is a glaring example of what they actually are. What is needed is drastic police action and weeding of the educational institutions.

Vivek Dubey, Allahabad

If today's youth is degenerated, it is the law and order situation (which is quite disabled), defective education

TO OUR READERS

Due to a steep rise in production costs, we are constrained to raise the price of *Career & Competition Times* to Rs 5 from this issue. We regret the inconvenience caused and hope you will bear with us.

system (quite abortive) and frustration (due to unemployment and corruption) which are responsible. When shelter from law is not available, education becomes fruitless

Rishi N. Yagnic, Udaipur

Encouraging Feudalism

Public Schools: A Good Investment (Nov '84), strongly advocates public schools in favour of government schools. Why shouldn't there be equal opportunity for a child of an IAS officer and a rickshaw puller? By promoting public schools we are indirectly encouraging feudalism at the cost of equality.

Sudhir Kumar, New Delhi

In every field, there is a demand for English-speaking candidates, especially at the time of interview or if you go to a non-Hindi speaking area. This is why public schools are more in demand.

Kamal Nain Grover, Delhi

Baseless Accusation

The figures about the 1983 massacre, (*Sri Lanka*, Nov '84) stated as 350 (or 700 unofficially), are just one-tenth or one-fifteenth of the authentic figures. Moreover, your unnecessary indictment on the Liberation Tigers for the Marias Airport bomb blast is totally baseless. These accusations mar the already obscure image of the Tigers who fight for a noble cause.

S. Manivannan, Madras

Banking Blues

What Does A Bank Look For In You? (Nov '84), was great. Regarding bank salaries, I want to point out that though Regional Rural Banks (RRBs) are a part of the banking industry, they are not paid salaries equal to the nationalised banks. I feel this is quite unfair for RRB employees have just the same duties as nationalised bank employees.

S. Venkataratnam, Madana Palle (AP)

THE TIMES OF INDIA RELIEF FUND

As in the case of other calamities in the past, *The Times Of India* has decided to start a fund for the relief and rehabilitation of our Sikh fellow-countrymen who have suffered grievously in the wake of the shameful violence that swept a large number of towns and cities, including Delhi, following Mrs Indira Gandhi's brutal assassination. The publishers, Bennett, Coleman & Company, have made a contribution of Rs 1 lakh.

We appeal to our readers to contribute generously to this fund. It will not only provide the much-needed succour to the hapless victims of the storm but also, in the process, strengthen the foundations of India's unity, integrity and secular values. The names of contributors who donate Rs 100 or more will appear in the columns of *The Times Of India*.

Under Section 80 G of the Income-Tax Act, 1961, the contributions to the Relief Fund will be eligible for tax exemption. The contributions may be sent to any office of the Times Of India group in cash or cheques or drafts made out in favour of The Times Of India Relief Fund.

It's Not Cricket

If cricket is called the game of gentlemen, then its umpires should be non-partial gentlemen with sincere unbiased designs and balanced actions.

Gavaskar's backlash at the end of the match was a reprieve to the heinous deeds committed during the whole episode. Had he abstained himself at this initial juncture, who knows, things might have deteriorated further.

Ajay Swami, Delhi

Corruption Reigns

Had "corruption" been the name of a girl, she would have been crowned Miss India.

Rajesh Kumar Agrawal, Hojai (Assam)

Genesis To Damnation

The world began with Adam; it should not end with atom.

Dinesh Kumar Chenchal, Gaya

Just Superb!

Your new features *For and Against* and *Analysis* are really excellent.

Ashutosh Kumar, New Delhi

The crosswords are just superb. Solving them is great fun—and they help increase G.K. too.

Dinash V. Valke, Manipal

Jim's Project Tiger

Col Jim Corbett killed 436 tigers in 1907 and today's National Park is named after him. A great tribute to our live Project Tiger!

M. T. Pottaraju, Bangalore

Mistimed Decision

The UPSC decision to lower the upper age limit for the Civil Services from 28 years to 26 with effect from 1985 suffers from at least four shortcomings. First, it would deprive many a candidate from availing all the three chances if required. Second, the limit was raised to 28 years from 26 not even a decade ago. It allows rural aspirants to catch up with their urban counterparts who enjoy better facilities. Third, seniority is the first and foremost consideration in case of promotion to the same positions as are filled through this exam. Hence, loss of adaptability at 27 or 28 years is not a lame excuse. Finally, this decision is contrary to the one increasing by two years the age limit for the Combined Defence Services for entry into the Indian Military Academy and the Officers' Training College.

Pijush Kanti Dutta, Chitra (WB)

Sorry Prof!

This has reference to the essay on the UGC report on Central Universities (Nov '84). According to the essay the committee consisted of five members, but does not mention the name of Prof Ramesh Mohan, Director Central Institute of English and Foreign Languages (CIEFL), Hyderabad, who was one of the members. The CIEFL has the status of a Deemed University and is a Central University. Therefore, a representative from a Central University was not missing as stated by the essay.

V.D. Singh, Lucknow

Opinion Poll

A Subhani from Patna feels that *Quarterly Review* is not essential in view of regular *Current Events* and *News Capsule*, and also because it leaves little room for analytical articles.

Do you agree with Subhani? We will welcome your views on this feature.

ADMISSION-NOTICE FOR

GOVERNMENT OF INDIA & UNION STATES - RECOGNISED DIPLOMAS & DEGREES

Applications are invited from employed/unemployed Boys & Girls for the following Engineering & Management Correspondence Courses:

ENGINEERING COURSES

1. **GRADUATESHIP (B.E.): A.M.I.E. (INDIA)** - Studentship, Section A&B in Chemical, Civil, Electrical, Electronics & Communications, Mechanical, Metallurgical & Mining Engineering
2. **GRADUATESHIP (B.E.): A.M.I.E.T.E. (INDIA)** Section A&B Tele. Com. & Electronics.

Hello folks...

Probably in no other country of the world has education undergone so much experimentation without much improvement and innovation. Early experiment has brought more chaos than order. After having tried every way to improve education our planners, educators and administrators have reached the conclusion that jobs should be delinked from degrees to reduce the admission rush to universities. The trend would enable universities to become better organised efficient institutions. The Planning Commission with a view to giving this idea a practical shape has asked the Indian Institute of Public Administration to prepare a note on delinking university degrees from jobs.

It does not at first look attractive. But if one probes deeper several questions arise. Even if the requirement of a university degree for a job is abolished will it really check the student rush to colleges and universities for higher education? Is the credibility of the state recruiting agencies like the State Public Service Commissions, Banking Service Recruitment Boards, Railway Service Commission etc. above board? Do employers reckon a university degree at its face value? Is the size of the university related with students discipline and academic standards? Is university education completely worthless for our young boys and girls? Aren't a large number of jobs linked with degrees?

It is a myth that if degrees are not essential for jobs, the craze for a university degree would be over. Those who believe so have failed to understand the motives behind university admissions. The university population in India can be broadly classified into four categories. First, come those who belong to business or industrial

houses and join the university to get respectability by earning a degree. They also want a degree for matrimonial reasons because all good girls are at least graduates. The second category only wants to acquire political training. While the third consists of serious minded students who have academic pursuits, the fourth category joins the university because they have not been able to get admission in any professional institution or not found employment.

If degrees do not remain essential for jobs, only the last category will be affected. But in a situation where job seekers are a hundred times more than jobs, what is the option for those unfortunate who have not been able to get employment after 12 years of schooling?

The credibility of state recruiting agencies is to say the least, murky. What goes on in the recruitment of officers and clerks is well known. Many months back a member of the Public Service Commission gave me a detailed *modus operandi* of selecting subordinate officers. I don't wish

IN MY OPINION

Exercise your polling rights now. Age no bar. The vital topic: 'Should jobs be delinked from degrees?' Mail in your opinions in about a 100 words latest by Jan 25, 1984. We'll be sending the weighty ones to the Planning Commission

to reveal what he said and all I can say is that if the degree requirement is withdrawn and the selection done by the existing agencies, the quality of those selected would definitely be affected.

There was a time when employment depended on a university degree. If one had a degree with good marks, employment depended on the impression the person created at the time of interview. Slowly employers stopped giving importance to the degree though it remained an essential condition. Now all public, private and government sector employers hold competitive exams to test the various faculties and qualities of the candidate giving no credence to the degree. Ultimate selection depends on the overall impression created by a person after the exam, the interview and group discussion. So the university degree has already been reduced to a railway ticket which entitles you to travel but does not ensure a berth in the compartment.

It is again a myth that if the number of students are reduced in universities and

colleges, academic standards and discipline will improve. In the capital we have a university of every size and things are no better where the number of students is less and no worse where the number is large. In fact, certain big colleges are better run and more reputed than several small ones. Efficiency is not a factor of size but of good management.

University education is not completely worthless and aimless. True, the ultimate objective of all education is to earn a good living. However, university education aims at much more. Jawaharlal Nehru believed that a college or university stands for the adventure of ideas and higher education was pursuit of knowledge which was necessary for training the mind. It helped develop logical reasoning and a scientific temper and established dynamic and beneficial linkage between education, employment and development. With this in mind, he developed a broad based strong infrastructure of higher education comprising universities, research institutes and training centres. We cannot say that institutions of higher education have produced worthless individuals. If they were worthless, then why would Indians trained in Indian institutions be considered the best employees and a large number of students from the Third World come to India for higher education?

A good number of jobs have already been delinked from degree. Army, navy and air force officers are recruited at the end of class ten and twelve, engineers, architects, electricians, medical doctors and merchant navy officers are selected for training after the twelfth minimum qualifications for clerk, stenographer, cashier, godown keepers and typists are matriculation or equivalent. Then what is left are bank and insurance officers, selection (Central and State Civil services and other recruitment) by the UPSC and the private sector.

We are of the firm opinion that it is unnecessary in fact unrealistic to dispense with degree requirements particularly for those categories of jobs where public dealing is concerned. If the decision is enforced, it would do more harm than good to the employee as well as employers.

TEST YOUR WORD POWER

BY AYGEE

Tick the word or phrase you believe is *nearest in meaning* to the key word:

- aberration:** A: an illusion B: a falsehood C: a deviation from the normal course D: shortened form of a word
- apostle:** A: guardian B: preacher C: learner D: dictator
- cog:** A: measure of wood cut for fuel B: piece of wood used as a stopper for a bottle C: wood-wind instrument D: an unimportant part of a large enterprise
- colossus:** A: huge building B: heavyweight C: immense person D: tall, upright pillar
- convalesce:** A: to regain health and strength after an illness B: keep within limits C: form a plan D: rest at a regular interval
- cowardice:** A: helplessness B: faint-heartedness C: want of knowledge D: mindlessness
- creed:** A: system of beliefs B: unquestioning confidence C: over enthusiasm D: judgment
- demure:** A: petite B: shy C: pleasant D: dainty
- detonate:** A: to explode B: ruin C: hinder D: separate
- errand:** A: mischievous act B: short journey for simple business C: wrong opinion D: long tedious journey
- frail:** A: delicate B: sweet-smelling C: ill-tempered D: easy to handle
- grit:** A: harshness B: fineness C: firmness of mind D: rashness
- huddle:** A: to crowd together B: wait about C: talk hesitatingly D: move back in fear
- impotent:** A: powerless B: listless C: angry D: rude
- mandate:** A: secret voting B: body of persons having the right to elect C: constitutional right of a sovereign to forbid something D: authority given to representatives by voters
- paroxysm:** A: a sharp or sudden utterance B: undesirable course of action C: sudden and violent outburst D: strong feeling
- polyglot:** A: having many sides B: passing through many stages C: worshipping more than one god D: speaking several languages
- traumatic:** A: sad B: sudden C: emotional D: distressing and unforgettable
- vicissitude:** A: farsightedness B: narrowmindedness C: capacity to endure D: change of fortune
- void:** A: freedom B: empty space C: inactivity D: boundless extent

(Answers on page 66)

IDIOMS & PHRASES

- To pamper to one's taste:** to over-indulge. It is not good to pamper to a child's tastes when he is young.
- To pant after:** to desire something that is unattainable. It is unwise to pant after the moon, instead one should try to 'hitch one's wagon to the stars'.
- To pare and burn:** to cut grass and burn it for manure. Once the crop is ready, the farmers separate the seeds and pare and burn up the husks and grass.
- Pariah dog:** a social outcast. A Harijan thanks to Gandhiji's philosophy that expounds that 'untouchability is a crime against God and man', is no longer a pariah dog in a free society.
- An ounce of pluck is worth a ton of luck:** it is better to have courage and initiative than depend upon destiny to make one rich. Those who do well in life depend on pluck and not luck because an ounce of pluck is worth a ton of luck.
- Pari passu:** side by side. It is truly ironical that when education and culture go up, the rate of crime goes up pari passu in society.
- To part the hoof:** to have cloven feet. "Every beast that parteth the hoof."—Bible.
- To pass a wet sponge over:** to obliterate the memory of. Hindus and Sikhs should make an effort to pass a wet sponge over all that has happened hitherto, with good will on both sides.
- To pawn one's future:** to do something which adversely affects one's

- future. Foreign loans pawn the future of a country because service charges grow heavier and heavier with time.
- To make peace with:** to come to terms with. One should first make peace with one's conscience before making peace with the world.
- Persona non grata:** an unacceptable person. A diplomat if discovered to be a spy becomes persona non grata in the country of his assignment.
- To make a pile:** to earn much money. The garment exporters in India are making quite a pile for themselves because of the good foreign market for Indian cotton fabrics.
- To be pitted against:** to be a challenge. The rival candidates were pitted against each other in the elections.
- Plethora of problems:** many problems. India has a plethora of problems to tackle.
- To play ducks and drakes with:** to waste, squander. Youth should refrain from playing ducks and drakes with their parents' hard-earned money.
- To turn swords into ploughshares:** to end war and replace it by peace. India and Pakistan have not yet succeeded in turning their swords into ploughshares.
- To pattern upon:** to fashion; to model. Indian democracy is patterned upon the British system.
- To ply a trade:** to follow a profession. Byron wrote: "Ply some other trade/Save Censure, for critics are all readymade".
- To pour oil over troubled waters:** to pacify; to assuage. A politician adds fuel to fire, but a statesman pours oil over troubled waters.

RAJIV GANDHI TAKES OFF!

Can He Safe Land?

BY AJAY VERMA

Oct 31, 1984, was a day of shock and mourning for over 700m Indians, for they had lost their leader, Indira Gandhi, who had guided their destiny for nearly two decades. To this national tragedy, however, there was a silver lining—the smooth transition of power. It was a reaffirmation of the democratic traditions which have now taken firm roots in India, that without any manoeuvring, much less bickering, Rajiv Gandhi was sworn in as the seventh Prime Minister of India. Any uncertainty at that critical moment in India's history would have sent the nation into turmoil.

The Congress Parliamentary Board met in New Delhi and recommended Rajiv as their leader to the President, who duly invited him to form the government. The decision was later unanimously endorsed by the Congress Parliamentary Party. The opposition parties, especially the DMKP and the BJP, did, however, question the propriety of the manner of installing the new prime minister.

Rajiv began his prime ministership on a sad note. Personal sorrow was aggravated by large-scale communal riots throughout the country. There was, temporarily, a complete breakdown of administrative machinery in most places, especially Delhi. The army subsequently succeeded in putting down violence with a heavy hand. The conflagration has subsided and normalcy is returning to the riot-affected areas.

The main task before the Rajiv Gandhi Government is to hold India together and make it possible for the general elections, which have been scheduled for Dec 24 and 27, to be concluded in a peaceful and orderly way. The Congress under Rajiv stands a good chance at the polls. But the elections will be the severest test yet not only for the new government but also for Indian democracy. Without the steadying iron hand of Mrs Gandhi, fissiparous elements may raise their ugly heads, particularly in Assam, Tripura, Nagaland, Punjab and Jammu & Kashmir. Thus, though an election victory is assured for the Congress at the hustings, the elections will be an "ordeal by fire" for the Rajiv Gandhi administration.

The immediate concern of the new government should be to restore public confidence in the law-and-order machinery. The

assassination and the bloody aftermath caught the police at their worst and no excuse can condone the criminal lapses during the nightmare of the first three days of November. A thorough overhaul is the need of the hour. The sacking of the Lt Governor and Police Commissioner of Delhi and senior security officers are steps in the right direction. But indifference and at times even connivance of the police in the riots has so dismayed and demoralised the people that cosmetic changes will not suffice. Discipline and dedication to duty will have to be instilled in the force, down to the constable.

On the economic front, Rajiv has a good opportunity to pull up the public sector and ask it to justify the heavy investment of public

The initial steps (left); Thanks for the confidence (above).

funds made in it. Fortunately, he is acutely conscious of it, as is evident from his first policy broadcast in which he declared that goals, not procedures, will have priority. The foodstocks and balance-of-payments situation is satisfactory and the economy is healthy. The policy of liberalisation initiated by Mrs Gandhi will have to be continued, as assured by the new PM. This will not only attract foreign capital but also the latest technology, if pursued in a planned manner. Time has come when utterances about meaningful economic cooperation with developing countries in South Asia, Africa and the Arab world would have to be made good in practical terms.

Foreign affairs, in general, can, for the time being, take a back seat. But efforts for normalisation of relations with the neighbours should continue. Notwithstanding the recent happenings at Nankana Sahib, the policy of good neighbourliness with Pakistan should not be relaxed. Ways should be found for the dialogue between India and Pakistan to resume in an earnest manner. As regards China, it was quite encouraging to see the country's vice-premier at Mrs Gandhi's funeral. His statements in New Delhi as well as other messages from top Chinese leaders augur well for further improvement in Sino-Indian relations. He has done well to reassure everyone that the basic postulates of the government's foreign policy will remain the same. Given India's stature and its chairmanship of the Non-aligned Movement, Rajiv Gandhi will also have to discharge his international obligations as and when required, despite his

present preoccupations with domestic problems.

It will certainly be in the interest of the country if Rajiv enlists the general cooperation of a sizeable section of the opposition parties at this critical juncture in India's history. Mrs Gandhi proved at the cost of her life that certain vested interests, both inside and outside the country, were out to destabilise India. Irrespective of party affiliations, it should be the endeavour of all patriotic parties and individuals to avoid wrangling and

pickering which may make India vulnerable to the machinations of those not so well-disposed towards this country.

Perhaps in a way, Rajiv's accession to power is good and promising. The young generation, with no memories of the travails of the freedom struggle which united people, may find in him a leader they would identify themselves with. Rajiv with his youth, dynamism and "Mr Clean" image may well lead India into a resurgent nationalism, stability and progress.

The question of the 80s—*"After India, who?"*—was replaced by *"After India, who?"* in the '80s. Just as India was able to not only survive but also progress after Nehru's death, it will withstand the void created by the assassination of Mrs Gandhi. The challenges before Rajiv are formidable but not insurmountable. He has the nation's sympathy, an efficient bureaucracy, a well-trained, apolitical army and established democratic institutions and traditions to assist and aid him.

FROM PILOT TO PM

The pilot is in the cockpit but will India fly? Rajiv Gandhi, who was sworn in as India's seventh Prime Minister within hours of his mother, Indira Gandhi's brutal assassination, is as much of an enigma to Indians as he is to foreigners. He entered public life only four years ago after the death of his brother Sanjay Gandhi, who, to all accounts, was being groomed for political leadership and who showed a lot of political ambition and leaning. Rajiv, on the other hand, stayed away from the public eye to the extent that as the chief pilot of an Indian Airlines aeroplane, he used to introduce himself to his passengers as "Captain Rajiv" and not "Captain Gandhi".

His over-riding ambition was to fly sophisticated jet aircraft. But through the turns and twists of fate—or, one should perhaps call it circumstance since he does not put much weight on astrology and believes, instead, in 20th century science and technology—he is now at the helm of affairs of the world's largest democracy. How he pilots the state now is not only the concern of over 700m Indians but the whole world. He is the third of the Nehru family to hold this commanding post, but he is the one member of the house who never lusted for political power. Only recently, he had said that he did not want to take over his mother's role for "a long while", and that he was "happy to stand in her shadow and help to get her re-elected to another term, and still another after that". But after Sanjay's death, he was pressed into politics, not only by Mrs Gandhi, but by 300 MPs who petitioned him to take his brother's place and run for his seat in Parliament.

Rajiv was born in 1944 and studied in Doon School, Dehra Dun. Thereafter, he spent two years at the Imperial and Scientific College in London and two years at Trinity College, Cambridge, and

earned a degree in Mechanical Engineering. He returned to India in the mid-1960s, took up commercial flying as a career and was in the air for 14 years. On Sanjay's death, he quit flying and in June 1981, stood for a by-election in UP and won Sanjay's Amethi seat as well as his brother's place on the executive committee of the party's youth wing. He was named a General Secretary of the Congress(I) party in February 1983. Gradually he began to emerge as a leader in his own right and became the most powerful of the party's seven general secretaries. He formed a team of his own and with the help of his close associates, Arun Nehru and Arun Singh, both of whom have managerial backgrounds and who became Rajya Sabha members only recently, used his growing influence to virtually build a new party which was not always in line with the professed hierarchy in the Congress(I). What he was trying to do was to strengthen the party structure from the shambles it had fallen to in recent years.

Now, by an unforeseen turn of events, he has become the country's youngest prime minister, and although there has been barely any opposition to his appointment, many senior politicians feel that he is a babe in the woods: a decent young man but does he have the political maturity or expertise to become the nation's premier? Unlike all the former prime ministers, he has not even held a Cabinet rank and seniors feel that he lacks maturity. According to a close associate of Rajiv Gandhi, he is "too straightforward and decent to understand that politics requires a certain amount of toughness".

However, it is perhaps these very qualities that the country needs now—decency and straightforwardness. Confronted with a personal tragedy and a national crisis, Rajiv behaved with a dignified calm which would do credit to any statesman anywhere in the world. Also appointed party President, Rajiv now faces a dual challenge. In his capacity as Congress (I) President, he will have to be fully involved in preparations for the fast-approaching elections. But his

immediate tasks as PM will remain pressing, and these are both political and administrative. Rajiv's first major policy-making broadcast shows his determination to move in the right direction. He spoke of not tolerating the "corrupt, the lazy and the inefficient", in the process dropping P.C. Sethi from the Cabinet, a minister whose rank inefficiency was quite evident but who had been tolerated by Mrs Gandhi. He also dropped Kalpana Rai, a muscleman-turned-politician, who had once invited Atal Behari Vajpayee to a wrestling bout in Parliament.

Rajiv also made a few other points which may give an indication of the line he plans to pursue. Emphasising that the quality of politics and civil services must be improved, he went out of his way to promise "full protection" to honest civil servants from political pressures. The country has a highly-trained bureaucracy which can be counted on to continue functioning even in a power vacuum. However, as a result of excessive political pressures and corruption, it had become difficult for honest bureaucrats to take initiative and work for the best interests of the country. It can be recollected that the excellent French bureaucracy kept the country running smoothly in the crisis period when there were innumerable change of governments in France.

Among other new points, the PM also mentioned that reward and punishment must be related to performance and a strong concern for efficiency must permeate all institutions. If this policy were to be followed to the letter, there would be added incentive to produce more. One of the main grudges of competent people in India is that merit has no reward in this country. If efficiency were given a higher priority and promotions on merit introduced in all sectors, there would be added enthusiasm for development in every field.

Very few days, however, have passed for a clear assessment of the new PM. With the oncoming elections, it will be up to the electorate to make their choice of a viable alternative to Indira Gandhi.

S.B.

PLANNING FOR PROGRESS

BY B.M. BHATIA

What India needs today is a thorough overhaul of the system of planning, not merely a tinkering with the objectives of each successive Five Year Plan. The Approach Paper to the Seventh Plan gives us a new slogan, 'food, productivity and employment'. Perhaps that is the only thing which is going to distinguish the next Plan from its predecessors. For the rest, the Seventh Plan is slated to run in the old grooves of the earlier Plans.

Over the years, planning in India has become a highly centralised bureaucratic affair in which the people have little part to play. Five Year Plans are drawn up by the Planning Commission and formally approved by the National Development Council (NDC) which consists of some Union ministers and chief ministers of all the states.

Scope

The NDC itself has, over the last two decades, suffered considerable shrinkage in the range of membership, scope and authority. It has been reduced to the position of a ceremonial body of state chief ministers and Central ministers which has no other function to perform than to approve whatever is placed before it by way of a Plan document.

The Planning Commission has meanwhile suffered a sharp decline in its prestige and power and, in consequence, become only another department of the government rather than an autonomous body of experts who command respect for their ability, integrity and expertise. Plan exercises have lost the seriousness of purpose and have come to be looked upon as the government's public relations efforts on the economic front. That explains why the Approach Paper to the Seventh Plan has attracted so little attention and prompted so little debate in public forums.

Two types of reforms are now necessary in the planning system. First, emphasis has to be changed from the size of Plan outlay and Gross Domestic Product (GDP) growth rate in a five-year period, to the progress made in solving the two basic social problems of poverty and unemployment. This means reorientation of planning from urban and large capital-intensive public sector projects to rural and labour-intensive small result-oriented enterprises. Secondly, planning should be debureaucratised and made a people's movement.

A macro-type planning may be necessary in the earlier stages of industrialisation when the infrastructure is to be created and the foundation of basic industries is to be laid.

That stage in Indian planning is now over. Henceforth planning must get down to the microlevel of village or a block. Conditions vary from place to place both in respect of opportunities available and challenges to be faced. Only a decentralised system of planning can take care of the differences that exist in a vast country like India in agro-climatic conditions, culture and customs of the people, availability of idle resources, development needs and several other factors.

Each area, village, development block, district and state must have a development plan of its own, forming an integral part of the overall national plan. People of that area will have to be given a hand. Necessary institutions will have to be created to ensure people's participation at each rung of a planning ladder from the village to the district or even to the state level.

We created the community development system, panchayati raj, zila parishads and district industry councils. These institutions are either dead or lying in a moribund state now. We must find out why they failed to achieve the objects for which they were created. The answer in each case is likely to be that what was intended to be a people's agency was turned into an administrative unit in the state's bureaucratic network. Official interference in the working of these institutions left little scope for people's initiative in improving their economic lot. Even the poverty eradication programmes, which in their very nature should be locally based, are highly centralised schemes for the distribution of Central largesse to the people through the bureaucratic machinery and public sector banks. Little wonder that their effect has remained confined to achievements on paper rather than any real improvement in the living conditions of the poor.

The Approach Paper to the Seventh Plan mentions resource constraint as the biggest hurdle in the way of future planning. According to it, domestic resource mobilisation has already been carried to a point where little scope is left for further effort in that direction. At the same time, prospects of foreign assistance are steadily shrinking. This scenario forces the planners to opt for the development strategy that they now advocate for the Seventh Plan.

Briefly, the strategy underlying the approach to the Plan is as follows. Because of the resource constraint encountered now, greater attention will be paid to agricultural and rural development schemes which are

less capital-intensive than industrial projects. Even in agricultural development, efforts will be directed to getting the maximum benefit from investments already made in irrigation, fertiliser production and power supply before making new investments in schemes involving large capital costs.

Thrust

In the industrial field the main thrust of the Plan will be towards fuller utilisation of the already created industrial plan capacity. Management of the public sector units is to be so improved that better returns are obtained on the capital investments made. A more vigorous effort will be made to step up the growth rate of exports. This is to be accomplished through increased efficiency and productivity of Indian industry so that Indian products acquire the necessary competitiveness in international markets. Import substitution will be further encouraged to reduce the country's foreign exchange gap. Poverty alleviation programmes like the IRDP, RLEGP and NREP are to be linked to capital construction works in the rural areas and administered to benefit the community instead of helping individuals.

In principle, the approach is unexceptionable. The difficulty lies in translating the good intentions into action. With the present system of planning this cannot be done. The question is: how long shall we go on, in the face of mounting evidence to the contrary, believing in the efficacy of the present system? Instead of being an instrument of growth, the system is proving to be a drag on development by its vexatious controls that inhibit enterprise and encourage corruption, wasteful public spending and high taxation. People not only pay directly in the form of taxes to maintain this inefficient system of planning; they also pay heavily in an indirect way as a result of chronic inflation.

According to a general index for retail prices in Greater Bombay, there was a 180.4% rise in consumer prices over the last 10 years from 1973-74 to 1983-84. This gives an average annual price rise of 18% in the 10-year period. While the figure relates only to one metropolitan area of the country and cannot be said to be representative of the situation in the country as a whole, it undeniably establishes the fact of the country having been in the grip of high rate of inflation in all these last 10 years. That is what the common man is gaining in concrete terms from the current system of planning.

Maybe, this was a coincidence and there was no casual relationship between the two. Still the fact remains that the Green Revolution in the country was conceived, and it burst on the scene, in the three years of Plan holiday, from 1966 to 1969. Despite the fact that we have gone through three Five Year Plans since then, the revolution has

(Continued on page 57)

THE BHARATENDU YUG

BY MADAN GOPAL

Death came to Bharatendu Harishchandra at the young age of 34. But even in this short span he had carved a niche for himself in the Hindi world and a whole period in Hindi literature is called the 'Bharatendu Yug'.

In January 1985, the Hindi world observes the death centenary of Bharatendu Harishchandra, the father of modern Hindi. As a pioneer, who gave a new direction to Hindi, Harishchandra played such a vital role in the development of this language that a whole period in Hindi literature is called the *Bharatendu Yug*. The honorific 'Moon of India' was conferred on him originally as a derisive term, but later affixed to his name as a mark of recognition. Harishchandra liked this appellation and had the rising moon printed on his letterhead.

Born in Varanasi on Sep 9, 1850, Harishchandra startled experts, even at the young age of 14, by telling them that, in addition to the traditional nine *rasas*, there ought to be another four (relating to childhood, friendship, devotion and happiness). He had his own ideas about the Hindi language, which, in his time, was in its infancy. On the one hand there was the highly Persianised Urdu in Devnagri script advocated by Raja Shiv Prasad, Sitara-i-Hind, with full official support, and on the other, the Hindi propagated by Raja Lakshman Singh of Agra, who used uncommon and difficult words in his translated version of *Shakuntala*.

Harishchandra advocated the adoption of the spoken language or *khari boli*. This was the language that he used in *Kavi Vacha Sudha*, which, according to one expert, was the first Hindi newspaper to use chaste Hindi. In 1873, Harishchandra started the *Harishchandra Magazine* (later renamed *Harishchandra Chandrika*) in chaste Hindi prose. In *Kalchakra*, a chronology of important events in world history, written 11 years later, Harishchandra mentioned the evolution of new Hindi (Harishchandriya Hindi) as a landmark of the year 1873.

A direct descendant of Seth Amin Chand, who collaborated with Robert Clive and Mir Jafar before the Battle of Plassey,

Harishchandra's family were financiers to the Maharaja of Banares. As the family were well-regarded by the British, Harishchandra was appointed Honorary Magistrate at the age of 20 and, later, Municipal Commissioner. Often enough, he was assigned the task of showing members of the British royal family around Kashi, when they visited Banares.

Harishchandra grew up as a loyal subject of Queen Victoria, and there was no occasion in the life of the British royal family—be it a birth, a death, or even a recovery from illness—which he did not acknowledge with a poem. However, he did not get along with local British administrators, and raised his voice against the levy of taxes and the exploitation of the poor. This resulted in the withdrawal of 100 copies of his journal, *Harishchandra Chandrika* and *Bala Bodhin*, and also some of his books, including *Vidya Sundar*.

Scion of the richest family in Banares, the fastidious Harishchandra was a patron of music, poetry, works of art, antiques and rare books. He encouraged every move to honour poets or artists. He wanted good books to be distributed free or to be nominally priced. A philanthropist, he had wrought iron benches installed in the company gardens of Banares, and iron railings put up at the Manikarnika ghat, at his own expense. He travelled frequently and propagated anything novel, be it homeopathy or lithography. He bought watches and cameras, and presented them to friends and sycophants. His name was a byword for extravagance.

He gave away money without the least thought: once, he covered a beggar shivering in the cold with his own expensive shawl and walked away. He always made himself available for any good cause, and readily went around with a begging bowl for funds

Jalhpur.

Harishchandra was in the forefront of many social crusades, be it for a ban on cow-slaughter or the adoption of Hindi as the court language. He also founded scores of societies and organisations, one of these being the Tadiya Samaj which made its members, including Harishchandra, take an oath to eschew meat and alcohol and to use only *swadeshi* goods. He was a strong supporter of women's education, and presented saris to new graduates from any university. On one occasion, Lady Ripon presented saris on his behalf to graduates of Calcutta University.

Two things always accompanied Harishchandra—a *paandan* and a portfolio of expensive writing pads in different colours, with ink and pen. Rajendralal Mitra once described him as a "writing machine": he wrote faster in Hindi than any Urdu or English writer. He wrote not only in Sanskrit, Hindi and Urdu, but also in Gujarati and Marathi. He wrote 18 plays and some 3,000 devotional and love songs in all conceivable metres and styles. He was undoubtedly the last Vaishnava poet of note. A pioneer in Hindi journalism, he was also the first Hindi dramatist and the first Hindi writer to compose travelogues. He encouraged poetry in *khari boli* and translation of novels into Hindi. He also encouraged several writers who carried the torch forward and came to be called the Bharatendu Mandal.

As welcome at the court of the Maharaja of Banares as among the folk composers sitting on the roadside, he came into close contact with people who visited Banares from India and abroad. They included Ishwar Chandra Vidyasagar who, in the preface to his *Shakuntalam*, expressed his deep gratitude to Harishchandra for his help. Keshub Chandra Sen thanked him for supporting the Brahmo Marriage Reform. Michael Madhusudan Dutt, Prince Keral Varma, Rajendralal Mitra, Col Olcott and Madame Blavatsky, and Surendranath Bannerjee were among those in whose honour he organised an "evening party" and also helped in raising revenue for the National Fund, a party which was later merged with the Indian National Congress.

Harishchandra projected Hindi abroad by presenting sets of his books to Queen Victoria, the Czar of Russia and the Kaiser of Germany. Sir George Grierson described Harishchandra as the "most celebrated of the native poets of the day, and a prolific writer who had done more for the popularisation of vernacular literature than almost any living Indian". And F.E. Keay wrote that Harishchandra's 175 works "exhibit his great desire for the progress of India and the development of its intellectual freedom". And all this before he died on Jan 6, 1885, at the age of 34.

LOST & FOUND

The Sphinx, the rocky manmade lion that guards the great Pyramids at Giza, south of Cairo, lost its beard 166 years ago. The beard constituting two parts, each about a foot high, was smuggled to Britain and is presently in the possession of the British Museum. For the past three years, however, Egyptian authorities have been pressing for its return to prop up the 130-ton head of the Sphinx as archaeologists fear the head might collapse since the neck has been weakened by erosion. The British have agreed after protracted negotiations, to restore the Sphinx's beard—as a loan. It sure did take the Sphinx a long time to acquire a beard—and a loaned one at that!

The RBI, which came into existence on Apr 1, 1935, acts as banker to the Central and State governments, and also controls the banking system in the country. Its functions before its creation were performed by the Imperial Bank of India which was created in January 1921 by amalgamating three Presidency banks: (a) Bank of Bengal, (b) Bank of Bombay and (c) Bank of Madras.

Notes of Rs 2½ denomination were issued during World War I in India. This was done to economise the use of silver due to its apparent shortage. The authorities considered re-introduction of this denomination during World War II, this time due to paper scarcity. The proposal was soon dropped as the denomination had proved unpopular.

The first Indian to become the Governor of RBI was **C.D. Deshmukh** (1943-49). He was appointed Finance Minister in the early '50s. In the line of succession, he was the third Governor of RBI, succeeding Sir James B. Taylor.

India experienced acute shortage of one-rupee notes and small coins during World War II. This was because of a phenomenal expansion of currency during the war and the very marked increase in demand for silver rupees and small change. Whenever the price of silver rose, the silver rupee coin disappeared from the market. People found that melting it was profitable. Among the steps taken to augment the supply of coins and rupee notes —

- Hoarding, specially of small coins, was discouraged. The government, on Jun 20, 1940, even promulgated a rule under Defence of India Act, making it an offence to acquire coins in excess of personal or business requirements.

● Available currency notes were put to maximum use and the usual standards with regard to their retirement were relaxed. Currency officers, Imperial Bank and the Treasurer were directed to resort to reissue of serviceable notes on an extensive scale. As economy was affected by this, the usual standards of worthiness for circulation of currency notes were further relaxed by laying down that they could be withheld from circulation only if they were too dirty or torn and were unfit for reissue.

● Moreover, the practice of stamping notes, particularly by the Railways and government departments, and of recording of names by note examiners was discontinued to prevent spoliation of currency.

● During 1942-43, when the situation was quite serious, the RBI even thought of issuing notes in the denomination of Rs 20 (which had earlier been made in 1962), but the proposal was dropped because of some practical difficulties. Instead, a new denomination (that of a two-rupee note) was decided upon. They were brought into circulation in February 1943 and helped ease the situation to a considerable extent.

Demonetisation, or the withdrawal of currency notes from circulation, has taken place twice in India. Once during World War II and the second time, in January 1978, when currency notes of higher denomination of Rs 1,000, 5,000 and 10,000 were demonetised.

time in September 1949 and then in June 1966. Dr John Mathai was the Finance Minister in 1949 and Sachindia Chaudhury in 1966.

Alexander the Great established two cities in India and named them both Alexandria. One was in Afghanistan near Kabul and the second one was in Sind near the confluence of the Chenab and the Indus. However, both disappeared in later times.

A lawn tennis player who wins four major tournaments of the world in one year (not necessarily in a calendar year) is honoured with the title of **Grand Slam**. The tournaments are: US Open, French Open, Australian Open and the Wimbledon Open. Martina Navratilova (USA) won this privileged title in 1984 too.

The **Jules Rimet Cup** was given to the winner of the World Cup Football Tournament between 1930 and 1970, during which period the tournament was actually known as the Jules Rimet Cup. In 1970, Brazil won the cup for keeps as they were winning the tournament for the third time (the earlier two occasions being 1958 and 1966). The Federation of International Football Association (FIFA), the organisers of the World Cup Football Tournament, replaced the Jules Rimet Cup with the FIFA Cup. As a result, the tournament is also known as the FIFA Cup tournament.

An award for Best Feature Film was first given in 1953 by the Government of India and was known as the President's Gold Medal. *Shyam Chi Aaiyee*, a Marathi feature film, was the first to get this award. In 1976, the name of the award was changed to *Golden Lotus*.

Lord Charles Cornwallis was the only British Governor-General (G.G.) to serve more than once as G.G. in India. He served from 1786-93 and then from July 1805-October 1805

The five principles of **Panchsheel** are: mutual respect for each other's territorial integrity and sovereignty; non-aggression, non-interference in each other's internal affairs; equality and mutual benefit; and peaceful co-existence.

The first time the five principles of the Indo-China agreement were referred to as the Panchsheel was on the occasion of the Indonesian PM's first visit to India in September 1954. In an address to the members of the Indian Parliament on Sep 23, Dr Ali Sastroamidjono referred to the *Pantja Sila*, principles of the Indonesian philosophy of State. The same evening, Jawaharlal Nehru, speaking at a state banquet in honour of the Indonesian PM, described the five principles of the Indo-China agreement as "another Panchsheel" in the sphere of international relations. In Nehru's words: "This afternoon, Sir, you were speaking to Members of our Parliament and you referred to certain basic principles which govern Indonesia. You call them the *Pantja Sila*, which is from our Sanskrit word *Panchsheel*. We talk also of another Panchsheel or principles, which have recently come to the fore. You may call them Panchsheel also in the same way. Therefore, it is a good thing for us to hold up this new Panchsheel because it is the right thing and even though we may not live up to it completely, it shows us the right path and even though there might be some evil behind it, yet saying the right thing and trying to act up to it will gradually do away with that evil in the end."

The principles of Panchsheel have now won recognition in a major part of the world. Soon after their formulation, they received almost immediate recognition in the final communique issued at the conclusion of the Colombo Conference of the IPMs of Burma, Ceylon, India, Indonesia and Pakistan, held from Apr 28-May 2, 1984.

Chow-En-lai, the Chinese PM, during his visit to Delhi in June 1954, reiterated his faith in these principles in a joint statement issued by him and the PM of India on Jul. 28, 1954. Two days later, the five principles were again restated in a joint statement issued by the PMs of Burma and China, at the end of their talks in Rangoon. The PM of Indonesia, who later visited India in September 1954, also lent his powerful support to these principles.

We invite readers to send us their queries on GK—provided the information being sought is not easily available. Of these a few will be selected for publication too. We regret that no direct correspondence will be possible. Do write to us at: GK, c/o Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

FOR & AGAINST

BY SANJUKTA BANERJI

Should the press be censored?

What would the world be without newspapers and journals? We would be back again in the dark ages when the most that concerned people was what was happening in the immediate neighbourhood. We have come a long way since then, and now the whole world is the concern of the individual mind. And all this is due to the invention of newspapers and news journals. Every morning, the individual is exposed to what is happening in the remotest little islands, and ponders over not only national events, but on the tensions of the two major power blocs, the coal miners' strike in Britain, apartheid in South Africa, and so on. And yet, various governments, including democracies, find it necessary to impose press censorship. Why? Opinion is varied on this question.

For

■ It is necessary for the press to be responsible since a vast number of people depend on it for correct news. However, there are a large number of newspapers in circulation and they vie with each other to capture the market. Since sensationalism is what sells, many newspapers are tempted to sacrifice truth for yellow journalism. When the press becomes irresponsible, it is sometimes necessary to impose censorship.

■ The press is a mover of opinion, a shaper of values, and plays an important role in the individual's moral make-up. It is, therefore, sometimes necessary to put a curb on what is printed: for instance, pornography and violence.

■ In times of crisis, it may be necessary to regulate news since the publication of the truth may have undesirable consequences. For instance, during times of communal troubles, if newspapers print the actual death toll, with photographs to back up their news, then it is quite possible that members of the victimised community may be goaded into retaliation. To give another example, during times of war, if the country is not doing too well and the actual facts are printed, it may well lead to the demoralisation of the entire country.

Against

■ Freedom of expression is the fundamental right of every individual in a modern democracy and a free press is an extension of this right. The government, therefore, should under no circumstance impose press censorship.

■ The press serves as a watchdog of the government. It is through newspapers that people get to know about governmental action. If the freedom of the press is curbed, the government can become arbitrary since it is the mass media which acts as a popular check on it day in, day out. Parliamentary elections are held over a period of time, so keeping an everyday check on governmental activities is a job which only the mass media can do.

■ It is through the mass media that the government can get to know about popular opinion. If censorship is imposed on the press, the government will only get a limited and coloured view of the reaction of the people to its programmes. To take an example, one of the major drawbacks that the government faced during the emergency between 1975 and 1977, proved to be press censorship. As a result of a muzzled press, the government did not get the correct feedback and wrongly judged the popular reaction to the various programmes that were implemented in this period.

■ In the absence of all the news, rumours tend to spread like wildfire. Popular curiosity and credulity leads to disastrous results when the press is muzzled. It is the duty of the newspapers to report all facts correctly so that people would know what to believe.

■ Investigative reporting plays a very important role in exposing social, political and economic evils, which would otherwise never become known. The exposure of the blinding of Bhagalpur under-trials, due to police atrocities, is a case in point. So is the expose on the infamous cement scandal involving former Maharashtra Chief Minister A.R. Antulay. Similar examples can be found in the US. Everybody is now familiar with the underhand dealings of former President Richard Nixon as a result of the press exposure of the Watergate Scandal. The massacre of unarmed North Vietnamese women and children by an American serviceman in a village called My Lai was exposed by a crack US freelance journalist Seymour M. Hersh. Often, the government would discourage such reporting because such events do not speak too well of the social and political systems of the country concerned. If such cases come to light, the government may wish to put them under the carpet through press censorship. The press, therefore, should not be censored because it acts as a safety valve and throws the floodlight on unsavoury elements in the social and political structure. If evils are exposed, the public would naturally wish to bring the evil-doers to book, reform the structure and improve the country's image.

■ A responsible press imposes a kind of censorship on itself without being told to do so. For instance, during the recent riots in Delhi, most of the newspapers played down acts of violence and did not publish inflammatory pictures. But by equal measure, they focussed continuously on the hardships faced by the victimised community, going to the extent of requesting its readers to contribute generously for the relief fund sponsored by them. If there is a responsible press, government-imposed press censorship is uncalled for.

■ If the press is not curbed, it may lead to straining of relations between countries. To take a recent case, relations between India and Sri Lanka took a downturn when an Indian journal published an article saying that Maoist guerrillas from Sri Lanka are being trained in the forests of India. Relations between Pakistan and India have often suffered because of the irresponsible reporting of the Pakistani press. Recently, a report in the Indian press about the alleged kidnapping of a certain number of Indian citizens by the Pakistani government members of a certain community to indulge in further terrorist activities.

GENERAL ELECTIONS THE FINAL LAP

The country is all geared to take the plunge. With the general elections for the eighth Lok Sabha (scheduled for Dec 24 and 27) barely a fortnight away, frenzied activity is going on in all political camps. For these elections, the Election Commission (EC) has recognised seven national political parties and 31 state parties. For the 515 seats being contested for, of the 542 Lok Sabha seats (i.e. excluding 14 seats in Assam and 13 in Punjab), an overwhelming number of 8,800 candidates filed in their nominations. However, of these several withdrew their nominations while 250 were rejected after scrutiny. But there are still over 5,000 left in the field. With the Congress, the BJP, the Janata and the DMKP to compete for 496, 225, 190 and 150 seats respectively, the contest promises to be exciting, hard-fought and well-won.

The state-wise break-up of the 515 seats is as follows: Andhra Pradesh—42; Bihar—54; Gujarat—26; Haryana—10; Himachal Pradesh—4; J & K—6; Karnataka—28; Kerala—20; MP—40; Maharashtra—48; Manipur—2; Meghalaya—2; Nagaland—1; Orissa—21; Rajasthan—25; Sikkim—1; Tamil Nadu—39; Tripura—2; UP—85; West Bengal—42; Union territories—17. The scheduled castes have been allocated 78 of these seats and the scheduled tribes 38.

Several new trends are emerging in the elections. For the first time ever in India's history there is a conspicuous lack of awe-inspiring, dynamic leadership—the lack of a "sure winner." Mrs Gandhi's untimely departure has left everyone, including the Opposition, floundering helplessly. The ruling party has been deprived of her powerful stewardship while the Opposition of its sole target of concerted attack.

Also for the first time ever, the reins of Indian politics lie in the hands of the young. The trio of Rajiv and the two Aruns (Arun Nehru and Arun Singh) at the helm of our politics has reversed the existing trend of old cronies hogging the limelight. The focus has shifted a generation ahead to one definitely more idealistic and enthusiastic about action rather than futile hypothesising.

Surprisingly, among those contesting this time are several eminent bureaucrats, including Natwar Singh, and K.R. Narayan and journalists too. The world of politics has suddenly become a star parade as well, as several famous film personalities seem to be finding politics more interesting than acting. Whether these stars are there to stay or are just putting in guest appearances remains to be seen. The formation of several new independent parties, apart from boggling the minds of the voting public, have proved cumbersome for the Election Commission (EC) too. Larger and consequently more unmanageable ballot papers will be needed to accommodate new parties.

What is most heartening about the present poll scenario is that the EC is, for once, making its presence felt. It has issued a number of directives to the governments and ruling parties at the Centre and states on observance of rules and norms during electioneering. These include, first and foremost the ban on misuse of official machinery which includes government transport and staff for furtherance of party interest; as well as government money on advertisements. Bans have also been imposed by the EC on the monopolising of public places, vehicles and amenities for ruling party propaganda; on transfer of all officials involved in poll supervision work, including top district and state level police officials until the end of the elections; on politicians from laying foundation stones of projects or schemes of any kind or making promises of any facilities eg. construction of roads, provision of drinking water. Ministers and other authorities have also been forbidden from indulging in acts of motivated generosity which includes announcing any financial grants in any form.

There has been a sudden influx of several film stars into the political arena including superstar Amitabh Bachchan, Sunil Dutt and Vijayanthimala Bali apart from the existing film stars-turned politicians like NTR, Jayalalitha, M.G. Ramachandran and others. To avoid their publicity through their films, the EC has banned the screening of any of their films or film sequences on TV and broadcast of songs, film excerpts on radio till the time the elections are over.

For ensuring equal coverage to all parties on the TV and radio the EC itself has done the allocation of dates and time to be given to each national party to present its election manifestos and propaganda to the public at large. These media will not therefore be monopolised for furthering the interests of any one party or person.

These steps should go a long way in ensuring "free and fair polls". The race is on in earnest now.

CATASTROPHE AT CARBIDE AVERTABLE

The Bhopal holocaust is just a portent of similar disasters which can follow in future. Scientific innovations while being good servants can, if not coupled with extreme caution and discretion when using them, prove to be bad masters. It is rather ironical that gas used for producing pesticide claimed over 2000 human victims in Bhopal on Dec 3 and rendered over 20,000 sick from the after effects of gas inhalation.

The tragedy occurred soon after 1 a.m. when pressure built up in a 45 tonne capacity gas chamber and caused the leakage of methyl isocyanate (MIC) liquid gas at the Union Carbide insecticide plant. (This multinational plant is one of the two plants of this kind in the world, the other being located at West Virginia in the US). By the time the leakage was detected the lethal gas had spread and hung heavily in the atmosphere. Residents within a radius of 15 km of the plant were severely affected by the poisonous emission.

THE KILLER GAS

Methyl isocyanate (MIC), the killer gas responsible for the shocking death toll in Bhopal, is a product of deadly phosgene gas and methyl cyanate. And phosgene gas (itself a reaction product of toxic gases like carbon monoxide and chlorine) reeks of the gory history of World War I when the German and American troops used it to eradicate each others' troops. Hitler used it too, in his infamous gas chambers, to ruthlessly eliminate 60,000 Jews.

While not being as poisonous as phosgene, MIC inhalation can have fatal results too. A highly toxic chemical with low tolerance level of two parts in 100 million; it reacts with water of the lungs when inhaled and chokes the inhaler to death. Essentially a liquid, it becomes a gas when in contact with air because of its low boiling point of 21°C and thence gains easy passage into the body where it can react with proteins and also destroy enzymes in the human blood.

Experiments conducted on the lethal impact this gas can have on animals have revealed that dogs cannot survive exposure of this gas for more than 20 minutes at the rate of 29 PPM (particles per million unit), cats suffer pulmonary damage within a few minutes of exposure at 13 PPM and mice die within 15 minutes.

When inhaled by human beings it causes breathlessness, choking, nausea and vomiting, pain in the chest and pain and a burning sensation in the eyes. Further inhalation causes death due to asphyxiation and poisoning of the blood stream. No experimentation is needed to ascertain its impact on human beings. The loss of over 2,000 lives and the hospitalisation of over 20,000 is evidence which is explicitly and horrifyingly self-explanatory.

What ensued was the grotesque unfolding of a death-drama. People awoke to a panic and poison-laden atmosphere. Breathless, giddy, retching and choking from the effects of MIC, they fled in confused desperation to the unpolluted haven of neighbouring towns. The unlucky ones were suffocated to death even as they slept while others fell unconscious on roads as the gas, the haste and the cold took their toll. Large numbers of cattle were also sacrificed on the altar of negligence.

Hospitals overflowed with people clamouring for medical attention. This caused an expected shortage of drugs and doctors in the prevailing chaotic circumstances. The sorting out of the dying from the dead became an awesome task.

of the tragedy and also issued a grant of Rs 40 lakh from the Prime Minister's relief fund for the assistance of the ailing. Troops were summoned for evacuating people to safer places and for providing medical aid. Five officials of the Union Carbide unit were immediately arrested for the lethal lapse in management.

The immediate closure of the factory was ordered and as a precautionary measure its counterpart in West Virginia was also closed down. Not even the similar incident which occurred in the north Italian town of Seveso in July 1976 or the nuclear accident in Harrisburg in USA assumed the mammoth proportions of the Bhopal mishap in terms of the colossal loss of human and animal life.

It will take quite some time before Bhopal becomes safely habitable again. And this gruesome episode has left in its wake uncertainty and terror. For death can stalk silently upon hapless victims—extinguishing life even as they clutch on to food for sustenance: a dead man with bread lying on his chest.

THAKKAR COMMISSION THE PROBE BEGINS

In the wake of Mrs Gandhi's brutal murder the government has constituted a one-man commission, consisting of Justice M.P. Thakkar, a sitting member of the Supreme Court to inquire into all the facts connected with her assassination. The commission will submit its report within a period of six months.

Apart from uncovering all the relevant facts concerned with the assassination, the commission is required to probe into various other facets including the identifying of persons/agencies involved in the conspiracy while exposing it in all its ramifications, finding out lapses of duty by individuals as also speculations on whether the tragedy could have been averted. After inquiring into the deficiencies existing in the security system, the commission will also be expected to recommend corrective measures which can be implemented in future.

The Thakkar Commission has been appointed under Section 3 of the Commission of Inquiry Act "for the purpose of making an inquiry into a definite matter of public importance, namely the assassination of Smt Indira Gandhi, the late Prime Minister, on Oct 31, 1984". All the provisions of Sub-sections (2), (3), (4), and (5) of Section 5 of the Commission of Inquiry Act have also been made applicable to the commission whose headquarters will be in New Delhi.

The commission may make interim reports to the Central Government as and when it deems necessary before the scheduled time for submission of the report.

It will be assisted in its task by an investigating machinery headed by Anand Ram, one of the senior-most police officials in the country and also by different branches of the police and intelligence organs of the government.

PUNJAB REBOUNDED BACK

While the country is all set to go to the polls the government has wisely decided against conducting elections in Punjab even though, allaying all fears, the law and order situation has remained commendably stable. The violence which rocked the country following Mrs Gandhi's assassination left Punjab unscathed.

But politics and polls are prevailing in Punjab too—those of the Sikh Panth. The Shiromani Gurdwara Prabandhak Committee (SGPC) proceeded to hold elections for office bearers and for once the five head priests refrained from intervening in the affairs. They advised the members of the SGPC to decide the issue by secret ballot.

The results of the SGPC polls are as follows: Gujcharan Singh Tohra, detained Akali leader, was re-elected for the thirteenth consecutive term as President of the SGPC by a comfortable margin; Prem Singh Lalpura, Senior Vice-President; Rajinder Singh Dhilliwal, Junior Vice-President; Kuldip Singh Wadala, General Secretary. Lalpura will work as acting President in Tohra's absence.

The SGPC will now start working actively again—it will chalk out the party's future policies and programmes, and also prepare strategies for opposing the Congress candidates in the Lok Sabha polls. The formation of relief committees to help victims of the recent violence as well as the draft of a programme to pursue cases of Sikhs arrested during and after the army action in June in the Golden Temple complex will also figure extensively in the SGPC's programmes.

The SGPC has already demanded a high-power judicial inquiry into the army action. While expressing its sympathies with the victims of the car-

ment for not allowing the five head priests to visit Delhi and other affected areas. All, then, is not well for the restoration of amicable relations between the government and the Sikh Panth. And even though the Centre has its hands full at the moment what with the elections looming large, it would be a dangerous folly to neglect Punjab at any cost.

OPPOSITION UNITY IN OPPOSITION OF UNITY

At a time when the ruling party's hold over the nation has been substantially jeopardised with the exit of Mrs Gandhi one would have thought the Opposition would strengthen its fortress to make it a strong if not invincible enemy. But it has failed miserably to even put up a facade of unity. In fact, if anything, its internal squabbles have intensified at the onset of the elections.

The formation of the Dalit Mazdoor Kisan Party (DMKP) by Charan Singh was intended to unify the Opposition. But far from achieving a modicum of that, the DMKP has succeeded in alienating individual opposition parties even more. The Bharatiya Janata Party (BJP) headed by the Opposition stalwart Atal Behari Vajpayee was openly antagonistic towards the DMKP and all it stood for right from the start. And this sounded the death knell for the National Democratic Alliance (NDA) between Charan Singh's Lok Dal and BJP. The seven-party United Front of Chandrashekhar's Janata Party was also disrupted with the desertion of the Democratic Socialist Party and the Rashtriya Congress.

Finally conceding that achievement of unity was a farfetched idea the Opposition then diverted its efforts towards resolving the problem of seat adjustments. Some headway was made in this direction, thanks primarily to the efforts of N.T. Rama Rao, Andhra Pradesh's once-aggrieved CM and Farooq Abdullah, ousted CM of J & K who called for collective Opposition meets in Delhi.

As of now, however, it is difficult to predict the turn of events even to the last day before the polls, taking into consideration the fickleness of those standing for the elections. The DMKP and Congress (J) of Jagjivan Ram have, according to latest indications, reached complete accord on seat adjustments in Haryana, UP and Bihar, collectively comprising the Hindi belt. And according to the DMKP's spokesmen, the party has reached complete accord with "all the major opposition parties" in Delhi as well as in Karnataka, Andhra Pradesh, Tamil Nadu, Kerala and Gujarat. It is also hopeful of an accord in Bihar and Rajasthan. But whether these accords are strong enough to resist weathering and erosion in the coming days and face up to defeat or victory remains to be seen.

DISSIDENCE IN CONGRESS (I) ON TO GREENER PASTURES?

Dissidence, deception, defection have become the hallmarks of the Indian political trade these days. Never had these assumed such mammoth proportions as of late, especially since Mrs Gandhi's death. Suddenly all decorum, code of ethics, loyalty to person or party has disappeared leaving behind chaos, where anyone can do what he feels like and get away with it too. Loyalty has in fact become a saleable pendulating commodity available to anyone willing to pay the price.

The dissatisfaction over the denial of tickets has been vociferously expressed and open revolts in defiance have been staged. Of these, the ones which have caused major political upheavals include those of Abdul Rahman Antulay, former Maharashtra CM; Shivaji Ganesan, popular film star, MP and Chairman of the Tamil Nadu Congress Committee; and the exodus of MLAs from the Bihar and Manipal Assemblies as well as others scattered all over the country.

The Manipal Congress(I) Ministry headed by CM Rishang Kershing lost its majority in the 60 member State Assembly when 14 Congress MLAs tendered their resignations to the Governor K.V. Krishna Rao. The step was taken when they were denied party nominations in protest against "the changes in the political situation in the state". Among those who resigned was the Speaker Y. Yaima Singh. The Kershing Ministry which initially had 43 MLAs was left with only 29, and 14 departed MLAs promptly joined hands with Opposition members in the State Assembly and demanded the dissolution of the ministry since it had no moral or constitutional right to continue. The crisis, however, blew over and the ministry regained majority a couple of days later when one minister withdrew his resignation when allotted a party ticket to contest the elections.

The former CM of Maharashtra, A.R. Antulay, notorious for his earlier exploits too, lived up to his reputation for trouble-making when he openly revolted against the Congress after being denied a Lok Sabha ticket for the Kolaba (Rajgarh) seat. Antulay went to the extent of calling for a split in the

...of Mrs Gandhi". However, his act did not go unpunished—and he was expelled from the Congress(I). Undeterred, Antulay is not only continuing his candidature as an independent candidate in Kolaba constituency but has also formed a regional party "Indiravadi Maharashtra Congress Party" which he hopes to convert into a national party.

Bihar did not emerge unscathed from this tide of revolts either. Nov 27 witnessed open rebellion against the Congress leadership by the disgruntled few not granted party tickets. At least three members of the Assembly staged a walkout and are now to contest as independents. This defiance is significant in that these MLAs won by convincing margins in the 1980 elections and will now pit their strength against relatively inexperienced Congress nominees.

This brings us to Tamil Nadu and Shivaji Ganesar, Chairman of the Tamil Nadu Congress Campaign Committee. Ganesar, dissatisfied with the seat allocations, threatened to walk out of the Congress(I) too, and form a party of his own. But, at this stage, he wisely opted to hold talks with the Centre first and this resulted in an understanding being reached between him and the Congress high command so that now, once again, Ganesar sits in the Congress camp and will be campaigning for the party actively in Tamil Nadu.

The Congress, on its part, watched these new desertion dramas unfold rather helplessly but later did issue statements to the effect that defectors would be penalised. But even if prodigals do return to the fold, either due to a belated sense of loyalty or from fear of reprimand, they will be bringing with them the danger of the few black sheep spoiling the entire flock.

RAJIV GANDHI

A PROMISING PRELUDE

"Rajiv is seen as pragmatic, cautious and practical—the first leader with whom India's disgruntled classes can identify," is the *Observer's* (of UK) observation of India's new PM. And for a person so happily oblivious to the world of politics until as recently as five years ago, this certainly is no mean tribute.

Rajiv Gandhi's initial steps are definitely not as tottering as expected from the new political entrant suddenly entrusted with a job as demanding as that of prime ministership. Even while Mrs Gandhi's body lay in state and the law and order machinery of the entire country lay in shambles, Rajiv went about the task of restoring normalcy in the strife-torn country with an iron hand. CMs of various states who had come to mourn Mrs Gandhi's death were promptly dispatched to their respective states to manage affairs. Then sweeping changes were made in the intelligence and security set-ups which had shown such dismal performances. The Lieutenant-Governor of Delhi was also dismissed. And all the while, Rajiv kept his personal emotions in tight rein for which he won the applause of leaders and the press worldwide.

The personal tragedy he suffered did not deter Rajiv from going about his functions with swiftness. In his first few addresses to the nation he stressed the need for maintaining peace and building a strong and united India. He also pledged to fight corruption and inefficiency. He made a call for improvement in quality of civil services and for depoliticisation of the administration as well.

Even while continuing in the traditions set by his mother, Rajiv clearly took a stance of his own too. That he is a product of the younger generation is left in no doubt when one sees his inclination towards modernisation. His emphasis on indigenous research and development to take care of the country's future needs coupled with the stress he lays on modernisation of technology, predict technological advancement under his regime.

Rajiv is also striving to nurture the relations built with various foreign countries by Mrs Gandhi. Several countries have extended their hands in friendship to him.

But what perhaps has earned him the respect of even staunch Opposition critics is his upholding of democratic values. His announcement of elections which have been preponed (contrary to their expectation of them being postponed) indicate his aversion to either dictatorial or dynastic rule. He is also living up to his reputation of Mr Clean and has, for the forthcoming elections, eliminated several notorious contenders from the race. This has, undoubtedly, earned him several enemies but has improved the Congress image overall.

Rajiv has inherited his office from colossals like Nehru, Shastri and Mrs Gandhi and making his mark will prove no mean task, if he wins. As the *Observer* puts it: "By the time the dust has settled down, Rajiv Gandhi will be seen as Prime Minister by right, not only by inheritance." Whether this statement proves right depends first on the people and then on him.

SOME GOOD WORK

For the third time in four successive years, a cyclone ravaged the south-eastern districts of Andhra Pradesh and the adjoining areas of Tamil Nadu. A cyclonic storm of particularly severe intensity, it lashed the coastline of Andhra Pradesh, covering Nellore and Prakasam districts. And yet again, it wrought havoc leaving behind a trail of destruction.

Early meteorological warnings of the approaching cyclone, the repeated warning issued over the radio and television and timely and prompt measures taken by the concerned authorities including evacuation of people went a long way in keeping the toll low. The cyclone claimed about 350 lives compared to the thousands lost in earlier similar catastrophes. However, it did succeed in devastating vast inhabited areas, destroying crops, damaging crucial sources of minor irrigation as well as disrupting road, rail traffic and telecommunications. Over 11.5 lakh people of 633 villages were left to reassemble the shambles.

It goes to the credit of the authorities that urgent relief and speedy rehabilitation was provided to those affected and attention paid to the restoration of the battered economy. IAF and navy helicopters and vessels as well as army personnel were deployed for organising relief work.

The PM immediately rushed to the stricken areas and made an aerial survey in the company of the Andhra Pradesh CM and Tamil Nadu officials. He also sanctioned a grant of Rs 12 crores to the cyclone hit states (Rs 7 crores to Andhra Pradesh and Rs 5 crores to Tamil Nadu). But it will take quite some time and concerted efforts before the losses can be recouped.

N.T. RAMA RAO

SPRINGING SURPRISES

Over the past couple of months the political scenario in Andhra Pradesh has had a remarkable likening to an action-packed suspense thriller. The ex-cine star and CM N.T. Rama Rao, with his unpredictable political manoeuvres, has the viewers at the edge of their seats and nobody quite knows what to expect from him anymore.

In a surprise move upon his return from New Delhi, where he had been engaged in promoting Opposition unity, NTR decided that he would like to seek fresh mandate. Armed with a memorandum signed by 164 MLAs (some belonging to "friendly Opposition" parties) endorsing the dissolution to eliminate the possibility of the governor forming an alternate government, he urged S.D. Sharma to dissolve the Assembly. Thus, on recommendation of the Telegu Desam Government, the Governor S.D. Sharma dissolved the 22-month-old sixth Andhra Assembly under Article 174 (2) (B) of the Constitution. Predictably NTR was asked to continue as head of the caretaker government.

According to NTR, he had resorted to this step keeping in view the development in the state which negated people's verdict and polluted the political atmosphere. And with this, he hopes to put an end, once and for all, to the politics of deception and defection. Also, he reasoned, holding elections was not only desirable but imperative in order to strengthen democratic principles and safeguard the interests of the people even though the ministry continued to enjoy the confidence of the Assembly.

But dissolution of the ministry had been on the cards ever since NTR was reinstated CM on Sep 16, although NTR himself had taken pains to dispel any notions of this.

In fact he had, in the not too distant past, disclaimed rather emphatically the dissolution of the Assembly. Twice in the last two months he had expanded his ministry and in order to strengthen the Telegu Desam hold over the 294 member-Assembly (reduced from 200 to a mere 148 after Bhaskara Rao's defection), had even inducted defectors into his camp. In an attempt to placate his supporters while expanding his ministry he went to the extent of bifurcating several public corporations to make room for more chairmanships.

Despite all these moves, NTR was at all times faced with the omnipresent threat of the unrollified few left out of offices of profit crossing the floor into other more lucrative camps. Which is probably why he opted for seeking fresh mandate in spite of the motivated protests made by Bhaskara Rao and K. Rosaiah, leader of the 54-man Congress Legislative Party in Andhra Pradesh.

And when the dissolution of the Assembly was announced and speculations were rife about the results of the elections which every one assumed would be held on Dec 27, NTR rolled yet another dice. He ruled out the possibility of simultaneous polls for the Lok Sabha and state Assembly because he felt that time for preparation of lists of candidates was not sufficient and neither were there enough ballot boxes to conduct simultaneous elections. The proposed date now for the Andhra Pradesh

Probably the off-chance of the Congress(I) retrieving some of its lost ground because of the sympathy generated by Mrs Gandhi's death and possible defection in view of the unpredictability of the Lok Sabha elections has made NTR overcautious. He wants to see the outcome of the polls and then prepare his future moves accordingly. He also wants to ensure that he is not caught unawares in the midst of another crisis. At the moment then, NTR is content with keeping a low profile. All said and done, NTR has everyone agog with excitement and anticipation for what promises to be a nail-biting climax!

PAUL vs ESCORTS

NO RAJ FOR SWRAJ

On Nov 9 the Bombay High Court judgment on the controversial Swraj Paul vs Escorts case gave it an entirely new turn. The Managing Director of Escorts Ltd, H.P. Narida had filed a petition earlier this year challenging the legal and constitutional validity of certain circulars of the Reserve Bank of India (RBI) dated Sep 19, 1983, relating to the eligibility of the purchase of Escorts' shares by the Caparo Group of Companies controlled by the London-based Indian industrialist Swraj Paul. These circulars had conferred eligibility even on Non-Resident Indian (NRI) companies to purchase shares in Indian companies in which NRIs held the minimum of 60% shares only indirectly, retrospectively under the portfolio investment scheme.

The bench consisting of Chief Justice K. Madhav Reddy and Justice D.M. Rege has categorically declared the Caparo group's purchase of shares as invalid and illegal. Invalid because it has been found that the NRI holding in the Caparo group was not the stipulated 60 per cent or more at the time that Paul made the share purchases (the court disallowed the Sep 1983 circular permitting these purchases with retrospective effect), and illegal because these purchases were made through the Punjab National Bank without obtaining prior permission from RBI. Under Section 29(1) B of the Foreign Exchange Regulation Act (FERA) the RBI's prior permission is mandatory and any purchases made without it are held illegal and are liable for action under Sections 50 and 57 and prosecution under Section 56.

Another aspect of this multi-faceted case was the participation of the Life Insurance Corporation (LIC). The LIC, a public sector institution, along with other government owned financial institutions, own 53% of the shares in Escorts. They had linked up proposals to accept pre-payment of loans and the merger of Escorts with Goetze with the issue of registration of transfer of the Caparo shares. Apart from this, the LIC had acted arbitrarily when having failed to force Escorts to register shares it had requisitioned an extraordinary general meeting (EGM) of Escorts on Feb 11 in a bid to replace nine out of the 15 directors of the company with nine nominees of financial institutions having majority shares. By this action the LIC violated Section 14 of the Constitution as well as Section 284 of the Companies Act. The bench, therefore, has declared null and void both the EGM as well as the resolutions it passed.

The verdict of the Bombay High Court, thus, viewed in isolation, indicates that public sector institutions like the LIC are not ordinary shareholders in the corporate sector and cannot, therefore, dictate terms, even though the majority of stocks may be held by them. Meanwhile the Supreme Court, on Dec 10, decided to stay the High Court's judgment and fixed Feb 26 for the final hearing of the LIC appeal challenging it. Till then, the future of NRI investments as well as the link between financial institutions and the corporate sector remains undecided. Also, complete confusion prevails regarding the fate of the nearly Rs 13 crores invested by Swraj Paul's Caparo group in Indian companies.

COMPUTER POLICY

MADE IN INDIA

The government's announcement of a new liberal computer policy bodes well for the country in terms of providing long-term benefits of computerisation as also helping in overall efficiency and price reduction with respect to a broad spectrum of items. The policy aims at indigenisation and standardisation of technology and is expected to bring down the prices of the final product and computer components to international competitive levels. It also ensures the induction of the best available technology into the Indian markets and will, undoubtedly, go a long way in closing the gap between the developed and developing countries.

Radical changes in policy and procedures for manufacture, import and export of computers and computer-based systems have been brought

puter industry include abolition of existing restrictions on the organised sector on manufacture and capacity, permission for foreign collaboration with 40% equity participation for making mini and micro computers in the private sector and above all, the formal classification of the computers and computer-based system under the electronics industry. This will enable the new units to avail of the benefits and concessions available to this industry.

In accordance with the new policy the duty rate on parts for manufacture of peripherals (which account for 58% of the price of computers) and micro-processor-based equipment has been slashed from 80% to 5% while the rate of duty on software in object code in any media from 100% to 60%.

Import duty on software in source code has been withdrawn altogether to facilitate the adaption of computers to Indian requirements. Imports of software as printed matter on paper will be allowed duty free as against the present level of 100% duty. Duty rate on imports of software in source code other than printed matter has also been brought down from 100% to 60%. The rate of duty on full-fledged computers has been reduced from the existing 135% to 60%. Import of computers, computer-based systems and sub-systems will henceforth be permitted to actual end users only.

Meanwhile, the Department of Electronics (DOE) will keep making periodical recommendations of progressively lower levels of duty in an effort to make local manufacturers more competitive with respect to equivalent imported systems. Import of designs and drawings will be allowed on an open general licence for research and development units.

The policy will hopefully help achieve "modernisation of technology and application of computers"—needs stressed by PM Rajiv Gandhi. It is estimated that because of implementation of the liberal policy, demand for mini and micro computers will soar to 100,000 a year by the end of the Seventh Plan.

Also, with the liberalisation of domestic manufacture, domestic computers will be able to compete progressively with their foreign counterparts on which sufficiently high duty will be levied. India, then, stands on the threshold of the 'Computer Age'.

ON FERTILISER IMPORTS

FOOTING A HIGH BILL

The growth in fertiliser consumption has picked up considerably. Domestic production, despite the excellent performances of plants run by National Fertilisers Ltd, Rashtriya Chemical Fertilisers, Indian Farmers Fertilisers Cooperatives and Madras Fertilisers, has not shown a corresponding increase. While the consumption of fertilisers is expected to go up from 77.92 lakh tonnes last year to 86.5 lakh tonnes—an increase of 8.58 lakh tonnes—domestic production is likely to rise by 3.37 lakh tonnes only. The subsequent spurt in demand has compelled India to import massive quantities of fertilisers.

Between April-October this year the purchase of urea has touched the 16-lakh tonne mark while those of phosphatic fertiliser and munite of potash, the 10 lakh tonne and 19 lakh tonne marks respectively. These purchases have been valued at Rs 700 crores and still the quantity imported has been insufficient to meet the growing demand.

The Union Agriculture Ministry is tapping all possible sources of fertiliser supply including Pakistan and USSR in an attempt to avert any shortfall in availability as this could severely affect foodgrains production. The target fixed for the current year is 153.6m tonnes and foodgrains production will not be allowed to suffer for want of fertilisers at any cost whatsoever. Shipment schedules for quantities already contracted are being advanced apart from contracting fresh supplies.

The rising trend in fertiliser prices in the world market is expected to make the fertiliser import bill substantially high. According to rough estimates it may even exceed Rs 1,200 crores. Heavy purchases by India and China together with outstanding demands from Indonesia, Philippines and several other countries have resulted in a shoot up in urea prices. The urea prices now are well over \$180 a tonne compared to \$105 a tonne in 1982.

Rather than attempting to rectify the situation, plants operated by the Fertiliser Corporation of India (FCI) and the Hindustan Fertiliser Corporation (HFC) have shown consistent dismal performances. The FCI has incurred losses of Rs 101 crores while the HFC over Rs 85 crores over the past few years while operating at low capacities. A lot of wasteful expenditure is also being incurred. It is high time some drastic measures were taken to improve the domestic production performance and decrease heavy reliance on import of fertilisers.

(Continued on page 60)

US ELECTIONS

REAGANISING THE COUNTRY

"You ain't seen nothing yet," promised President Ronald Reagan on his re-election to another five-year term as President of the United States. But what the world saw in this election will be worth remembering for a long time to come. He won by a margin of 59% to Mondale's 41%, and received 525 electoral votes, which is a record. He swept every state except the District of Columbia and Mondale's home state, Minnesota. He received 61% of the votes of the elderly people and 59% of the votes of the under-25 age-groups. Despite Geraldine Ferraro's candidacy for the Democratic Vice-presidency, women backed him by a 10-point margin. What is even more surprising is that 54% of Italian-American women, to which hyphenated group Geraldine belongs, voted for Reagan. He received 62% of the southern votes and 55% of the votes of the north-eastern states. The normally-Democratic Massachusetts and Rhode Island gave him 52% of the votes. Only the blacks voted solidly for Mondale, but the effect of the black swing vote in the southern states, where they reside in large numbers, was upset by a 70% white southern vote for Reagan.

Reagan's victory was, however, a personal victory. The Democratic Party gained two seats in the Senate and in the House of Representatives, the Republicans could gain only 15 seats. Potential 1988 Democratic presidential candidates like Senators Bill Bradley (New Jersey) and Joseph Biden (Delaware) won with easy margins. Speaker Tip O'Neill will continue to reign in the House with a more-than-65-seat Democratic majority. The Democrats also hope to regain control of the Senate during the mid-term elections of 1986. The defeated Mondale said with quiet dignity: "Do not despair. This fight didn't end tonight, it begins tonight. I've been around for a while and I have noticed in the seeds of almost every victory are to be found the seeds of defeat, and in every defeat are to be found the seeds of victory. Let us fight on."

Now that Reagan has won a landslide victory, what does he plan to do in the next four years? The world got a glimpse of his plans during his first post-election Cabinet meeting. On the question of the heavy Federal budget deficit, Reagan declared that he was "not in a compromising mood", since the nation had voted against tax increases and for further cuts in spending. He also said that he was against cutting back on his defence build-up and claimed that there was "plenty of fat" elsewhere in the Federal budget. During an interview with *Newsweek*, he stated that about \$100b was not being collected from taxpayers who evaded taxes. He, therefore, said that an easy solution was to broaden the base and simplify tax collection, and the income from that would meet the Federal deficit. He also aired views about appointing an arms-control "Czar" to help resolve East-West tensions.

However optimistic he may sound, the going will not be so easy. The budget deficit for 1985 is \$210b and the President is pledged against tax increases. The Democrats in the House of Representatives are also strong and there is the likelihood that there may be a protracted impasse with Congress over the details of domestic spending. Tip O'Neill and majority leader Jim Wright have just announced their post-election strategy—the Democrats are not going to let "Reagan hide in the basement while we raise taxes. If he wants something, he is going to have to ask for it."

US-USSR

ON TALKING TERMS

Almost exactly one year after the Soviet Union had walked out of the Geneva talks on Euromissiles (INF) in protest against the deployment of Pershing-2 and cruise missiles in West Europe by the NATO allies, Moscow and Washington announced the resumption of the talks. US Secretary of State George Shultz and Soviet Foreign Minister Andrei Gromyko are due to meet in January to discuss issues aimed at achieving an arms balance. Hopes that something like this may happen were aroused when President Reagan had expressed his interest in meeting his counterpart in the Soviet Union, Chernenko, so as "to get down to examining the question of reducing nuclear weapons". Reagan's main interest in expressing such a wish may have been a pre-election stunt to reassure the American public. Chernenko, however, took him at his word and decided to break the log-jam. The Soviet Union took the initiative and gave up its earlier insistence on

the withdrawal of cruise and Pershing-2 missiles from West Europe as a precondition for the resumption of negotiations.

President Reagan's National Security Adviser, Robert McFarlane, recently said that the administration was prepared to negotiate on long-range and intermediate missile controls and was also ready to talk about limiting space weapons. It is possible that the US may appoint a special envoy to take charge of the talks but no decision has yet been taken. The Soviet Union, on the other hand, feels that the US has not really changed its basic policy. Washington has been following a "star wars" policy—that is, to intensify the nuclear arms race to the extent that it becomes ruinous for the Soviet economy. According to the Communist Party newspaper *Pravda*, the main obstacle to agreement between the two countries is that Washington does not intend to give up its "star wars" programme.

Hardliners on both sides will have to be controlled if anything is to come out of the new Geneva talks. And the whole world wants the talks to be constructive: after all, who wants a nuclear holocaust?

USSR

THE HOMECOMING

"Having found myself in the so-called free world, I was not free for one single day." So said Svetlana Alliluyeva, Joseph Stalin's daughter, who re-defected to the Soviet Union 17 years after she had defected to the West through India. She had been allowed to come to India in 1967 with an urn containing the ashes of her Indian husband who had died of a respiratory problem. Once in New Delhi, she had sought asylum in the US Embassy and had later been given American citizenship. She had married an American architect, William L. Peter in 1970, borne him a daughter, divorced him in 1973 and moved to Cambridge, England, in 1982. Recently, however, she had begun to miss her homeland as well as her two children by earlier marriages, whom she had left behind in the Soviet Union.

On her return to Russia with her daughter Olga, she held a press conference in which she said that she had never wanted to become a defector in the first place but had chosen to do so. She added that from the moment she had arrived in the US, she had fallen into the hands of businessmen, lawyers, publishers and intelligence agents who had manipulated her. These people had sought to "turn my name and the name of my father into a sensation" and she had become "a favourite pet" of the CIA, which had dictated "what I should write and how".

Such statements by Alliluyeva are, perhaps, necessary for her rehabilitation in the Soviet Union. While in the West, she had denounced the Soviet regime in many books and interviews. She had called the Bolshevik Revolution a tragedy for Russia and had characterised Stalin as "a moral and spiritual monster". She had also vowed that she would never return to the "prison" of Russia and had virtually burned her Soviet passport. Recently, however, she had become depressed and homesick. She had told interviewers that she regarded both the US and the Soviet Union as equal menaces to world peace and that she felt as though she had moved "from one cage to another".

The propaganda victory of the return of the "prodigal daughter" for the Russians was doubled by the return of two other defectors in November. Igor Rykhov and Oleg Khlan, who had deserted from their military units in Afghanistan and taken shelter in Britain, turned themselves in to the Soviet Embassy in London. It appears that they, too, had become homesick. According to Alliluyeva, there are many defectors now in the West who have been prevented from returning home "only by fear of possible punishment". If this were true, her words and action may encourage many other defectors to re-defect.

In another development, Defence Minister Dmitri Ustinov was conspicuous by his absence from the line-up of Kremlin leaders before the Nov-7 parade. In 1982, Brezhnev had died three days after he made an unsteady appearance before this parade and a year later, Yuri Andropov's absence from this function gave hints of his imminent demise. Ustinov is said to be suffering from a "sore throat", but as Western Kremlinologists say, "colds in the USSR tend to be fatal". There are unconfirmed reports that he has either suffered a stroke or has a serious liver disease. Western analysts feel that his most likely successor is Warsaw Pact Commander Viktor Kulikov, although others feel that the civilian, Gngori Romanov, may also be in the running.

VIOLENCE AGGRAVATES

The crisis in Sri Lanka deepened in late November as Tamil guerillas stepped up their attacks on the Sinhalese. On Nov 21, there were a large number of reports of violence from Colombo and other parts of the country. Thirty policemen, a majority of them Sinhalese, were killed in an attack by Tamil guerillas on Chavakacheri police station in the northern province. Later, four shops owned by Tamils were set ablaze at Timhngasyaya in southern Colombo, where families of some of the victims of Chavakacheri resided.

As the month drew to a close, reports came in that 110 people had been killed in attacks by Tamil separatist guerillas. In simultaneous raids on two separate farms, about 50 civilians had also been killed. About 30 guerillas had also died in the incident. A guerilla organisation called Liberation Tigers of Tamil Eelam (LTTE) claimed responsibility for the attacks. This group is one of about six guerilla groups operating in places situated in rehabilitation centres for former prisoners. About 450 people had settled there in the last four months, and most of them belonged to the Sinhalese community.

The Sri Lanka Government has begun to reinforce its armed forces on a war footing. The National Security Ministry has arranged to recruit permanent personnel and volunteers for the defence forces and, according to reports, on one day alone, 15,000 men had stood in line to get enlisted in the Sri Lankan Air Force.

Meanwhile, the government has again charged that bases for the training of Tamil extremists exist in India. The Sri Lanka Freedom Party (SLFP), which had earlier not joined the government on this issue, reversed its stand. The SLFP leader, Anura Bandula, said in an interview that though he differed from CM Premadasa on other matters, "there is no doubt now that such bases do exist". India has denied the charge vehemently.

LIBYA

ON THE RECEIVING END

Libya outmanoeuvred France and Egypt outmanoeuvred Libya. Nov 12 was supposed to be the deadline when France and Libya were to concurrently withdraw their forces from Chad. French and Libyan troops have been locked in an uneasy stalemate in the former French colony of Chad since August 1981. Before the deadline approached, the French foreign minister declared that the French troops had withdrawn. But US satellites revealed that two Libyan battalions were still stationed in Chad and its President announced that the Libyan aggression had not ceased.

President Mitterrand's government was thus caught on the word front, and faced a major setback from the Organisation for the Liberation of Africa, a tough-talking ally against the Libyan strongman Col Muammar Gaddafi. Mitterrand was interested in protecting France's relations with the area as a whole and had hoped to reduce tensions through negotiations. Libya, however, went back on its words, and this was disclosed, much to Mitterrand's embarrassment, when the President was meeting Gaddafi on the island of Crete for the first Franco-Libyan Summit in 11 years. Gaddafi, at first, denied that there were Libyan troops in Chad, but later said that there was a delay in the withdrawal programme and promised to withdraw "every single soldier" from the area. France, on its part, declared that if the Libyans did not pull out, it would "honour its commitments" and return its troops.

On the other hand, Libya, too, suffered some embarrassment in November when Egypt disclosed that Gaddafi had sent out roving death squads to hunt down enemies. In the second week of November, Tripoli announced that the former Prime Minister, Abdel Hamid Bakkoush, had been "executed" in Cairo for having "sold his conscience to the enemies... of the Libyan people". Five days later, the Egyptian Government produced Bakkoush alive and well. It appears that President Hosni Mubarak had got wind of the plot to kill Bakkoush and had identified four foreign hitmen: two British and two Maltese. They had been arrested and faked pictures of Bakkoush lying in a pool of blood had been printed. Thus, Gaddafi had been tricked into thinking that his plot had succeeded and had made a public announcement. This event confirmed that the Colonel's international murder squads were still active. Mubarak also got confessions from the would-be assassins and warned that several world leaders had been marked for assassination, including West Germany's Helmut Kohl and Saudi Arabia's King Fahd. Mubarak had also recently accused Gaddafi of mining the Red Sea and plotting to blow up the Aswan Dam. Gaddafi denied all these charges and called them "imperialistic fabrications".

Besides getting duped, Gaddafi had yet another set-back in November when the Belgians withdrew their earlier offer to help him equip Libya with nuclear reactors. They were, perhaps, influenced by Libya's double-dealing

assurances that the nuclear material would not be diverted for building weapons, his word, it appears, cannot be trusted.

POLAND

MURDER OF A PRIEST

Late in October, the Rev Jerzy Popieluszko, who was a known anti-communist and used the church as his pulpit, was kidnapped. Eleven days later, his body was found in the Wloclawek reservoir, 45 miles down the Vistula river. His body was badly bruised and signs of torture were evident. Three Polish security officers were charged with the priest's kidnapping and murder and the government arrested a colonel and lieutenant in the Internal Affairs Ministry in connection with the killing and suspended one general on the grounds that he had not taken "sufficient supervision" of his department's operation. The three security officers subsequently pleaded guilty to the charge and Polish strongman Gen Wojciech Jaruzelski himself assumed charge of the Internal Affairs Ministry.

Few, however, believed that these officers had engineered the murder by themselves. Most Poles think that the plot goes much further. One theory is that the communist hardliners in the security forces had decided to eliminate the anti-communist priest. There is yet another theory which traces the conspiracy back to Moscow, which may want to discredit the Jaruzelski regime. Some Solidarity supporters believe that Jaruzelski himself was behind the murder because, although the government acknowledges the church's calming influence on the public, many priests have openly supported the outlawed Solidarity movement.

What is surprising is that the government is conducting its investigations with an openness which is unprecedented for a communist country. Further, the speed with which the Internal Affairs Ministry is acting is also unprecedented. The ministry has been going through a period of self-purification over the last two years and 2,000 officers have already been dismissed from the security service and the civil militia for various transgressions. However, the government has shown no signs of adopting a conciliatory attitude towards the Opposition, which holds the government responsible for the priest's murder.

The timing of the murder has also been awkward for Jaruzelski, coming at a time when the West seemed more inclined to restore diplomatic relations with Poland. As for Popieluszko himself—he has become a hero. Thousands turned up for his burial and long lines of mourners gathered outside his church for days afterward. Solidarity leader Andrzej Gwarda called for an hour's strike at Gdansk, but Lech Walesa was against this, and in favour of a resumption of talks between the Opposition and the government. He declared that "the death must become a building material of social peace".

UK STRIKE

PROMISING PROSPECTS

There are some hopeful signs that the National Union of Mine-workers (NUM) strike, which has proved to be the most disruptive labour unrest in the country since the 1926 General Strike, may end sometime in the near future. The strike, which has been continuing for over one-and-a-half-years, suffered a major setback when it was disclosed recently that the NUM had sought financial assistance from Libya's Muammar Gaddafi. The Marxist leader of the NUM, Arthur Scargill, met Salem Ibrahim, who is known to be one of Gaddafi's main paymasters to European terrorists, in France. Roger Windsor, the Chief Executive of NUM, had also visited Libya. The Libyan link was not widely accepted, even by some of the miners. Norman Willis, the Secretary-General of the Trades Union Congress, Britain's umbrella labour organisation, condemned Scargill's move. The main reason for this lack of support is that earlier this year, Britain had broken off diplomatic relations with Tripoli following the murder of an unarmed policewoman by a gunman inside the Libyan Embassy in Britain.

Later, in November, Scargill also made an appeal for assistance at the Soviet Embassy and according to the Soviet news agency Tass, the Soviet miners have contributed about £50,000 to the NUM. The strike was further weakened when the Mine-safety Supervisors Union decided not to join the miners' strike in late October. Had they joined, all of Britain's 174 coal mines would have had to be shut down. Meanwhile, the Coal Board has been holding out carrots to miners who return to work soon—\$1,764 in wages and back-holiday pay.

The strike has cost 60m tons in lost coal production. The strikers have lost an average of \$7,500 in pay, each. In the violence which has accompanied the strike, 35 policemen and many more miners have been injured and 45 strikers have been arrested. There has been large-scale violence of

I am not prepared to condemn the action of my members whose only crime is fighting for the right to work." PM Margaret Thatcher, however, remains uncompromising and, perhaps, her strong stand will finally pay dividends.

OAU

ORGANISED DISUNITY

The 20th Summit of the Organisation of African Unity (OAU) began at Addis Ababa in Ethiopia on Nov 12. African unity, for which the organisation was formed was, however, far from achieved, and the major point of contention this time was over the admission of the Saharan Arab Democratic Republic (SADR), which claims, over the objections of Morocco, a member of the OAU, that it controls Western (formerly Spanish) Sahara. Its guerilla arm, the Polisario Front, has, in fact, been fighting Moroccan troops in the area. SADR has Nigeria's backing. But its seating in the OAU would mean that it has the OAU's collective backing.

Morocco has steadily been losing the support of the OAU on the issue and Nigeria's Gen Buhari declared that Nigeria had decided to recognise SADR because of Morocco's failure to hold a referendum on independence in and for the territory and to open direct negotiations with the Polisario Front.

Morocco, therefore, withdrew from the meeting in protest and had withdrawn completely from the OAU. Zaire, too, did not participate in the proceedings of the meeting and 20 of the OAU delegations were not led by the head of state or government. King Hassan of Morocco signed a treaty of "union" with Libya in August and had perhaps hoped that this would strengthen his hand at Addis Ababa. But Libya's Gaddafi was present at the meeting and his men did nothing to keep the SADR out of OAU.

In fact, the one matter on which there appeared to be total African unity was South Africa and all the nations denounced the "racist regime" there. On other matters, the OAU remains divided and the question, therefore, arises: How long will it survive?

ETHIOPIA

HUNGRY FOR FOOD

Why does it take a 10-minute TV film to awaken public sympathy? So asked Muhammad Amin, the Nairobi-based BBC TV cameraman whose televised coverage of the Ethiopian famine has moved the Western world to send money and supplies at record-breaking rates to the starving country. And it is perhaps too late, for, according to estimates, it is unlikely that more than 20% of those gripped by famine could be reached before they died. At least 3,00,000 people have already died and at least 6m live on the brink of starvation. According to relief workers, over a million could die this year alone in what could become "the worst human disaster in recent history".

The first warnings of the impending disaster were ignored by the Western world and the Ethiopian Government two years ago. Critics of the Reagan Administration charge that Ethiopia's connection with Soviet Russia as a Marxist state, inhibited the American Government in its aid efforts. Earlier this year, the American Congress killed an economic policy initiative that would have provided Africa with \$75m for development in 1985 because it insisted that the money would go only to governments that rejected socialism. As for Ethiopia, the country's leader, Lt Col Mengistu Haile Mariam, was warned of the impending crisis two years ago by a group of Oxford University economists headed by Keith Griffith. He chose to ignore the warning and spent \$2.5b on Soviet arms. He spent another \$250m this year on the 10th anniversary of the Marxist revolution in the country.

Meanwhile, his countrymen died by the thousands every day. The last big African famine had occurred 10 years ago and had led to the death of over 3,00,000 people. It had also led to Emperor Haile Selassie's overthrow. At the time experts had insisted that famines are predictable and some had vowed that the disaster would never happen again. Yet, it has recurred, perhaps in a worse form. The natural disaster is worsened by poverty, environmental damage and rapid population growth. In fact, Africa is the world's poorest area and it is the only region where the population is growing faster than the food supply.

Ethiopia is not the only country affected by starvation. Two vast hells of starvation have spread across the continent and nearly 30 countries have been officially listed as 'hungry'. In the last 20 years, Mauritania has lost more than three-quarters of its grazing land to the encroaching sands of the Sahara, and in some areas, 90% of the livestock is dead. About 2,00,000 people have died in Mozambique. Chad, too, has been suffering from a famine similar to that of Ethiopia. To make matters worse, many other

Pining for food.

countries, for instance, Chad, Angola, Ethiopia and Mozambique, have been embroiled in civil war for years. Other relatively prosperous countries have suffered as a result of an influx of refugees. Sudan, which was once expected to become the bread basket of the Arab world, has been flooded by refugees from Ethiopia and Chad and can now barely feed its own 2.5m people.

The Western response of late has been very heartening but it may have come too late. The US has contributed \$97.5m in food aid to Ethiopia since Oct 1 alone; West Germany has donated \$6m in aid; Italy has promised to build a hospital; and Canada and Australia have contributed tens of thousands of tons of grain. The Soviets, too, have given much in aid and have sent 400 trucks, 16 planes and 24 helicopters to help distribute the food. This, however, is a short-term remedy, even if it helps to save many lives now. The question is: What can be done to ensure long-term self-sufficiency in food?

PAPAL PLOT

TRIAL OF THE CENTURY

What may well prove to be West Europe's trial of the century will begin sometime next year. Another chapter was added to the story of the conspiracy to murder Pope John Paul II in St Peter's Square on May 13, 1981, when the chief investigator, Judge Flario Martella, filed a 1,243-page final report on the case in early November. While Martella's report will remain secret till the trial begins, 13 pages have been made public and these have shed new light on the case.

After the attempted assassination, it was thought to be the work of a mad Turkish gunman, Mehmet Ali Agca, who was arrested immediately afterwards. But his statements led to the unravelling of an alleged Bulgarian connection and the threads may lead as far as Moscow. The report indicts three Bulgarians, including a Bulgarian airline official Sergei Ivanov Antonov, who is under house arrest, and two other Bulgarian Embassy officials, Todor Aivazov and Maj Zhely Vassilev, who have since left Italy.

Martella's report further claims that a second Turk, Oral Celik, a friend of Agca, fired a shot at Pope along with Agca. Martella is said to have a secret film shot by a Vatican camera crew that lends credence to this theory. There is a photograph of a man running away from the scene of the attempted murder, and this person is thought to be Celik. The Bulgarian helpers are alleged to have planned an escape route for the Turks, and Celik, who is absconding, may perhaps have used their help to escape.

The indictment also charges that a Turkish businessman, Bekir Celeuk, offered \$1.2m to Agca, Celik and another defendant, Musar Cedar Celebi, to kill the Pope. It further accuses another Turk, Omer Bagci, of smuggling in the Browning automatic pistol which Agca used to shoot the Pope. Bagci and Celebi are in jail in Italy and Celeuk is in Bulgaria. Martella's report claims that there are at least five other unidentified people involved in the conspiracy.

The Bulgarian Government has stated that the case is a political conspiracy against Bulgaria and socialism. Relations between Italy and Bulgaria have reached a new low, and early in November, a member of the Italian Parliament reportedly called for an end to diplomatic relations with Bulgaria.

PHILIPPINES KILLING AT RANDOM

The Agrava Commission, which investigated the 1983 murder of Opposition leader Benigno Aquino in Manila airport, put up evidence against Gen Fabian C. Ver, the armed forces Chief of Staff, and 24 other military officials. However, 68 Filipino generals put up an advertisement in a local newspaper pledging "unwavering loyalty and support" to Gen Ver. Only 15 generals did not sign this "manifesto", among them Lt Gen Fidel Ramos, his longtime rival. This showed that the upper rung of the army, at least, were staunch Ver supporters. Ver has, meanwhile, taken leave to prove his innocence, although he has not, as yet, relinquished his key post as head of the National Intelligence and Security Authority.

Even after the Agrava Commission declared that a military conspiracy was behind Aquino's assassination, another Opposition leader, Cesar Giliwaco, the Mayor of Zamboanga City in southern Mindanao, was murdered by an unknown assailant. While some felt that he had been killed by local mobsters, others alleged that the Ferdinand Marcos regime had masterminded it. He was an outspoken critic of the Marcos Government and had vowed not to cut his hair until "peace and democracy are restored". In fact, over the past two months, four other Opposition leaders have been murdered, and it is alleged that the right-wing People's Liberation Army, trained and financed by the Army, is responsible for the death of three of them.

The fury of nature added to the death toll. Last September, two typhoons named Ike and June devastated the islands. In November, typhoon Agnes killed over 500. Since over 700 are still missing, the toll may be as high as 1,200. The few economically-important regions, spared by the earlier typhoons, were affected by the November typhoon. Rebel groups took the opportunity provided by the confusion created by the typhoons, specially in areas where the communication system had broken down. In early November rebels killed 15 soldiers and 11 civilians. There were also a number of serious fires in some Manila hotels. These are said to be the work of urban terrorists. To say the least, Marcos is sitting on a potentially explosive situation. To add to his personal miseries, he has allegedly undergone a surgical operation recently and his physical condition is poor.

SORE CURE

Sore or pulled muscles need not worry you. The new hand-held sonic massager puts you right back into action. Developed over a period of 30 years this instrument produces sonic waves of 100-10,000 Hz that penetrate muscle tissue up to a depth of 6 cm. What's more, the massager can easily be used at home by any layman.

THE KOREAS SMILING ON

To Panmunjon they came, seven from the North, seven from the South. According to a veteran Korean watcher, "they usually start out smiling but end up scowling. Today, they kept on smiling."

The occasion was a meeting between delegates from North and South Korea to discuss economic ties between the two countries for the first time since 1945. Earlier, North-South exchanges had ended as damp squibs in May, talks of fielding a joint team for the Olympic Games in Los Angeles ended in a shouting match, and in August Pyongyang pointedly ignored a South Korean offer for technical and economic assistance. A natural calamity intervened, however, in September in the shape of a major flood in the South and set the two back on the tracks. Seoul accepted Pyongyang's offer of \$12m in relief supplies and the scene was set for the November meeting.

China has been pressuring North Korea to renew contacts with the South for a long time. The South, which wishes to expand unofficial and economic relations with Beijing and wants the Olympic Games, which are scheduled to be held in Seoul in 1988, to go off smoothly, decided to put aside its precondition that North Korea should apologise for the bombing in Rangoon last year which killed four South Korean Cabinet ministers and 12 other officials, and decided to meet the North Koreans.

During the talks, each side offered a list of proposed trade exchanges. The South was interested in buying briquette coal, iron ore, pig iron, lead, zinc, silica, scrap, fish, silk, cocoons, red beans, corn, castor beans and material for herbal medicines, and in selling finished steel, copper, aluminium, household goods, automobiles and electronics. The two mutually agreed to open railway links between the two capitals and a telephone "hot line" for trade purposes. They also spoke of opening key points in each country for trade. North Korea has a current foreign loan burden of \$3b and its economy suffers from ageing factories and equipment. It is possible that Seoul is just the first step, and Pyongyang aims at making contacts with the US and Japan for trade purposes and for improving its economy. Whatever the reasons for this North-South thaw, it is a welcome change from their previous hostile attitude. Korean reunification, however, still appears far away.

JAPANESE ELECTION IT'S NAKASONE AGAIN

Yasuhiro Nakasone recently became the first Japanese PM in more than a decade to win a second term as leader of the ruling Liberal Democratic Party (LDP) and with it the primeministership. This is because the party is predominant in the Japanese Diet (Parliament). The victory, however, did not come easily. There are a number of factions in the LDP, the chief among them being led by former PMs Kakuei Tanaka, Takeo Fukuda and Zenko Suzuki. Tanaka, who is now appealing a conviction for accepting a \$2m bribe from the Lockheed Aircraft Corporation of the US, heads the largest faction, controlling 120 of the LDP's 393 Diet members. He is known as the "shogun in darkness". Nakasone has Tanaka's backing and won the leadership struggle with his help.

His potential rivals were Kichi Miyazawa, who belongs to the Suzuki faction, and Spintaro Abe, who belongs to the Fukuda faction. More dangerous for Nakasone, however, was a plot engineered by dissatisfied members of the LDP. They backed a senior Tanaka man, Susumu Nikaido, with the hope that this would split the Tanaka faction's vote. The plot failed either because Nikaido proved to be too loyal or because he was unsure of himself.

The main reason for Nakasone's unpopularity within the LDP is that he is a Tanaka man and Tanaka is alleged to be corrupt. Two years back, Nakasone had pledged to rid the party of bad influences, but he has not cut his connections with Tanaka. In fact, he has become doubly indebted to Tanaka in this election. However, his popularity in the country stands at 58% in the polls, the highest for any Japanese head of government in ten years.

As a result of the compromise which led to his victory, Nakasone tailored key posts along factional lines. Abe was made the foreign minister and Miyazawa, the Chairman of the party's Executive Council. He also appointed Japan's first woman minister in 22 years. However, his critics had a field day when he granted five of the 20 Cabinet portfolios to members of the Tanaka faction.

Given his party problems, Nakasone may have to tone down some of his policies. In the fiscal and military fields, he may have to lessen his austerity moves.

S.B.

GEOGRAPHY HOMEWORK

BY BRIG R.L. MULLICK
(Reid)

It's time to speak geographically again because research reveals that usually 25% of all questions in G.K. in competitive exams like the Civil Services, Assistants' Grade, NDA, CDS, PO, Income-tax Inspectors, Senior Observers and Clerks' Grade are on Geography. So, to increase your knowledge globally, both physically and politically, and to take your score to greater heights, here's an exhaustive feature on Geography in all its latitudes and longitudes.

PHYSICAL

abrasion: Wearing away of part of earth's surface by the action of wind, water or ice; the moving debris, e.g., sand, acts as abrasive material.

afforestation: Planting bare ground with trees and transforming an area into a forest. Afforestation may be undertaken to replace trees cut down or to provide a supply of timber, or to improve the climatic or aesthetic conditions of a place.

altitude: (i) Height or elevation of a place above mean sea level, usually measured in feet or metres. (ii) Angular distance measured vertically, e.g., of a heavenly body, above the horizon.

anemometer: An instrument by which the velocity and direction of wind is measured, usually in miles per hour or metres per second. The commonest type is that in which cups rotating on a pivot record wind velocity on a graduated dial.

Antarctic Circle: The line of latitude at 66° 30' S. Owing to the inclination of the earth's axis, the sun does not set here on one day of the year, around Dec 22, the southern midsummer. Similarly, the sun does not rise on one day around Jun 21, the southern midwinter. The conditions are the converse of these at the **Arctic Circle** (latitude 66° 30' N) where the northern midsummer is around Jun 21, and the northern midwinter around Dec 22.

antipodes: When two places on the earth's surface are diametrically opposite to one another, i.e., situated at the ends of a diameter, each is said to be the antipodes of the other, e.g., North Pole and South Pole. The antipodes of a place 60°S and 50°W is a place 60°N and 130°E. At the antipodes, both the seasons and day and night are reversed. Winter at one is simultaneous with summer at the other, and noon at one is simultaneous with midnight at the other.

aphelion: The position of the earth in its orbit when it is at its greatest distance from the sun, i.e., about 3m miles further away than when it is at 'perihelion'. It reaches this position during summer in the Northern Hemisphere when it receives the direct rays of the sun and the days are of the maximum length.

archipelago: A group of islands. The name was first given by the Greeks to the islands in the Aegean Sea—Aegean Archipelago. It was afterwards used for any group of islands. Archipelagos are most common in the southern part of

the Pacific Ocean.

artesian well: When a basin-shaped permeable layer of rock, such as chalk, is sandwiched between two impermeable layers, such as clay, and is exposed at both ends, rain water percolates through these ends and fills the whole of the permeable layer which becomes saturated to the rim of the basin. If a hole is drilled through the impermeable rock reaching as far as the bottom of the permeable rock, water gushes out of the hole as a result of hydrostatic pressure. A well sunk at this place is called an artesian well. The name is derived from Artois the French province where some of the earliest artesian wells were constructed. Such wells are common in Australia and Algeria. In India, artesian wells are found in the Hoshiarpur district of Punjab and the Kangra district of Himachal Pradesh.

atmospheric pressure: The pressure of a point due to weight of column of air above that point. At the earth's surface (sea level) the pressure equals about 14.7 lbs per sq inch or 1,038 gm per sq cm. With increasing height above the surface, the pressure decreases.

atoll: A coral reef in the shape of a ring or horseshoe enclosing a lagoon. They are found in the Indian and Pacific oceans and are usually grown over with coconut palms.

avalanche: A vast mass of snow and ice at high altitude which has accumulated to such an extent that its own weight causes it to slide rapidly down the mountain slope, carrying with it thousands of tons of rock. Avalanches are a common occurrence in the Himalayas and many a mountaineering expedition has been wrecked by these moving glaciers.

barometer: Instrument for measuring atmospheric pressure. In its simplest form known as the Mercury Barometer, it consists of a glass tube closed at the upper end and filled with mercury. The lower end is plunged in a tank of mercury, this column of mercury is balanced against the weight of atmosphere. Another type of barometer is the Aneroid Barometer which consists of a metallic box, partially exhausted of air, its surface reacting to outside air pressure which is registered on a graduated dial face.

basalt: A dark grey or black fine-grained igneous rock formed by the solidification of lava.

basin: An extensive hollow or trough in the earth's crust. If occupied by an ocean or a lake it is termed as an ocean basin; if coal deposits are present, it is called a coal basin, the total area drained by a river and its tributaries is a river basin.

bay: Part of the sea, or of a large lake

enclosed by a wide curve of the shore, e.g., Bay of Bengal, Bay of Biscay.

biosphere: Both animate and inanimate life on earth which includes human beings, animals, birds and plants.

block mountain or horst: A mountain mass formed by the uplift of land between faults or by the sinking of land outside the faults.

bore or eagre: A tidal wave or great height and force which appears in the estuaries of certain rivers at times of high or spring tides. There is a conflict between the river and the tidal wave, resulting in a high wall of water moving up the river. The bore is experienced in rivers like the Hooghly in Bengal, Yangtse Kiang in China and the Trent in England.

bund: An artificial embankment, dyke or dam.

Buys Ballot's Law: The law, enunciated by Buys Ballot in 1857, which states that in the Northern Hemisphere the winds move anti-clockwise round centres of low pressure, and clockwise round centres of high pressure, the reverse being true, again for the Southern Hemisphere.

campos: The tropical grasslands or Savanna of Brazil, situated north of the equatorial forests of the Amazon Basin.

canyon: A deep ravine or narrow valley made by a river cutting its way through a rock. The most famous canyon in the world is the Grand Canyon of Colorado River in Arizona. It is about 352 km (220 miles) long and 16 km (10 miles) wide with walls 1,830 m (6,000 ft) high.

cape: The extreme end of land that juts out into the sea, e.g., Cape Comorin in the south Indian peninsula.

cataract: A large waterfall or series of waterfalls.

catchment basin or drainage area: The region which drains all the rain water that falls on it into a river or stream which then carries the water into the sea or to a lake.

Centigrade or Celsius Scale: The temperature scale used over most of the world including India. It is the simplest scale devised with two fixed points: the freezing and the boiling point of water, being 0° and 100° respectively. To convert temperature on this scale to one on the Fahrenheit Scale, multiply it by 1.8 and add 32 to the result. $F = (1.8 \times C) + 32$.

Chinook: A warm, dry west wind blowing down the eastern slope of the Rocky Mountains in Canada and the US. The Chinook causes the atmospheric temperature very quickly by as much as 15°C to 20°C in a couple of hours, melting the

...and morning greatly possible almost throughout the winter.

climate: Climate is a composite and average picture of weather conditions prevailing in a region over a long period, usually 30 to 35 years.

climatic regions: The main areas into which the earth is divided according to climate. The four principal climatic regions which are usually recognised are tropical, sub-tropical, temperate and polar.

cloud: Mass of watery particles suspended in the air which are formed by the condensation of water vapour in the atmosphere, usually at a considerable height above the earth's surface, water vapour is created by evaporation of surface water—oceans, lakes, rivers, etc. According to their shape and mode of formation, two main types of clouds are recognised—cumuliform or 'heap' clouds and stratiform or 'layer' clouds.

cloudburst: A phenomenon in which a huge mass of moisture-carrying clouds bursts into a heavy downpour on account of condensation of all water vapour at the same time. Cloudbursts, though possible anywhere, are more frequent in mountain districts, as in Kashmir.

col: A depression in a mountain chain connecting two or more mountains. Such depression is useful in mountaineering for establishing camps, e.g., South Col in the Everest area. Passes are formed across such depressions, also called saddles or necks.

confluence: The merging of two or more rivers or streams, as of the Ganges, the Yamuna and Saraswati at Allahabad.

coniferous forest: A forest of mainly evergreen coniferous or cone-bearing trees carrying needle-shaped leaves, e.g., pine, fir and spruce.

constellation: A group of fixed stars in the heavens. There are now 28 northern, 12 zodiacal and 48 southern recognised constellations, the best known amongst them being the Great Bear, the Orion and Ursa Major.

continental climate: The type of climate experienced in the interior of the great continents characterised by extremes of temperature, light rainfall and low humidity.

A B C D

Artesian well

Continental Drift: German scientist, Alfred Wegener, advocated in 1915 the theory of Continental Drift. According to this theory, there was only one continent and one ocean about 250m years ago. Wegener named this continent Pangaea (meaning all lands) and the ocean Panthalassa (meaning universal ocean). The land mass then separated and started drifting until it was divided into the present continents. The continents have been constantly on the move throughout geological history and are still shifting. The configuration of the continents, it is held

by geologists, will be completely different in another 50m years.

NIFE stands for nickel (Ni) and iron (Fe). Temperature at the centre of the earth is very high but the

STRUCTURE OF THE OCEANS

continental shelf: A shallow area surrounding the land masses and never more than 600 ft (100 fathoms) deep. The boundary of the continental shelf, which slopes gently towards the sea, is known as the continental edge. The shallow seas are good breeding ground for fish. Tides, useful for commerce, are also quite high in such areas. Along the eastern coast of India, there exists a fairly wide strip of continental shelf.

contours: A line drawn on a map to join all places at the same height above sea level; a number of contours, therefore, depict on a flat map the relief of the land over the area covered.

convective rainfall: Convection is the form of heat transmitted from one part of a liquid or gas to another by movement of the particles themselves. The hotter part rises to the surface and its place is taken by the cooler part. Similarly, due to the heat in the equatorial region, evaporation is very great and the warm moist air rises in a convection current upwards. In the upper regions of the atmosphere, water vapours condense, form thick clouds and bring heavy rains. Such rains are called convective rains.

coral islands and coral reefs: Coral polyp, part plant, part animal (consisting of a jelly-like mass around a hard skeleton which remains after the softer part has worn away), grows sometimes in such great masses as to form islands or reefs. Such coral islands are found in the Pacific Ocean, e.g., the Lau group of islands, the Indian Ocean (Laccadive and Maldiva islands) and the Atlantic Ocean (islands around the West Indies).

core or nife: The central part of the innermost layer of the earth consisting mostly of nickel-iron;

core is not liquid because the great pressure existing there raises the melting point of the rock.

coriolis force: The force due to earth's rotation on its axis which together with the force due to pressure gradient causes the wind to deflect, in accordance with Buys Ballot's Law.

cyclone: A region of low atmospheric pressure of which there are two types. The first, characteristic of temperate latitudes, is now usually referred to as a depression; the second typical of the tropics is usually called Tropical Cyclone. In both types, their winds in the Northern Hemisphere circulate in an anti-clockwise direction, and in the Southern Hemisphere in a clockwise direction.

cyclonic rain: Rain associated with the passage of a cyclone or depression and caused by a warm, moist air mass moving upwards over colder, heavier air.

deciduous forest: Forests of Monsoon and Cool Temperate regions. The trees in these forests lose their leaves at some season of the year. In order to protect themselves against excessive loss of moisture by evaporation, the monsoon forest trees, such as those of India and Burma, shed their leaves during the hot season. In the cooler regions of North-western Europe, the trees shed their leaves during autumn to protect themselves against the cold and frost of winter.

Rhine-Meuse Delta: The low flat sandy islands are dissected by numerous small creeks.

The deciduous forests yield a wide variety of hard and soft woods such as teak from the monsoon forest, and oak, elm and birch from the temperate forests.

delta: In its lower part, just before it falls in the sea, the river becomes extremely slow and the mud and soil that are held in suspension sink at the bottom. This earth continues to pile up till it forces the river to divert its flow and fall into the sea by a number of small channels. The triangular land formation between the extreme channels is called delta and resembles the Greek letter Δ . The well known deltas include the Nile, Mississippi, Hwang Ho, Ganga-Brahmaputra, the Rhine and Rhone. The soil of deltas is usually very rich.

density of population: Average number of people living within a specified unit of area; usually the square kilometre or the square mile in a certain area.

denudation: General wearing away of earth's surface by various natural agents: sun, wind, rain, frost, running water, moving ice and the sea. The heat of the sun causes the rock to expand, crack and break up; the wind carries loose particles and with sand helps to wear away rocks; the rain loosens and carries away the soil; frost freezes water in the cracks of the rock, causes the cracks to widen and the rock to break; solvent water of rivers and streams denude the land; moving ice in the form of glaciers also wears away the land; the sea along the coast also erodes the rocks. The process is also known as degradation. Denudation is one of the two major processes of the earth's sculpture, the other being deposition, also known as aggradation which means filling up the depressions or levelling up the surface of the earth.

dew: Water formed by condensation of atmospheric water vapour as the air cools. Dew point is the temperature at which condensation begins.

caldrums: Also known as the Equatorial Belt of Calms, it is a belt of low pressure in the equatorial regions where the North-Eastern and South-Eastern Trade Winds meet. The belt is characterised by low pressure, high variable winds, stormy weather and heavy rains.

dolomite: Magnesium limestone; it is composed of carbonate of lime and carbonate of magnesium in almost equal proportions. Brittle and lustrous, it is used in the production of steel and for building purposes.

dune: A sandhill formed either in a desert or along the sea coast by the agency of wind. The sand particles are carried along by the wind and piled into a heap which gradually increases in size till it becomes a mound or a ridge.

dyke or dike: 1. An inclined sheet of igneous rock formed when molten rock material from the interior of the earth has forced its way towards the surface through a crack, and has then cooled and solidified. 2. Embankment erected on a river bank or on the seashore to prevent the flooding of adjacent land.

earthquake: A movement or tremor of the earth's crust. Earthquakes are of two kinds: volcanic and tectonic. Volcanic earthquakes are caused by the eruption of volcanoes. On land,

Melford Sound, New Zealand — a fiord. It is a long narrow inlet of sea, with steep sides, scooped out by glaciers.

they are localised around the volcanoes and therefore, do not cause extensive damage; but in the sea, these earthquakes can give rise to tidal waves and cause widespread destruction. Tectonic earthquakes are caused by shifts in the rock structure of the earth due to the existence of a fault. When an earthquake strikes, tremors spread outwards in the form of seismic waves. The place of origin, called the epicentre, is the point on the earth's surface which is vertically above the point of origin or seismic focus of an earthquake. The magnitude of an earthquake is measured on the Richter Scale. Earthquakes upto 6 on the Richter Scale are considered to be mild affairs; between 6 and 8, they can be disastrous; beyond 8, they bring about total destruction wherever they strike.

entrepot: A place which acts as an intermediary centre for trade between foreign countries. It is a place where goods are temporarily stored. Two well-known examples of sea ports in entrepot trade are Singapore and Hong Kong.

erosion: The wearing away of the land surface by various natural agents of change. Some geographers regard erosion as synonymous with denudation.

estuary: Usually the funnel-shaped mouth of a river caused by the sinking of a lower part of the river valley in which effects of the tides may be observed.

extrusive rock: Igneous rock formed by solidification of volcanic lava or magma.

A fault

fault or faulting: A fracture in the earth's crust

where movement has taken place and a displacement of the rock strata has been caused, the strata on one side of the fracture lies at a lower level as compared to the corresponding strata on the other side. Faulting may give rise to well-marked relief features like rift valleys and horsts.

fauna: The animal life of a region corresponding to the term *flora* for plant life.

Ferrel's Law: The law which states that winds tend to be deflected owing to the earth's rotation to the right in the Northern Hemisphere and to the left in the Southern Hemisphere.

fog: Atmospheric condition of low-lying cloud or thick mist. When the temperature falls suddenly below dew point, a film of water is deposited in the dust particles present in the air. This is called fog. Visibility in a fog is reduced to one kilometre. If light, the fog is usually called mist.

Föhn Wind: Dry, warm wind, experienced in the northern Alps, which blows down the mountain valleys. Its warmth is due to pressure and consequent rise in temperature as it descends from high altitudes. The warm wind melts the snow and greatly helps agriculture. Similar winds are the Chinook, the Nor' wester (New Zealand) and the Sirocco (Iran).

fold mountains: Due to squeezing of the cooling earth, the intense pressure caused the crust to crumple up. This made huge wrinkles or folds upon its surface on land as well as on the ocean floor. This gave rise to fold mountains. Almost all the prominent mountain ranges of the present day come under the category of fold mountains, viz., the Himalayas, the Alps, the Rockies and the Andes.

fossils: The remains of a plant or an animal which has been buried and preserved over a long period in the rocks of the earth's crust. Fossilisation is usually confined to skeleton or hard parts; but entire mammals of pre-historic age have been found frozen in ice.

free port: A port (both sea and airport) at which goods, either imports or exports, may be loaded and unloaded without payment of customs duty.

frost: The particles of frozen moisture or ice crystals on exposed objects or near the ground when the air temperature falls at or below freezing point (0°C).

geographical inertia: The tendency of a place or region to retain an economic activity after original causes of that activity have ceased or changed.

geographical degree or measure of height equal to one-sixtieth (1/60th) of a degree or one minute (1) of latitude.

geoid: A term used to signify the shape of the earth which simply means 'earth-shaped'.

geophysics: The study of the physical processes relating to the structure of the earth; including not only the lithosphere, but also the hydrosphere and the atmosphere.

geyser: A hot spring characterised by violent and explosive eruptions of steam and boiling water; sometimes the jet of water rises to a height of 30 to 60 m (100-200 ft). It occurs in a volcanic region. The best known geysers are those of New Zealand, Iceland and Yellowstone National Park of the US.

glacier: Slowly moving ice mass, formed from accumulated snow. The lower layers of the snow mass, accumulated in the snowline region, harden up as ice which under pressure of its own weight, starts moving down slowly carving a broad and steep-side valley on its way.

gorge: The narrow passage that a river cuts out through the hills by means of systematic erosion.

grasslands: Regions of light rainfall where the natural vegetation consists of grass. Two main sub-divisions are recognised—the Tropical Grasslands or Savanna and the Temperate Grasslands which include the Steppes, Prairies and Pampas.

Great Circle: The equator is a great circle as its centre coincides with that of the earth. Every parallel other than the equator is a small circle because its plane does not pass through the centre of the earth. The Great Circle bisects the world into two hemispheres.

gulf: An extensive inlet of the sea penetrating far into the land. The Persian Gulf in West Asia and the Gulf of Mexico in Central America are well-known examples.

harbour: A stretch of water on the coast which affords shelter to sea-going vessels; it may have been formed naturally, e.g., Bombay, New York, Sydney, or artificially, e.g., Dover and Southampton.

heat wave: A term commonly used to signify an unbroken spell of abnormally hot weather.

hinterland: An area behind the sea port which supplies the bulk of the exports and where the bulk of the imports of that sea port are distributed. For example, the hinterland of Bombay port includes Maharashtra, Gujarat and Madhya Pradesh; Cochin's hinterland includes Kerala, Karnataka, Andhra Pradesh and Tamil Nadu.

horizon: The boundary of the part of the earth, seen from any given point; the line where earth (or sea) and sky seem to meet.

Horse Latitudes: Belts of high atmospheric pressure over the oceans, situated in both the hemispheres between the Trade Winds and the Westerlies. They are regions of calm, light and dry winds, and stable weather conditions.

humidity: The degree to which water vapour is present in the atmosphere. The actual amount of water vapour present in the air is its absolute humidity, but where the humidity is measured in terms of saturation, it becomes relative humidity, which is measured in percentage.

humus: Organic matter in the soil derived from the decomposition of animals and plants. Black in colour, it plays an important part in maintaining the fertility of the soil.

hurricane: Cyclonic storms of the West Indies and the Gulf of Mexico, originating in the east of the islands in the doldrums. The velocity in a

Loch Einich -- a typical glaciated region.

hurricane invariably reaches 120 km (75 miles) per hour and causes extensive destruction.

Ice Age: A geographical period in which ice sheets or glaciers covered large areas of the continents, reaching the sea in places and lowering the temperature of the oceans. There are indications that man was contemporary with the latter part of the ice age.

iceberg: Mass of ice which has become detached from the ends of great glaciers in the polar regions. They often project 60 m or more above the surface, and are sometimes several hundred metres long. Only about one-tenth of the mass of an iceberg is visible above the water, so that the depth of a berg below the surface is far greater than its height above the surface.

icefall: The part of a glacier where the sudden change of slope has caused crevasses and broken the ice surface into pillars of ice. An outstanding example is the great Khumbu icefall, below the Everest.

igloo: A dome-like dwelling built by the Eskimos in the Tundra region, made from frozen ice.

impervious rocks: Rocks which do not allow water to pass through them freely. Granite provides an example.

insolation: Heat energy received from the sun by the earth and other planets. The amount of insolation reaching any place during any one day depends on: (a) the area of the surface, (b) the inclination of the sun's rays, (c) the transparency of the atmosphere and (d) the position of the earth in its orbit. Insolation is the most important factor controlling the climate.

insular climate: The type of climate where the sea rather than a land mass is the dominant influencing factor. Experienced on islands and coastal regions. The climate is characterised by a relatively small range of temperature (see continental climate).

intensive cultivation: A system of farming where land is continually kept under cultivation

without being allowed to lie fallow any time. Farming is so intensive that two, three and even four crops are harvested in a year. Intensive cultivation is practised in countries where land is relatively valuable, as in Denmark or England, or where a rapidly growing population necessitates great intensity in the tillage of land as in monsoon Asia.

isobar: Lines shown on weather maps connecting points where the atmospheric pressure is the same at a stated time.

isobath: A line on a map joining points on the sea-bed with equal depth.

isohel: A line on a map joining places having equal duration of sunshine.

isohyet: A line on a map joining places having equal depth of rainfall over a certain period.

isoneph: A line on a map joining places having equal average cloudiness over a certain period.

isostasy: The state of balance or equilibrium that is said to exist between the highlands and lowlands of the earth due to difference in the densities of their respective rock materials.

isotherm: A line on a map joining places of the same average temperature.

isthmus: A narrow strip of land joining two large land areas, e.g., two continental land masses; or joining a peninsula to the mainland, e.g., the Isthmus of Panama and the Isthmus of Suez.

Japan Current (or Kuro Siwo): A warm Pacific current that flows northwards to Japan and eastwards to the coasts of North America. The current resembles the Gulf Stream in its course and effect.

jet stream: Winds thousands of miles long, more than 100 miles wide, and a few miles deep with a minimum speed of 100 ft per second. Jet streams originate when the polar and tropical air systems meet, their differing temperatures producing corresponding pressure changes which set the jets in motion. Jet streams are the overall regulators of weather conditions on earth.

Khamsein: The hot dry wind experienced in Egypt corresponding to Sirocco of North Africa. Khamsein is the Arabic word for 50; the wind is said to blow during a period of 50 days from April to June.

lagoon: Artificial lake at the mouth of a river,

inlets and bays. Other lagoons may also be formed by the development of sand bars across the inlets by sea waves as in the Bay of Bengal.

lake: Expanse of water occupying a depression on the land surface of the earth. They may form in rock basins or be caused by an obstruction such as ice or moraine accumulated in a river valley. A lake may be as big as the Caspian Sea or as small as a pond. Lakes may be very deep as Lake Baikal in Siberia having a depth of 1.5 km or extremely shallow as Lake Chau. Lakes which have an outlet and are drained by rivers are freshwater lakes while those which have no outlet become brackish or saltish (See table on page 38).

land breeze: Winds blowing from the land out to the sea caused by the differential in the cooling of land and the sea; during the night, the greater cooling of the land causes the air to descend and flow seawards. This is land breeze (see sea breeze).

laterite: A reddish rock material (clay) produced by weathering chiefly in humid tropical regions; it contains oxides of iron and aluminium. It is found in India, Malaya, Indonesia, Sudan and part of South America. Used locally for making mortar, cement, tiles, etc.

lava: Molten rock or magma which has flowed from the interior of the earth on to its surface through the crater of a volcano and/or a fissure and allows its dissolved gases into the atmosphere.

leeward: The side or direction which is sheltered from the wind, e.g., by a range of mountains. Rainfall is scanty on the leeward side as compared to the windward side. Tibet lies on the leeward side of the Himalayas whereas the Indo-Gangetic Plain lies on the windward side.

limestone: General form of rocks whose chief constituent is carbonate of lime. When pure, a limestone is white, but the presence of iron and other impurities give rise to red, brown, green, blue and other colours, e.g., limestone, chalk, dolomite and marble.

lithosphere: The rigid part of the earth's crust extending to a depth of 65 km (40 miles) below the surface, and comprising the Sial, the Sima and the upper Mantle.

littoral: The land adjacent to the coast of a country. Littoral region of the ocean comprises the shallow water adjacent to the sea coast and littoral countries are countries around that region.

Llanos: The vast tropical grasslands or Savanna, north of the equatorial forests of the Amazon Basin.

loam: A rich soil consisting of sand, clay together with silt and humus.

local time: Time calculated by the position of the sun at noon of a given place. The places lying on the same meridian, irrespective of their distance, have the same local time.

lowland: The low-lying land of a region in contrast with a mountainous area.

lunar month: The interval of time in which the moon makes one complete revolution round the earth from new moon to new moon; approximately 29.5 days.

magma: The molten material which exists below the solid rock of the earth's crust and sometimes reveals itself on its emission from a volcano; it may also cool and solidify while forcing its way upwards.

crust or lithosphere; it extends downwards to about 2,900 km (1,800 miles) below the earth's surface, under the mantle is the core.

map scale: The ratio between the distance between two points on a map and the actual distance it represents. It may be expressed by the two lengths, e.g., one inch to one mile; the map scale may also be expressed as an arithmetic ratio or fraction known as the Representative Fraction (RF) i.e., most maps are drawn on a scale of a 1/4-inch, 1/2-inch, 1-inch or 6 inches to 1 mile. As there are 63,360 inches in 1 mile, a map on which 1 inch represents 1 mile on the ground is said to be drawn to a scale of 1:63,360.

marsh: A tract of soft, wet land usually low lying and completely under water. The term is synonymous with swamp.

mean sea level or MSL: The average level of the sea; it is the standard level from which all heights are calculated.

Mediterranean climate: The type of climate experienced by the land bordering the Mediterranean Sea and also by other regions in both hemispheres situated in a similar geographical position. The characteristics of the climate are the warmth of summer, the mildness of winter and ample sunshine. Dominated by the Westerlies in winter and the Trade Winds in summer, moderate rainfall is received mainly during the winter, the summer being relatively dry. The vegetation is specially adapted to withstand the summer drought. Fruits like grapes, olives, oranges, lemons and grapefruit are in abundance. Besides the land around the Mediterranean Sea, other areas enjoying this type of climate are central California, central Chile, the southern tip of South Africa, and parts of southern Australia.

meridian: Meridians are imaginary lines drawn on the earth's surface joining the North and South Poles and cutting the equator at right angles. The meridian that passes through Greenwich in London has been internationally accepted as zero (0°) meridian or Prime Meridian; other meridians are measured east and west of the Prime Meridian to 180°.

meteor or shooting star: Small, solid body lying around in outer space. Meteors usually occur in swarms which on entering the earth's atmosphere at great velocity become incandescent and visible as shooting stars. Most of them are very small and disintegrate to such an extent during their passage through the atmosphere that they fall to the surface as dust. Occasionally, however, a larger body, known as meteorite, survives the journey and falls to the ground.

meteorite: A large mass of rock or mineral similar to meteor, but so large that it does not dis-

integrate on the earth's surface. Meteorites vary in size from small grains to large masses found in Greenland and South Africa, weighing from 60 to 70 tons or more. Some meteorites are almost wholly metallic; consisting chiefly of iron-nickel alloy, others contain silicates. One of the best known meteorites is the one which fell near Winslow, Arizona USA, probably about 50,000 years ago and formed a basin over a kilometre in diameter and about 180 m deep.

Meteorology: The science which investigates the atmosphere including the study of atmospheric pressure, temperature, winds, precipitation, cloudiness, sunshine, etc. On the basis of this knowledge, weather forecasts are made.

midnight sun: Term applied to the condition within the Arctic and the Antarctic circles of earth where the sun is visible during the whole 24 hours in midsummer. Due to the obliquity of the earth's axis, the pole which is inclined towards the sun enjoys a six-month day while the opposite pole remains in darkness for this period. At North Cape, Norway, just north of 73° N Latitude, for instance, a part of the sun's disc is continuously visible, day and night, from May 12 to Jul 29.

mineral: A natural inorganic substance which possesses a definite chemical composition (normally a rock does not) and definite physical and chemical properties.

mirage: Word used for optical phenomenon that arises from the reflection and refraction of light in unusual circumstances. Mirages are chiefly seen at sea or in deserts where there is calm air that is extremely hot or extremely cold.

mist: Due to condensation of water vapours in the air, mist appears in the lower layers of the atmosphere which reduces visibility. The phenomenon is called mist when visibility is less than 2,000 m and exceeds 1,000 m, but becomes fog when the visibility falls below the latter limit.

mistral: A cold northerly wind experienced on the shores of N.W. Mediterranean, especially the Rhone delta in France. The wind is strong (velocity may exceed over 130 km per hour), cold and dry and frequently brings down temperature to freezing point.

moon: The natural satellite of the earth, the only heavenly body which revolves round the earth. Moon has a diameter of 3,475 km (2,160 miles), a quarter of earth's diameter. As moon's period of rotation (day formation) on its axis and revolution (year formation) around the sun are equal, the same side of the moon always faces the earth.

moon, phases of: The various stages or changes of appearance through which the moon passes during its revolution round the earth, when

... .. 1985

length: Example: the Narmada Rift Valley in Madhya Pradesh.

riviera: Popular resorts and beaches on the coastal land of the Mediterranean in southern Europe, e.g., the Italian Riviera, French Riviera, Portuguese Riviera and Cornish Riviera.

Roaring Forties: See under Westerlies.

salinity: The degree of saltiness, expressed as the number of parts per thousand of the oceans and seas, lakes and rivers. The mean salinity of sea water, for instance, is 35 per 1 000. The degree of salinity depends on the amount of rain-fall, the loss of water by evaporation and inflow of river water to seas and lakes.

satellite town: Name given to a town which is associated with a large city though it is separated from the latter.

Savanna: The region lying between the equatorial forests and the hot deserts in both the hemispheres where the prevailing type of vegetation is grass (elephant grass is the most common) and scattered trees. Savannas are also called Tropical Grasslands, the most extensive Savanna land is in Africa (Sudan, Kenya, Angola, Rhodesia, etc.). The Llanos in Venezuela and Campos in Brazil are other examples of Savanna lands.

scrub: Term used for tracts of low-growing shrubs or stunted trees in areas which have insufficient rain and poor soil, as in the hot deserts.

sea breeze: The daily movement of air from the sea to the land caused by the difference in the heating of land and sea. During the day greater heat of the land causes the air to ascend and the heavy cooler air from the sea moves in to take its place. This is sea breeze (see land breeze).

sea level: The level at the surface of the sea not influenced by tidal or waves (see coast and level).

seismograph: Instrument used for detecting and registering vibrations of the earth's crust and especially those of earthquakes. The vibrations used to be recorded by a pen tracing on a revolving drum but in more modern instruments a photographic record is obtained on a moving film.

selvas: Dense tropical forests in the equatorial region of the Amazon Basin.

ship canal: A canal constructed to connect two usual depth and width between two seas or a function is to shorten the voyage. The best known ship canals are (i) **Suez Canal** connecting the Indian Ocean through the Mediterranean Sea and the Red Sea with the Indian Ocean. It has shortened the distance between Southampton in England to Bombay by about 1 600 km (1 000 miles) and is about 160 km (100 miles) long and 12 m (40 ft) wide and has a depth of 13 m (42 ft). (ii) **Panama Canal** connecting the Atlantic and Pacific oceans. It is about 64 km (40 miles) long, has deep water in the Caribbean to deep water in the Pacific, between 91 m (300 ft) to 30 m (100 ft) wide, with a minimum depth of 15 m (49 ft). Panama Canal has considerably shortened the distance between London and San Francisco, New York and Japan. (iii) **Kiel Canal** which connects the North Sea and the Baltic Sea. It is 18 km (6 ft) long with a depth of 13 m (45 ft). This canal shortens the distance between London and Baltic ports by about 400 km (250 miles).

sial and sima: Sial is the outer layer of the comparatively light rock of the lithosphere, including granite, lying beneath the continents.

Waterbury, Conn. 06702

warm ocean currents carry a great deal of water vapour giving generally a heavy rainfall over the coasts where warm currents flow and scanty rainfall where cold currents flow. In western Europe, there is heavy rainfall on account of the warm North Atlantic Drift. In South West Africa rainfall is scanty partly on account of the cold Benguela Current. The meeting of warm and cold currents produces fogs. Where the warm Gulf Stream meets the cold Labrador Current, one of the most foggy and hazy parts of the world is created. Ocean currents also affect temperature - warm currents keep the harbour open in winter and facilitate trade to be carried on throughout the year, ships are aided by the direction of the winds, and cold currents help cool the tropical seas, and attract large number of fish to be caught for food.

Oceanography: The study of the ocean including the nature of the water, its movements, its temperature, its depth, the ocean bed, the flora and fauna, etc.

Safety report -- Growth
Positive, well informed.

[illegible]

mathematical model of the system. The model is used to predict the behavior of the system under various conditions. The model is based on the following assumptions:

basis: A basis for the column space of A is the set of columns of A corresponding to the pivot columns of A .

[illegible]

orbit: The path of celestial bodies, e.g., earth in their revolution around the sun. The orbit of the earth as well as other planets is very nearly circular, although elliptical.

Oxygen. The amount of oxygen present in the atmosphere at its maximum concentration at about 23,250 km (14,450 miles) above the Earth:

pastoral farming: the practice of breeding and raising certain herbivorous animals, for example, reindeer in the tundra, sheep or goats in the desert or semi-desert lands, from which the inhabitants derive most of their necessities of life.

pampas: Wide treeless grassy plains in South America. They are suitable for cultivation of wheat, maize, alfalfa and flax and for cattle raising and dairy farming, giving rise to industries like meat packing, tanning and processing of dairy products. See Pampas, Steppes

peneplain: A region almost like a plain. Due to erosion by rivers and rain all the elevated portions of a region are worn down to the same level.

perihelion: Position of the planet in its orbit when it is at its nearest distance to the sun

winds throughout the lower atmosphere. It consists of calms and very light winds of the equatorial low-pressure belt—the Doldrums, the N.E. and S.W. Trade Winds blowing from the sub-tropical belts of high pressure towards the equator, S.W. and N.W. Westerlies on the poleward side of the Trade Winds, and N.E. and S.E. Polar Winds.

plateau: An extensive level area of elevated land. Sometimes the plateau is traversed by rivers and mountain ranges (Meseta of Spain); it may be exceptionally high as in the case of the Tibetan Plateau. It is usually called tableland when it is bordered by steep cliff-like faces.

port: A town with a harbour or a landing place at which ships and aircraft call to load and unload goods. It may be a river port, a sea port, an air port or a fish port

Prairies: Level, grass-covered, treeless plains of Central and North America. With porous soil, the area is most fertile and productive. Wheat is the chief crop extensively cultivated here.

precipitation: Total amount of rainfall, sleet or snow at a particular place

quartz: One of the commonest minerals present in many rocks and soils. It consists of silica and forms the major proportion of most sand.

quicksand: A mass of loose sand saturated with water at the mouth of a river.

radiation: Emission of radiant energy, e.g. in the form of heat by a body and its transfer through space. These include: radio, light, heat, X-ray, etc.

rainfall: The total amount of rain deposited on a given area during a given time. Melted snow and hail are included in rainfall. There are three different types of rainfall: orographic, cyclonic and convectional.

rain gauge: Meteorological instrument for measuring rainfall. A rain gauge usually consists of a cylindrical copper or glass vessel, containing a funnel for collecting rain and a bottle or other form of receiver. The contents are emptied at intervals into a measuring glass, graduated in millimetres or inches.

rain shadow: An area situated on the lee-ward side of a range of mountains and hills where prevailing rain bearing winds do not reach and therefore it has relatively light rainfall as compared to the windward side of the range. The best known example is that of the Western Ghats in India. The western slopes on the windward side are exposed for about five months to the S.W. Monsoons and have heavy rainfall extending to 6000 mm but on the eastern slopes, in the rain shadow area, the annual rainfall at many places is 600 mm or less.

reef Ridge of rock or shingle or sand at or just above or below the surface of water. The most common type is the coral reef.

relative humidity: The ratio, expressed in percentage, between the actual amount of water vapour in a volume of the air and the amount which would be present when the air is fully saturated.

relief rain: Rains caused by the surface relief of land. e.g. a mountain system, the Western Ghats receive heavy relief rain on their windward slopes.

rift valley: A valley which has been formed by the sinking of land leaving a long and narrow opening with steep edges. The best known example is the rift valley in West Asia which extends through Syria, Israel and Jordan and East

Example: the Narmada Rift Valley in Madhya Pradesh

riviera: Popular resorts and beaches on the coastal land of the Mediterranean in southern Europe, e.g., the Italian Riviera, French Riviera, Portuguese Riviera and Cornish Riviera

Rearing Forties: See under Westerlies

salinity: The degree of saltiness, expressed as the number of parts per thousand of the oceans and seas, lakes and rivers. The mean salinity of sea water, for instance, is 35 per 1,000. The degree of salinity depends on the amount of rainfall, the loss of water by evaporation and inflow of river water to seas and lakes

satellite town: Name given to a town which is associated with a large city though it is separated from the latter

Savanna: The region lying between the equatorial forests and the hot deserts in both the hemispheres where the prevailing type of vegetation is grass (elephant grass is the most common) and scattered trees. Savannas are also called Tropical Grasslands; the most extensive Savanna land is in Africa (Sudan, Kenya, Angola, Rhodesia, etc.). The Llanos in Venezuela and Campos in Brazil are other examples of Savanna lands.

scrub: Term used for tracts of low-growing shrubs or stunted trees in areas which have insufficient rain and poor soil, as in the hot deserts

sea breeze: The daily movement of air from the sea to the land caused by the difference in the heating of land and sea. During the day greater heat of the land causes the air to ascend and the heavy cooler air from the sea moves in to take its place. This is sea breeze (see land breeze).

sea level: The level at the surface of the sea not influenced by tide, or waves (see mean sea level).

seismograph: Instrument used for detecting and registering vibrations of the earth's crust and especially those of earthquakes. The vibrations used to be recorded by a pen tracing on a revolving drum but in more modern instruments a photographic record is obtained on a moving film.

selvas: Dense tropical forests in the equatorial region of the Amazon Basin.

ship canal: A canal constructed for the purpose of shortening the voyage between two seas. Its function is to shorten the voyage. The best known ship canals are (i) **Suez Canal** connecting the Indian Ocean through the Mediterranean Sea and the Red Sea with the Indian Ocean. It has shortened the distance between Southampton and Bombay by about 7,600 km (4,724 miles) and is about 160 km (100 miles) long, 16-200 m wide and has a depth of 13 m (42 ft). (ii) **Panama Canal** connecting the Atlantic and Pacific oceans. It is about 64 km (40 miles) long, 15-20 m deep water in the Caribbean, 10 m deep water in the Pacific, between 91 m (300 ft) to 30 m (100 ft) wide, with a maximum depth of 13 m (42 ft). Panama Canal has considerably shortened the distance between London and San Francisco, New York and Japan. (iii) **Kiel Canal** which connects the North Sea and the Baltic Sea. It is 18 km (61 ft) long with a depth of 13 m (45 ft). This canal shortens the distance between London and Baltic ports by about 400 km (250 miles).

sial and sima: Sial is the outer layer of the comparatively light rock of the lithosphere including granite, lying beneath the continents.

sima is the inner layer of the comparatively heavy rocks lying at the lower level than the sial, beneath the ocean basins. The words sial and sima stand for the first letters of the two commonly occurring elements in these layers: sial—silicon (Si) and aluminium (Al); and sima—silica (Si) and magnesium (Mg).

sidereal day: The period of time during which the earth completes a rotation on its axis (in relation to the fixed stars) and which equals 23 hours 56 minutes and 4 seconds, almost four minutes less than the mean solar day.

Simoom: Hot, desert sandstorms experienced in the Sahara and the Arabian deserts; carrying dense masses of sand, the Simoom moves from south to north and from east to west.

Sirocco: Hot, dry wind that is experienced over the northern shores of the Mediterranean in Sicily and south Italy. It withers vegetation and causes much damage to crops. In Egypt, the wind is known as the Khamsin, in Spain as the Leveche, in Tunis as the Chilli, in Libya as the Ghibli.

TAIWAN'S STATUS

Taiwan, formerly known as Formosa, is an island in the Chinese Sea some 144 km (90 miles) east of the Chinese mainland. It was ceded to Japan by China in 1895. After World War II (1939-45), the island was surrendered by Japan to General Chiang Kai Shek, the then head of the government in China on the mainland, in September 1945. Towards the end of the war against the Chinese communist regime, the General withdrew to Taiwan, in 1949, with 500,000 nationalist troops and made Taiwan the headquarters of the Nationalist Republic of China. USA signed a Mutual Defence Treaty with Taiwan in 1954 and Taiwan became the original member of the UN representing all China on Oct 24, 1955.

Although Taiwan still claims to be the legal government of all China, it lost its membership of the UN and its permanent seat in the Security Council to the People's Republic of China in October 1971.

USA broke diplomatic relations with Taiwan on Jan 1, 1979 and established relations with the Peking (Beijing) Government. India has no diplomatic relations with Taiwan but it maintains friendly relations with it at commercial and cultural levels.

soil erosion: Wearing away of the topsoil by action of wind and rain.

solar day: The time interval between two successive appearances of the sun over the same meridian which comes to 24 hours.

solstice: At the tropics the sun is seen at mid-day—on Jun 21, at the Tropic of Cancer, and on Dec 22, at the Tropic of Capricorn; these dates are known as Summer and Winter Solstices respectively.

spot heights: Indications in figures on a map regarding the height above sea level; a line joining all points of equal heights is called contour line.

spring: Natural outflow of water from ground and rock. Water percolates through a permeable bed such as sandstone or limestone until it reaches one that is impermeable; here it accumulates till the pressure forces it out of surface.

stalactite and stalagmite: A stalactite is an icicle-shaped column of calcium carbonate hanging from a roof of a limestone cave, deposited by dripping ground water; a stalagmite is found on the floor of a cave and grows upwards. If the two meet, a pillar is formed.

standard time or zonal time: Standardisation of time on the basis of a selected standard meridian over a given area. The world has been divided into 24 zones of 15° longitude each representing an hour, within each such zone, the time is uniform but it changes by one hour when the next zone is reached. The standard meridian of India is 82° 30' E, running close to Allahabad and Madras and the standard time is 5½ hours ahead of the Greenwich Mean Time (GMT).

Steppes: Grass-covered plains of Eurasia extending over the lower regions of the Danube, and in a broad belt over southern European USSR and south-west Siberia. They resemble the Prairies in North America and the Pampas in South America.

strait: A narrow stretch of sea connecting two extensive areas of sea across an isthmus.

submarine ridges and plateaus: Mountain ranges and mountain systems rising above the ocean floors; if they are long and narrow they are generally known as Submarine Ridges, if broad and large they are called Submarine Plateaus or Rises. The best known example is the Mid-Atlantic Ridge.

subsistence farming or agriculture: The type of farming in which crops grown are consumed mainly by the grower and his family. In India subsistence agriculture is practised in the lesser developed parts of Madhya Pradesh, Bundelkhand, eastern UP and south Bihar.

sun spot: A spot or irregular area on the surface of the sun. It consists of a whirling mass of gas just within the sun's atmosphere. The sun-spots are believed to cause magnetic and electrical disturbances on the earth.

Taiga: Coniferous forests of the Northern Hemisphere, e.g., North America, specifically the name is given to the forest land of Siberia.

tectonic movements: Earth movements which break, bend and warp the structure of the earth's crust and result in moving the earth's surface creating depressions and elevations.

temperate zone: See under zones.

terai: Large tracts of marshy jungles at the

ISRAEL'S CAPITAL

A resolution proclaiming Jerusalem as the country's capital in place of Tel Aviv was adopted by the Israel Parliament on Jan 23, 1950. Most of the government departments

have been located in Jerusalem. However, Jerusalem is not recognised as the capital by the UN. Afro-Asian countries, including India, recognise Tel Aviv as Israel's capital.

(Continued from page 35)

loot of the Himalayas. This is the home of India's wildlife, some of this land has been cleared for agriculture.

territorial waters: Belt of sea surrounding the coast of a state and subject to its jurisdiction; generally a 12-mile limit of territorial water is recognised for a country's jurisdiction.

topography: A detailed description of the features both natural and artificial, e.g., relief, rivers, valleys, railways, roads, etc of an area.

tornado: Violent storm, usually accompanied by torrential rain, which occurs in the Guinea land of South Africa and in the US, in the central plains of the Mississippi Basin; the wind velocity of a tornado exceeds 300 km per hour, bringing in its wake much destruction.

torrid zone: See zones.

Trade Winds: The regular winds which blow from the high-pressure belts of the sun tropics towards the low-pressure belts of the equatorial region, between 35° N and 9° N and 30° S and 1° S, in both the hemispheres. These winds blow with extreme regularity throughout the year, especially over the oceans. Trade Winds derive their name from the expression 'to blow trade' meaning 'to blow along a regular track'.

tropical cyclone: See under hurricane and typhoon.

tropics: The part of the earth lying between the equator and 23½° N bounded by the Tropic of Cancer in the Northern Hemisphere, and between the equator and 23½° S bounded by the Tropic of Capricorn in the Southern Hemisphere. The region lying between the two tropics is known as the Torrid Zone where the weather is always hot because the sun's rays fall directly overhead twice a year within this zone.

truck farming: Specialised and intensive cultivation of vegetables and fruits farther away from the markets and involving transport. This system is well-developed in the US, and in the densely populated industrial districts of North-West Europe—Britain (also known there as market gardening), Denmark, Belgium, the Netherlands, Germany and France.

Tundra: Cold desert area of northern Siberia and North America along the Arctic Circle. During the long winter the region is covered with ice and snow; in summer the surface thaws just enough for moss or lichen and low shrubs to grow. Reindeer and the caribou are the two well-known Tundra animals.

SPORTING HIGH!

The world's tallest fountain, McCulloch Fountain, at Fountain Hills, Arizona.

THE LONGEST RIVER

The people who should know differ strangely as to which is the longest river. The *Times Atlas* casts its vote in favour of the Amazon; the *Encyclopaedia Britannica* says the Nile; while the *Guinness Book of World Records* cannot make up its mind.

In terms of length the greatest river of all is the Nile, 6,648 km from shore to sea. Though Amazon is shorter (by just 211 km) it remains the greatest in every other sense. It is navigable by deep sea steamers for over 4,000 km; it has the largest river basin in the world; it has some 15,000 tributaries, the longest tributary having a length of 3,200 km (2,000 miles).

We may conclude that the Nile is the longest river and Amazon the biggest river.

From *Great Rivers Of The World*

UN MEMBERS

There are 159 member states to date. Two states have been admitted since 1945: Saint Christopher and Nevis (the islands in the Caribbean Sea) in Sep. 1983 and Roun Darassalam (South East Asia) in Sep. 1984.

twilight: Light between sunset and the dawn; the interval between sunset and the beginning of the night; after sunset.

typhoon: Strong tropical storm; a cyclone; a violent wind and rain storm which originates over the Pacific. The word typhoon is derived from the Chinese word for 'storm'.

Vald: The name of a town in the north of the United Kingdom. It is a town in the north of the United Kingdom. It is a town in the north of the United Kingdom.

volcano: A mountain or hill with a crater or vent from which smoke, steam, and lava issue. It is a mountain or hill with a crater or vent from which smoke, steam, and lava issue. It is a mountain or hill with a crater or vent from which smoke, steam, and lava issue.

wadi: A dry river bed or a small stream. It is a dry river bed or a small stream. It is a dry river bed or a small stream.

watershed: A ridge or high ground that separates two drainage basins. It is a ridge or high ground that separates two drainage basins. It is a ridge or high ground that separates two drainage basins.

weathering: The process of breaking down rocks and minerals into smaller particles. It is the process of breaking down rocks and minerals into smaller particles. It is the process of breaking down rocks and minerals into smaller particles.

Westerlies (Könnig's Formula or prove West Winds): A type of wind that blows from the southwest in the Northern Hemisphere and from the northwest in the Southern Hemisphere. It is a type of wind that blows from the southwest in the Northern Hemisphere and from the northwest in the Southern Hemisphere. It is a type of wind that blows from the southwest in the Northern Hemisphere and from the northwest in the Southern Hemisphere.

willy-willy: A type of wind that blows from the north in the Northern Hemisphere and from the south in the Southern Hemisphere. It is a type of wind that blows from the north in the Northern Hemisphere and from the south in the Southern Hemisphere. It is a type of wind that blows from the north in the Northern Hemisphere and from the south in the Southern Hemisphere.

zenith: The point in the sky directly above the head of the observer. It is the point in the sky directly above the head of the observer. It is the point in the sky directly above the head of the observer.

zones: The five belts into which the Earth has been divided: the Arctic Zone, the Northern Temperate Zone, the Equatorial Zone, the Southern Temperate Zone, and the Antarctic Zone. It is the five belts into which the Earth has been divided: the Arctic Zone, the Northern Temperate Zone, the Equatorial Zone, the Southern Temperate Zone, and the Antarctic Zone. It is the five belts into which the Earth has been divided: the Arctic Zone, the Northern Temperate Zone, the Equatorial Zone, the Southern Temperate Zone, and the Antarctic Zone.

PRINCIPAL RIVERS

River	Location	Length in km	Description *
Nile	Africa	6,695	White Nile originates from Lake Albert in Uganda and Blue Nile from Ethiopia; the two join together at Khartoum in Sudan to form River Nile. After flowing through <i>Egypt</i> (the river's longest course) near Alexandria, it falls into the Mediterranean Sea.
Amazon	South America	6,570	Originates from the Andes Mountain in Peru; tributaries come from Bolivia, Ecuador and Venezuela; the river flows through <i>Brazil</i> , and falls into the Atlantic Ocean.
Yangtze-Kiang	Asia	6,380	Rises in north-east Tibet and flows through central <i>China</i> , draining into the East China Sea.
Mississippi-Missouri	North America	6,020	Mississippi rises in Lake Itasca in Minnesota state of <i>USA</i> ; Missouri joins it at Saint Louis; together, they flow into the Gulf of Mexico at New Orleans.
Ob-Irtysh	Asia	5,400	Ob originates from the Altai mountains in Siberia; Irtysh from Sinkiang province of China; joining together, they flow through <i>Siberia</i> (Asiatic territory of USSR) and empty into the Arctic Ocean.
Hwang Ho (Yellow River)	Asia	4,840	Rises in Tibet and flows through <i>China</i> to the Pacific Ocean in the Gulf of Chih-le.
Zaire (Congo)	Africa	4,630	Rises in Zambia, flows through <i>Zaire</i> (previously called Congo) and empties into the Atlantic Ocean.
Parana	South America	4,500	Rises from Brazilian Highlands, follows Paraguay's borders, enters <i>Argentina</i> and flows into Rio de la Plata in the Atlantic Ocean.
Irtysh	Asia	4,400	Originates from the south-west slopes of Altai Mountains in Sinkiang province of China, joins Ob and flows through <i>Siberia</i> ; together, they fall into the Arctic Ocean.
Amur	Asia	4,416	Rising from the Pamirs in Inner Mongolia and flowing through <i>Siberia</i> , it enters the Pacific Ocean at the Sea of Okhotsk.
Lena	Asia	4,400	Rises near Lake Baikal, flows through <i>Siberia</i> and falls into the Laptev Sea of the Arctic Ocean.
Mackenzie	North America	4,340	Rising in Great Slave Lake, it flows through <i>Canada</i> to Mackenzie Bay in the Arctic Ocean.
Mekong	Asia	4,180	Rises in Tibet, enters <i>China</i> through which it flows and later forms, for some distance, the borders between Thailand and Laos and falls into the South China Sea.
Niger	Africa	4,100	Rising near Sierra Leone, it crosses Niger and flows through <i>Nigeria</i> and enters the Atlantic Ocean at the Gulf of Guinea.
Yenisey	Asia	4,090	Rises in the mountains of Mongolia and flows across <i>Siberia</i> (USSR) into the Arctic Ocean.
Missouri	North America	3,969	Source: Rocky Mountains in Montana (USA). It joins Mississippi near St Louis and flows into the Gulf of Mexico.
Mississippi	North America	3,779	See Mississippi-Missouri.
Murray-Darling	Australia	3,750	Murray rises in the <i>Australian Alps</i> . Darling, its biggest tributary, joins it in the state of New South Wales. Both empty into the Indian Ocean at Encounter Bay.
Volga	Europe	3,668	Rises in Valdai Plateau north-west of Moscow, USSR, and enters the Caspian Sea at Astrakhan.
Madeira	South America	3,240	Formed on the Bolivia-Brazil border, it flows 1,450 km through <i>Brazil</i> and enters River Amazon. Both empty into the Atlantic Ocean.
Indus	Asia	3,180	Rises from Mount Kailas, in Tibet; flows through the Kashmir gorges; is joined by its

Nanda Devi

*The name Everest to the world's highest mountain peak was given in 1865 by Sir George Everest (1790-1866), the British Surveyor-General of India who established its location and altitude. The Tibetan name for the peak is 'Chomolungma', which means the Goddess Mother of the Earth

**K2 (Godwin Austen) was the second peak to be measured during the survey of the Karakoram Range (hence K2). It was named in 1888 after its first surveyor, Lt Col Henry Godwin Austen (1834-1923).

***Kanchenjunga: The word means 'Five Treasures of the Eternal Snows'. In Tibet, it refers to the mountain's five peaks. Tibetans believe that the god of wealth resides there storing on its five peaks the five treasures: gold, silver, copper, corn and sacred books.

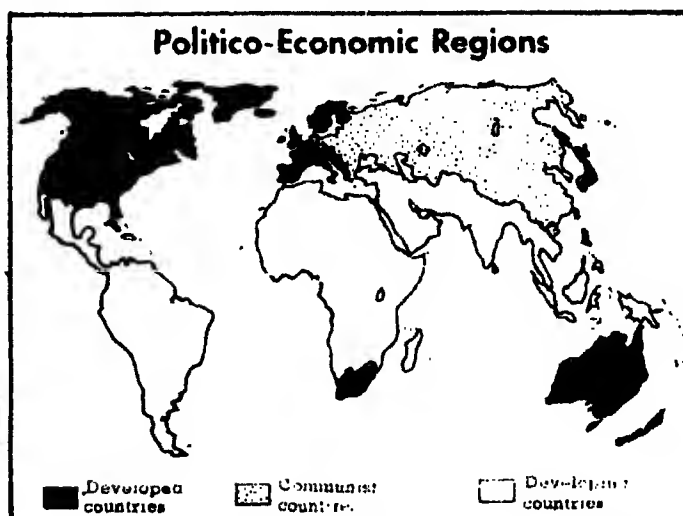

Most of the other Himalayan peaks derive their names from Hindu and Tibetan mythology or their mystical traditions. To the Hindus, the peaks of the Himalayas (abode of snow) are the petals of the Golden Lotus that God Vishnu created as a first step in the formation of the universe. To the Tibetans, the Himalayan peaks are the sacred ground for a multitude of gods and devils. The names of the peaks like Nanda Devi, Gosainthan, are after the names of the local deities. Annapurna means the 'giver of life' as the mountain is the source of sustenance and is worshipped by the mountaineers. Nanga Parbat means 'naked mountain' because its steep cliffs can hold no permanent snow.

REGIONAL GROUPINGS

From the geographical point of view, some regions in the world map stand out distinctly from the rest of the continent(s) and they show marked physical and social unity. Although there is some difference of views about their territorial limits and the countries included, the generally accepted regions from the geopolitical angle are: *South Asia, South-East Asia, West Asia, East Asia, the Caribbeans, Central America and Latin America. The Third World, North-South and East-West* are names with geographical connotations, now current; the basis of this regional grouping is more politico-economic than geographic. (Note: For regional groupings, we have adopted the classification as followed by the External Affairs Ministry of the Indian Government.)

Region	Description	Countries
South Asia	Geographically, the countries of the Indian subcontinent constitute this region; geopolitically, India groups the 7 countries shown in the next column under South Asia. These countries, including Maldives, (an archi-	India, Sri Lanka, Bangladesh, Bhutan, Nepal, Pakistan and Maldives

Region	Description	Countries
	pelag in the Indian Ocean south-west of India), are members of the South Asia Regional Cooperation (SARC). Burma, which is part of the subcontinent, is not included here but grouped under the South-east Asia region.	
South-East Asia	Collective name given to the series of peninsulas and islands which lie to the east of India and to the south of China. (India lists Burma in this regional group)	Burma, Thailand, Indonesia, Brunei, Kampuchea, Singapore, Malaysia, Philippines, Laos and Vietnam.
West Asia (Middle East)	<ul style="list-style-type: none"> ● The Asia region west and south-west of the Indian subcontinent, embracing the countries towards the eastern fringe of Africa and the Mediterranean Sea ● Referred to as the Middle East by the Western countries. In this group, they include, in addition to the West Asian countries, the North African countries of Egypt, Sudan, Libya, Tunisia, Algeria and Morocco ● Afghanistan, Turkey and Cyprus, which are located in this region, are not officially listed by India in the West Asian group ● Syria, Lebanon, Israel and Cyprus, which border the Mediterranean Sea, are collectively known as the <i>Levant</i>. 	Iran, Iraq, Bahrain, Oman, Qatar, Saudi Arabia, Kuwait, UAE, Jordan, Lebanon, Syria, North Yemen, South Yemen, Israel, (Afghanistan, Turkey and Cyprus).
East Asia (Far East)	This region includes the East Asian countries not shown under South Asia and South-East Asia; referred to as the Far East also	China, Taiwan, Japan, North Korea and South Korea
The Caribbean	<ul style="list-style-type: none"> ● String of archipelagos and islands around the Caribbean Sea in the Atlantic Ocean which stretch from near Florida in the US to the Venezuelan coast of South America. These islands form the heartland of Caribbean culture. But other islands in mid-Atlantic, and on the north-east fringe of Central America are also considered an integral part of the Caribbean area. Despite wide diversity in size, ancestry, language, population density and political organisation, the countries of the Caribbean show a common culture as a result of their somewhat parallel experiences as plantation colonies. ● The region covers roughly 90,560 sq miles with a total population of 3,00,00,000. 	1 The West Indies (independent territories)—Barbados, Cuba, Dominica, Dominican Republic, Grenada, Haiti, Jamaica, St Lucia, Trinidad & Tobago; (dependent/associated territories)—Anguilla, Antigua, Guadeloupe, Martinique, Montserrat, Puerto Rico, Virgin Islands 2. Bahamas, Bermuda, Guyana and Surinam
Central America	Region between 8°N and 18°N, it lies south of Mexico (North America) and north of Colombia (South America) comprising 7 republics.	British Honduras, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua and Panama.
Latin America	<ul style="list-style-type: none"> ● Name given to South and Central America where the predominant language spoken is Spanish. Spanish is derived from the old classical Latin. ● The Portuguese-speaking 	Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay and Venezuela.

Region	Description	Countries
	Brazil in South America also forms part of this.	
	<ul style="list-style-type: none"> ● Central America is spoken of as a separate region, as shown above 	
The Third World	<ul style="list-style-type: none"> ● Omnibus term for the world's underdeveloped countries, also referred to as Less Developed Countries (LDCs). ● Embraces the third element in the world power structure, the other two being the so-called "free world" of the US-led Atlantic alliance and of the USSR-led East European Communist bloc. ● The Third World comprises about 60% of the earth's surface and 70% of the human race, embracing about 100 nations with a population of over 3,000m. ● Common characteristics of Third World countries would appear to be: economically poor and technologically less advanced; high proportion of subsistence agriculture, reliance on one or two cash crops for export, minimal manufacturing industry, expanding population (expected to reach 5,000m. by 2000 AD) ● There is great diversity among LDCs in climate, terrain, geographical position, cultural tradition, demographic situation and Gross National Product. 	Embraces about 100 countries of Asia, Africa and Central America. Among them, most are NAM members.
North-South	<ul style="list-style-type: none"> ● North refers to the rich, industrialised, developed countries of the north (of high latitudes) and South to the underdeveloped and developing countries of the south (of low latitudes) ● The North-South Dialogue is concerned with the Third World's demand for a New International Economic Order. 	
East-West	East refers to the communist bloc and West to the non-communist bloc, the one dominated by the USSR and the other by the US	

*Ceded by Spain to the US by the treaty of Dec 10, 1898; name changed from Porto Rico to Puerto Rico by an Act of Congress. On Nov 27, 1953, President Dwight Eisenhower of the US sent a message to the UN General Assembly stating 'if at any time the Legislative Assembly of Puerto Rico adopts a resolution in favour of more complete or even absolute independence' he 'will immediately thereafter recommend to Congress that such independence be granted'. Since parties advocating full independence for Puerto Rico have polled no more than 5% of the total seats in the Assembly, it continues to be a US territory.

DID YOU KNOW THAT...

- the total length of the canals in the Rajasthan Canal System is 9,425 km and that it is more than the length and breadth of the country added together;
- the number of bricks used in the lining and other construction work for the system is 340 crores and these bricks will be enough to tie an 8-m broad band above the equator?

MAJOR RESOURCES OF THE EARTH

Natural resources are generally classified as biotic and abiotic resources. Those consisting of living things such as forests and their products, agricultural crops, animals, fodder, wild and domestic animals, birds, reptiles and fishes are all biotic resources. These are renewable. Abiotic resources consist of non-living things like minerals and fossil-fuels such as coal, petroleum and natural gas; abiotic resources may be considered as mostly non-renewable.

Some of the important commodities comprise

1. AGRICULTURAL CROPS

- a. food crops : wheat, rice, barley, rye, oats and maize.
- b. Beverage crops : tea, coffee, cocoa
- c. Fibre crops : cotton, wool, silk, flax, jute.
- d. Cash crops : sugarcane, tobacco, vegetable oils, spices, rubber.

2. MINERALS

- a. Metallic : iron ore, copper, aluminium, tin, lead, gold, silver.
- b. Non-metallic : coal, mica, manganese, petroleum, sulphur.
- c. Atomic : uranium, thorium.

3. MANUFACTURING INDUSTRIES

- iron and steel, textiles, jute, chemical, paper, rubber, ship-building

27°C), long rainy season (150 cm).

Soil: Deep, loamy, well-drained, calcareous.

CPC: India, Brazil, Cuba, China, Mexico, Pakistan, Colombia, Australia and South Africa.

Cotton

Climate: Warm (temperature around 25°C), moderate rainfall (110 cm) during growing season, dry during picking.

Soil: Black cotton soil

CPC: USSR, USA, China, India, Pakistan, Turkey, Brazil, Egypt, Mexico, Sudan, Nicaragua, Greece and Guatemala.

Rubber

Climate: Hot (average temperature 27°C) heavy rainfall (200 cm)

Soil: Deep rich.

CPC: Malaysia, Indonesia, Thailand, India, Sri Lanka, Nigeria, Liberia, Vietnam, Brazil and Zaire.

Minerals

(Principal producing countries)

Iron

USSR (leading iron-ore producer), USA, Australia, Canada, Sweden, France, Spain, India, China and Brazil

Copper

USA, Chile, Zambia, Zaire, USSR, Canada, Spain, Mexico, Japan, Australia and India.

Aluminium

Jamaica, Surinam, France, Ghana, Hungary, Australia, USA, Greenland and India

Coal

USA, USSR, China, West Germany, UK, France, Poland, Belgium, Australia and India.

Petroleum

Saudi Arabia, Kuwait, Iran, Iraq, Qatar, UAE, Libya, Algeria, Nigeria, Niger, Egypt, USA, USSR and Indonesia.

Uranium

Zaire, South Africa, USA, Canada, East Germany, Czechoslovakia, USSR and India.

Thorium (from monazite)

India, Brazil and USA.

Manufacturing industries

(Principal producing countries)

Iron & steel

USA, USSR, Japan, West Germany, UK, France and India.

Textiles (cotton)

USA, China, India, Japan, USSR, UK, Taiwan, Canada, Egypt, France and Italy.

Textiles (woollen)

USSR, UK, Japan, Australia, India, France, Poland, Belgium, Czechoslovakia, West Germany and Bulgaria

Jute

India, Bangladesh, UK, West Germany, Italy and Japan.

Chemicals (heavy)

USA, West Germany, UK, USSR, Japan, Canada, Australia and India.

Paper

USA, Canada, Japan, UK, West Germany, Sweden, Norway, Finland, USSR and India.

Rubber

USA, UK, West Germany, France, the Netherlands, Australia, Canada, Brazil, Indonesia and Sri Lanka.

Major crops

(World distribution)

Wheat

Climate: Cool with fair amount of moisture in the beginning, warmth and dryness at the time of ripening and rainfall at intervals. Temperature between 16°C and 27°C; rainfall 50-75 cm.

Soil: Clayey loam.

Fertilisers: Phosphates.

Chief Producing Countries (CPC): USSR, USA, China, India, France, Canada, Australia, Turkey, Italy, Pakistan, West Germany and Argentina.

Rice

Climate: Hot (average temperature 20°C) and wet—rainfall 150-200 cm; soil saturated in water—'root in water, head in hot sun'.

Soil: Rich, muddy.

CPC: China, India, Indonesia, Bangladesh, Thailand, Japan, Burma, Vietnam, South Korea, Brazil, the Philippines and USA.

Tea

Climate: Warm and moist (temperature over 21°C), heavy rain (200 to 250 cm)

Soil: Deep, well-drained as on hill slopes

CPC: India, China, Sri Lanka, USSR, Japan, Kenya, Turkey, Indonesia, Bangladesh, Argentina and Uganda.

Coffee

Climate: Hot and moist (temperature 14°C-26°C), rainfall (175 to 300 cm).

Soil: Humus (rich in iron and potash), well-drained hill slopes.

CPC: Brazil, Colombia, Mexico, Ivory Coast, Uganda, Guatemala, Indonesia, El Salvador and India.

Sugarcane

Climate: Hot (average temperature 21°C to

INDIA

RIVER SYSTEM

The rivers of India are broadly classified into two categories: the Himalayan System and the Deccan System. The Himalayan rivers are the perennial rivers being snow-fed and rain-fed; the

Deccan rivers are seasonal as their flow is dependent mainly on rainfall. See the table below for the salient features of the two river systems:

River	Source	Body of Water into which it falls	General features
A. HIMALAYAN SYSTEM			
Indus	Mount Kailas in Tibet	Arabian Sea	General direction of flow: west and north-west (Punjab, India) south-west (Punjab & Sind, Pakistan); has five major tributaries: Sutlej, Beas, Ravi, Chenab, Jhelum.
Ganga	Rises from the glacier Gangotri in the Himalayas	Bay of Bengal	General direction of flow: west, south-west, east, south-east; flows through U.P. Bihar and Bengal; main tributaries are: Yamuna, Gomti, Ghagra, Gandak, Ram Ganga (all these except Gomti emerge from Himalayas), Sone, Chambal, Betwa, Ken join the Yamuna from the south after flowing through the southern hills; eventually all rivers flow into Ganga.
Brahmaputra	Mansarovar Lake in western Tibet	Bay of Bengal	Flows through Himalayas, turns south-west and then south, joining the eastern-most branch of Ganga—the Padma—both emptying together into Bay of Bengal.
B. DECCAN SYSTEM			
Godavari, Krishna, Cauvery & Pennar	Western Ghats	Bay of Bengal	General direction of flow: east, south-east; Godavari forms the largest river basin in Deccan and the second largest in India; often called 'Dakshina Ganga' or 'Vridha Ganga'; Krishna basin is the third largest in India.

Mahanadi & Damodar	Rise in the north-west of Deccan Plateau	Bay of Bengal	Flow eastwards. Mahanadi forms the fourth largest river basin in India
Narmada & Tapi	Northern-most extremity of Deccan Plateau	Gulf of Cambay in the Arabian Sea	Flow westwards. Narmada has an extensive river basin
Sharavati, Netravati, Bhartapuzha, Periyar and Pamba	Western Ghats	Arabian Sea	Flow westwards. These west coast and fall into Arabian Sea. Formed three small rivers with minor basins

CLIMATE

The climate is studied under average weather conditions prevailing from one season to another in the course of a year. The Indian Meteorological Department recognises four seasons: (1) Cold weather season (December-March), (2) Hot weather season (April-May), (3) Rainy season (June-September), (4) Season of retreating south-west monsoon (October-November). The seasonal variations in the weather conditions are produced by a number of factors such as surface distribution of pressure and winds, upper air circulation caused by factors controlling global weather and the inflow of different masses and jet streams, and the inflow of western disturbances and tropical cyclones.

Q. Which are the coldest parts and why?

A. The coldest parts lie in the Trans-Himalayan and Greater Himalayan regions. Dras and Kargi of Ladakh region are the coldest parts where temperature can fall as low as -40°C ; this is due to the combined influence of the distance from the equator and the effect of altitude.

Q. Which are the hottest parts and why?

A. The hottest parts lie in west Rajasthan at Barmer where mercury shoots upto 50°C (122°F) during day time; this is due to the distance from the sea, absence of rainfall, and dry and sandy soil which gets heated intensely.

Q. Which are the wettest and driest parts and why?

A. The wettest part is Cherrapunji in Meghalaya (in fact the place which receives the maximum amount of rainfall in the world is not Cherrapunji but *Mawsyran*, 10 km from Cherrapunji). Here the rainfall is as high as 1,080 cm; this is due to its funnel-shaped location surrounded by the Khasi, Garo and Jaintia hills. The driest part is Jaisalmer in western Rajasthan which receives the minimum amount of rainfall (less than 12 cm); its distance from the Bay of Bengal's monsoon winds, and location in the sub-tropical high pressure belt being the main reasons.

The monsoons

The climate is 'monsoonal', led by two rain bearing winds, the south-west monsoon and the north-east monsoon. The south-west or the summer monsoon, the dominant monsoon in India (85% of the total rain is derived from it), opens on the west coast about the beginning of June (the first rain is known as the *monsoon burst*) and continues till September. The amount of summer rainfall is characterised by a declining trend with increasing distance from the sea; eg. the rainfall decreases westwards in the northern plains—Calcutta receives 119 cm, Patna 105 cm, Allahabad 76 cm, and Delhi 56 cm; Western Ghats, the North-eastern Hills and the Himalayas cause regional variations in the distribution of summer rainfall. The north-east monsoon coming in the wake of the south-west monsoon (November-March) is comparatively a minor monsoon as it is confined to a smaller area of the

country particularly the north-east. Land Nadus (major monsoon) is the south-east monsoon from which the ever-flowing streams of the two monsoons—the November and the summer monsoon—arise. The monsoon is the dominant feature of the Indian climate.

IRRIGATION

Importance of irrigation. Agriculture is water management and of vital importance for our agriculture economy. Available water supply has to be increased and brought close to the crops at the proper time and in the right quantity. Rain-fall is not evenly distributed throughout the year, it is not enough for growing crops throughout the year.

Water resources. The sources of water consist of 1. Rain water, 2. Surface water, 3. Ground water. The sources of water are not equally available and of different quality. To provide irrigation facilities for the large cultivated area in the country.

Area irrigated. The area irrigated has been progressively expanded over the years. In 1951 the total area irrigated was 29 million hectares, and by 1980-82 it had risen to 61 million hectares.

Sources of irrigation. The sources of irrigation are major, medium and minor water courses, mainly canals, open channels, water courses, mainly wells and tubewells. They are divided by surface water and 40% by ground water sources.

Q. Punjab and Haryana had the greatest position in regard to irrigation by means of canals and wells. Why?

A. The rainfall in Punjab and Haryana is not only low (less than 55 cm in Amritsar) and far less in the southern districts of Punjab and Haryana but also, abundant and mostly concentrated in one season. There is thus a great need for irrigation. The river Indus and its five tributaries which irrigate the Punjab plain are snow-fed and provide water throughout the year for canals. The configuration of these rivers spread out like five fingers of a hand, hence it is easy inter-linking of these rivers by canals, the soft and even ground and porous soil make for easy digging of canals and sinking of wells for tapping underground water.

Q. In the Deccan the other means of irrigation is by tanks. Why?

A. In the Deccan the rivers are neither so numerous nor do they rise from snow-covered mountains and are therefore, waterless in dry seasons. As the ground is also hard, rocky and uneven, wells and canals cannot be easily dug, but tanks can be made by damming the rivers at different places to collect the water for storage and use for irrigation when required.

MULTIPURPOSE SCHEMES

Multipurpose projects aim at optimum development of a river valley in terms of all its resources and needs. They help (a) create maximum storage on a river, (b) secure flood control and prevent soil erosion, (c) provide irrigation not only in dry areas but also in the dry season, (d) generate hydroelectric power, and (e) extend facilities for navigation, fishing and recreation.

Some of the major multipurpose projects are outlined below.

Bhakra Nangal on River Sutlej. **Main features (MF):** (a) Bhakra Dam across the river Sutlej, 518 m long, 226 m high (three times as high as Qutab), highest straight gravity dam in the world. (b) Gobind Sagar Lake behind the dam, stores 73 lakh acres ft of water. (c) Bhakra Main Canal, 173 km long. (d) Nangal Hydel Channel from Nangal to Ripar reservoir, 64 km long, 42.7 m wide and 6.2 m deep. (e) Nangal Dam 11 km down the Bhakra Dam, 291 m long, 29 m high, stores 24,000 acre ft of water. (f) Four power plants—two at Bhakra, one each at Ganguwal and Kotla with total installed capacity of 1,204 Mw. (g) Canal system irrigates 14.8 lakh hectares. (h) The project was dedicated to the nation by Jawaharlal Nehru on Oct 22, 1963. **Beneficiary state(s) (BS):** Punjab, Himachal Pradesh, Haryana, Rajasthan.

Damodar Valley on Damodar. **MF:** (a) A dam each at Tilaya, Konar, Maithon and Panchet (all in Bihar) with a hydel power station at each location except at Konar. (b) Irrigation barrage at Durgapur (West Bengal), 692 m long, 11.58 m high with 7,495 km of canal system. (c) Thermal power station at Bokaro, Chandrapura and Durgapur. (d) 1,280 km route of double circuit transmission lines, 30 sub-stations and receiving stations. (e) Irrigation potential about 5.15 lakh hectares and power generating capacity 1,181 Mw. **BS:** Bihar, West Bengal.

Hirakud on Mahanadi. **MF:** (a) Dam 4,801.2 m long, 28.9 m high, flanked by 21 km of dykes constructed at Hirakud about 14 km above the town of Sambalpur (Madhya Pradesh) storage capacity 67 lakh acre ft of water. (b) Two power houses at Hirakud and Chipkema. (c) Irrigation potential about 2,054 lakh hectares and power generating capacity 770.2 Mw. Dam completed in 1957. **BS:** Orissa.

Tungabhadra on Tungabhadra (tributary of river Krishna). **MF:** (a) Dam at Mallapuram, 2,441 m long, 49.38 m high. (b) Reservoir stores 30 lakh acre ft of water. (c) Two canals on either side which irrigate 8.32 lakh hectares in Andhra Pradesh and Karnataka. (d) Two power stations one each at Mallapuram and Harpri, total power capacity of 99 Mw commissioned. Project completed in 1956. **BS:** Andhra Pradesh, Karnataka.

Mayurakshi on Murali. **MF:** (a) A weir constructed on Mor river at Tipara for storing water. (b) Canals take off from its right and left banks above the weir which irrigate 2.5 lakh hectares of land. (c) Canada dam, 640 m long and 47.24 m high was completed in 1955. (d) The hydroelectric plant produces 4 Mw of power. **BS:** West Bengal.

Nagarjunsagar on Krishna. **MF:** (a) A dam 1,450 m long, 115 m high on river Krishna at Nagarjunsagar (Andhra Pradesh). (b) Two canals on each side of river. (c) Irrigates 32 lakh acres of land. (d) Power generation 75 Mw. The dam has been completed and works on canals underway. **BS:** Andhra Pradesh.

Gandak on Gandak (tributary of Ganga). **MF:** (a) Joint venture of India and Nepal. Project completed in 1977. (b) A barrage 747 m long across river Gandak at Valmikinagar in Bihar. (c) An irrigation potential of 11.30 lakh hectares had been created by 1981-82 in Bihar and UP. (d) Power house with installed capacity of 15 Mw, in Nepal territory. **BS:** Bihar, UP in India; Nepal.

Kosi on Kosi. **MF:** (a) A dam 5 km long across the bed of river Kosi. (b) 120 km long embank-

embankment on western bank upto Jhama.
(c) A canal from Bhumi Nagar with four branches.
(d) Production of 90 Mw of hydro-electricity. (e)
Project targeted to irrigate 8/3 lakh hectares of
land. **BS:** Bihar

Farakka on Ganga. Bhagirathi **MF:** (a) A
barrage across the Ganga at Farakka near the bor-
der of West Bengal and Bangladesh. (b) A barrage
at Jangipuri across the Bhagirathi (the upper part
of Hooghly). (c) 39 km long feeder canal at Farakka.
(d) Road-cum-rail bridge over the Farakka barrage.
Two barrages and bridges completed, work on
the national canal in progress. Basic aim of the
project is to preserve and maintain the port of
Calcutta and improve the navigability of the
Hooghly. **BS:** West Bengal

Beas or Beas-Sutlej Link. **MF:** (a) Beas-Sutlej
Link—a dam across river Beas at Pannote near
Mandi in Himachal Pradesh; its spare water is can-
nelled through channels and tunnels to Sutlej at
Slapper (Himachal Pradesh), main function is to
augment water resources of Gribid Sagai Lake
at Bhakra. (b) Beas Dam at Pong (Himachal
Pradesh) 33 m high with installed capacity of four
power units of 60 Mw each; principally an irriga-
tion project. (c) Beas transmission system—
waters of Beas Dam carried to augment water
resources at Hanka Pattan reservoir at the con-
fluence of Sutlej and Beas rivers, will feed 204
km-long Rajasthan Feeder Canal (in Haryana,
Punjab and Rajasthan), and 445 km Rajasthan
Canal (in Rajasthan). (d) The latter comes under
another project known as Rajasthan Canal Pro-
ject, ultimately the entire project will irrigate an
area of 1,254 lakh hectares in the Thar Desert
region of Rajasthan. **BS:** Punjab, Haryana,
Himachal Pradesh, Rajasthan.

FORESTS

A total area of 75 06m hectares is covered
with forest, making a little over 21% of the land
area. The National Forest Policy has laid down a
target of raising it to 33.3%. Forests check soil
erosion on hill slopes in upper catchment areas of
rivers which help control floods, increase rainfall
and improve local climate, besides yielding such
products as timber, wood-fuel and numerous
other industrial raw materials.

Types of forests

India has different types of forests falling into
five botanical categories. Evergreen, Deciduous,
Dry, Hill, Tidal or Littoral.

Evergreen forests are found where rainfall is
between 200 and 300 cm (80" and 120") i.e. in
the Western Ghats and the sub-Himalayan regions
in the east. They provide hard wood like teak,
ebony, rosewood and bamboo of all
varieties.

Deciduous forests or monsoon forests are
found in areas where the rainfall ranges between
150 and 200 cm (60" and 80"). These forests
occupy a large part of the Deccan Plateau stretch-
ing over the states of Maharashtra, Madhya
Pradesh and Karnataka. They provide fine timber
such as teak, sal, padauk, sandalwood, red-
wood, arjun, etc.

Dry forests occur where rainfall is between 75
and 100 cm (30" and 40") which comprise the
desert regions of Rajasthan and south Punjab.
They consist mostly of shrubs, thickets and stunted
trees like jal, kikar, etc.

Hill forests are found in southern India above
3,000 ft and in the Himalayas above 5,000 ft,
and include the very best timber such as oak,

chinar, maple, poplars, etc.

Littoral forests occur in the estuaries of great
rivers like the Indus, the Ganga and the Mahanadi.
Trees in these forests provide good fire-
wood.

Forest products

The major forest products are wood, used as tim-
ber (e.g. teak, deodar and oak) as fuel (inclining
wood for charcoal) and as raw material for wood-
based industries like rubber, paper and coconut.
Minor products include bamboos and canes,
grasses of various kinds, leaves of different
trees, medicinal plants, gums, resin and
lac.

Forest-based industries

Paper industry depends on raw materials of
soft wood, woodchips, grasses (saba grass) and
bamboos. Paper mills have been established at
Titaghar and Kharagpur (West Bengal), Bap-
anagar (Orissa), Lucknow and Saharanpur (UP),
Jagadhari (Haryana) and Pune (Maharashtra).
Nepanagar in Madhya Pradesh manufactures
newsprint.

Gum industry. The most important gum-
yielding trees are natural bhesa, kudu, salai and
tharai. Karyu, a gum from Kum trees, is mixed
with resin to produce a variety of gums
exported and being a valuable foreign exchange
earner obtained from presap and habai trees among
others, is used for making oil type of goods
of great value.

Resins differ from gums in that they are soluble
in alcohol. Resin factories have been established
at Nahan (Himachal Pradesh), Bareilly (UP) and
Hoshiarpur (Punjab). Resin obtained by tapping
the trees is used for making paints and var-
nishes, grease, boot-polish, disinfectants, soap,
etc.

Match industry. Wood for matchsticks and
boxes is usually obtained from bamboos and
other soft wood trees like pine. Match industries
have been established almost throughout India
increasingly as a cottage industry. Match fac-
tories are found on a large scale at Kevdipati,
Sivakasi, Chirgudur (Tamil Nadu), Tichur,
Tiruvandram (Kerala), Ambarnathi, Chanderpur
(Maharashtra), Bareilly (UP), Shumga (Kar-
nataka), Dindur (Assam), Kota (Rajasthan), Bilas-
pur (MP).

Sports goods form another important forest
based industry in Jubbulpur (Punjab), Meerut
and Moradabad (UP), Kanpur (MP), Pune
(Maharashtra), Madras (Tamil Nadu).

Katha industry: Katha is obtained from a
plant called khar and is valued as a medicine;
some 3,000 tonnes is produced annually in India.
Faznagar in UP and Shivpur in Gwalior are well-
known for this industry.

Medicinal plants: Indian forests provide over
20,000 species of medicinal herbs of proven
therapeutic value. These are widely used for mak-
ing drugs, mainly under the ayurvedic system.
These herbs have given rise to a flourishing cos-
metic industry as well.

FISHERIES

India's coastline, of nearly 6,000 km, the exis-
tence of a continental shelf, the ocean currents
along the coastline, plankton brought down by
big rivers flowing in to the sea—all favour the
development of fisheries in our country.

Fish production in statistics over the period
1978-81 are shown in the table in the next
column.

Marine	lakh tonnes	14.9	14.9	15.5
Inland		8.2	8.5	8.7
Total		23.1	23.4	24.2

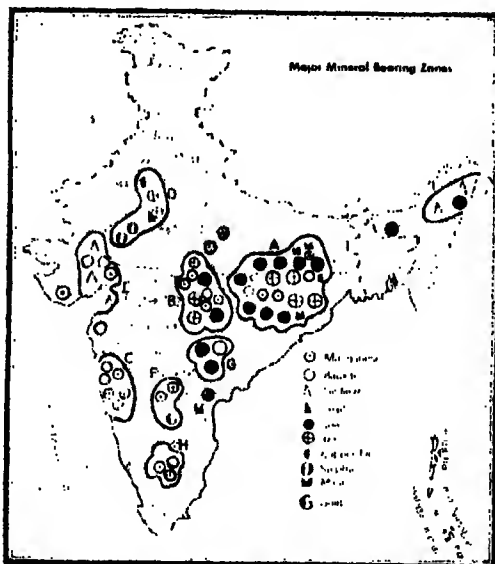

Marine fish resources are vast and are being
increasingly exploited as a commercial venture
and for export. Main species of marine fish
include tuna, sardines, mackerel, Bombay duck,
pomfrets, Indian salmon, shrimps, prawns, etc.

The emergence of multipurpose dam lakes in
many parts of the country has boosted the
development of inland fisheries on a large scale.
The main species of inland fish are kalta, rahu,
mrigal, and all major Indian carps.

MINERAL RESOURCES

Some noteworthy points about mineral
resources are:

1. The known resources are large but insufficient
in view of the country's size and population.
2. The available resources are quite unevenly
distributed over the country.
3. Sizeable and rich mineralised areas are marked
in relatively simpler and at the same time old crys-
talline rock structures of plateaus and low hills in
peninsular India.
4. There is a concentration of rich minerals found
in close proximity to each other forming a kind of
mineral belt of high economic importance.
5. The country may be divided into nine major
mineral bearing zones as shown in the map
below.

6. India is rich in certain minerals, self-sufficient
in others and quite deficient in some. The country
is rich in iron ore of quality; the estimated reserves
are about 21,870m metric tonnes or about one-
fourth of the world's known deposits; in mica,
India is first in production contributing about two-
thirds of the total world production; in manganese, it
is the third largest producer in the world, the
estimated reserves being 180m tonnes; in bauxite,
the reserves are of the order of 230m tonnes.
7. India is self-sufficient in antimony, building
stones, cement materials, clay, chromite, limes-
tone, dolomite, marble and gold.
8. According to our present knowledge, India is
deficient in copper, graphite, lead, mercury, zinc,
tin, nickel, petroleum, rock phosphates, sulphur
and tungsten. Mineral resources like potassium
are totally absent and have to be imported. Pet-

total value of imports, followed by diamonds (uncut) sulphur and rock phosphates.

9. Recent progress in oil prospecting has shown that India has enough oil and natural gas potential and can become self-sufficient in the immediate future if the present tempo of investigation is kept up.

Atomic minerals

Uranium and thorium are available as raw materials for producing nuclear energy. Uranium is mostly found in Bihar, Rajasthan and Tamil Nadu; of note are the uranium deposits at Narwapahar and Turamdih located in the mineralised Singhbhum belt of Bihar. Uranium deposits found in Bodai (Madhya Pradesh) are also being opened up. Thorium reserves are found in the Chhota Nagpur plateau of Bihar and in the form of monazite sands along the coast of Kerala. Thorium and monazite are being increasingly used as nuclear fuel instead of the costly enriched uranium.

Nuclear power stations

Tarapur Atomic Power Station (TAPS) in Maharashtra

Rajasthan Atomic Power Station (RAPS) near Kota, in Rajasthan.

Madras Atomic Power Station (MAPS) near Kalpakkam in Tamil Nadu.

Narora Atomic Power Station (NAPS) in UP

Principal oilfields

Assam : Digboi, Rudrasagar, Baramuri
Gujarat : Ankleshwar, Navgaon, Mohsana, Cambay (gas)

Maharashtra : Bombay High, N. Bassein, S. Bassein

Pondicherry : Porto Novo (oil with gas struck here in 1982)

Oil refineries

Assam : Gauhati, Digboi, Bongaigaon
West Bengal : Haldia

Bihar : Barauni
UP : Mathura (the biggest refinery in the country)

Gujarat : Koyali
Maharashtra : Bombay (two refineries)

Tamil Nadu : Madras

Andhra Pradesh : Vizag

Kerala : Cochin

FERTILISERS

It is now recognised that the three basic inputs for a successful agricultural economy are: irrigation, high yielding variety seeds and fertilisers.

Fertilisers have transformed the entire agricultural scene in India. The introduction and gradual acceptance of chemical fertilisers was symbolic of the people's, particularly the rural population's, first contact with scientific concept of land management. The Indian farmer has traditionally used organic manure like dung, leaf sweepings and compost the result being a very poor yield. Use of chemical fertilisers has not brought in a new dynamism to the country's economy but a social revolution as well by demolishing inhibitions inherited from generation to generation.

INDIA OVERTAKES US

"CHINA AND INDIA, the world's two most populous nations, on an average increased their combined production of cereals at a slightly higher rate than did USA in 1984."

A fertilizer is a plant food added to the soil other than in the form of farmyard manure.

Soil nutrients

Soil needs three major nutrients: (1) Nitrogen (N), (2) Phosphate (P) and (3) Potassium (K). Nitrogen helps in the **greening** of the plant; phosphate helps in **flowering**; and potassium at the **fruit forming** stage. All crops are therefore given doses of fertilisers at the three stages of growth.

Kinds of fertilisers

Based on the three requirements, the chemical fertilisers produced are: nitrogenous fertilisers (N); phosphatic fertilisers (P); potassic fertilisers (K); complex fertilisers which contain more than one nutrient (N.P.K.) in varying proportions.

Nitrogenous fertilisers are: Urea containing 46% nitrogen; ammonium sulphate containing about 21% nitrogen; calcium ammonium nitrate containing about 20% nitrogen.

Phosphatic fertilisers are: single super phosphate (SSP) triple super phosphate (TSP) P_2O_5 .

Potassic fertiliser is chemically named K_2O .

Complex fertilisers: Several grades of N.P.K. fertilisers, nitro phosphate dia ammonium phosphate.

With an investment of over 1

India is today ranked fourth in the world as far as production of nitrogenous fertilisers is concerned and eighth in respect of phosphatic fertilisers. In Asia, its position is next only to China which is the leading producer of soil nutrients in the continent. Potassic fertilisers are not being produced in India and are totally imported at present.

Fertiliser industry

India's fertiliser industry ranks second after the steel industry in terms of manufactured products. There are 20 companies at present producing chemical fertilisers, nine in the public sector, 10 in the private sector and one in the cooperative sector.

Public sector companies are located at: Sindri (Bihar), 1951; Naya Nangal (Punjab) 1961; Trombay (Maharashtra), 1965; Gorakhpur (UP) 1968; Namrup (Assam) 1968; Durgapur (West Bengal) 1974; Barauni (Bihar) 1976; Telchar (Orissa), Ramagundam (Andhra Pradesh). A project at Korba (Madhya Pradesh) will also be taken up after completion of the projects at Telchar and Ramagundam.

Private sector companies are located at: Madras, Neyveli, Entnore (Tamil Nadu); Alwaye, Cochin (Kerala); Secunderabad (Andhra Pradesh); Baroda (Gujarat); Kota (Rajasthan); Rourkela (Orissa); Varanasi, Kanpur (UP); and Delhi.

PRINCIPAL MANUFACTURING REGIONS

Major Regions	Bihar-Bengal industrial belt	Bombay-Pune	Ahmedabad-Vadodara	Madurai-Coimbatore-Bangalore
Main industries	(a) Hooghly side-jute, cotton, electricals, light engineering, chemicals (b) Chhota Nagpur—iron and steel, wire, rolling stock, vehicles	Cotton (over one-third of workers), chemicals, engineering, food processing, printing	Cotton, chemicals, pottery	Cotton, light consumer goods, light engineering
Coal	Damodar Valley (Bihar), West Bengal, Assam, Orissa, Arunachal Pradesh,	Maharashtra, MP	Bihar (recently some oil and gas was struck)	Andhra
Iron ore	Singhbhum (Bihar)			Small iron and steel works at Bhadravati using ores from Bababudhan hills
Power-Hydro-electricity	Damodar Valley project	Important suppliers from Western Ghats	—	Cauvery, Jog, Nilgin projects
Other raw materials mainly from agriculture	Bengal jute Jy water routes meeting Damodar coal (but much of the best jute area has gone to Bangladesh)	Cotton, ground-nuts, on regur soil of plateau to the east	Cotton from surrounding regur soils, salt from salt-pans	Some cotton on Madurai and Coimbatore regur
Chief port	Calcutta	Bombay	Bombay	Madras

Assam valley	Processing of local tea, rice and oil seeds, some petroleum
Darjeeling terrain	Processing of local tea
North Bihar-adjointing	Manufacture of sugar from local sugarcane
UP plains	
Delhi-Meerut	Manufacture of sugar from local sugarcane, some textiles, chemicals engineering
Indore-Ujjain	Cotton cloth for local markets, handicrafts (patronised by former royal courts)
Nagpur-Wardha	Small textiles, iron foundries, railway and general engineering, glass and pottery
Dharwar-Belgaum	Cotton textiles for local and other markets, railway and general engineering
Godavari-Krishna Delta	Local tobacco, sugarcane, rice and oil, cement, small textiles
Kanpur	Textiles and clothing, large modern tanneries, leather works, shoe factories - all founded on early military needs
Madras	Textiles, light engineering, consumer goods of wide variety
Malabar-Quilon-Trichur	Cashew processing, coconut and oilseeds processing, associated industries (coir manufacture, soap) some textiles, numerous handicrafts in very densely populated coastal tract
Sholapur	Important textiles based on cotton grown on local regur soils and engineering centres

LANGUAGES

Distribution pattern of Indian languages

The languages and dialects prevailing in India belong to four language families: Austro family or Nishada, Sino-Tibetan family or Kirata, Dravidian family or Dravida, Indo-European family or Arya.

There is a Negroid family of languages also but it has only survived in the Andaman Islands and the Andamanese language is spoken by just about 1,000 people.

Geographical distribution of language families

Language family	Regions	Chief languages/Percentage dialects
Austro family	Tribal groups in the Khasi, Jaintia Hills (Meghalaya), Nicobar Islands, Santal Paragana, Mayurbhanj, Ranchi (Bihar)	Khasi and Monkhmer, Nicobarese, Munda or Kol / 1.3
Sino-Tibetan family	Tribal groups in Himalayan and sub-Himalayan regions of north and north west i.e. Ladakh and north east i.e. Sikkim and Arunachal Pradesh, Manipur	Ladakhi, Bhotia, Bodo, Naga, Kuki, Chin and Abor, Manipuri belongs to the Tibeto-Burman family and Manipuri is the state language of Manipur / 0.7
Dravidian family	Plateau region and adjoining coastal plains of four southern states and tribal groups of central India and Chhota Nagpur Plateau	Telugu, Tamil, Kannada, Malayalam, Kui, Khond, Gondi, Naiki, Koya, Toda, Kota, Kodaga, Kurukh and Malto / 24.0
Indo-Aryan family	Kashmir, northern plains, Konkan coast, Gujarat and Maharashtra	Bihari, Punjabi, Sindhi, Rajasthani, Gujarati, Marathi, Assamese, Bengali, Oriya, Pahari and Kashmiri / 74.0

TOUCHING BOTTOM

The Gjoa, which pioneered the Northwest Passage in 1906. It was captained by Roald Amundson (Norway), first man to reach the South Pole.

India, with a coastline of over 5,700 km, has 10 major ports which are the direct responsibility of the Indian Government. In geographical order, from the northern-most point on the Arabian seaboard in the west to the northern-most point on the Bay of Bengal coast in the east, these 10 ports are:

Kandla, Gujarat, is situated on Kandla creek, a part of the Rann of Kutch. It was declared a major port in 1956 and was completed in 1957. A natural and safe harbour, it serves the 1,600-km coastline between Bombay and Karachi (Pakistan).

Bombay, Maharashtra, is a natural deep-water harbour and a major largest port, nearer to the centre of the country than any other harbour. It handles over 40% of India's trade.

Mormugao, Goa, is one of the finest natural ports and an important naval station.

Mangalore, Karnataka, is a major port for the Jale.

Cochin, Kerala, is reputed as one of the best natural harbours in the east, it is a major naval station and has a large ship-building yard.

Tuticorin, Tamil Nadu, is a shallow but big port on the east coast, almost at the tip of the Indian peninsula.

Madras, Tamil Nadu, is an artificial harbour, the third largest in India.

Visakhapatnam, Andhra Pradesh, is a first class harbour between Madras and Calcutta, it has a big ship-building unit and is a major naval base.

Paradip, Orissa, a newly opened port was declared a major port in April 1966.

Calcutta (West Bengal) is situated on the easterly coast some 144 km (90 miles) from the Bay of Bengal, it is roughly being completely dependent on river, canal, at-enters and boat at fixed times according to the tides.

The eleventh Indian port **Nhava Sheva** across the Bombay harbour was begun in May 1982 and is likely to become operational by the end of 1987.

The Indian coastline has some 225 intermediate and minor ports on the east and west coasts; these are distributed among states and Union territories as follows:

Karnataka: Karwar and 19 minor ports.
Tamil Nadu: Tuticorin, Nagapattanam and seven minor ports.

Maharashtra: Ratnagiri and Redi and 46 minor ports.

Gujarat: Okha, Porbandar, Bhavnagar, Navala, Cambay, Veraval, Boker, Mindia, Sikka and Sotah and 46 minor ports.

Kerala: Alappuzha, Changanassery and Kozhikode and

Orissa

Andhra Pradesh: Machilipatnam and Kakatiada and two minor ports.

Pondicherry: One minor port only.

Andaman and Nicobar Islands: 15 minor ports.

(NIP) PON MY AGE

The Japanese are now outliving the Icelanders. According to the Japanese Health and Welfare Ministry, average male life expectancy was 74 years and female longevity nearly 80 years.

Practice Tests

In preparing these tests we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating: Evaluate your performance on the basis of the following score-card.

100 questions in 60 minutes	—	Excellent
60 questions in 60 minutes	—	Good
50 questions in 60 minutes	—	Fair
35 questions in 60 minutes	—	Poor

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not guess the answer.

Geography

FOR UPSC, SSC & BANK EXAMS

To help you improve your Geography score these restructured questions, compiled from GK test papers of various exams like the Civil Services, NDA, CDSE, Assistant's Grade, BSRB and SBI (PO) and SCRA held over the last few years, have been selected especially for you. After having read the extensive notes on the subject, test the amount you've grasped and brush up the ones you've failed to master.

DIRECTIONS: For each question tick mark the choice that best answers the question. Answers are given at the end of this test.

Earth is a/an

- (a) Sphere (b) Spheroid
(c) Oblate spheroid (d) Genoid

Earth's axis is inclined at an angle of

- (a) $66\frac{1}{2}^\circ$ (b) 45°
(c) $23\frac{1}{2}^\circ$ (d) 22°

Earth's motion around its axis is known as

- (a) Revolution
(b) Diurnal movement
(c) Annual movement
(d) Rotation

The rotation and revolution of the earth together with the inclination of its axis causes

- I Day and night
II The differing length of daylight at different places on the earth's surface
III Seasonal changes

- (a) All except I (b) All except II
(c) All except III (d) All the three

Seasons occur because of

- I The rotation of the earth
II The revolution of the earth
III The inclination of the earth's axis
(a) I & II (b) II & III
(c) I & III (d) I, II & III

Centrifugal force is the force due to the

- (a) Rotation of the earth on its axis
(b) Revolution of the earth round the sun
(c) Force of gravity
(d) Gravitational pull between the sun and the earth

When earth is nearest to the sun, it is said to be in

- (a) Aphelion (b) Perihelion
(c) Equinox (d) Solstice

Summer solstice refers to the

- (a) Day when the sun shines vertically overhead at the equator
(b) Duration of summer season
(c) Position occupied by the earth on Sep 23 along its orbit
(d) Sun as seen at mid-day at the Tropic of Cancer

Winter solstice falls on

- (a) Mar 21 (b) Jun 21
(c) Sep 23 (d) Dec 22

10. Midnight sun occurs due to

- (a) Solar eclipse (b) Lunar eclipse
(c) Inclination of the earth's axis
(d) Magnetic storm

11. The solar system is a

- (a) System of the sun and stars in the heaven
(b) Family of the sun consisting of planets, satellites, comets, the asteroids and meteors, all of which revolve round the sun
(c) Group of fixed stars in the heaven
(d) Family of sun, some stars and the planets, all of which revolve round the sun

12. Small pieces of solid matter which appear in the earth's atmosphere as shooting stars are actually

- (a) Falling stars (b) Comets
(c) Meteors (d) Rotating discs

13. _____ is the largest planet in the solar system.

- (a) Earth (b) Uranus
(c) Jupiter (d) Neptune

14. New moon is visible when

- (a) The moon is between the earth and sun
(b) The earth is between the moon and sun
(c) One-half of the circular disc is seen
(d) Three-quarters of the circular disc is seen

15. Companion body to a planet round which it revolves is called

- (a) Planetoid (b) Asteroid
(c) Meteorite (d) Satellite

16. Lunar eclipse occurs when

- (a) The moon passes between the sun and earth
(b) The earth comes in between the sun and moon
(c) The sun's shadow falls on the moon
(d) There is partial or complete obstruction of the moon's surface by any planet

17. Solar eclipse occurs on a

- (a) New moon day
(b) Full moon day
(c) Half moon day
(d) Midway between full moon and half moon days

18. Prime Meridian is

- (a) The central meridian in a country
(b) The 0° meridian passing through Greenwich
(c) A meridian corresponding to 90° E
(d) A 180° meridian east of the equator

19. The local time at longitude in India is known as the Indian Standard Time.

- (a) 0° (b) $81\frac{1}{2}^\circ$ E
(c) 90° E (d) 180° E

20. When a traveller going east crosses the International Date Line, he will have to adjust his calendar date by

- (a) Adding one full day to it (example: changing 6th to 7th)

- (b) Subtracting one full day from it (example: changing 6th to 5th)
 (c) Adding two full days to it (example: changing 6th to 8th)
 (d) Subtracting two full days from it (example: changing 6th to 4th)
21. Igneous rocks originated from
 (a) Clay (b) Mud
 (c) Magma (d) Silica
 22. Lithosphere refers to the
 (a) Land surface of the earth
 (b) Interior of the earth
 (c) Outer ring of the earth which is made up of solid rocks
 (d) Intermediate layer between solid crust and inner core
 23. The world's continents are mainly composed of
 (a) Sial (b) Sima
 (c) Core (d) Mantle
 24. At the earth's centre, the temperature is very high, yet, the core is not in liquid state because (of) the
 (a) Great pressure raising the melting point of rocks
 (b) Hardness of the core
 (c) Core is not a conductor of heat
 (d) Core has a high melting point
 25. The most common igneous rock is
 (a) Sandstone (b) Limestone
 (c) Granite (d) Basalt
 26. Metamorphic rocks are produced by
 (a) Solidification of molten magma
 (b) Changes in igneous rocks
 (c) Changes in igneous and sedimentary rocks
 (d) Compression of sand, silt and clay particles
 27. The highlands and lowlands of the earth are said to be in a state of balance or equilibrium due to difference in the densities of their respective rock materials. This state of balance is called
 (a) Tension (b) Compression
 (c) Isostasy (d) Continental drift
 28. Judge the **wrong** statement below.
 (a) Sedimentary rocks are found in layers
 (b) Igneous rocks contain most of the world's mineral wealth
 (c) Large crystals are found in igneous rocks
 (d) Metamorphic rocks are generally very hard rocks
 29. Of the total area of the earth's surface, water occupies about _____ of it.
 (a) 50% (b) 60%
 (c) 70% (d) 80%
 30. Weathering is a process concerned with the
 (a) Wearing away of the land surface
 (b) Loosening and breaking down of rocks
 (c) Transportation of weathered material
 (d) Sculpturing of land surface
 31. _____ must be present for temperature changes to be an effective agent of mechanical weathering.
 (a) Air (b) Moisture
 (c) Dust particles (d) Warmth
 32. Chemical weathering involves
 (a) Disintegration of rocks without any change in their chemical composition
 (b) Chemical interaction of oxygen, carbon dioxide or water with minerals in rocks
 (c) Removal of soil by rain
 (d) Removal of soil by chemical action
 33. The removal of top soil by wind or rain is termed as
 (a) Denudation
 (b) Soil erosion
 (c) Soil wash
 (d) Deforestation
 34. Laterite soils are found chiefly in _____ regions.
 (a) Tropical
 (b) Sub-tropical
 (c) Humid tropical
 (d) Temperate
 35. _____ is the most productive soil in the world.
 (a) Green soil (b) Black soil
 (c) Red soil (d) Laterite
 36. The term artesian is derived from Artois which is found in
 (a) Australia (b) England
 (c) France (d) New Zealand
 37. A well differs from a spring in that it is
 (a) Deeper (b) Shallow
 (c) Produced by nature
 (d) Produced by man
 38. The amount of water stored underground in a particular area depends upon (all) the
 (a) Amount of rainfall
 (b) Rate of evaporation
 (c) Steepness of the slope
 (d) Three
 39. The last Ice Age began about _____ m years ago.
 (a) 1 (b) 2
 (c) 3 (d) 4
 40. Spring tides occur twice a month at
 (a) New moon or full moon
 (b) First quarter and new moon
 (c) Full moon and the last quarter
 (d) The first and third quarters of the moon
 41. Tick mark the **wrong** statement(s).
 (a) Ocean currents are produced by the difference in the density of seawater at different depths
 (b) The direction of ocean currents is influenced by the shape and position of the coast
 (c) Winds do not play any part in the circulation of ocean currents
 (d) Ocean currents modify the climate of the coastal regions along which they flow
 42. When warm and cold currents meet, _____ is/are formed.
 (a) Clouds (b) Rain
 (c) Fog (d) Frost
 43. _____ chiefly constitute the atmosphere.
 (a) Oxygen and hydrogen
 (b) Oxygen and nitrogen
 (c) Oxygen and carbon dioxide
 (d) Oxygen and helium
 44. _____ is the lowest layer in the atmosphere.
 (a) Stratosphere (b) Troposphere
 (c) Mesosphere (d) Hydrosphere
 45. Judge the **wrong** statement below
 (a) Atmospheric pressure decreases with increasing latitude
 (b) It increases when temperature decreases
 (c) It is shown on maps by an imaginary line called isotherm
 (d) It is measured by an instrument called barometer
 46. Imaginary lines on maps joining places which have equal depth or rainfall over a certain period are known as
 (a) Isotherms (b) Isobars
 (c) Isohyets (d) Isobaths
 47. Land and sea breezes are caused by unequal
 (a) Pressure
 (b) Temperature
 (c) Heating capacities of land and water
 (d) Distribution of heat over land and water
 48. Trade Winds are so named because they
 (a) Encourage trade
 (b) Blow persistently over a trodden path, especially over the ocean
 (c) Followed trading routes in the days of the sailing ships
 (d) Blow from the coasts of trading nations
 49. Constant winds which blow from the south-west in the Northern Hemisphere and north-west in the Southern Hemisphere towards the poles are called
 (a) Polar Winds
 (b) North Winds
 (c) Westerlies
 (d) Easterlies
 50. Torrid Zone is the area
 (a) Between the equator and the Tropic of Cancer
 (b) Between the equator and the Tropic of Capricorn
 (c) On the equator
 (d) Between the Tropic of Cancer and the Tropic of Capricorn on both sides of the equator
 51. Tropical revolving storms which occur in the West Indies are called
 (a) Tornados
 (b) Typhoons
 (c) Willy willys

52. _____ is not a form of precipitation.

- (a) Fog (b) Mist
(c) Dew (d) Chinook

53. Actual amount of moisture contained in the air is known as

- (a) Absolute humidity
(b) Relative humidity
(c) Moisture content
(d) Saturation point

54. The line of separation at the earth's surface between cold and warm air masses is called a

- (a) Front (b) Boundary
(c) Device (d) Ridge

55. The Mediterranean climate is characterised by

- (a) Hot and wet seasons all the year round
(b) A hot dry season followed by a hot and wet season
(c) Hot season throughout the year with rain in summer
(d) A hot dry summer and mild wet winter

56. The Indian monsoon climate is marked by

- (a) A cool dry season
(b) A hot dry season
(c) A hot wet season
(d) All the three

57. Which of the following are/is characteristic(s) of monsoon rains?

- (a) They break out suddenly
(b) Occur in cool season
(c) Are unreliable
(d) Are variable
(e) All except (b)

58. Richter Scale is used to register the intensity of

- (a) Wind speed
(b) Ocean currents
(c) Earth's rotation
(d) Earthquakes

59. A volcano is described as _____ when no eruption has happened within recorded times.

- (a) Active (b) Inactive
(c) Dormant (d) Extinct

60. Air pressure is measured by a/an

- (a) Thermometer
(b) Barometer
(c) Hygrometer
(d) Anemometer

61. The seven continents in the order of size are

- (a) Asia, North America, South America, Africa, Australia, Antarctica, Europe
(b) Asia, Africa, North America, South America, Europe, Australia, Antarctica
(c) Asia, Africa, North America, South America, Antarctica, Europe, Australia
(d) Asia, Africa, North America, South America, Australia, Europe, Antarctica

ulation in order of size are

- (a) China, India, Indonesia and Japan
(b) China, India, the USSR and the US
(c) China, Japan, India and Indonesia
(d) China, India, the USSR and Japan

63. The highest point in Africa is

- (a) Aconcagua
(b) Elbrus
(c) Kilimanjaro
(d) McKinley

64. Tick mark the incorrect pair.

- | Country | Capital |
|-------------|----------------|
| (a) Ghana | — Accra |
| (b) Cuba | — Havana |
| (c) Brazil | — Buenos Aires |
| (d) Vietnam | — Hanoi |

65. Tick mark the incorrect pair.

- | Country | Capital |
|------------------|-----------|
| (a) Kenya | — Smiling |
| (b) South Africa | — Pound |
| (c) China | — Yuan |
| (d) USSR | — Rouble |

66. The national language of the Netherlands is

- (a) German (b) French
(c) Dutch (d) English

67. Area-wise, _____ Ocean is the largest.

- (a) Atlantic (b) Arctic
(c) Indian (d) Pacific

68. The longest river in Asia is

- (a) Indus (b) Mekong
(c) Yangtze (d) Yenisey

69. Lake Eyre is located in

- (a) Ireland (b) Australia
(c) The US (d) Canada

70. The highest Indian mountain is

- (a) Kanchenjunga
(b) K2
(c) Nanga Parbat
(d) Nanda Devi

71. The Third World countries refer to

- (a) Developed countries
(b) Undeveloped countries
(c) Under-developed countries
(d) Developing countries

72. The Suez Canal connects

- (a) The Atlantic and Pacific oceans
(b) The Pacific and Indian oceans
(c) The Mediterranean Sea and the Indian Ocean
(d) The Mediterranean and Red seas

73. _____ is not included in West Asia.

- (a) Afghanistan
(b) Israel
(c) Iraq
(d) Egypt

74. The world's largest reserves of petroleum are located in

- (a) The US
(b) The USSR
(c) Saudi Arabia
(d) Venezuela

75. The largest reserves of thorium are considered to be in

- (a) USSR (b) USA
(c) Brazil (d) India

the world is

- (a) USA (b) USSR
(c) Egypt (d) India

77. The biggest producer of tea is

- (a) China (b) India
(c) Indonesia (d) Sri Lanka

78. Which of the following 'country-commodity pairs is wrong?

- (a) Brazil — coffee
(b) Burma — rice
(c) Cuba — sugar
(d) China — copper

79. A light year is

- (a) A period of 3560 days
(b) A year in which production of electricity is maximum
(c) A year in which production of electricity is minimum
(d) The distance traversed by light in one mean solar year

80. The Steppes are the temperate grasslands of

- (a) Europe and Asia
(b) North America
(c) South America
(d) Asia

81. _____ needs water-logging for cultivation.

- (a) Corn (b) Wheat
(c) Rice (d) Sugarcane

82. Vegetable and fruit cultivation is called

- (a) Horticulture
(b) Sericulture
(c) Double cropping
(d) Subsistence farming

83. Brazil is a well-known _____ producer.

- (a) Tobacco
(b) Tea
(c) Coffee
(d) Sugarcane

84. _____ does not produce olives.

- (a) Spain (b) Poland
(c) France (d) Italy

85. Silkworm feeds on _____ leaves.

- (a) Banana (b) Guava
(c) Mulberry (d) Apple

86. _____ is/are more important for industrial development.

- (a) Production
(b) Market
(c) Raw materials
(d) Ports

87. _____ has the highest industrial value.

- (a) Anthracite
(b) Bituminous
(c) Lignite
(d) Peat

88. _____ serves as a collecting and distributing centre for its hinterland.

- (a) Outport
(b) Packet station
(c) Entrepot
(d) Port of call

89. The degree of urbanisation of a country refers to (the)

- (a) Rate of industrialisation
(b) 1% of population living in the

- cities
- (c) Density of population in the cities
(d) Size of the cities
90. A millionaire city is one in which
(a) There are many millionaires
(b) The public services are of the highest order
(c) The population exceeds 1m
(d) Millionaires like to live
91. From north to south, India measures
(a) 2,900 km (b) 3,000 km
(c) 3,050 km (d) 3,200 km
92. India's coastline and land frontiers measure _____ respectively.
(a) 5,500 km and 15,200 km
(b) 5,700 km and 15,000 km
(c) 5,700 km and 15,200 km
(d) 6,000 km and 15,000 km
93. _____ have common natural frontiers with India.
(a) China, Burma and Afghanistan
(b) Afghanistan, Nepal and Burma
(c) China, Burma and Nepal
(d) China, Pakistan and Bangladesh
94. India has _____ political states.
(a) 21 (b) 22
(c) 24 (d) 26
95. _____ is the biggest state.
(a) Andhra Pradesh
(b) Madhya Pradesh
(c) UP
(d) J & K
96. _____ became a state of the Indian Union in 1975.
(a) Arunachal Pradesh
(b) Manipur
(c) Meghalaya
(d) Sikkim
97. _____ is the smallest Union territory.
(a) Pondicherry
(b) Lakshadweep
(c) Andaman & Nicobar Islands
(d) Goa, Daman & Diu
98. _____ has a common boundary with the largest number of states.
(a) Andhra Pradesh
(b) Karnataka
(c) UP
(d) Madhya Pradesh
99. _____ are the oldest mountain system.
(a) Himalayas
(b) Western Ghats
(c) Aravallis
(d) Satpura Ranges
100. Western Ghats are also called
(a) Ajanta Hills
(b) Sahayadai Hills
(c) Sevaroy Hills
(d) Loshar Hills
101. _____ is the second-highest mountain-peak in India.
(a) K2
(b) Kanchenjunga
(c) Nanga Parbat
(d) Nanda Devi
102. Himalayan rivers are perennial. Why?
(a) There are heavy rains in the upper reaches of the river
(b) There is heavy rainfall throughout the year in the course of these rivers
(c) The snow melting in the upper Himalayas during spring and summer seasons provides them enough water during the dry season
(d) There is a constant supply of water from the underground water table
103. The longest river in India is
(a) Indus (b) Ganges
(c) Brahmaputra (d) Mahanadi
104. Sone is the tributary of the
(a) Ganges (b) Yamuna
(c) Narmada (d) Sutlej
105. The rivers of the Deccan System which flow into the Arabian Sea are
(a) Narmada, Tapti, Mahanadi and Pennar
(b) Periyar, Sharavati, Narmada and Tapti
(c) Mahanadi, Godavari, Tapti and Narmada
(d) Narmada, Damodar, Tapti and Sharavati
106. _____ is referred to as "Dakshin Ganga"?
(a) Krishna (b) Godavari
(c) Mahanadi (d) Tapti
107. Tick mark the incorrect statement (s).
(a) All the tributaries of the Ganges flow from the Himalayas
(b) Ganges and Brahmaputra flow from two drainage systems
(c) Ganges breaks off into numerous tributaries before joining the sea
(d) Brahmaputra is the largest tributary of the Ganges
108. A multipurpose river valley project
(a) Helps in checking floods
(b) Helps in conservation of water and soil
(c) Helps in irrigation and development of hydroelectricity
(d) Serves all the above purposes
109. Tick mark the incorrect pair (s).

Project	Location
(a) Bhakra Nangal	— Punjab
(b) Damodar Valley	— West Bengal & Bihar
(c) Hirakud	— Orissa
(d) Chambal Valley	— Rajasthan & Haryana
110. Rihand Valley Project is located in
(a) UP
(b) Madhya Pradesh
(c) Bihar
(d) Rajasthan
111. _____ % of land is under forest in India.
(a) 11 (b) 22
(c) 25 (d) 30
112. Deciduous forests are found in areas where the rainfall ranges between
(a) 40" (100 cm) and 60" (150 cm)
(b) 60" (150 cm) and 80" (200 cm)
(c) 80" (200 cm) and 100" (250 cm)
(d) 100" (250 cm) and 120" (300 cm)
113. The most important commercial forests in India are the
(a) Tropical evergreen forests
(b) Tropical deciduous forests
(c) Coniferous forests
(d) Tropical arid forests
114. _____ is the most fertile soil in India.
(a) Regur
(b) Alluvial
(c) Laterite
(d) Red soil
115. Laterite soil in India is found in the
(a) Western Ghats
(b) Ganges Valley
(c) Malwa Plateau
(d) Punjab Plain
116. Black soil is best suited for _____ cultivation.
(a) Sugarcane (b) Maize
(c) Jute (d) Cotton
117. Black soil covers the largest portion of
(a) Karnataka (b) Kerala
(c) Maharashtra (d) Tamil Nadu
118. Kharif crops are raised during
(a) Spring (b) Summer
(c) Autumn (d) Winter
119. Select the incorrect statement(s).
(a) Kharif season begins with the onset of monsoons and the crops are harvested in winter
(b) Rabi season begins in autumn after the rains and the crops are harvested in late spring
(c) Kharif season begins with the onset of monsoons and the crops are harvested in late spring
(d) Important kharif crops are rice, millet, maize, jute and cotton; important rabi crops are wheat, gram, barley and linseed
120. Wheat is the leading crop of
(a) Andhra Pradesh
(b) Bihar
(c) Punjab
(d) West Bengal
121. Agriculture in India accounts for about _____ % of the national income.
(a) 75 (b) 66
(c) 48 (d) 35
122. _____ is the leading food crop of India.
(a) Rice
(b) Wheat
(c) Maize
(d) Millet
123. The favourable climatic conditions for the cultivation of rice are
(a) Rainfall below 100 cm, temperature below 25°C
(b) Rainfall above 100 cm, temperature above 25°C
(c) Rainfall below 100 cm, tempera-

ERRATA

In the GK paper for SBI (PO), NDA and CDS exams (Nov '84), the answers to Qs. 28, 30 and 39 should read as (d), (a) and (c) instead of (a), (c) and (d).

(c) rainfall below 100 cm. temperature above 30°C

124. The principal wheat-producing states of India are
 (a) Punjab, Haryana and UP
 (b) Punjab, Haryana and Rajasthan
 (c) Punjab, Haryana and Madhya Pradesh
 (d) Haryana, UP and Madhya Pradesh
125. Jute is grown in
 (a) Bihar and Andhra Pradesh
 (b) West Bengal and Assam
 (c) Kerala and Tamil Nadu
 (d) West Bengal and Tamil Nadu
126. _____ is the largest producer of rubber in India.
 (a) Andhra Pradesh
 (b) Karnataka
 (c) Kerala
 (d) Tamil Nadu
127. The important Indian cash crops are
 (a) Tea, coffee, cotton, and sugarcane
 (b) Tea, cotton, sugarcane and tobacco
 (c) Cotton, sugarcane, tobacco and oilseeds
 (d) Tea, cotton, sugarcane and oilseeds
128. India earns foreign exchange by _____ exports.
 (a) Coffee
 (b) Cotton
 (c) Jute
 (d) Tea
129. India is the world's largest producer in all the following agricultural commodities except
 (a) Cotton (b) Jute
 (c) Oilseeds (d) Sugarcane
130. India has about _____% of the world's cattle population.
 (a) 50 (b) 40
 (c) 30 (d) 20
131. The largest number of cattle in India are found in
 (a) Andhra Pradesh
 (b) Bihar
 (c) Gujarat
 (d) UP
132. Which of the following high milk-yielding breeds of buffaloes from Pakistan are popular in India?

133. 'Op Flood' refers to
 (a) Green Revolution
 (b) Control of floods
 (c) Increase in milk production
 (d) Increased production of consumer goods
134. _____ help in the greening process of crops.
 (a) Nitrogenous fertilisers
 (b) Phosphatic fertilisers
 (c) Potassic fertilisers
 (d) None of the above
135. India ranks _____ in the world in the production of nitrogenous fertilisers.
 (a) 1st (b) 2nd
 (c) 3rd (d) 4th
136. The biggest fertiliser manufacturing company in India is
 (a) Fertiliser Product, Naya Nangal
 (b) Rourkela Fertiliser Project, Rourkela
 (c) Fertiliser and Chemical Ltd Co, Sindri
 (d) Trombay Fertiliser Organisation, Trombay
137. _____ fertiliser plant is in the private sector.
 (a) Talcher (b) Nangal
 (c) Kota (d) Barauni
138. Coal resources in India are largely concentrated in
 (a) Damodar Valley
 (b) Godavari Valley
 (c) Mahanadi Valley
 (d) Sone Valley
139. India ranks first in _____ production.
 (a) Manganese
 (b) Mica
 (c) Iron ore
 (d) Bauxite
140. Tick mark the incorrect pair.
Oil Refinery Location
 (a) Barauni—Bihar
 (b) Bongaigaon—Assam
 (c) Haldia—West Bengal
 (d) Koyali—Maharashtra
141. The largest deposits of uranium are found in
 (a) Bihar
 (b) Kerala
 (c) Maharashtra
 (d) Andhra Pradesh

- (a) Bihar
 (b) Kerala
 (c) Madhya Pradesh
 (d) Rajasthan
143. Choose the incorrect pair.
Steel Plants Location
 (a) Tata Iron & Steel Co — Jamshedpur (Bihar)
 (b) Hindustan Steel Ltd — Bhilai (Madhya Pradesh)
 (c) Hindustan Steel Ltd — Durgapur (West Bengal)
 (d) Hindustan Steel Ltd — Bhadravati (Karnataka)
144. Select the incorrect pair.
Industry Location
 (a) Antibiotic — Rishikesh
 (b) Cement — Katni
 (c) Cotton — Ahmedabad
 (d) Ship-building — Calcutta
145. Nepa Nagar newsprint factory is located in
 (a) Assam
 (b) Bihar
 (c) Madhya Pradesh
 (d) West Bengal
146. In India, the maximum number of workers are employed in the _____ industry.
 (a) Iron and steel
 (b) Jute
 (c) Sugar (d) Textile
147. Select the incorrect pair.
Port Location
 (a) Bhavnagar — Gujarat
 (b) Kandla — Maharashtra
 (c) Marmugao — Goa
 (d) Mangalore — Karnataka
148. Nhava Sheva, the 11th major port constituted in India in May '82, is in
 (a) Kerala
 (b) Maharashtra
 (c) Andhra Pradesh
 (d) Orissa
149. India's population according to the 1981 census is _____ crores.
 (a) 58
 (b) 68
 (c) 72
 (d) 81

AWARDED

The Soviet Land Nehru Awards for 1984 carrying a cash prize of Rs 15,000 and a two-week trip to the Soviet Union to: Godawari Parulekar, a social worker, for her work among adivasis and a literary contribution in Marathi, *Manus Gemwha Jaga Hate* (When The Man Wakes); Subhash Mukhopadhyay, a poet, for his political works dedicated to peace and Indo-Soviet friendship; and the Jawaharlal Nehru University (JNU) for establishing the Centre of Russian Studies and Soviet and East European Studies.

The first **Indira Priyadarshini Award** to Hindi poet and critic Shrikant Verma for promoting the programmes and ideals of Mrs Gandhi. The award carries a prize of Rs 11,000 and a plaque.

The Uttar Pradesh Lalit Kala Akademi Awards of Rs 10,000 to Rameshwar Singh of Udaipur, Sharad Pande of Lucknow and Vidya Sagar of Jaipur for printing; Srikhande of Lucknow for sculpture; and Vijai Singh of Varanasi for drawing.

The Golden Hugo Award at the International Film Festival in Chicago to *Khandhar*, a film by Mrinal Sen.

The Soviet Order Of People Friendship to Svyatoslav Rensch, a noted Indian artist, for his great contribution to the development and consolidation of friendship between India and the Soviet Union.

The Goncourt Prize, one of France's highest literary awards, to Marguerite Duras, 70, for her novel *L'Amant* (The Lover), an autobiographical story of an affair between a young French girl and a wealthy Chinese in French-ruled Indo-China.

The 1984 **Jawaharlal Nehru Award for International Understanding** to Indira Gandhi. The Rs 2.5 lakh annual prize, instituted in 1964 by the Indian Council of Cultural Relations (ICCR), is given for outstanding contribution to international understanding, goodwill and friendship among the people of the world.

The annual **Borlaug Award** for 1983 to Dr V.L. Chopra, Professor at the Indian Agricultural Research Institute (IARI), New Delhi, for his outstanding research and service to agriculture. Dr Chopra has made significant contribution to the knowledge of genetics of micro-organisms and rust-resistance in wheat.

The John C. Phillips Medal to Indira Gandhi for her "great influence on world conservation". The medal is instituted by the International Union for Conservation of Nature (IUCN).

The 1984 **Third World Prize** to former West German Chancellor Willy Brandt, for his outstanding contribution to Third World development in economic and political fields. The annual prize is awarded by the Third World foundation to persons or institutions for notable service in the economic, social, political or scientific fields of the developing world. The prize carries a cash award of \$1,00,000.

The 1983-84 **National Family Welfare Awards** have gone to Maharashtra, Punjab, Assam, HP and Pondicherry. The prizes were given for excellence in performance in the field of

family planning including the percentage of targets achieved during the year in the number of sterilisations.

APPOINTED

M.M.K. Wali, Union Home Secretary, as the Lt Governor of Delhi in place of P.G. Gavai who "proceeded on leave". Wali's appointment followed the large-scale violence in Delhi which the Gavai administration failed to control. About 900 people were killed in Delhi in the violence after the assassination of Mrs Gandhi.

M.P. Thakkar, 61, a senior judge of the Supreme Court, to investigate the events and circumstances of Mrs Gandhi's assassination. Thakkar's appointment followed a Cabinet decision to entrust the investigation to a single-judge commission.

S. Anand Ram, Director-General of the Central Industrial Security Force, to lead an investigation into the assassination of Mrs Gandhi. There will, however, be no duplication in the work of the Thakkar Commission and the Anand Ram team.

K.P.S. Menon, Indian Ambassador to Japan, as Ambassador to China in succession to A.P. Venkateswaran.

Virendra Prakash as Chief Secretary of Delhi Administration, replacing S.C. Vajpayee who was acting as Chief Secretary in place of R.M. Agarwal. Prakash earlier held the post of Joint Secretary in the Pay Commission.

EDUCATION

Schools of aesthetics and arts at JNU: The UGC has approved the setting up of Schools of Arts and Aesthetics and Physical Sciences in the Jawaharlal Nehru University (JNU). The School of Arts and Aesthetics will impart education in the principles, practice and history of drama, music, dance, film, sculpture and graphics. The School of Physical Sciences will provide Physics, Chemistry and Maths under a common umbrella.

SCIENCE

A major step towards fighting infertility: An American reproductive microsurgeon has transplanted for the first time an ovary and a fallopian tube from a woman to her identical twin sister. Dr Sherman Silber, noted for performing the first microsurgical vasectomy reversal in 1975 and the first testicle transplant in 1977, operated

SUCCESSFUL INDIAN OF '84

Readers, write in whom you think fills the above bill. Only:

- ☐ The person must be an Indian citizen;
- ☐ Must not be a politician;
- ☐ Must have achieved something in 1984 which has made every Indian proud;
- ☐ Must have risen to the top.

Send in your nomination latest by January 25 on a postcard with your name, address and age. Also indicate in four lines the reason for your nomination. The first 25 best nominations have a attractive but surprise gift waiting

on 28-year-old twin sisters who wanted to become pregnant. One wished to reverse a tubal sterilisation and the other had lost her tubes and ovaries during an infection. The surgeon reconnected one of the donor's tubes to the miniscule opening in her uterus, then removed her other tube and ovary and implanted them in her sister. The donor is now pregnant, while her sister has begun to produce estrogen, showing that transplanted ovary and fallopian tubes are intact.

Ariane-3 launched: The European Space Agency on Nov 9 put into space an Ariane-3 rocket, carrying two commercial satellites, from the space centre in Kourou, French Guiana. The launching was the 11th of an Ariane rocket and the third commercial one.

Telemedicine: Experiments conducted jointly by the Space Applications Centre in Ahmedabad and a TV studio have shown it is possible for doctors to instruct patients 1,000 kms away through a slow-scan TV. The experiments showed that the Satellite Communication Channel can accurately transmit clinical data from patients and get back prescriptions. Two-way audio-video channels were set up and special stethoscopes for transmitting sounds were used, providing instant communication via satellite. Telemedicine, as it is called, was first tried out in India 10 years ago. It offers an alternate way of providing medical care beyond the reach of most people.

Heart-liver patient: A two-year-old girl on Nov 9 became the world's second simultaneous heart-liver patient. Kellie Kochran of Birmingham, USA, was then given a second heart transplant after her first new heart failed to pump properly. Kellie, however, died on Nov 13 when her new liver failed.

NASA for more cooperative civilian space programmes: A US Congressional study says NASA should establish more cooperative civilian space programmes with other nations, including the Soviet Union. Such programmes could save taxpayers billions of dollars. The study characterises the US goal in space as shortsighted and narrow, reflecting the views only of the science and technology communities and not of the general public which pays for the NASA projects. The study added that the US and the Soviet Union could explore a broad range of space-related activity and called upon the US to negotiate a major international space station programme.

Surgery to correct nearsightedness by making tiny slices in the cornea of the eye, called radial keratotomy, improved the vision of all 435 people involved in a US Government study. Researchers, however, say it is difficult to predict which patients would benefit most from the operation, the variable outcome being one of the major problems facing surgeons. Nearsightedness is caused by a misshapen cornea, the clear front portion of the eye. Some doctors fear the procedure of radial keratotomy could lead to eye infections, cataract or blindness but the recent study revealed minimum complications.

The American space shuttle Discovery returned to earth on Nov 16 after successfully completing history's first space salvage operation. During the journey of 5.8m kms, astronaut

specimens, two communication satellites that were lost in space after being launched on an earlier mission. They also released two other satellites. Never before had a human being latched on to an orbiting satellite nor had one been retrieved for return to earth to be repaired and launched again. Financing the historic mission was the insurance company, Lloyds of London, who underwrote the two satellites—*Palapa B2* and *Urestar-6*.

Baby with baboon's heart dies: Baby Fae, a month-old infant who received a baboon's heart to replace her own congenitally deformed one, died on Nov 15. The infant, who received the heart in an unprecedented operation on Oct 26 in Loma Linda (California), lived longer than any other person with an animal heart. Only four other times had animal hearts been implanted in humans and never in an infant. The longest-lived previous recipient was 59-year-old Benjamin Fortes of South Africa who lived three and a half days after he received a chimpanzee's heart in a 1977 operation by Dr Christian Bernard.

New electronic control system: The public sector Instrumentation Ltd at Kota has set up a new project to make an advanced electronic microprocessor-based control system, Conto-nic-3, in technical collaboration with Haftmann & Braun of West Germany.

Veha probes to be launched: Two Soviet inter-planetary Veha (called after two initial symbols of the words Venus and Halley) probes will be launched to make a unique scientific test on the Earth-Venus-Halley's comet route.

Artificial heart transplant: At the Humara Hospital, Audobon, the swollen diseased heart of William J. Schroeder was cut from his chest and replaced with a pulsating assembly of plastic, making him the world's second recipient of a permanent artificial heart.

HEALTH

Cigarette smoking causes a disease that weakens the heart's ability to pump blood and kills about 10,000 people annually, according to a report by the medical college of Wisconsin, USA. Researchers speculate nicotine or carbon monoxide in the smoke somehow poisons the heart and causes the disease, called cardiomyopathy. Another research has shown smokers are two to three times more likely to die from heart attacks, which occur when the heart's blood supply is temporarily blocked. The damage from cardiomyopathy is spread throughout the heart which does not pump strongly enough to circulate blood properly. To compensate for the weakness, the heart becomes enlarged and the consequence is heart failure.

Formaldehyde causes cancer: American scientists have found that formaldehyde, a chemical used in textile, newsprint and cosmetic industries, causes cancer. It had been established earlier that formaldehyde, in low concentrations, can cause dermatitis, lung complaints such as bronchitis and asthma, menstrual disorders and pregnancy complications. Now, tests conducted by scientists at the chemical industry institute of toxicology using mice have established that the chemical induces cancer. Also, high rates of brain cancer have been found among workers engaged in industries where formaldehyde is used. Formaldehyde is also used as a disinfectant in operation theatres and as a preservative in laboratories.

NATO's 'follow-on force attack' approved: NATO's political authorities have approved a controversial plan envisaging deep strike into Eastern Europe with conventional weapons in the event of a Warsaw Pact attack. The concept aims to exploit new technology to track and hit enemy reinforcements upto hundreds of kilometres beyond the East-West border, delaying or preventing them from reaching the battlefield. By reducing enemy force ratios, the plan seeks to avoid early use of nuclear weapons by NATO. Called the "follow-on force attack" (FOFA), the plan is the brain-child of the Supreme Allied Commander-General Bernard Rogers. Defence analysts feel the plan will divert funds to highly expensive and unproven technologies for a mission which they denounce as "doctrinal reform of doubtful merit".

Pak seeks Hawkeyes, Harpoons from the US: Pakistan is seeking from the US highly sophisticated radar warning and command and control aircraft, and Grumman, Hawkeye and Harpoon anti-ship missiles, says the London *Jane's Defence Weekly*. Three new frigates the Pakistan Navy is trying to acquire from Britain are to be fitted with Harpoon missiles after modifications as are two French-built submarines. Foreign Minister Yaqub Khan has reportedly approached the US for E-2C Hawkeye missiles for defence against border raids by Afghan aircraft. The US is yet to take a decision.

The first German-built submarine under Indo-German collaboration will be delivered to India in 1986. Navy personnel will have to be trained in the latest high technology to keep pace with changing technology and be competent enough to handle the equipment.

NEIGHBOURS

MRD threatens to boycott elections: The movement for restoration of democracy (MRD) in Pakistan has announced it will boycott elections due by March next unless they are conducted under the terms of the 1973 Constitution. In a resolution adopted at a secret meeting, MRD leaders said President Zia-ul-Haq plans a "fraud in the name of elections". Any MRD member-party participating in the "fraud" would be expelled, said the resolution.

Plenary session on Lanka ethnic issue postponed: The Sri Lanka Government on Nov 8 postponed by one month the plenary session of the all-party conference on the ethnic issue, scheduled to reconvene on Nov 15. The postponement apparently was to allow more time for consultations and drafting of government proposals to resolve the island's ethnic crisis.

Zia not for use of force against Afghan attacks: The Pakistan President, in an interview to the Paris newspaper *Liberation*, said recently that Islamabad would not use force in response to attacks from the Afghan side; retaliation, he said, could lead to direct confrontation with the Red Army. Zia's statement contradicted a statement by Yakub Khan, the Pakistan Foreign Minister, who said his country would fight back if Kabul continued to shell Pak territory. Zia said Afghanistan had become a prestige issue for the Kremlin and predicted that the Soviet army would intensify its attacks against the resistance and step up pressure against Pakistan.

Pakistan has ruled out a ban on the entry of Khalistanis. Pakistan would expect them to

tion of the principle, "appropriate action would be taken by Islamabad". Sikhs from abroad would be welcome to visit Pakistan for pilgrimage. Each case would be dealt on merit where visa was required for entry.

Several Bangla diplomats resign: Several career diplomats in Bangladesh, including ambassadors, have resigned in protest against the appointment of active and retired army officers in vital foreign mission posts. The resignations were provoked by the government's decision to absorb army officers and other civil bureaucrats permanently in the foreign service cadre. The diplomatic missions in India, the UN, West Germany and France are headed by armed forces generals.

Pak abandons Sixth Five Year Plan: Heavy military spending coupled with debt servicing has forced Pakistan to abandon the Sixth Five Year Plan barely a year after its implementation. Pakistan now spends 73.4% of its revenue budget on defence and debt servicing. The rest of the 26% goes to meet police, intelligence and other security expenditures.

ECONOMY—National

India enjoyed a \$ 664m favourable balance of trade with the US in the first eight months of the current calendar year. Exports to the US totalled \$ 1,718.9m and imports from the US \$ 1,054.9m. One of the reasons for the higher exports is stated to be the US economic recovery. Besides exports of Bombay High crude, there has been a marked increase in exports of diamonds, readymade garments, cashew nuts and leather.

India not to press for \$ 2b ADB loan: India has decided not to press its application for a \$ 2 billion loan from the Asian Development Bank (ADB); the decision followed an ADB move to restrict the loan amount to \$ 200m for what India feels are "arbitrary reasons". India, the third largest shareholder in the ADB, has refrained from borrowing from the bank, set up in 1966, and been a donor alone. Last year, it put its application for the loan and scaled down the amount to \$ 1 billion in May this year. A 105% capital increase in the ADB's resources led New Delhi to hope for at least a \$ 1.2 billion assistance over 1983-87. The US, supported by Japan and the ASEAN, felt India should not borrow at the expense of existing borrowers, and the proposed \$ 200 million assistance was rejected by India as "most inadequate". The money was intended for, among other projects, a fertiliser plant and rural electrification.

India's repayment liabilities will peak during the Seventh Plan period and its foreign exchange needs will have to be met by increased receipts from abroad and reasonable amount of commercial borrowings. Finance Ministry and Planning Commission officials are now working out estimates of external resources likely to be available. But it is clear that more realistic assumptions will have to be made as the flow of developmental assistance gets reduced under the impact of the negative attitude of developed countries to the capital increase plans of development banks. Besides going in for increased commercial borrowings, India will have to achieve faster export growth rates and avoid excessive imports, economists say.

India's trade deficit during the first five months of the current fiscal year touched Rs 2,158 crores against Rs 1,730 crores in the corres-

The rise in imports to the 18.7% increase in imports during April-August 1984 against a rise of only 12.7% in exports. The trade deficit for 1984-85 is expected to be around Rs 6,000 crores. A silver lining was that in August, exports registered a sharp increase, Rs 795 crores against Rs 585 crores in August 1983, meaning a 36% rise. Imports went up only by 10.4% from Rs 1,043.2 crores to Rs 1,152 crores.

India's strategy on the export front in the future will be: a part of the agricultural production would be set apart for export; there would be a gradual shift from bulk exports to value-added products; and areas where India has a competitive edge would be identified along with upgradation of technology to increase productivity in export-oriented industries.

Norway is to give India grants totalling Rs 25.4 crores in 1985 for projects related to fisheries development, health and family welfare and for commodity imports.

Indo-Soviet trade has been making good progress and the outlook is considered bright. The Russians have shown a keen interest in importing more of items like tea, coffee, spices, food products, garments and woollen knitwear. Their purchases of textiles are expected to increase and textile exporters in Bombay feel that Moscow may be willing to pay more for Indian cloth in response to its growing demand.

The Basic Chemicals, Pharmaceuticals and Cosmetic Export Promotion Council (CHEMEXCIL) has exported items valued at Rs 155.98 crores during April-July 1984, as against Rs 138.33 crores in the corresponding period of the previous year. The export target fixed for 1984-85 is Rs 415 crores.

India is now capable of offering fertiliser manufacture technology to other countries.

According to the Fertiliser Association of India (FAI), India can undertake turnkey projects for setting up fertiliser plants based on varied feedstocks. The total investment in the country's fertiliser industry, estimated at around Rs 4,000 crores at present, is likely to rise to Rs 11,000 crores by 1990. With the production of 3.5m tonnes of nutrients in 1983-84, India has emerged as the world's fourth-largest producer and consumer of fertilisers, next only to the US, USSR and China.

ECONOMY—International

US trade bill passed: President Ronald Reagan on Oct 30 signed into law a Trade Bill that sets the course for future relations between the US and its trading partners. Among the Bill's provisions are an eight-and-a-half-year extension of the special programme benefitting 140 developing countries, known as the generalised system of preferences. It also aims to help the beleaguered American steel industry and its workers who have lost jobs because of foreign competition and outdated facilities. It calls on steel companies to reinvest and modernise to be eligible for import relief. The trade package essentially excludes strict quotas or high duties on imports of wine, steel, copper or textiles. Reagan called the Bill the most important trade law approved by the US Congress in a decade.

UNCTAD project for developing countries: A \$109m project has been launched to help set up the global system of trade preferences (GSTP) among developing countries, according to UNCTAD. The project, to be implemented by

UNCTAD, will provide technical backing to south-south trade negotiations under the GSTP. The GSTP is the centerpiece of the Group of 77's Caracas programme for economic cooperation. The project will provide technical support for 12 weeks of meetings during the next two years, involving about 70 countries.

UN food aid for developing countries: The UN world food programme's governing body has approved some \$216m worth of food aid for Third World countries. The aid, for 22 projects in 17 countries, is equivalent to 508,000 tonnes of food. The largest project is a \$31.4m one to feed workers engaged in social forestry and watershed development in UP over the next five years.

Dollar at par with SDR: The recent strength of the dollar had restored its parity with the IMF's SDR (special drawing right) that existed when the instrument was established in 1969. The parity had been broken by the December 1971 devaluation of the dollar against gold. As the dollar rose against other currencies in October, the SDR depreciated against the American currency till its value fell to \$0.995857. Reciprocally, the dollar rose to SDR 1.004160. The initial value of the SDR was established as the equivalent of 0.888671 grams of five gold—the gold content of the dollar in 1969. Thus the first SDRs were valued at one SDR = one dollar.

OU call for aid to save Africa's economy: The Organisation of African Unity (OAU) has called for massive international aid to arrest Africa's unparalleled economic decline. At its summit in Addis Ababa, the OAU concentrated on the continent's drought-withered economy. Here are some statistics: Some 34 OAU states were affected by food shortages, food output declining by 11% between 1970 and 1980; aid from the developed world fell from \$14.2 billion in 1982 to \$7.8 billion in 1983; the rising interest rate had pushed up sharply the debt servicing ratio on African debts, which total \$150 billion. The summit said the economic decline was due to the West's control of the world economy and called for talks to involve the Third World more in the running of the economy.

UK plans to replace one pound note: The British Government has announced plans to abolish the one pound note and replace it with an unpopular coin much to the wrath of the people. The modern pound note was introduced in 1914 at the outbreak of World War I. Its introduction, to replace the gold sovereign, caused almost as much of a stir as its demise.

STATES

KKR merges with Congress (I): The Bangarappa-led Karnataka Kranti Ranga (KKR) on Nov 8 decided to merge with the Congress (I). With the merger, the strength of the Congress (I) goes up from 80 to 86 in a House of 225. The decision to merge was taken at a meeting of the party executive in Bangalore. The regional outfit, originally set up by Devraj Urs, has been a close ally of the Congress (I) since January 1983.

Recommendation to ban strikes in all power projects in Kerala: A high-level committee on "industry, trade and power", constituted by the Kerala Government, has recommended enactment of legislation banning strikes in all power projects in the state. It also recommended that such strikes should be declared a cognizable, non-bailable, economic offence punishable by imprisonment. The drastic recommendations by the committee, one of the five such set up to

assist the state planning board, came with reference to the "unreasonable and irrational labour militancy" by 110 workers delaying the Idmalayar power project for over three years. The loss to the state exchequer: Rs 33.65 crores.

The Gujarat Government has formulated a five-point direct action programme, involving an expenditure of Rs 500 crores, for the benefit of the very poor. Apart from a Rs 110 crores midday meal scheme benefitting 5m students, the state government will take up a Rs 200 crore scheme for providing foodgrains at subsidised rates to people whose annual income does not exceed Rs 5,000. Scholarships for meritorious students and sportsmen and drinking water projects are also on the cards.

Andhra Ministry expanded: CM N.T. Rama Rao on Nov 12 inducted 11 more ministers into his government, raising the strength of his ministry to 27. The new entrants: A. Kotiah, B.V.M. Reddy, V.N. Rao, A.P. Rao, S.R. Reddy, N.R. Reddy and A. Satyanarayana (all Cabinet rank), P. Chandrashekhari, M. Narasimhan, B. Rajiah, S. Rajeshwar (ministers of state). Before his dismissal on Aug 16, Rama Rao had run his administration with a 13-man team. The expansion of his ministry after his reinstatement in September was necessitated by the demand by legislators for offices of profit. Earlier, more than 50 MLAs were made chairmen of various state corporations.

Tamil Nadu Assembly dissolved: Tamil Nadu Governor S.L. Khurana on Nov 15 ordered the dissolution of the state Assembly. This was to facilitate a one-day poll to the Assembly on Dec 24 along with the Lok Sabha elections.

The cyclonic storm which left hundreds of Andhra and Tamil Nadu villages inundated and thousands of people homeless, is the worst natural calamity to hit the south in recent times. Unlike in the past, the cyclonic storm spread to the northern coast of Tamil Nadu as well as large parts of southern coastal Andhra. The cyclone had caused 1,315

A World Bank study on Kerala's fertility decline, which has received worldwide attention, attributes its success to socio-economic factors including education and health improvement and the most successful family planning programme in any state in India.

Kerala's Seventh Five Year Plan will aim at achieving an overall growth rate of 5.4% per annum to reduce the gap between the all-India average per capita income and that of the state and will seek to reduce the percentage of population below the poverty line to 25 by the end of the plan. Rs 8,900 crores will be required to achieve the proposed growth rate. The outlay of the 1985-86 Annual Plan will be Rs 507 crores.

EVENTS—National

Talcher plant produces heavy water: The Talcher heavywater plant of the Department of Atomic Energy has produced heavywater on an experimental basis, for the first time since its completion three years ago. The Rs 66-crore plant produced 105 kg of heavy water on Oct 24 after engineers modified its earlier design, found to be defective. The production was 25% of the plant's rated capacity and came after the earlier design was declared "unworkable".

Rath, Dhote expelled: Ram Chandra Rath, Minister of state for Fertilisers and Chemicals in the Indira Gandhi Ministry, joined the Janata Party on Nov 14 after resigning from the Congress (I).

(Continued on page 60)

BADMINTON

The Dutch Masters crown was won by Han Jian (China) when he beat Morten Frost Hansen (Denmark) 15-9, 18-14 in Utrecht on Oct 21. Thus, Han avenged his defeat of a week earlier at the English Masters. It was only the second defeat for Frost in national tournaments this year. He has already won six open championships while Han won the World Cup in September.

At the Scandinavian Cup championships in Randers (Denmark), on Oct 28, Hansen in turn avenged his defeat when he beat Han 15-10, 15-9 in the final.

Despite his absence from the grand prix circuit lately during which he underwent anti-coagulation treatment for blood clots, Prakash Padukone (India) has made it to the top 10 of the men's points table, which is as follows (after the Canadian Open):

(1) Morten Frost Hansen (Denmark)—1,730 pts; (2) Ick Sugianto (Indonesia)—870; (3) Steven Baddeley (England)—685; (4) Jens Peter Nørhoff (Denmark)—680; (5) Hastomo Arbi (Indonesia)—655; (6) Prakash Padukone (India)—560; (7) Liem Swie King (Indonesia)—520; (8) Han Jian (China)—455; (9) Nicklaus Yates (England) & Sijit Pamungkas (Indonesia)—450 pts.

BOXING

Marvin Hagler (USA) retained his undisputed (i.e., both WBA and WBC-recognised) world middleweight title, on Oct 19, when he knocked out Mustapha Hamsho in the third round of their scheduled 15-round bout at Madison Square Gardens in New York.

But the World Boxing Council (WBC) does not recognise 15-round bouts on grounds of safety. Their limit is 12 rounds. Thus, two days later, the WBC voted unanimously to strip Hagler of the title, and their President, Jose Sulaiman, said that the boxer had repeatedly been asked to conform to the 12-round rule, but had never responded to the requests.

Larry Holmes (USA) stepped into the ring after almost 11 months, and successfully defended his (International Boxing Federation) heavy weight title at Las Vegas on Nov 9. The referee stopped the scheduled 15-round bout against James "Bonecrusher" Smith in the 12th round, on the advice of the ringside doctor, because of a bad cut over Smith's left eye.

CRICKET

Sri Lanka beat New Zealand by four wickets in the first 1-day International in Colombo on Nov 3. In another fixture in the same place, the Kiwis beat the Sinhalese.

New Zealand captain Jeremy Coney—speaking on Hyderabad (Pakistan) television after his team lost the second Test and thus the current 3-Test series against Pakistan—criticised the Pakistani umpiring, even though he had been

number of doubtful decisions.

Without naming umpire Khizar Hayat—the same man who provoked Sunil Gavaskar to launch a diatribe against Pakistani umpiring—Coney left none in doubt as to who had incurred his ire. Asked to comment on Coney's remarks, Pakistan skipper Zaheer Abbas said that since the Kiwis had lost, they were making excuses. He had even some bad remarks for Indian and New Zealand umpiring.

The Australian cricketers lost their heads, their pride and the chance to level the series against the West Indies as they gave another dismal performance to lose the second Test by eight wickets at the Brisbane Cricket Ground on Nov 26. The West Indies won the first Test, in Perth, on Nov 12 by an innings and 112 runs.

After skipper Kim Hughes promised a grittier performance, the Australian fightback in the Brisbane Test spluttered like a damp squib in the face of the explosive talents of Clive Lloyd's "unbeatables".

With the Australians 2-down in the 5-Test series, Hughes stunned a packed post-match news conference by announcing his resignation as captain. Visibly broken, Hughes, 34, said: "The constant speculation, criticism and innuendo by former players and sections of the media over the last four or five years have finally taken their toll".

While Hughes was left to survey the wreckage, the victorious Lloyd said: "What we want is for Viv Richards to come good. He is striking the ball well but the runs are not coming. If Viv hits form in the third test, we should be right for the fourth and fifth".

Even without a vivacious 'Viv', the West Indians have now stretched their undefeated sequence to a world record ten. With man-mountain Joel Garner going great guns, and Larry Gomes and Jeff Dujon shoring up with the willow, Australians can do nothing better than weep.

Former West Indies Test captain Alvin Kallicharran has established something of a record in race-conscious South Africa. He has signed a 3-year contract, according to which, he will not only play and coach for Rovers Cricket Club in Welkom, in the Free State province, but will also captain the provincial team in the white-controlled South African inter-provincial tournament. This is the first time in the history of South African sport, let alone cricket, that a black person of Indian origin will be the "boss" of the white boys.

The Pretoria regime has circumvented its 86-year-old law—whereby all Indian people in South Africa are not allowed to stay for more than 72 hours in this province—by claiming that "Kalli" has British passport, and therefore, is not a local Indian.

Kallicharran has been instrumental in getting other West Indians to play in South Africa as well: Sylvester Clarke for Transvaal province; Collis King and Colin Croft for Natal province; and Faoud Bacchus for Western province.

MOTOR RALLY

The 5th Himalayan Car Rally was terminated on Oct 31 following the brutal assassination of Prime Minister Mrs Gandhi. Till then, 21 of the 37 competitive sections in the first two legs of the rally had been completed. These comprised a

Jayant Shah, who had topped TT7 penalty points, was declared the winner. Coming in second and third were Raieev Khanna (276 penalty points) and Ramesh Khoda (281 penalty points). No formal prize-giving function was held.

SNOOKER

O.B. Agrawal (India) broke the 21-year England-Wales stranglehold on the World Amateur snooker championships when he beat defending champion Terry Parsons (Wales) 11 frames to 7, in the final, at Dublin, on Nov 4. This was the first appearance for Agrawal in this event.

Earlier, in a group match, Indian national champion M. Jayaram lost to T. Draggio (Malta) 4-0.

SQUASH

Jahangir Khan (Pakistan), unbeaten since April 1981, won yet another major title when he trounced Stuart Davenport (New Zealand) 9-5, 6-9, 9-0, 9-1 in the final of the World Masters tournament in Warrington (England) on Oct 31—his fifth win in the event. The women's title was won by Luck Souter, the 19-year-old junior champion of Great Britain, when she beat World No. 1 and the hardest-hitting woman in world squash, Susan Devoy (New Zealand) 9-0, 2-9, 9-2, 6-9, 9-5.

MARATHON

The Rath Open Indian Marathon, which had been named 'Peace Marathon for national unity and integration', was held in New Delhi on Nov 18. A little under 900 runners participated in the four sections of the race. Results: **Men: Full Marathon:** 1. Sumer Singh (CRPF)—2:24:30; **Half Marathon:** 1. Satish Kumar (FCI)—1:09:08.6 sec; **Women: Full Marathon:** 1. Sunita Anand (Mother's International School)—3:55:30. (This 25-year-old yoga instructor at the school was the only woman to finish the race).

FOOTBALL

Mohun Bagan (MB) of Calcutta lifted the Durand Cup, on Nov 19, by defeating their archrivals, East Bengal (EB), also of Calcutta, by the only goal of the match in New Delhi. The goal came in the sixth minute when Manoranjan Bhat-tacharjee (EB) made a casual clearance and allowed Bidesh Bose (MB) to get the ball under control just 10 yards outside the box.

Seeing his opportunity, Bidesh was lightening itself: going a few paces forward, he unleashed a perfectly timed left-footer from about four yards outside the box. Bhaskar Ganguly in the goal could hardly be faulted for letting in the blinder.

TENNIS

The \$3,15,000 Scandinavian Open championships, one of the oldest indoor tournaments in the world, ended at Stockholm, on Nov 5, in victory for World No. 1 John McEnroe (USA). To win this title for the third time, he beat defending champion Mats Wilander (Sweden) 6-2, 3-6, 6-2.

SANJEEV GUPTA

WHAT AILS INDIAN SPORTS?

BY J.V. ARUN KUMAR

Ranjit Bhatia, an eminent sports journalist and former Olympian, spoke on the "State of Indian Sports" at the CCTimes lectures held recently in Kirori Mal College, Delhi. He directly blamed the fatalistic attitude of Indians for the lack of "world beaters amongst us". Excerpts from his lecture:

In the thunder of guns and the mushroom clouds, World War II catapulted sports overnight to the forefront of human activity. The world's Mallorays not only conquered the Guns of Navarone but also brought to their countries an almost pathogenic escape from despair: sports. For an organised personality development and recreation of the young, and to provide a channel for the energies of the youth—no one wanted a repeat of the horror of the Hitler Youth—sports were encouraged at that time.

The Winter War and the siege of Moscow did not deter—indeed spurred—the Soviets from excelling in the early '50s. In their ranks were many sportsmen and women who consistently broke world records to win top honours. All this was a direct result of some arduous work and of the vigorous sports programme of the State. The strategy was to make sports a way of life and towards this end, large number of facilities were provided.

West European countries were quick to emulate the Russian feats and they combined attractive incentives with tremendous sports facilities. New attitudes came about and in countries like West Germany, many were the people who actively engaged in sports. Emerging not unscathed from the trauma of the Vietnam War, track suits and safford replaced marijuana and heroin as hot favourites in American Universities. And in the '70s, the US appeared as a sports superpower. From the ghettos of New York to the impoverished waterfront of California, American Blacks, Indians and Hispanics made it to the undreamable Ivy League universities on football, boxing and baseball scholarships. Overnight it seemed, from a programme of few sports scholarships, the approach had changed to mass subsidisation of sports at all levels by the State. The 'jogging mania' in America is symptomatic of this change in attitude and mentality. Encouragement for mass participation resulted in worldwide success and champions came up fast and plenty.

More importantly, a 'second-line of defence' also emerged along with the great performers, only to step in at the right turf at the right call—successfully. Of course, all those who participated in the games, taking advantage of the existing facilities, did not win medals or go to tournaments. But some of them became very good sports administrators and organisers, giving a tremendous boost to the sports standards in their countries. Another remarkable trend was that even some superb sportsman, after retirement, contributed their mile in the development of sports. For instance, the brain behind the talematches held in West Germany is a former ice-skating ace and an Olympic champion.

...ed. The country has always been an active sporting nation with international participation dating back to the 1920s. The then sportsmen belonged to the forces and played no small role in raising India's prestige. Christian missionary schools of the time believed in combining education with sports for personality development. This led to the emergence of sportsmen of some merit.

But there were inbuilt weaknesses in our sports system, notwithstanding the fact that Indians were fond of outdoor activities since early times. The flawed attitude was to only capture medals and the world stage. Otherwise sports meant little to an Indian. But for a Milkha Singh here and there, the Indian performance remained insipid by and large. But for a genius sportsman or two, most others got a place in the side because of the patronage extended them by the powers that be. Compounding the woes of a poor side was poor coaching facilities available at the lower levels. And, sometimes, even its absence. Even today, teams are selected first and only then coaching imparted to the chosen few. One or two of them genuinely live up to the phrase 'chosen few'—courtesy our politicians. And this is the most important reason for our failure to produce 'record breakers' with regularity.

While the lack of facilities and equipment has hampered the progress in the sports arena, it is more our attitude towards sports which has failed us. The lack of a second line of defence, starkly evident by our Olympic hockey debacle, is a serious handicap and is a direct outcome of our small sports base. Even today, the situation is not very different. Very few turn up to witness local fixtures—the less said about the national selectors, the better. Our attitudes are still attuned to winning medals and awards, at the international level.

But consistent, good performances need a much healthier outlook towards sports. Due to their mental make-up our sportsmen and women have certain inherent weaknesses. After their tie-ups, they lose interest in the proceedings and are not keen on picking up a few tips by watching their counterparts from other countries in action. Sometimes, our players are so ignorant of the strong and weak points of their opponents that they cannot plan their strategies with success. This is precisely what struck Indian hockey, at the Los Angeles Olympics, in their match against the US. This approach is fatal and responsible for the low standards of sports in India. Lack of killer instinct and of the knockout punch also prevents Indians from emerging as top performers. The satisfaction with 'good' performances rather than the best has seriously hindered the progress of our sportsman and women. There is also a lack of knowledgeable sports organisers and, thus, ill-planned schedules for our players are no surprise.

If we are to come up as a great sporting nation our fatalistic approach must change. Sports must be seen as a way of life and the sports culture must be finely blended with our routine. Mass participation in sports must be encouraged and this will help in building up a stock of great performers. The creation of a Sports Ministry and the Sports Authority of India augurs well for the future. But only a judicious use of the existing facilities, increased per capita expenditure on sports and a sea change in our attitudes can take us to the top in the sports arena.

(Continued from page 15)

remained confined to the areas of its birth and has not moved to other parts of the country. Credit is taken by the planners for the additions made to the area under irrigation, increase in domestic production of fertilisers, and spread in the use of high-yielding varieties of seeds achieved over the period of 17 years since the beginning of the Green Revolution.

Against this encouragement to agriculture under the aegis of planning is to be put the discouragement provided by the equivocal agricultural price policy pursued by the government during the period of three Plans, from the Fourth to the Sixth, that in any case has constituted a serious deterrent to agricultural growth in the country apart from imposing a heavy burden of subsidies, amounting now to over Rs 2,000 crores a year, on the national exchequer. The planners cannot take refuge in the plea that their attention was directed during this period to the industrial and the complementary industrial field.

The record in the industrial field of Plan achievement is no better and is in some ways even worse than that in agriculture. In the latter case there is the excuse of weather factor; there is none whatsoever to explain the dismal performance of the industrial sector in which the "commanding heights" are held by the public sector enterprises.

It may sound cynical but it is a painful truth that, if all the resources the country has deployed in development effort over the period of the last three Five Year Plans had been deployed without the trimmings of planning the economy would have been in a far healthier state today.

Burden

Mounting annual budget deficits which are the main source of inflation in the country would have been avoided; dependence on foreign aid would have been reduced and significant progress made towards self-reliance; the debt service burden would have been kept within more manageable limits; and individual enterprise and initiative would have had a more conducive environment to operate and produce results. The objection may be that that would be capitalist path of growth whereas the country is committed to socialism.

But what does socialism mean in the Indian context but inefficiency, corruption, black money economy, growing disparities and mounting caste, class and communal conflicts. It is time now that we seriously pondered over the achievements or otherwise of the system of planning that we adopted and let launching of the Seventh Plan wait till the necessary reform of the system was carried out.

REVIEWING FOR BETTER VIEWING

BY AMITA MALIK, Film and TV critic

As we all know, Doordarshan celebrated its silver jubilee on Sep 17 last year. And it takes me back to a day, 25 years ago, when I conducted my first-ever TV interview with Alfred Hitchcock, the producer of some of the best thrillers ever made for the cinema. The studio we were in was set up for an Indian trade fair in what is now called Pragati Maidan in the capital. The equipment was Philips.

With this gifted equipment and with UNESCO and USA's Ford Foundation as guides for its pilot project, TV was started officially in India. Telecast began as modest, short-duration transmissions for secondary schools on the basis of a scheme drawn up by an expert, Paul Neurath. Then an evening entertainment transmission went on the air when Indira Gandhi became I & B Minister in PM Lal Bahadur Shastri's Cabinet after the death of her father in 1964.

Since then, Doordarshan has expanded tremendously insofar as coverage goes. As our young readers probably know, India's target of installing transmitters by 1984-end was 180, covering 70% of the population. In between, Doordarshan—known outside the country as 'Television India' since the Indian name is a little difficult for foreigners—has carried out some interesting experiments, such as the Satellite Instructional Television Experiment (SITE) which started in 1975 for a year. It was meant for village education and was carried out by a US NASA satellite, ATS-6. Specific rural areas in six states were identified and instructional programmes beamed directly to 2,400 television sets there. Opinions differ about its success. But it was well worth a try.

Now that the future of Doordarshan is in their hands, the young need to assess for themselves the success of this media in serving the social needs of what is still a poor and developing country. And to assess whether its software (programmes) has kept pace with the awesome speed of one TV transmitter for its hardware (equipment).

There are many, including this writer, who think that Indian TV is trying to run before it can crawl. And that it has not served its basic purpose of educating a vast, at times pathetically poor and mostly illiterate population. That TV can serve to educate people has been proved by a classic instance, that of *Telescuola*, a television school, in Italy. In a matter of months, *Telescuola* beamed literacy to an entire village, including old people who had never hoped to be able to read and write. Our own track record pales in contrast. Many of us who write on

Doordarshan have paid surprise visits to secondary schools in the capital to assay the effectiveness of the lessons telecast by Doordarshan in tandem with the Delhi Administration's Education Department. We have found that not only are the programmes telecast of poor quality, with presenters and teachers inadequately trained in the highly specialised medium, but also the sets are improperly maintained. In any case, it does not seem right that in a country with 28-lakh domestic TV sets, there should be only 10,000 for community viewing.

Such poor planning also affects the newly-begun telecasts by the University Grants Commission (UGC), which I am sure many of our readers have already heard of, though it has been poorly publicised. For instance, although the rest of the country got these telecasts from Aug 15, Delhiites got to view it only after the second channel went underway, a good month afterwards. And when they started, it was found that not a single college in the metropolis had a TV set, although the UGC subsidises the purchase of colour TV sets for community viewing. (Unfortunately, of the 800 colleges all over India, only 300 had bought sets by mid-October.) Then it was found that the timing was inconvenient for almost everyone. Bangalore has no classes at that time while Nagpur colleges have laboratory work from 3 to 4 p.m. Also, it is impossible to accommodate more than about 40 students at a time to watch programmes on a TV set. So, one set per college seems totally inadequate. Lastly, in the matter of timing, many colleges have games between 3 and 4 p.m. and students have to miss either the TV lessons or the games.

I strongly feel that this sort of situation can only arise when college students are not assertive enough about their rights. In the many letters I receive from listeners and viewers, I find that college students seldom make appreciatory or deprecatory comments about radio and TV programmes.

The same applies to Doordarshan programmes for youth. Quite a few of them are now put on at 10 p.m. or even 11 p.m. Also, they are constantly cancelled or changed to make way for reports on political meetings, conferences, or special reports on opening of TV stations by politicians. But has any college student protested? If so, he hopefully wrote straight in to Doordarshan. On the contrary, protests (and these I think were from the college students) poured in when I once wrote about too many imported programmes. They said that the programmes presented by Doordarshan locally were dull

worthwhile programmes for India's unlettered millions, including millions of young Indians who neither understand English nor care for pop music of the imported kind? What about young people in the remote villages of India who do not even have a transistor radio?

If I were asked which programmes on Doordarshan are worthwhile for young people, I would mention the science quiz or *Quest*, a Calcutta TV presentation, because young people participate and get involved and it is educative.

Imported programmes on wildlife, though most times years old and in black and white, are interesting and educative. They have a very high quality of presentation, they capture the audience. Some are about India itself, but made by foreigners. I could not help wondering why, first, Doordarshan could not itself have made a programme on, for instance, the one-horned rhino, instead of importing it. And why they could not have projected the splendid documentary on the Ganges Gharial made by the two young Bedi brothers which has been shown on the best networks abroad and won high acclaim.

Now this is the sort of lop-sided programming which should not only make young viewers think, but also force them to protest—by writing in to Doordarshan, or to the papers, and why not?

Every country, they say, gets the TV it deserves. And I think every country's youth gets the TV it deserves too. There was a time when the Yuva Vani of AIR Delhi was a trend-setter. Young people conducted panels with the most distinguished writers, economists and politicians in a programme called *Firing Line* and really gave a piece of their minds to the older generation. I remember a feature on the red light district of Delhi made with compassion and power by a young producer called Gujral. I have not heard such an effective programme on the radio or seen one on TV. Where has all that talent gone? And why is it that a similar new wave in youth programmes is not evident on TV, which is a much more dramatic medium.

The other day I & B Minister H.K.L. Bhagat made an announcement that he had asked the states to set up training centres for young people to learn to repair TV sets as there was a great future in it. It suggested that the sets were always breaking down. The humour was perhaps unconscious. But I wish the government would rather ask the states to train more young people in making better TV programmes. Now, that would really be the way. And, incidentally, the editor had asked me for a general article on Indian TV. Please forgive me for getting carried away and writing instead about youth and Indian TV. I found it both more exciting and relevant. And now it is up to you to start the great debate.

CAREER COUNSELLING

BY G.J. UNNITHAN

Director, Students Advisory Bureau, University of Rajasthan

Which courses of the City & Guilds of London Institute are recognised by the Indian Government?

Y. Paradesi Kumar, Palagudem (AP)

The following courses have been recognised by the Indian Government: City & Guilds College, Kensington, London-A.C.G.I.; City & Guilds of London Institute, Technical College, Finsbury—diploma or higher certificate 3 years' course if taken after passing the matriculation or the institution's studentship exam or its recognised equivalent; City & Guilds of London Institute—a pass in the final-grade exam in Electrical Engineering Practice, Parts I & II of the City & Guilds of London Institute held upto and including June 3, 1950. Further details regarding admissions may be had from the Technical Division of the Ministry of Education, Shastri Bhawan, New Delhi-110 001. These exams are generally of a level equivalent to an ITI or polytechnic course.

Which institutions/universities offer M.Sc. (by research) in Immunology or Pharmacology or Biochemistry/Microbiology etc?

R. Kannan, Bangalore

A separate degree in Immunology either in the medical or science faculty is not available in India. For other disciplines, contact the following medical colleges to find out which ones offer M.Sc. by research only: Medical College, Rohtak, L.T. Municipal Medical College, Sion, Bombay-400 022; Government Medical College, Aurangabad-431 001; S.R.T. Rural Medical College, Ambajogai-431 517; E.J. Medical College, Pune-411 001; Miraj Medical College, Miraj-416 410, Sangli; S.M.S. Medical College, Jaipur; Christian Medical College, Vellore-632 002; Postgraduate Institute of Medical Sciences, Chandigarh-160 012; All India Institute of Medical Sciences, New Delhi-110 029; Maulana Azad Medical College, New Delhi-110 002; Goa Medical College, Panaji-403 001; JIPMER, Pondicherry-605 000; P.G. Institute of Basic Medical Sciences, University of Madras, Madras-600 113; V.P. Chest Institute, Delhi-110 007. M.Sc. Biochemistry and Microbiology are also taught in the science faculty of a large number of universities.

Having passed pre-engineering (10+2) with 48% marks, can I become an aircraft maintenance engineer (AME)?

Atul Verma, K.B. Dharamsala (HP)

Minimum qualification for the AME course is 10 + 2 exam (or equivalent) with Physics, Chemistry and Mathematics. The candidate must be 21 years when he appears at the AME exam, which is conducted by the Directorate General of Civil Aviation (DGCA), Government of India, New Delhi. DGCA is the only licensing authority in India. There are a limited number of coaching institutions in India which can prepare candidates for this exam. They are: Jamia Millia Islamia University, Okhla, New Delhi; Hindustan Institute of Engineering Technology, G.S.T. Road, St Thomas Mount, Madras; Air Technical Training Institute, Dum Dum Airport, Calcutta; and Southern College of Engineering and Technology, Luis Nagar, Chalakudy, Alwaye, Kerala. Normally, two-and-a-half years of theoretical and a half year of practical training are necessary to face the AME exam.

I am a 1st year M.Com. student with Trade and Transport as my main subject (both national and international). Please give me further details concerning job prospects and further studies.

Kumar Shyam, Bombay

If you can manage a good 2nd division, you can get ready employment in the private sector. Advanced training could be had at the Indian Institute of Foreign Trade, Ashok Bhawan, 23 Nehru Place, New Delhi-110 024. However, take a job first. Its nature should indicate the kind of advanced training you require for promotion and better prospects.

I am a 1st class Psychology post-graduate majoring in Industrial Psychology. Will my doing M.S. Industrial or Personnel Management secure me a good job?

Seetha Shenoy, Cochin

Yes, if it is from an institute of repute. Moreover, M.A. Psychology is much too theoretical.

I am a Geophysics postgraduate. Where in France can I continue my doctoral studies.

N. Purnachandra Rao, Secunderabad

Contact the University of Bordeaux (351, Cours de la Liberation, 33405 Talence), Unit of Regional Geological Studies: University of Grenoble (B.P. 53, 38041 Grenoble), Unit of Earth Sciences; University of Lille (B.P. 36, 59656, Villeneuve d'Ascq), Unit of Earth Sciences; University of Languedoc (Place Eugene Bataillon, 34060 Mon-

pellier, Unit of Fundamental Geological Sciences; University Pierre and Marie Curie (Paris VI) (4 Place Jussieu, 75230 Cedex 05), Unit of Earth Sciences. This is a restricted list only.

What are the job prospects after studying Tourism in Austria and Switzerland? What is the admission procedure? Is government scholarship available?

Rajiv Kumar, Patna

Both Austria and Switzerland have excellent training facilities for Tourism and Hotel Management at the vocational/professional level. Admission is open on direct application. Knowledge of German is essential. Both countries offer scholarships to Indians with prior experience. These scholarships are channelled through the Union Ministry of Education. Up-to-date information about institutions offering these courses may be obtained from the embassies of these countries located in Jor Bagh and Chanakyapuri, New Delhi.

I am a final-year Food Technology graduate. Which is better: to continue with postgraduation or take up M.B.A?

D.D. Shendey, Nagpur

Few universities like Govind Ballabh Pant Agricultural University, Nainital (UP); Jadavpur and Mysore universities teach M.Sc Food Technology. Candidates with these qualifications can look forward to advanced research positions; those taking up M.B.A. instead might qualify for good jobs in food-processing and related industries. Eventually, it is your interest which must determine the choice of a career.

I wish to do a course in Ship Technology.

C. Hari, Jamshedpur

Contact the Department of Ship Technology, University of Cochin, Thrikkakara Campus, Cochin-682 022, which conducts a B.Tech. course in Naval Architecture and Ship-building. Minimum qualification: 12th Class exam with 1st division. There is an entrance test followed by an interview. ■

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

(Continued from page 22)

OUTLAY FOR EDUCATION AND LITERACY FOR ALL

The future of a nation depends largely on the rate of literacy among the masses. Education contributes to increased productivity and production and by making a person self-sufficient, to a large extent, reduces exploitation and increases awareness in every aspect. Keeping in view the crucial role education plays, the working group on elementary education constituted by the Planning Commission has proposed a Rs 6,200-crore outlay with respect to norms representing the minimum needs of schools. This step has been taken on the lines of the PM's stress on the need to revamp the education system in the country.

The fourth all-India educational survey conducted in 1982 revealed a rather bleak picture of educational facilities. The conditions in elementary schools particularly in rural areas are appalling. About 40% of the 4,70,000 primary and 14% of the 1,12,000 middle schools have been set up in *kutcha* thatched huts and even open spaces. Of the primary schools 36% do not even have the bare minimum of furniture including mats for children to sit on, blackboards, and 60% have no drinking water facilities or toilet facilities. Also, at present there are 1,70,000 single-teacher schools in urgent need of more teachers.

Taking all this into consideration, the Eighth Finance Commission has also agreed to provide special assistance worth Rs 70 crores to education over the next five years. The basic aim of these extensive programmes to boost education is to ensure the fulfilment of the constitutional goal of providing free and compulsory education to all children in the 6-14 age group by 1990.

If this goal has to be achieved the total enrolment in this age group must increase to 640 lakh children, 250 lakh of whom will be in formal schools. A minimum of 9.68 lakh teachers would be required for catering to the needs of these children. And for this, teacher training facilities for 3.68 lakh teachers would have to be created. Nearly Rs 2,300 crores would be needed for building new schools. And over 15 lakh instructors on part-time basis, requiring pre-service training too, would also be needed to meet the requirements of the 390 lakh children in the non-formal school system.

NEWS CAPSULE

(Continued from page 53)

Rath was dropped by PM Rajiv Gandhi. Jambhvantrao Dhote, MP, who was expelled from the Congress (I) for anti-party activities, resigned from the Lok Sabha and on Nov 15 announced his own party "Krantikari Congress".

Electronic telephone exchanges: All new telephone exchanges commissioned in the four metropolitan cities of Delhi, Bombay, Calcutta and Madras, will be electronic. The electronic exchanges are of two types, analogue and digital. Six analogue exchanges are already functioning in the country, two of which are in Delhi—291 and 77 exchange. The first digital exchange will be established at Worli in Bombay. In this system speech can be transmitted by converting it into a digit stream and reconverting it into words at the other end.

Fruits of Technology Corner: About 300 products from strong furnace bricks to highly sophisticated equipment like canned motor for heavy water projects and gamma scintillation camera are ready at the Bhabha Atomic Research Centre (BARC) at Bombay for technology transfer to the Indian industry. "Technology corner"—a novel idea by BARC to take the fruits of research at the centre to the industry and in turn to the people is a major achievement for the country.

EVENTS—International

UN deplores Vietnamese occupation of Kampuchea: The UN General Assembly on Oct 30 passed a resolution deploring "armed inter-

vention and occupation" by Vietnamese forces in Kampuchea. The vote, 110-22 with 18 abstentions, was the biggest in six years and continued a trend of growing support for the resolution that has been passed in similar form each year since 1973.

Pinochet declares state of siege in Chile: Chile's President Augusto Pinochet on Nov 6 declared a state of siege nationwide to "end criminal, terrorist and subversive onslaught" against his military government. The crackdown came a week after eight people died in Marxist-led demonstrations for a swift return to democratic rule and after six policemen died in terrorist attacks.

Morocco quits OAU: The OAU suffered a jolt on Nov 13 when Morocco quit the body in protest against the seating of the Polisario Front. Morocco announced its decision to quit the OAU, which it helped found, just before the close of the continental body's 20th session in Addis Ababa. Morocco claims sovereignty over the Spanish Sahara, now represented by the Front. Tanzanian President Julius Nyerere was elected OAU's new Chairman during the session which adopted a resolution praising Indra Gandhi's contribution to world peace and the Non-aligned Movement.

UN proclamation for peace: The UN General Assembly on Nov 12 proclaimed that "the peoples of our planet have a sacred right to peace" and that its preservation constituted "a fundamental obligation of each state". The proclamation was adopted by a vote of 92-0 with 34 abstentions on a draft resolution sponsored by Mongolia and seven other countries. It was for

the 900 crores for elementary, middle and working group has also put forward a number of recommendations aimed at achieving the goal. These include the continuation of non-formal part-time education programmes for elementary age group children in the Seventh Plan; enhanced support for the scheme at the Centre; provisions by the Integrated Rural Development Programme (IRDP) and National Rural Employment Programme (NREP) in respect to construction of school buildings and also agencies like the Khadi and Village Industries Commission and the Handloom Board rendering assistance towards organisation of meaningful, socially useful productive work by providing raw materials as well as arranging for the sale of finished products.

And even if a part of the proposed scheme is achieved, it will go a long way in promoting education and eradicating illiteracy.

COLOUR TV

AT REDUCED RATES

The electronic industry is all geared to grow and expand by quantum leaps. The customs duty concessions granted to this industry in August '83 and then in October and November '84 have been "further liberalised and nationalised".

Prices of black and white TV sets and colour TV sets and other electronic goods is expected to fall further because of the recent announcement of customs duty concession worth Rs 10 crores. The Department of Electronics has contributed to the revolution in this electronic medium by clearing the hurdles encountered while meeting the growing demand for picture tubes. Several manufacturers have been allowed to enter the foreign market directly to satisfy their needs. The cumulative effects of these steps might just ensure availability of colour TV sets at a relatively less amount.

The government has completely exempted from customs duty a number of raw materials like chemicals of special grade and high purity metals which are, at present, attracting customs duty ranging from 120-131% *ad valorem*. The rate of customs duty on critical inputs like TV glass bulbs and shell and parts of rotor assemblies, which are already enjoying concessional rates of duty of 40%, has been further reduced to a meagre 15%. The customs duty on polyethylene terephthalate film has been slashed from 236% to 40% *ad valorem*. This drastic axing of import duties means a revenue sacrifice of Rs 9.7 crores.

JYOTSNA SHARMA

the first time that the General Assembly adopted such a resolution. The US abstained but the Soviet Union supported the resolution.

DIED

Rajinder Singh Bedi, 70, noted writer and film-maker, on Nov 11 in Bombay, of cancer. Bedi won the Padma Shri for his contribution to Indian literature. His works included the Punjabi novel *Ek Chadar Maili Si* while his best-known film remains *Garam Coat*.

Martin Luther King Sr, 84, father of slain civil rights leader Martin Luther King Jr, on Nov 11 in Atlanta. King Sr's non-violent preachings during the 1950s and 1960s earned him a place in the forefront of the civil rights movement in USA.

Rehman, 66, veteran character actor on the Hindi screen, on Nov 5, of throat cancer. Rehman's film career spanned four decades.

Faiz Ahmed Faiz, 73, the editor of the *Pakistan Times* and a noted Urdu poet died on Nov 21 of a heart attack. Faiz spent a whole year in solitary confinement under the Rawalpindi conspiracy case, when he was not allowed to use even his pen. He described his confinement in the following words (translated): "Let them take away my pen and paper. I have dipped my fingers in the blood of heart."

Y.B. Chavan, former Deputy Prime Minister, expired after a brief illness on Nov 26. He was also former CM of Maharashtra and was to have contested as a Congress (I) nominee in the Lok Sabha elections from Satara, his home constituency.

ANUPAM MATHUR & A.P.

The Reservation Policy

Reservation: Thirty-seven years after independence, it is a patently inflammatory word. Despite India's progress in many spheres, its society is enmeshed in social tensions along caste lines. Often, tensions reach flashpoint against positive discrimination favouring the depressed castes. And, the fact is, reservation has yet to produce an outstanding administrator, educationist or careerist.

Before independence, liberals brought up on Western democratic values—like Mahatma Phule, Sree Narain Guru and others—failed to stem the social malaise of caste dominance. Where they failed, Gandhi realised that unless the deep-seated hatred against the lower castes was removed, more political freedom would not “free” the Indian society of its evils. He advocated fundamental changes in the Hindu society and christened the depressed classes as ‘Harijans’—Children of God. Deeply influenced by Gandhi's ideals and aware of the discrimination against the Harijans, Ambedkar and others of the Constituent Assembly provided for reservation in the Constitution.

Then viewed as a transitory measure, reservation was meant to open up new jobs and training opportunities for the underprivileged, socially ostracised Harijans. It was hoped that the intermingling of communities would lead to the natural acceptance of the Harijans as “equals”.

Quite the opposite have been the consequences of reservation. For one, the divide between the upper and lower castes is near total. For another, even among Harijans, it has created an island of the elite. These men cut themselves away from their roots and seek to merge with the upper castes, thus depriving the depressed classes of effective leaders who can raise the banner of injustice and exploitation.

Even where the fruits of reservation are a bit more diffused, there has yet not been any significant rise in the economic, political and social fortunes of Harijans. While reservation has given them a semblance of representation in Parliament and in state Legislatures, their numbers are fairly small in the indirectly-elected Rajya Sabha. Economically, they are complete write-offs. And the percentage of government jobs reserved for them are not filled up because they don't come up to the minimum education standards prescribed.

Despite the failure of reservation in bringing about a change in the standing of these deprived classes, anti-reservation sentiments have been gathering strength. After independence the higher castes, coincidentally, came to occupy all the important posi-

tions created by the forces of modernisation and benefited considerably in terms of education and social standing. Amassing huge economic strength was a natural outcome giving the upper castes considerable clout in society. Though the depressed classes have gained by the new institutions, their numbers are very small. But the winds of change have made them more vocal in their fight for their rights. Under the circumstances, reservation is seen as an instrument by the upper-caste Hindus as a threat to their position and power. To prevent the upward movement of the lower castes, they are highlighting the issue of “merit” and “efficiency” being overlooked by the policy of reservations.

Another argument of the anti-reservationists is that this policy has created vested interests and discouraged creation of skills, resources and other attributes essential for the progress of society. The result of such generosity, it is argued, is the creation of a class which takes concessions for granted and is a burden on society. This step is viewed as a populist one, as a substitute for radical reforms—more difficult to initiate. It is contended that electoral convenience and not moral justification alone has been at the root of this generosity. Harijans are seen as ‘vote banks’ by the ruling classes and, hence, the populist measure of reservation.

Another reason advanced for the scrapping of reservation concerns the fears of the upper castes regarding meritorious Hindu candidates being overlooked at the time of admissions, employment and promotions because of reservation. In a situation like this, the Mandal Committee report advocating that reservation be extended to other backward classes has very little chance of being implemented.

The anti and pro-reservation arguments need to be viewed in proper perspective to arrive at a solution. While it is true that reservation was created as a temporary measure, in reality, it has been institutionalised. As a result, the few amongst the Harijans who have gained are seeking more and more concessions for their kith and kin.

The panacea to the malaise is to strengthen the educational and employment infrastructure for everyone, particularly for the underprivileged. Ultimately, securing higher rate of growth and percolation of these fruits to the lowest rungs of society is the only course for the elimination of social tensions. All said and done, the efforts should be directed in ensuring that those enjoying the benefits of reservation strive hard to justify the advantage they get. Reservation should not be viewed as a licence for lethargy and inefficiency.

VARIED VOCATIONS

BY JYOTSANA KAPOOR

Delhi University has taken a major step forward and for the first time this year introduced vocational courses at the B.A. (Pass) and B.Sc. (General) levels. The purpose for introduction of these courses, according to Prof Mohinder Singh, Dean of Colleges, is to provide the students with better job prospects and a brighter future: "B.A. (Pass) and B.Sc. (General) courses are becoming less and less important every year. Only those students who do not get good marks at the school level take up these courses and face a bleak future once they have graduated. Our main aim is to give these students a direction and help them get jobs after they finish their studies."

Fifteen new courses have been introduced in 41 Delhi colleges this year. These courses are: (A) **B.Sc. (General) Group**—1. Computer Science 2. Electronics 3. Instrumentation 4. Analytical Methods in Chemistry and Biochemistry 5. Industrial Chemistry 6. Agro-chemical and Pest Control 7. Environmental Science 8. Family and Child Welfare 9. Food Technology 10. Nutrition and Health Education; (B) **B.A. (Pass) Group**—1. Industrial Relations and Personnel Management 2. Entrepreneurship and Small Business 3. Business Data Processing 4. Office Management and Secretarial Practice 5. Insurance.

The University Grants Commission (UGC) scheme to introduce vocational courses on an all-India basis has been with the university for the last four years or so. But the response from other universities where efforts were made to introduce the scheme was not very encouraging. Delhi University this year decided to go ahead with these courses and got a tremendous response, far beyond the expectations of the university officials.

"We had to conduct a survey to pick up only those courses which could provide the students with the maximum number of job opportunities. Then, to prepare the syllabi we had to study the market requirements. For example, for the electronics course, we

Vocational courses at the undergraduate level are being introduced in Delhi University from this year. Prof Mohinder Singh, Dean of Colleges and mastermind behind their implementation, talks about the immense advantages of these courses and future prospects of students

went to various electronic concerns in Delhi and asked them questions about their needs. The idea was to prepare the students in such a way that they are easily accepted in these concerns. The same procedure was followed in other courses too. The syllabi have been prepared keeping in mind these requirements. Not only will these courses help students to get good jobs, but even those students who want to set up small business units at home will benefit," points out Prof Singh.

Within 12 weeks everything was ready alongwith permission to start these courses. UGC was also quick to respond and sanctioned Rs 40 lakhs a year for the courses.

According to the professor there are good job prospects for these students. "In some courses, there are more job opportunities than in others. I think Computer Sciences are going to be very popular in the

course in eight colleges. The fee has been kept the same as for the regular B.Sc. courses, for we want to encourage the bright but financially poor students to join them. I feel the whole thing is a kind of experiment. Whatever the success or the setbacks, the risks are worth taking. To me, success of a project is not the only measure, it's the direction we are giving to the students. If we feel that a particular course is of no use to the students, we'll not hesitate to discontinue it. But at the same time, it is a continuous process. We have to be on the lookout for new courses and update the existing ones. The university cannot afford to close its eyes to the changing needs of the times. If this happens, the whole scheme will be a failure and we'll go back to mass producing graduates without providing them with any future."

"We are also now trying to introduce at the B.Sc. (Hons) level a Physiotherapy course. We hope to start it by the next academic year. Another proposal under consideration is to make a computer course available as a subsidiary for the Physics (Hons) course, and Business Data Processing course as a subsidiary at the B.Com. (Hons) level. The purpose behind this proposal is to provide the honours students also with an opportunity to take any of these courses as subsidiaries as they will be more useful to them than studying the present subsidiary subjects," explains Prof Singh. He goes on to say, "These courses are a step towards the introduction of a new approach altogether—an interdisciplinary approach to make studies more practical and useful. How far teachers and heads of departments of various colleges are willing to cooperate with this new experiment is yet to be seen. But if the implementation of these new ideas is successful the whole education system in the Delhi University at least will undergo a revolutionary change."

PIPES ON

Seven hundred years later too, the fabled Pied Piper of Hamelin pipes on. Hamelin continues to hold celebrations in honour of the mysterious rat-catcher who marched off with Hamelin's children to get back at the townsfolk when not paid for services rendered. Meanwhile, historians have been trying to assess the truth behind this fairy tale.

BETTER ENGLISH

BASICS OF ENGLISH-1

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

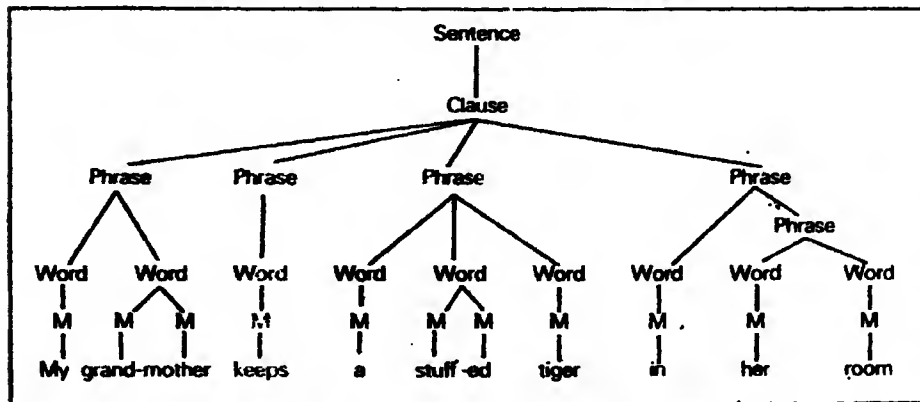

This year we introduce a new serial on grammar—beginning at the very beginning with Basics of English Grammar. In our forthcoming issues we will cover in detail all aspects and techniques of handling Reading Comprehension, Precis and Letter Writing, Paragraphs and Essays, with illustrative practice questions.

When one talks of grammar it is essentially about a set of rules for constructing and analysing sentences. Language use has these two aspects: synthesis and analysis. Analysis is based on what are called units of grammar. They are five in number and they constitute a hierarchy, which means that each unit of the higher rank consists of one or more of the units of the next lower rank.

Units of grammar

Sentence	— S (largest unit)
Clause	— Cl
Phrase	— P
Word	— W
Morpheme	— M (smallest unit)

Here is a diagram (called a tree diagram) which shows how these units are ordered:

[Note that the word 'stuffed' has two morphemes *stuff* and *ed*. The word 'grandmother' also has two morphemes: *grand* and *mother*. In the latter both morphemes are independent words; in the former *stuff* is an independent word while *-ed* as a suffix is a morpheme which has meaning only when bound to an independent morpheme. All prefixes and suffixes are bound morphemes in this sense.]

Of the unit called the word, there are several. The chief among which are Nouns (N),

Verbs (V), Adjectives (Adj) and Adverbs (Adv). They are marked in the following sentences:

1. College education is very expensive.
N N V Adv Adj
now-a-days.
2. She said that her uncle wore glasses.
Adv V N V N
3. The floods show no signs of abating.
N V N N

Two points emerge from the above examples. Some words which are not italicised have to be accounted for. They are of two kinds: In sentence 2, *She* is used in place of a noun and therefore it is as good as a noun (such words are called pronouns). Similarly *her* in the same sentence is roughly like an adjective. In place of *her uncle* one could have *old uncle*. On the other hand there are words like *that* (sentence 2), *the* and *of* (sentence 3) used primarily to help complete the structure of the sentence.

It is also evident that these words can be identified both formally and functionally. In addition to the formal and the functional criteria, there is also meaning which helps in identifying these word classes.

We will now discuss the types and structure of the first three units, viz, the sentence, the clause and the phrase.

Sentence Types/Patterns

Here we are thinking only of what are called simple or basic sentences. All other sentences are merely derivations or transformations of these sentences. They are 11 in number:

1. She is a teacher.
2. She is intelligent.

elements they take after them. The types of verbs alongwith their obligatory accompanying elements are the following:

1. Linking Verb (V_L) + Noun Phrase (NP)
2. Linking Verb (V_L) + Adjective Phrase (AdjP)
3. Linking Verb (V_L) + Adverb Phrase of Place (AdvP)
4. Intransitive Verb (V_I)
5. Intransitive Verb (V_I) + Prepositional Phrase (PP)
6. Intransitive Verb (V_I) + Noun Phrase (NP)
7. Transitive Verb (V_T) + Noun Phrase (NP)
8. Transitive Verb (V_T) + Noun Phrase (NP) + Noun Phrase (NP)
9. Transitive Verb (V_T) + Noun Phrase (NP) + Prepositional Phrase (PP)
10. Transitive Verb (V_T) + Noun Phrase (NP) + Noun Phrase (NP)
11. Transitive Verb (V_T) + Noun Phrase (NP) + Adjective Phrase (AdjP)

[A Linking Verb takes either a Noun/Adjective complement* or an Adverb of Place. An Intransitive Verb is that which does not take an object and therefore cannot be changed into the passive voice. A Transitive Verb is that which takes an object and therefore can be changed into the passive voice.]

Since the simple sentences are one-clause sentences, their structure is Noun Phrase + Verb Phrase (where *phrase* can comprise either one word or more than one word). We can represent it thus:

S → NP + VP

Clause Types

There can be many ways of looking at clause types. For example, we can have Finite Clauses or Non-finite Clauses. Take the following sentences:

1. It would be nice [if everybody came].
2. The nicest thing would be [for everybody to come].
3. [That everybody came] is amazing.
4. [Everybody's coming] is amazing.
5. [As she had to cook dinner], we finished work early.
6. [The dinner having been cooked], we started for the theatre early.

The bracketed clauses in 1, 3 and 5 are finite as they have a finite VP in them; whereas those in 2, 4 and 6 are non-finite as they have a non-finite VP in them.

Again clauses can be declarative, interrogative and imperative depending upon whether they are statements, questions or commands:

1. She will come late tonight. (Declarative)
2. (a) Will she come late tonight?
(b) Who will come late tonight? (Interrogative)
3. Get ready soon. (Imperative)

Finally, we may classify clauses into the following types:

1 Noun Clauses

1. [That she is intelligent] is recognised by everyone.

*A complement either identifies or describes a noun which may be either subject or object.

These sentence types have been formed on the basis of the types of verbs and the obligatory

2. Everyone recognises [that she is intelligent].
3. She told me [the clothes were wet].
4. She told me [that the clothes were wet].
5. [Who set the house on fire] is a mystery.
6. She told me [how she had managed to get a first].
7. I asked her [if/whether she was going to America].

All the bracketed clauses function as nouns.

II Adverbial Clauses

Clauses which function as adverbs (show or give **place, reason, time, purpose, condition, contrast**) are adverbials:

1. She danced [wherever she found an appropriate audience].
2. She did not go to college [because she was unwell].
3. [When the prime minister arrives] there is going to be a big celebration.
4. She gave me her pen [so that I could write the letter].
5. [If you come punctually], you will get an extra promotion.
6. [Although she lost], she played an exciting game.

III Relative Clauses

Relative Clauses begin with either a relative pronoun (who, whom, which, whose, that) or with relative adverbs (where, when, that):

1. Here is the boy [who won the cup].
2. Show me the watch [which/that] you bought yesterday].
3. Is there anyone [that can accompany me to the station?]
4. That is the house [where I was born].
5. It was the year [(when) I was born].

IV Comparative Clauses

1. She is always spending more money [than she can earn].
2. This house is less airy [than the one we lived in last year].

V Prepositional Clauses

1. She was amazed [at what she saw].
2. There is no evidence [of who killed the tiger].

It must be noted that all the types described above are of **Subordinate Clauses**. There are also **Co-ordinate Clauses** which are mainly of three types:

1. She became lazy [and neglected her work].
 2. She went to Bombay [but could not meet her uncle].
 3. She was tired [so she lay down to rest].
- Clauses can also be co-relative:

1. [Either the driver was careless] [or he did not see the cyclist].
2. The constable [both gave a shout] [and jumped to one side].
3. He [neither plays games] [nor does he go to the cinema].

Clause Structure

The structure of a clause consists of five elements:

Subject	— S (always an NP)
Verb	— V (always a VP)
Object	— O (always an NP)
Complement	— C (either an NP or an AdjP)
Adverbial	— A (either an AdvP or a PP; occasionally an NP)

These elements can have the following combinations depending upon the choice of verb:

1. SV She/was sleeping.
2. SVO She/wrote/a poem.
3. SVC She/is/a writer.

4. SVA She/is/pretty.
She/stood/on the table.
She/is/there.
5. SVOO She/wrote/me/several letters.
6. SVOC They/appointed/him/secretary.
They/proved/him/wrong.
7. SVOA She/put/the book/on the table.

Phrase Types

There are three types or classes of phrases: Noun Phrases (NP), Adjective Phrases (AdjP) and Adverb Phrases (AdvP), all of which have the same basic structure:

(M) H (Q)

Where H stands for head (noun in an NP, adjective in an AdjP and adverb in an AdvP), M for modifier(s) which precede the head and Q for qualifier(s), i.e., modifiers which follow the head. In the formula given above, M and Q have been put inside brackets. It means that they are optional elements. Thus H alone is the obligatory element without which there can be no phrase. Here is an example of a Noun Phrase:

Fresh fruit in the shop

M H Q

Fresh fruit

M H

Fruit in the shop

H Q

Fruit

H

Examples of the Adjective Phrase:

very beautiful indeed

M H Q

extremely hot

M H

kind enough

H Q

pretty

H

Examples of the Adverb Phrases:

very quickly indeed

M H Q

rather efficiently

M H

loudly enough

H Q

greedily

H

Besides these, we have two more types of phrases:

Prepositional Phrase (PP)

It will be seen that a prepositional phrase con-

Any kind of Noun	Uncountable Nouns or Countable Singular Nouns	Countable Singular Nouns	Uncountable Nouns	Uncountable Nouns or Countable Plural Nouns	Plural Nouns
the	this	a	much	some	these
may	that	an	little	more	those
your		each	a little	most	many
her		every	a good deal of	all (the)	few
his		either	a great deal of	a lot of	a few
its		neither		lots of	several
our		one		other	two, three, etc
their		another		enough	both (the)
which					
what					
whose					
whichever					
no					
some					
any					

sists of a preposition and a noun phrase, in the classroom.

Though we are going to discuss the Verb Phrase (VP) in greater detail a little later, it may be stated here that the basic structure of a VP is one or more Auxiliary elements (Aux) and the Main Verb (MV). Here are a few examples, using the verb **write**:

wrote	— MV
might write	— Aux MV
had written	— Aux MV
was writing	— Aux MV
was written	— Aux MV
might have written	— Aux Aux MV
might be writing	— Aux Aux MV
might have been writing	— Aux Aux MV
He had been writing	— Aux Aux MV
had been written	— Aux Aux MV
was being written	— Aux Aux MV
might have been writing	— Aux Aux Aux MV
writing	
might have been written	— Aux Aux Aux MV
written	
might be being written	— Aux Aux Aux MV
written	
had been being written	— Aux Aux Aux MV
written	
might have been written	— Aux Aux Aux MV
being written	MV

Let us now talk a little more about the Noun Phrase (NP) and the Verb Phrase (VP).

Noun Phrase

As we have seen, the basic structure of the Noun Phrase is (M) H (Q). Among the elements which function as modifiers (M), the following are the most frequent:

Determiners	— (a finite set of words which are so called because they determine or limit the noun that follows) {a, the, this, you, many, every, etc}
Numerals	— [three, thirty, first, etc]
Adjectives	— [good, green, weakest, Indian, etc]
Genitive Nouns	— Ram's, India's, girl's, year's, etc]
Other Nouns	— (diamond as in diamond ring, garden as in garden umbrella, etc]

Of these, Determiners, as stated earlier, are a limited set of words. The following table lists the important Determiners:

TEST YOUR WORD POWER

- aberration:** C: a deviation from the normal course; lapse. In Mrs Gandhi's time, violence was becoming something nearer a norm than a periodic aberration.
- apostle:** B: preacher; important advocate of a cause, espouser. Indira Priyadarshini, a favourite of the apostle of peace, Mahatma Gandhi, was a victim of violence of the worst kind.
- cog:** D: an unimportant part of a large enterprise; a minor person in a large organisation, movement. Sub-inspector Beant Singh and Constable Satwant Singh are probably just cogs in an ominously efficient machine.
- colossus:** C: immense person; anything gigantic or very powerful. For 16 long years, Indira Gandhi had straddled the most populous democracy in the world like a colossus.
- convalesce:** A: to regain health and strength after an illness. While the men were in prison, Kamala developed tuberculosis, so she was sent to Switserland to convalesce.
- cowardice:** B: faint-heartedness; lack of courage to face danger, difficulty, opposition. The senseless murder of a vulnerable PM is the worst form of cowardice.
- creed:** A: formulated system of beliefs or opinions, especially religious. Mrs Gandhi held together a vast and teeming nation of 750m people of differing races, languages and creeds.
- demure:** B: shy; quiet and serious; reserved; sedate. Indira Gandhi's mother Kamala was a demure and subservient woman who had been found for Nehru by his father.
- detonate:** A: to explode with a loud noise. Mrs Gandhi's decision to detonate the Indian nuclear device in 1974 won domestic praise but international criticism.
- errand:** B: short journey for simple business, i.e., to take or get something. At the age of 12, Indira Gandhi organised the Monkey Brigade - a children's army that ran errands and messages for the independence movement.
- frail:** A: delicate; fragile; weak. She was high-born, the daughter of an

illustrious father, apparently frail and possessing the charm distilled from the valley of Kashmir and the mountains overlooking it.

- grit:** C: firmness of mind or spirit; quality of courage and endurance. Indira and Margaret came to be described as the only men in their cabinets, probably under the mistaken notion that courage and grit are the monopoly of men.
- huddle:** A: to crowd together; get together to confer. As the doctors struggled fruitlessly to save Mrs Gandhi, her Cabinet ministers huddled in small groups along the hospital corridors.
- impotent:** A: powerless; unable to act; ineffective. Indira Gandhi remade the Congress Party in her own image after split in 1969 and forced her would-be manipulators into impotent opposition.
- mandate:** D: authority given to representatives by voters; an instruction from an electorate to its representative, expressed by the results of an election. In 1971, Mrs Gandhi won a fresh mandate by a huge majority.
- paroxysm:** C: sudden and violent outburst. Within hours of Indira Gandhi's assassination, India was plunged into one of its worst paroxysms of sectarian violence since partition in 1947.
- polyglot:** D: speaking, writing in several languages; multilingual. Indira Gandhi kept a polyglot country together—and that was no mean feat.
- traumatic:** D: distressing and unforgettable. Mrs Gandhi's assassination and the communal bloodletting that followed it have been the most traumatic events since the partition riots and Mahatma Gandhi's assassination.
- vicissitude:** D: a sudden, unexpected change of fortune, i.e., changes from wealth to poverty, success to failure (almost always used in the plural). The daughter of Kamala and Jawaharlal Nehru, who had faced many a vicissitude in her life, met a most painful end.
- void:** B: empty space. The void left by the departure of a strong and dominating national leader will take considerable time to fill.

17-15 correct excellent
14-12 correct good

BETTER ENGLISH

(Continued from page 65)

Phrase it may be useful to describe the English tense system in some detail. It is helpful to take up the tenses in pairs.

Three pairs are important.

Present Simple — Present Continuous

Past Simple — Present Perfect

Past Simple — Past Perfect

(As indicated earlier, the term Tense is being used in a wider sense.)

It is instructive to learn these tenses through simple time diagrams.

1. Simple Present

2. Present Continuous

3. Simple Past

4. Present Perfect

5. Simple Past

6. Past Perfect

A look at the first pair will show that the real present is indicated only by the Present Continuous tense, which stands for an activity, state, event or process going on at the time of speaking or writing. On the other hand, the Present Simple tense generally shows one of the following things.

- a professional activity
- a habit
- something general or regular
- something universal or eternal

As a rule the Continuous form is ideal for description and the Simple form for narration.

The second pair shows the difference between the Past Simple, which stands for anything in the past unrelated to the present, and the Present Perfect which also shows something in the past but relates it to the present. This relation is very often mental, i.e. it is felt to exist by the speaker or the writer.

The third pair, similarly, shows that whereas the Past Simple merely refers to some one thing in the past, the Past Perfect refers to two things in the past, one before the other, and the Past Perfect is used for the earlier thing. (This is obvious from the traditional example of the Past Perfect: The patient had died before the doctor arrived.)

As for the Future Time, the English Verb has no future tense form. There are a number of ways for referring to the future, the most important of which are the use of *shall*, *will* and *be + going to*. In modern English there is hardly any distinction between *shall* and *will*, except in judicial and legal pronouncements where *shall* is used for something mandatory. Wherever intention is involved, *going to* is the preferred form. However, *going to* also shows possibility or likelihood as in: It is going to rain.

(To be continued)

WHAT 'R' LI'L GIRLS MADE OF?

Sugar and spice and everything nice—plus a lot of strength. Romanian scientists conducted a study on the daily activities of a housewife—and what did they come up with?

That a housewife walks 2,000 km a year if her movements in the house and shopping centres are taken into account. This includes 10,000 steps a day in her two-room flat. If the distance to and from her household plot is added to this, then the total goes up to 17,000 steps.

That a housewife handles about five tonnes of weight in a year, if all the utensils she

washes at home are weighed. The weight includes 18,000 spoons, forks and knives, 13,000 plates, 6,000 cups and saucers and 3,000 saucepans and frying pans.

In their report, which was published in the Soviet journal, *Smena*, the scientists claim they used special gadgets to make the super measurements. Weaker sex indeed!

Coffee

Break

THE DAY AFTER

Planet earth would go into a permanent deep freeze, should a nuclear war take place in the Northern Hemisphere. That is the dire conclusion of a recent study by 80 US and European scientists, investigating for the first time the impact of nuclear war on earth's climate, atmosphere and ecosystem. The desire for the study goes back to 1971 when astronomers noted the effects of a dust storm on Mars—the fine dust particles blocked the sunlight and, as a result, Martian surface temperatures dropped rapidly. Volcanic ash has the same effect—in 1816, a mere 1°C drop in the world's average temperature caused it to be dubbed the 'year without a summer'. Based on these observations, the team predicts that the cloud of radioactive dust and soot, raised by nuclear explosions, would play havoc with the earth's ecosystem. For every nuclear megaton exploded, 1,00,000 tons of dust is sent up into the atmosphere. This dust and soot, added to the smoke from fires caused by the explosion, would effectively block out sunlight and plunge the Northern Hemisphere into a nuclear winter with sub-zero temperatures and continuous snowfall. Surface water would freeze, and surviving animals would die of thirst. The human race, or whatever is left of it, would fare no better—lack of sunlight would put a stop to the photosynthesis process in plants, and crops would perish. The entire food chain would be disrupted, and the ecological balance disturbed.

That's not all. Exposure to radioactive fallout

The calamitous cloud

after a nuclear war would be greater than previously expected—in a baseline scenario of 5,000 megatons, about 30% of the Northern Hemisphere would receive a radioactive dose greater than 250 rads, while 50% would receive a long-term dose greater than 100 rads (100 rads = 1,000 medical X-rays). This increased exposure to radiation would lower the resistance of the human body to disease. Also, due to the injection of nitrogen oxides into the atmosphere, the ozone layer, which protects the stratosphere from ultraviolet rays (UV-B), would thin out. Though the dust and soot would absorb the ultraviolet radiation initially, in a few months, the UV-B doses would increase six times, further lowering the immunity level of the human body.

These effects would not be confined to the Northern Hemisphere alone—the radioactive dust and soot would spread southwards, accelerated by any minor disturbances in global circulation. Hardest hit by a reduction in sunlight would be the tropical forests which require continuous warmth and light. Moreover, the developing countries, dependent on vital food imports from the Northern Hemisphere, would suffer, as food output levels in the North would be drastically cut, due to the nuclear war. This sudden shortfall in food availability would lead to extension of area under cultivation, at the expense of forests, thus quickening the pace of deforestation.

Thus, misery, starvation, disease and mass

destruction of life and property would be the grim consequences of a nuclear war, and they wouldn't be confined to any one portion of the earth. It is a commonly held assumption among the scientists that 1.1 b people would die outright in the first few hours of a major nuclear war and that another billion would die of the after-effects.

Says William Shirer, "Such a war will not last long and none will ever follow it. There will be no conquerors but only the charred bones of the dead on an uninhabited planet." Dire warning, indeed!

Ashish Jain, New Delhi

Booktalk

CHILLING & THRILLING

Then one night they came for her, dragged her from under the shelter of the branches where she had been bound, and pulled her into the great circle of red-painted faces under the flaring torches. In the middle was a stake, still with a white man's body on it. She could not see who it was.

"For a moment," she said later, "my heart failed me. I thought it was my turn."

Then her despair turned to anguish when she saw the man they were dragging out into the torchlight. It was her husband. He looked ghastly, with a terrible scar on his face.

"They dragged him across the circle right in front of me," said Mrs Fraser. "Four aborigines stood over him with upraised spears. I knew then that I had been brought there to witness his death."

Their eyes met for a moment. She tried to give him a smile of encouragement. She raised her hand to her quivering lips to send him her last kiss.

An agonising while later Captain Fraser died without uttering a cry, and that somehow made his wife proud, and defiant.

She knew the native word for "brave". She wrenched one hand free, and, pointing to her husband's body, she shouted the word over and over again at the top of her voice: "Brave! Brave! Brave!"

So run the adventures of one of the 11 survivors of the *Caroline* bound from London to Sydney.

Many other interesting episodes and escapades like the one mentioned above are found in *100 Great Adventures edited by John Canning: From the Dark Continent and across the globe to Sao Paulo on the Brazilian coast through deserts, oceans, the South Pole, India, China, Japan... the book takes one through over 600 pages of

*100 GREAT ADVENTURES; edited by John Canning; published by Rupa & Co., New Delhi, by arrangement with Souvenir press, Ltd., London; pages: 672; price: Rs 60.

V. Niranjan, New Delhi

Winston Churchill was with him on the foot-plate and now he took charge, getting the frightened man to butt end shove the upturned

wagon at the way. If he succeeded, at least the precious engine might be saved to roar and belch another day. The soldiers would have to retreat on foot.

With Churchill shouting instructions the line was cleared, the engine headed for home.

The intention was that it would keep within sight of the soldiers, but the driver was understandably in a hurry and soon the troops had been left far behind. Churchill made the driver stop, while he jumped from the footplate to go back, see how they were faring.

As feet hit the ground a bullet whistled past his ear. He began to run and the bullets seemed to follow. He had just made out the troops in the distance when a horseman appeared from nowhere, screamed at him and stopped the horse in a cloud of dust.

With a rifle aimed at his chest, Winston Churchill raised arms in surrender.

Soon he was in prison in Pretoria. As war correspondent he ranked as an officer and was placed with 60 of them in the "State Model Schools". These, in fact, were a single building set in a quadrangle and surrounded on two sides by an iron grille and on the other two by a wall 10 feet high. The wall was guarded from the inside, by sentries 50 yards apart.

With two officers Churchill drew up a plan of escape, and on the evening of Dec 12, 1899, it was put into effect. It depended on careful analysis of the times sentries passed a certain point from which, for a few seconds, they were unable to see a portion of the wall. The three of them—Churchill first, would hide themselves near this part of the wall (where, conveniently, there was a small lavatory hard against it) and then at the right moment clamber up via a ledge in the lavatory to lie flat along the wall's top. At the next suitable opportunity each man would drop on the far side, to freedom.

Churchill succeeded in getting on top of the wall—through a waistcoat button entangled with the ironwork, and nearly trapped him—and a second later he was outside.

But only now were his troubles beginning. The sentries had noticed something, the alarm had gone out and there was no question of the others joining him. In minutes the whole of Pretoria would be searching for him, and the other two explored him, in loud whispers, to come back over the wall while there was still time.

Even had he wished to, there was no means, no convenient lavatory, on this side. He was stranded in the middle of enemy territory without map or compass. These, together with the rations he and his companions had so carefully saved, were still in the prison, in the pockets of his friends. He had 75 pounds in money and four small bars of chocolate: he was 300 miles from the nearest sanctuary, the Portuguese seaport of Lourenco Marques.

No point in dithering—he walked into the night, boldly humming a tune and keeping to the middle of the road. There were a few burghers about, but they ignored him.

In a little while he had struck a railway line. With luck it would lead to Lourenco Marques, and was not the other one he had seen on the map, which led northwards, to Pietersburg? He walked along it in the dark for two hours till he came to a station, then prudently left the line, circled round behind the station and rejoined the railway 200 yards farther on. Here he crouched, waiting for a train.

As we have seen, he caught it—literally, clutching at it with both hands as it roared past in the night, and nearly dislocating his shoulder in the process. He went to sleep.

When he awoke it was still dark, and he had a raging thirst. He would have to get off at the first opportunity and find water, for the train could take days to reach a destination and in the meantime he might well die of thirst.

There was no sign of an impending halt, and Churchill now hurled himself off the moving train, a process even less pleasant than his embarkation. He landed in another ditch, bruised and shaken but still confident of success. A little later, as a hot and steamy dawn crept into the sky—for this was midsummer—he found water and drank like a camel to last for as many hours as possible.

He went on, but now, in daylight, it was less easy. Every bridge was guarded, every station full of men. He lay low for most of the day, started moving again at dusk. This was hazardous, for he had to creep much of the way like an animal, falling into bogs and swamps, wading waist-deep through streams.

Suddenly, looking out of the darkness on an unexpected siding, he found not one train, but three, all stationary.

Which one to take? It might be embarrassing, getting out at Pretoria.

The decision was taken for him: men approached and he tore off into the long grass of the veld.

Once out of earshot, he stood up straight, headed towards what seemed a village in the distance. He knew that the Kaffirs, the black men, hated the Boers, and if this were a Kaffir village he might be safe. On the other hand, it might belong to Boers.

It belonged to neither, it was a coalmine, with a few houses round the mouth. A number of these, he knew, were still run for the Boers by Englishmen. Carefully, he selected a door, beat against it.

There was a shout in Afrikaans and he replied loudly in English, saying he had an accident. A tall man with pale face and dark moustaches opened the door and faced him. Years later, Churchill described the encounter: "I am a burgher," I began. "I have had an accident. I was going to join my comrades at Komati Poort. I have fallen off the train. We were skylarking. I think I have dislocated my shoulder."

"It is astonishing how one thinks of these things. This story leapt out as if I had learnt it by heart."

He was in luck. The stranger had no need to swallow this improbable tale, for he was an Englishman, managing the Transvaal Collieries, and there could be no doubt that this dirty, English-speaking, individual was a compatriot. On learning that his guest was Winston Churchill, John Howard confirmed that soldiers had already been making inquiries, that 3,000 pictures of the absconded prisoner were already being distributed, that telegrams had been sent to every post office, every railway station, in the country. And of course there was a substantial reward—dead or alive.

The first thing, after feeding the fugitive, was to get him down the mine and Howard accompanied him in the little cage, operated from the surface by another Englishman, and took him to a spot underground where a mattress had already been provided, as well as candles, whisky and a

box of cigars. Wishing him a pleasant rest, Mr Howard was wound slowly to the surface.

Churchill slept—and when he awoke and tried to light the candles, found rats had eaten them. He sat there, in utter darkness, for many hours.

His incarceration lasted three days—not all of it in darkness, for more candles were sent down, with food. He was warned to tuck them away under the mattress while he slept.

At two o'clock on the morning of Dec 19, out in the blessed air again, he was led by his host to a railway wagon. It would be carrying wool to Lourenco Marques and had conveniently been delayed until the extensive police search of the mine and surroundings was over. The war correspondent of the *Morning Post* wriggled in among the wool as his host handed over food and cold tea. A little later the wagon was hooked up, moved off.

On the afternoon of the following day the train seemed to have reached Komati Poort, the last Boer town on the frontier.

This would be the most dangerous part of the whole escape. He was only a few miles from freedom, but with every likelihood that police and customs would search the train. Some did, and he lay flat on his face, covered with sacking for many hours before the train pulled out of the station.

But now there was the nagging suspicion: had that stop been Komati Poort? After all, he hadn't dared look out and see. If it had been—he was safely over the frontier. If not—the horrors of train inspection were ahead.

Then—to his almost uncontrollable joy—he saw Portuguese uniforms at the next stop, saw them through a chink in the wagon. He forced himself to remain hidden, but when the train was on the move again he went wild with joy, leaning out of the wagon, shouting and singing, firing his revolver.

And late that afternoon the train reached Lourenco Marques. There was still a chance of Boer sympathisers arresting or kidnapping him, and he made his way carefully, mingling with the loafers, "which my slovenly and unkempt appearance well fitted me to do", till he discovered the British consulate. Here he was brusquely ordered off, but caused such a disturbance that the great man himself came downstairs to see him. A moment later, identity established, the war correspondent was inside and safe.

Churchill had guts and determination and vision, and almost everything else as well: one of these was luck. The train on which he had been secreted—by the only man likely to have helped him—ran in conjunction with the weekly steamer from Lourenco Marques to Durban. After an excellent dinner and escorted by "patrotic Englishmen" determined to get him to safety, he was put aboard that steamer. An hour later it had sailed, and a few days after that he was back in Durban, already, thanks to the electric telegraph, a world hero.

His luck stayed with him. With the war as good as won, he was invited back to England to stand again for Parliament, in the Oldham constituency which had already rejected him. A universal hero, he need hardly have bothered to campaign, but he did, and was able to point out to a rapturous audience that the gentleman who had so skillfully wound him to the bottom of a mine in the Transvaal was none other than Mr Dewson—of Oldham.

The audience went wild.

GUIDE TO GOOD GROOMING

What suits you

If you're Tall

You have a head start—make the most of it. If you're also lean, you might choose your colours, designs and accessories to add dimension.

Fabric

Plains, checks, stripes—anything goes. If you're also slim—light shades create an illusion of breadth. Wide-eyed checks and spaced stripes give narrow shoulders width.

Single-breasted worn unbuttoned drape elegantly on a tall frame. Double-breasted give you a nice chest—just the thing! Trousers cut on the straight, with pleats or without—and you can get away with turn-ups! Loosely fitting shirts with rounded collars; and, if you're lean, a run of gathers at the back.

Sharp angles should be rounded off where possible. Jackets and trousers cut on the straight, slightly contoured to the figure.

Accessories

Snub-nosed shoes are the right footnote. You can sport a broad tie with panache and flourish a pocket handkerchief.

Putting it all together

In any ensemble a pleasing balance is achieved by having one element strong, one subdued, one neutral.

A plain suit gives you a carte blanche. The perfect foil for a patterned tie, paisley, geometric, abstract. With matching pocket square, or one that picks up the tie's keynote colour.

A suit with a fine stripe invites diagonals—a tie with a thicker or denser stripe, an interesting counter-play.

In coordinates of various combinations, the accents vary.

The sports jacket is the unabashed showpiece of an ensemble. The trouser is the neutraliser. Tie and links must be decidedly subdued, just camp followers.

With the blazer, the slim club tie or a bright plain one with a small motif completes an elegant picture. The casual look, instead, asks for just a bright touch of handkerchief knotted breezily about the neck or tucked in at the pocket.

An ensemble is essentially two-colour harmony. In plain contrasted coordinates where jacket and trousers fall in the same colour band, tie and accessories can introduce some excitement. Thus with a navy jacket on grey slacks, a dark wine tie makes a heady highlight. When jacket and trouser represent a colour contrast, tie and accessories must tone in. A

If you're not

There are many ways of walking tall. But everything must be made to add UP. And if you're broad as well, to streamline.

Fabric

Narrow stripes create verticals. Thus a pencil stripe gives an impression of length. Large checks may add to your account, but they're inch reducers. Deeper hues have a neat compactness that trims a broad frame.

Jackets with narrow lapels are just what the designer ordered. Padded shoulders would make you look stocky. Make your trousers minus pleats with slimmer trouser legs. Wide-bottomed trousers are out. Also, give turn-ups the thumbs down. Shirts should be tapered to body lines.

Jackets and trousers should be shaped at the waist and calf respectively to create a more elongated, trimmer profile.

Accessories

Shoes with a built-up heel give you a leg up. Ties and links should be modest. Give pocket handkerchiefs a miss.

deeper or lighter tint of one of the paired colours. Or a neutral like pearl, mushroom, sand-beige, silver grey. Even with a delicate print.

How to get a good fit

Of course, the first step is to go to the right tailor. But you also have something to do with it.

Do's and Don'ts when being measured

■ Keep your wallet and keys in your pocket and your belt on. Since this is how you will

eventually wear your suit, the tailor will be able to allow the right leeway.

■ Don't stand stiffly to attention, stand at ease, slouching a little as you normally do.

Do's and Don'ts when you take a trial

■ Check for horizontal ripples below the base of the neck. This indicates that the material must be cut across the top of the shoulder. If tension lines appear across the shoulder blades, it means the back is too tight and needs letting out a bit.

■ To decide whether your jacket fits (whether it is straight or shaped), button it up and watch for the X-shaped lines that form the button. If they are too pronounced, the waist must be let out. Horizontal wrinkles at the back of the jacket also mean the waist is too pinched.

■ To make sure that your trousers fit well, stand and sit. They must be comfortable and not too tight at the thigh when you sit.

A checklist for your tailor

■ At least half an inch of the shirt collar should show above the jacket. This looks smart and ensures that the jacket hangs well.

■ Jacket sleeves should be fuller at the top and taper down; half an inch of the shirt cuff should be visible.

■ The jacket must cover the seat completely, though slight variations in length are acceptable.

■ The second button should be at the waist or slightly higher.

■ The trousers should be one centimetre above the ground, to prevent fraying.

A dress rehearsal

A moment of truth. Lay out shoes, socks, handkerchief, tie together. Well-matched indeed. Now put them on and give yourself a top-to-toe once-over because the final answer is in your full-length mirror.

The right care Lengthens wear

Do not wash or bleach because this could spoil the feel and finish of the fabric. Dry clean with perchloroethylene or white spirit.

PRESSING

Do not press the garment directly with a hot iron. Always place a fine muslin cloth which has been dampened over the garment and then iron.

KEEPING

Clothes-brush your suit before and after use. Put it in a plastic cover on a hanger or keep folded lightly. Strew cupboard with mothballs.

Extras: Slim fob watches. Jewellery lighters. Heavy signet rings. Elegant tie pins.

How to colour match

Combining is never as simple as it looks. As patterns can chime or clag like cymbals, colours can blend or clash. The colour guide on the centrespread can help you to happy matches. Having made a well-considered selection of suiting, shirting, tie, handkerchief, socks, shoes, lay them all out together. Spare a minute to check against our guide that you've teamed them right.

Sports Quiz-38

BY NAROTTAM PURI

WIN Rs 100 IN BOOKS

1. Name the three England bowlers who have captured more than 300 Test wickets.
2. When and where did the West Indies lose their last Test series?
3. What will the new form of cricket being introduced by the Australian Cricket Board be called?
4. What do Frank Weineke, Hitoshi Saito and Yasuhiro Yamashita have in common?
5. In which four events did Jesse Owens win gold at the 1936 Olympics?
6. And what events did Carl Lewis win in 1984?

PRIZES

SPORTS QUIZ-38:

2 First Prizes

Sports books worth Rs 50 each from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no all-corrects) pulled out of the hat.

Plus 5 Consolation Prizes worth Rs 20 each from **Rupa & Co.**

KENWORDS-38:

2 First Prizes

100 *Great Adventures* from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no all-corrects) pulled out of the hat.

Plus 5 Consolation Prizes—Arthur Hailey's *Strong Medicine* from **Rupa & Co.**

HOW TO ENTER

- Print the answers neatly in capital letters along with your name, age and address. Each crossword must be pasted/clipped to a larger piece of paper.

- You may send in any number of entries, but each must be numbered accordingly and accompanied with its respective COUPON.

- Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the two contests: January 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions to this issue's contests will be published in March '85.

CALCUTTA-700007

From The Club Desk

We're back again to help all you enterprising young folks come together through your very own CCTimes Clubs. And this time we hope we'll be there to render our assistance and advice to you whenever and wherever you need it. We regret the slight lapse that occurred in our communications with you but circumstances beyond our reach caused this—much against our wishes, of course.

In the meantime, correspondence from your side has continued unabated—a very heartening sign indeed because it goes to show unceasing enthusiasm on your part. The number of CCTimes Clubs all over the country has gone up too.

Several of our readers have sent in letters asking about how to form a CCTimes Club, the rules, regulations, activities of such a club, the minimum number of members required to form a club, and so on. Once and for all, we'd like to simultaneously resolve your queries. The CCTimes Club is formed exclusively by your own efforts and initiative. So if you're preparing for any competition in any field whatsoever and are eager to share your opinions, views, experiences with others like you in your own locality, school, college or city then go right ahead and form a CCTimes Club—and don't count your members. You can have any number.

As members of such a club you can organise activities like debates, discussions, quiz contests on various subjects. And while increasing your general knowledge and developing your all-round personality, you'll at the same time be developing qualities of leadership and organisation as well. Our contribution will be providing you with assistance and guidelines on any specific problems you encounter. For example, if you're planning to hold a debate contest and find you need some 'thought-provoking' topics, we'll be glad to supply it to you. And you can keep us informed of all the activities your club organises (accompanied by black and white photographs, if possible), and we'll provide you with adequate coverage in our magazine. The most active and enterprising club will be awarded the 'Club of the Month' title too! Also, all club members who win any CCTimes contest will receive an extra bonus prize—provided you quote your membership number.

Once you have formed a club, send us the name and address of the club (you can conduct your club's activities in premises mutually convenient to all the members of your club), names of the members and we will issue membership cards. If you've already sent us these and not received your membership cards yet, rest assured you'll be receiving them soon. We've already despatched them upto the letter 'I'. Many of our readers have asked for the names and addresses of CCTimes Clubs in their towns. For their convenience we have been publishing the list alphabetically. In this issue we continue with the letters 'B' and 'C'.

So come on, energise yourselves, form new CCTimes Clubs and if you're already members then activate your clubs and we too will do all we can to make your endeavours successful—that's a promise. Do keep writing in to us at: The CCTimes Club Desk, C/o Career & Competition Times, 10, Daryaganj, New Delhi-110 002.

A to Z of Science

GIVE US 15 MINUTES OF YOUR TIME EVERY DAY FOR THE NEXT 30 DAYS AND WE SHALL TURN YOUR HAND, ELBOWS, KNEES AND FEET INTO DEADLY WEAPONS OF SELF-DEFENCE.

Presenting **KOMANDO**

The amazing new **TOTAL SELF-DEFENCE SYSTEM** that combines the best and the most effective features of Karate, Judo, Jiu-Jitsu, Savate, Boxing and Wrestling to turn you into a **MASTER PRACTITIONER OF THE ART OF WEAPONLESS SELF-DEFENCE**.

Before you read any further, glance through today's newspaper. Which are the headlines that draw your attention most?

"Couple robbed at Knife-point on the beach" "Man stabbed to death while resisting hold-up" "Woman raped and done to death."

Yes. Today you are living in a world of increased crime and violence, whether you like to admit it or not. The streets, the byelanes are no longer safe for you and your loved ones. You are in constant danger of being brutally, mercilessly attacked with lethal weapons. **YOU ARE NO LONGER SAFE.**

How do you cope with this world of unprecedented crime and violence?

This is where **KOMANDO** comes in.

KOMANDO is a **WEAPONLESS SELF-DEFENCE SYSTEM** that combines the best features of the world's best-known martial arts. It's packed with never-before-revealed secrets of the world's expert weaponless fighters—the supreme masters of Karate, Judo, Jiu-Jitsu, Savate, Boxing and Wrestling. Once you master the teachings of **KOMANDO**, you can walk the most dangerous streets of this world fearlessly. Because, once you master **KOMANDO**, you can tackle almost anyone—even if he is twice your size and heavily armed!

NOBODY EVER DESIGNED A BETTER WEAPONLESS SELF-DEFENCE SYSTEM THAN KOMANDO.

Easy to Master **Komendo**

The most amazing part of **KOMANDO** is the **EASE** with which even a child can master it. That's because this action plan is specially written by a team of experts who have been teaching these self-defence secrets to thousands of eager pupils all over the world.

Become a master practitioner of the art of weaponless self-defence. In just 15 exciting minutes a day

KOMANDO is very simple, very easy to learn and precise. All you need to do is to spend just 15 minutes of your time every day for 30 days systematically learning and practising the step-by-step instructions in the privacy of your home. In 30 exciting days, we promise **KOMANDO** will turn you into a **MASTER PRACTITIONER** of the art of **WEAPONLESS SELF-DEFENCE**. In 30 short days, your hands, elbows, knees and feet will turn into **LETHAL WEAPONS OF SELF-DEFENCE**. In 30 fun-filled days, you'll be bursting with self-confidence. Ready to take on this criminal, violent world with your **KOMANDO** skills.

KOMANDO costs less than a shirt!

Yes. This amazing, exciting **WEAPONLESS SELF-DEFENCE SYSTEM** is now yours for just Rs. 30/- only (plus postage, packing and handling by V.P.P.). Less, much less than what you would pay for a good decent shirt!

That's not all.

KOMANDO COMES TO YOU WITH OUR UNIQUE 7-DAY, NO RISK, MONEY BACK GUARANTEE

Order your copy of **KOMANDO** today. Examine it at our cost, at no risk whatsoever! If you are not satisfied with this exciting self-defence system, just return it in its original condition within 7 days of receipt for a full and unconditional refund (minus postage, packing and handling costs, of course!) No questions asked.

INSTITUTE OF HUMAN DYNAMICS,
3/305, Navivan Society, Lamington Road, Bombay 400 008

Norvicsun

**At 8 he wanted
to be a doctor.**

At 10 he just wants to be able...to see.

It was a life full of ambition and hope. Of secret dreams and a smiling future. Till one day tragedy struck. In the form of a disease that shattered his life.

Gone were the days of pranks and play. Smiles and laughter. Hopes and aspirations. Replaced by a hopeless terror few can understand. The terror of becoming blind.

But young Ajay's case is not without hope. His blindness is not without cure.

There is a remedy that's simple, doesn't cost anything and is effective.

Only it needs you.

A simple cornea transplant can restore his sight. The useless cornea, replaced by a healthy one. And the healthy one could be yours.

Eye removal leaves no scar or disfigurement. And once you've pledged to donate, you'll live with the gratifying emotion that your eyes will live much longer than you. And that some blind person will see ... through them.

If your heart goes out to the blind during your lifetime, let your eyes go out to them

after death. It's the most precious gift you can give them.

To know more about eye donation, and what kinds of blindness can be cured, send us the coupon for a detailed brochure.

Do it today. Remember, miracles can't cure the blind. You can.

I would like to know more about eye donation and cornea grafting. Send me a detailed brochure.

Kettle Calling The Pot Black

The issue of Parliamentary vs Presidential system is being much debated. According to me a system never fails in itself. Regional controversies, corruption, nepotism, separatist tendencies poverty are not the frailties of a system but are caused more by the people themselves. Blaming the system is a case of the kettle calling the pot black. Besides, one cannot easily shed a government like a cloak. Can we change a system which is in the grip of corrupt leaders?

The 'P' Game

First I was a P (Pilot). Then I became an MP. Subsequently, there was a clash between the M and the P. P succeeded and I became PM!

P.V. Subba Rao, Guntakal (AP)

A New Beginning

It is not *The End Of An Era* (Dec'84) but the beginning of one to culminate violence, apathy and disbelief and to usher in not the presidential form of government but a good government.

S.K. Mehta, Dehra Dun

The madness which spread all over the country following Mrs Gandhi's assassination was rather unfortunate. Should an entire community suffer for the misdeeds of a few individuals? I still remember one elderly Sikh who was serving the public by taking care of their shoes, free of cost, at Rajghat, on Oct 2. How can one claim that all Sikhs are separatists?

Subrat, New Delhi

Indira is not India now, a fanatic made all the difference.

A.K. Malla, Sangam Pura Sapore (J&K)

The December issue very deftly covered the whole life of our late prime minister—the most dynamic leader India had

Rajeev Ghai, Setna (MP)

Unfaithfully Yours

The year's biggest casualties have been hope and trust.

Bhooshan Shende, Nagpur

Let The Planet Live

Environmental Pollution (Dec'84), is the greatest enemy of mankind. All the lectures by our leaders in the UN and elsewhere, on environment won't help. We have to act fast to crush this man-made enemy.

Anish M. Dave, Ahmedabad

Mutual Co-existence

The need of the hour is not confrontation, but collaboration. It's high time we the citizens of India realised this, and took steps to curb any problem which is a threat to communal harmony. The only way to exist in today's world is to co-exist.

Bismaya Mahapatra, Bhubaneswar

Our country is passing through a critical phase. It

Act(ive) Role

Today, the film industry is apparently becoming a coaching class for future politicians as more and more actors and actresses are trying to play an active role in the political cinema. No one would have grudged this new trend if the actors were trained to become progressive national leaders who would sincerely work for the country's development. But unfortunately they are only trained to become on-the-spot vote catchers.

Nisha Gandhi, Rajkot

Prize-winning Letter: Rs 25

seems the Westminster coat does not suit our political set-up. It is high time we got rid of a system that builds capitalism in the name of socialism; a system that practises communalism in the name of secularism, a system that disintegrates the nation in the name of integration. Let us have a new result-oriented system of government which can ensure Justice, Liberty, Equality and Fraternity.

Narendra Nath Mehra, Ajmer

Timely Guidance

Thanks for the guidance provided by *CCTimes*. I have been appointed as Probationary Officer in Syndicate Bank. With the help of your invaluable issues (Sep'83, Feb'84 & May'84) my interview went off well and was very interesting.

Randhir Singh, Chandigarh

Energising India

Your editorial comments on the role of students in society (*Hello Folks*, Nov'84) were timely. Some political parties occasionally allow the members of their student wings to resort to violence for their own short-term gains. Consequently the members of these organisations at times behave like stormtroopers and the parent political parties look on helplessly. The need for channelising the energies of the students for the benefit of the country is more today than ever before. Political parties should not only train the members of their student wings in leadership but also utilise their services for promotion of national integration, communal harmony and nation-building activities.

A.R. Srinivasa Rao, Hyderabad

Do we face an energy crisis? Not in India with its millions of youngsters. "You've enough atomic energy within you to blow up the city of New York," says Vincent Peale, for youngsters. In the International Year of the Youth, it is imperative to channelise this young energy for creative and useful purposes. Anger, violence and idleness, must be replaced by patience, fortitude and hard work.

Ali Akbar Teharally, Madras

'Publicising' The Government Schools

Public schools (Nov'84) have several plus points in their educational system that outweigh the minus ones. Government schools, instead of pointedly accusing the public schools for 'creating a wide disparity', should lay emphasis on the all-round development of a child's personality. This will enable the child to cope with the advanced academic curriculum

chalked out for one and all. In order to rid the general masses, barring a few, of a deeply etched inferiority complex the government should adopt measures along the lines of public schools.

Nabaneeta Sahu, Burla

I wonder if there is any chance of bettering the government schools. With the majority of our masses poor and illiterate, the government should direct its resources in providing at least a bare minimum of, educational requirements, instead of bettering the existing schools.

Moony, Rourkela

Away With Inequality

The Gujarat Government has offered to provide free education to girls studying at the Higher Secondary or degree levels. But why is there a discrimination against boys?

Yatin Dhirajlal Gandhi, Rajkot

The appointing authorities who issue application forms for various posts should see that information on 'caste' and 'religion' are not sought from the applicants and equal opportunity is given to one and all.

Vinayadatt V. Kohir, Gulbarga

An Election Stunt?

Recently, the Gujarat Government introduced a scheme for supplying vitamin nourished food to primary school children at the cost of Rs 110 crores. The motive behind this scheme was to provide encouragement to school going children. But there are schools in the state where even basic amenities like drinking water ventilation etc are not available. Some of the schools do not even have a proper building.

Why this expenditure at the cost of public revenue? Is it an election stunt?

A.B. Vandiwalla, Vadodara

Errata

The Colombo Conference of the PMs of Burma, Ceylon, India, Indonesia and Pakistan recognising the principles of Panchsheel was held from April 28-May 2, 1954 and not 1984 as wrongly stated under the columns of G.K.

Current Events: International wrongly states that US President Ronald Reagan has been elected for another five-year term. The term of a US President is four years, not five.

The errors are regretted—Editor.

WIN A PRIZE

Do our articles provoke you to say something? Is there anything else you feel strongly about? Here's your chance to say it and make some money in the bargain. The best letter will win Rs 40, the second Rs 25.

So, why don't you get cracking?

Your letters should be legibly written/typed, not exceed 200 words and include your full name and address. We may edit them for purposes of clarity or space.

Hello folks...

Ramesh had just completed his graduation, and was already a bundle of nerves. Reason: the fast approaching Civil Services Exams which were just six months away. He had never realised there would be so much to study, to understand. He found an enormous amount of reading material but very little time at his disposal. Whenever he sat down at his desk, he was unable to decide on what to begin with.

His friend, Vikas, who was his classmate, was also appearing for the same exam. He did not seem as bothered and spent much more time in relaxing, going to the movies or shopping. Ramesh and Vikas met each other by chance one day and Vikas offered to take Ramesh home and discuss his problem.

"Time is one factor which has been distributed equally between everyone," explained Vikas to Ramesh. "And you know there are people who run the whole country during these 24 hours and those who cannot read 10 pages in the same time." He discussed with Ramesh the art of time management and how he could achieve the maximum in a limited time period. He also suggested a book *Successful Time Management Methods* by R. Alec Mackenzie published by Vision Books, New Delhi.

Time management is nothing but dividing the 24-hour day and allocating time periods for various uses in such a way that maximum output can be achieved. A person who can manage his time successfully not only gets the maximum out of the day, but also finds time to relax, read and meet people. Time management can be divided into three stages:

The first stage is to find out how a per-

son is spending most of his time. Peter Drucker, the father of modern management studies, advocated the use of the time log. The time log should be a daily log of activities for at least two weeks. After this period, the entire time log should be critically analysed to find out how the days were spent. It will reveal how much time was consumed by various activities during the day and bring to notice several 'time-wasters' which prevent a person from working in the minimum possible time. These time-wasters are either external or internal. You have little control over external time-wasters. For example, if there is a sudden electricity failure or a friend drops in whether welcome or not. You, however, have sufficient control on internal time-wasters like a disorganised desk, unnecessary involvement in routine matters, spending much more time on a particular work than required, inability to decide what to do, and working at a slow pace.

The time log will also reveal that time-wasters are inter-related. For example, when you are not able to decide on what to do, you try to do several things and leave them half-finished, or because of a disorganised desk are unable to find the appropriate papers. Very few people take the trouble to identify their time-wasters. The first positive step towards effective management will be to precisely identify areas where you waste time.

The second stage is preparing a time schedule which will indicate the way you wish to spend your time. Before planning your schedule it is necessary to keep three things in mind: One, time estimates should not be unrealistic. It is a common practice to assign less time to a work than it takes. We do not estimate our ability to complete the work. Successful time planning requires a realistic appraisal of our capabilities. The second important thing is that you should not trust your memory too much. We tend to feel that various ideas which come to our mind will be retained by us. However, we seldom remember most of them. It is, therefore, necessary that you should take the trouble to jot down these ideas. The third important thing is that you should not make sketchy notes in your time schedule. Making entries in general terms is sometimes confusing. The main points or major details should be recorded.

Making a time schedule, i.e., the art of

dividing time among various activities, is the third stage. Its first principle is that you should lay down a priority system and clearly chart out the order of importance. Then, keeping in view your working ability and capacity, you should assign a certain amount of time to it. This way you can prepare a time schedule for one week. At the beginning of the day, you should spend 15-20 minutes to study the time schedule and remember that day's schedule. At the end of the day, it is better to spend 20 minutes on planning for the next day.

What has been suggested here is a basic idea, for many details of time scheduling cannot be laid down. It is a very personalised thing and every person will prepare his time schedule in an entirely different way. However, if you carefully maintain a time log for a few months, you should precisely identify the time-wasters and on the basis of that and according to the priority, prepare the time schedule. A perfect time schedule could be prepared in probably three months time. Once this has been arrived at, it will be realised that the person will be doing in a day's time what he was doing in three days.

While preparing the time schedule it is very necessary to keep in mind certain things. Unexpected happenings should always be considered as normal affairs. Therefore, always make a provision for the unexpected.

Deadlines must be strictly adhered to. If you have not been able to finish your work within a stipulated period of time, you should leave it there and attend to the next work which is on schedule.

The time schedule should be flexible because many a time you have to accommodate forces beyond your control. If there is no cushion provision in your time schedule, it will always remain upset.

Time management has acquired significant dimensions because students today have to study 30-40 times more than what their fathers or grandfathers had to. Time, however, is the same. The successful ones are those who are able to manage their time efficiently.

R. Halan

Right now

Why not consider studying the following courses?

Let us give you a helping hand. Our professors go through the syllabus and, after intensive reading, prepare written lectures on important points as well as questions and answers. You may not have the time or the finance to do a full-time degree course at the University. Don't let this hinder you. You can achieve your ambition by taking a correspondence course from Nancy College. And do it in your leisure time. The fees are not high. Join Nancy College immediately for Postal Courses.

(Answers on page 62)

IDIOMS & PHRASES

1. **To drive a quill**: to write. He earns a living by driving a quill.
2. **To qualify for**: to be fit for. To qualify for the job of a professor in a Delhi college, one must hold a Ph.D. degree.
3. **In quest of**: in search of. They went to the Himalayas in quest of peace.
4. **To be a Quixote**: to be idealistic to an impracticable degree. Modern man cannot afford to be a Don Quixote.
5. **Quirk of fate**: twist of destiny. By a quirk of fate, a prisoner of yester-years became the King of France.
6. **For a rainy day**: for hard times. It is always wise to save a dime for a rainy day.
7. **Ravages of time**: destruction caused by years. Both men and mansions suffer from the ravages of time.
8. **To reckon with**: to take into account. Every government has to reckon with major problems caused by natural calamities and make suitable budgetary provisions.
9. **To restrain from**: to hold in check. Children should be restrained from playing truant.
10. **To renege from**: to retract from an earlier stand. A government cannot renege from its commitments to its people.
11. **To ram down**: to crush. The autocratic monarch rammed down the Opposition in every conceivable way.
12. **To rant against**: to criticise. All over the world, people are heard ranting against inflation.
13. **With respect to**: having regard to. He was let off lightly with respect to his physical infirmity.

14. **Without rhyme or reason**: without any valid cause. Many innocent people were murdered during the revolution in Iran in 1979 without any rhyme or reason.
15. **To ring in**: to welcome, usher in. Let us ring in the New Year.
16. **A riot of colours**: colourful. The garden was a riot of colours last spring.
17. **Ripe old age**: old with age. George Bernard Shaw died at the ripe old age of 95.
18. **To rock the ship**: to create trouble. If you want to live peacefully yourself, don't rock the ship for others.
19. **Under the rose**: in secret. Many deals are conducted under the rose.
20. **In the red**: in danger. India's unity is in the red and hopefully the new government will have a hold over the situation.

QUOTABLE QUOTES

Men have an extraordinarily erroneous opinion of their position in nature; and the error is ineradicable.

Somerset Maugham

The greatest thing in the world is to know how to be self-sufficient.

Michel de Montaigne

Is not life a hundred times too short for us to bore ourselves?

Friedrich Nietzsche

The most successful politician is he who says what everybody is thinking most often and in the loudest voice.

Theodore Roosevelt

What is Conservation? Is it not adherence to the old and tried, against the new and untried?

Abraham Lincoln

Here we all live in a state of ambitious poverty.

Juvenal, Satires

Nothing lays itself open to the charge of exaggeration more than the language of naked truth.

Joseph Conrad

The nearest way to glory is to strive to be what you wish to be thought to be.

Socrates

Government, even in its best state, is but a necessary evil; in its worst state, an intolerable one.

Thomas Paine, Common Sense

That man is great, and he alone, Who serves a greatness not his own.

For neither praise nor self:

Content to know and be unknown:

Whole in himself.

Owen Meredith, A Great Man

Why is it that we rejoice at a birth

and grieve at a funeral? Is it because we are not the person concerned?

Mark Twain,

Pudd'nhead Wilson's Calendar
If you get simple beauty and naught else,

You get about the best thing God invents.

R. Browning, Fra Lippo Lippi

Remember that the most beautiful things in the world are the most useless; peacock and lilies, for example.

John Ruskin,

The Stones Of Venice
A little learning is a dangerous thing; Drink deep, or taste not the Pierian spring.

Alexander Pope,

Essay on Criticism

Very often he that his money lends, loses both his gold and his friends.

C.H. Spurgeon, John Ploughman
We would rather die on our feet than live on our knees.

Franklin D. Roosevelt,

Address, 1939

Literature always anticipates life. It does not copy it, but moulds it to its purpose.

Oscar Wilde,

The Decay Of Lying

Man is a rope connecting animal and superman—a rope over a precipice. What is great in man is that he is a bridge and not a goal.

Neitzsche,

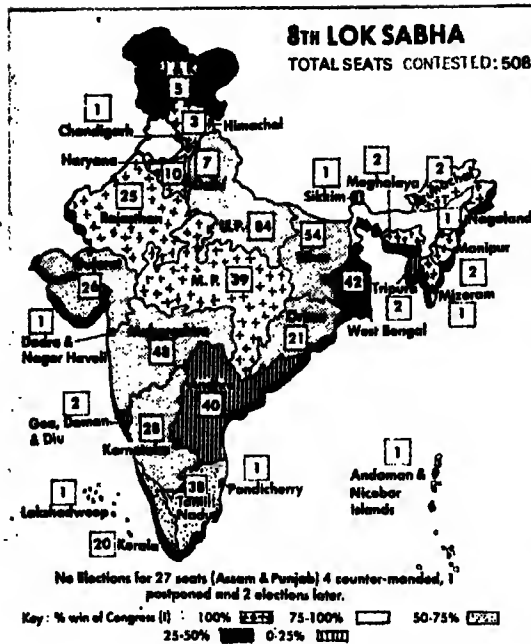

Thus Spake Zarathustra

Hitch your wagon to the star.

Emerson, Civilisation

ELECTIONS '84 THE HAND'S UP

BY JYOTSNA SHARMA

For the Congress(I) hand, it's been a hands down victory. The eighth general elections established, rather comprehensively, the virtual invincibility of the ruling party. In its greatest election win ever, it polled a record 49.17% of the popular vote. The results of the elections negated the predictions of many political pundits stunning even the most staunch and optimistic in the Congress(I) camp. Capturing 401 of the 508 seats, the party surpassed its previous record of 371 seats in the Nehru regime, emerging a victor unparalleled. The verdict of the masses is devoid of ambiguity and uncertainty. For details see *Current Events*.

There was a very definite swing in favour of the Congress(I) this time. An electorate of 378m was faced with a choice of over 5,000 candidates on Dec 24, 27 and 28. And in its wisdom, after much soul-searching and brain-ticking, decided to paint the country saffron, white and green, the colours of the Congress(I) flag, thus identifying it with the national flag. What will never cease to amaze onlookers is the absolute and harmonious blending of minds all over the country which takes place during an event of crucial importance to all of them. A poor Tamil voter never meets his affluent coun-

terpart residing in a plush bungalow in Delhi nor does a wealthy Marwari businessman meet the poverty stricken farmer tilling land in Bihar. And yet they think alike, feel alike and vote alike.

The Congress(I) win this time was a vote of confidence expressed in favour of the Congress platform as a whole and Rajiv Gandhi as an individual. Several reasons can be attributed in favour of both these. The elections this time were unique in that they were held at a stage when India was shrouded in an atmosphere of terror, evoked by Mrs Gandhi's assassination and its aftermath, and uncertainty. Insecurity prevailed and with mammoth national calamities occurring with dangerous frequency over the whole of 84, as well as threats from without, there was an undercurrent of panic. People wanted a government which represented safety from the twin external and internal dangers as well as holding promise of a stable hand at the reins. The Congress(I) was, perhaps, the only party which presented a strong, united front—a relief in the light of the petty quarrels and disunity in the Opposition ranks. Also the public had learnt well from the 1977 lesson administered to it in the Opposition regime when all it got from a coalition government was the ensuing tussle for power in the top echelons of leadership.

The ruling party in its manifesto promised a clean, efficient government which works. And this motto clicked with the masses. The stable front coupled with Rajiv's fresh, positive and effective handling of the office of prime minister in his two-month tenure lent credibility to the Congress(I)'s promises. That Rajiv meant

NEVER SAY LOST

Hotepasha Rangaswami has the dubious distinction of having contested 49 elections—ranging from the presidential and parliamentary to the municipal—and having successfully lost all of them. He now marches on to his half century with a never-say-lost attitude, patience and perseverance despite having to forfeit the security deposit each time. One can only hope he has better luck sometime.

J.S.

WINNERS AND LOSERS

- Rajiv Gandhi polled 83.6% of the votes polled in Amethi—the highest by any prime minister. Of the 110 MPs of the dissolved House to be unseated, 23 belonged to the Congress (I) of whom 19 lost in Andhra Pradesh alone. Only 10% candidates of six opposition parties could win elections.

- The BJP was wiped out completely from 15 states and three union territories.

- All the three film stars defeated three stalwarts of the Opposition (Amitabh Bachchan defeating H.N. Bahuguna, Sunil Dutt defeat in Ram Jethmalani and Vyjanthimala Bali defeating Era Segyan.) Sixteen of the 22 scions of former royal families have been elected. All 16 belonged to the Congress (I). The losers belonged to the Opposition, including Dr Karan Singh.

- The Congress (I) bagged 80% of the reserved seats winning 90 out of 112.

- Veteran Parliamentarian Tridip Choudhry (RSP) failed to return to the eighth Lok Sabha for the first time since 1952.

- There are 41 women MPs in the Lok Sabha—the highest since Independence. Their number was 28 in the dissolved House. In 1952 their number amounted to 22. For the first time in 17 years Himachal Pradesh is being represented by a woman in the Lok Sabha.

- The ministers of the seventh Lok Sabha who lost in this election are P.V. Narasimha Rao (from Hanamkonda), Harinath Mishra (Dharbhanga), Venkat Subhaiya (Nandgal), Sanjeev Rai (Kakinada), S.M. Krishna (Mandya), Malikarjun (Mahbubnagar), S.P.

business when he stated that corruption, disloyalty and inefficiency would not be tolerated at any level was demonstrated by his dismissal of A.R. Antulay, P.C. Sethi, former Home Minister and Ram Chander Rath. The top priority he accorded to Punjab and Assam went in his favour too, for it was a positive step towards removal of destabilising forces from the country.

Rajiv endeared himself to the masses in

LOOKING BACK

The eighth general elections have proved to be historic for more reasons than one. Never has any party been voted to such a massive mandate as this. Never have the north and the south shown such conformity in their voting patterns. And, never has any regional party emerged as the main Opposition. This, coupled with the role of women, the role of film stars and the wiping out of the most prominent opposition leaders have made the present elections particularly outstanding.

Over the years the Indian polity has evolved gradually and considerably. In the first general elections, the Indian National Congress emerged as the dominant party securing 369 seats. The other parties which managed to make their presence felt were the Socialist Party (12 seats), the Communist Party of India (16), the Kisan Mazdoor Praja Party (8) and the Jana Sangh (3). The one-party dominant system continued throughout the next two elections, of course with the Communists doubling their strength (routing the Congress in Kerala and forming a government). A new feature of the third general elections was the emergence of the Swatantra Party, formed in 1959 as a result of opposition of the Congress to the Nagpur Resolution on cooperative farming. In the 1962 elections, it won 22 seats.

The personality factor being removed following Nehru's death, in the fourth general elections the Congress returned with a much lesser majority. Of the 516 seats, it won 279 (54.1%) and 40% of the popular vote. It was for the first time that in the same Assembly elections the Congress was made to sit in Opposition, in most of the states. At the national level Swatantra and Jana Sangh improved their positions. Regional forces also developed, e.g., the Akali Dal, the DMK and various split Congress parties.

In the years following the fourth

general elections, the ruling party recognised the need to forge the varied sections of the ruling class together and restore the consensus pattern if it had to continue in power. Thus came the radical steps of nationalisation of banks in 1969, abolition of princely privileges and ban on company donations to political parties. The Congress itself underwent a transformation. The conservatives had broken away, forming Congress (O), and Congress itself was organised around the personality of Mrs Gandhi.

The next general elections were announced in 1971—the first mid-term polls, delinking the national and the Assembly elections. Under the slogan of *Garibi Hatao*, the Congress once again emerged as the middle-of-the-road party based on a continuing consensus pattern enclosing within itself most sections of the ruling class. The party secured a two-thirds majority winning 352 seats, and reducing the influence of the Jana Sangh in the north. Regional parties were cut to size while the position of Communists remained unchanged. In the 1972 Assembly elections the Congress emerged as the dominant party.

The Congress would have benefited from the fruits of the 1971 Indo-Pak war, the Indo-Soviet treaty, and the Pokharan explosion of 1974, and but for the emergency imposed by Mrs Gandhi in June 1975 and the subsequent dictatorial attitude displayed by banning opposition parties and controlling the mass media. This turned public opinion totally against the Congress. More important, it brought the major opposition parties to a common platform under the banner of the Janata Party. The 1977 elections turned *volte face* in the north, from where major leaders including the then PM Mrs Gandhi contested. In the south, in Kerala and Tamil Nadu, and in West Bengal, the Congress had not scored more than one-eighths even in the previous elections. The situation remained unchanged in 1977. The Congress, however,

managed to secure 154 seats in a House of 542.

The Janata Party could not maintain its unity for more than three years. Personal ambitions, internal bickerings, and factionalism marked its working right from the beginning. As a consequence, in July 1979 Morarji Desai resigned from the post of prime minister and an interim government under the leadership of Charan Singh was formed. General elections were announced once again in 1980. The Janata Party had split into Janata (comprising mainly the Jana Sangh) and the Lok Dal (comprising elements of the Bharatiya Lok Dal).

The elections evoked a negative vote. Following their discontent with the Janata, the masses voted in the Congress (I) (the Congress had by now split into Congress (S) and Congress (I)). It bagged 353 of the total 527 seats, i.e., 66% of the House taking 42.68% of the votes. The Janata secured 31 out of 431 seats it had contested with 18.93% votes. CPI(M) had won 36 out of 63 seats it had contested and CPI won 11.

The 1980 elections improved the position of the Congress (I) in the north particularly in Himachal Pradesh, Madhya Pradesh, Rajasthan and Delhi. In Haryana the Congress (I) secured only 50% of the seats. On the national level the Opposition now comprised the BJP headed by Atal Behari Vajpayee and the Janata Party headed by Chandrashekhar.

Just before the assassination of Mrs Gandhi, it was widely predicted that the state of Indian polity would largely be coalition-oriented in the forthcoming elections, due before Jan 19, 1985. Her sudden demise, however, turned all predictions haywire. The vacuum created an unknown fear in the minds of people. The Congress (I) was consolidated once again, under the leadership of the heir apparent—Rajiv Gandhi—and emerged victorious securing 401 of the 508 seats.

SAVITA PANDEY

general and youth in particular by coming into Indian politics as a breath of fresh air. In an atmosphere stagnant with stubborn old croonies representing the same old never-to-be-fulfilled promises came a dynamic young man full of enterprises and innovative ideas showing a glimpse of what India could achieve once out of the rut. A young post-independence democracy, with as many as 75% of Indians belonging to the below 35 years category, identified itself with a young leader who raised visions of hope within

it. Unsullied by arrogance or corruption Mr Clean appeared attractive to the young and old alike.

A major determining factor was the female electorate. Comprising half the total electorate and fast making its own decisions, this discerning population was also responsible for the phenomenal Congress(I) sweep. Previously identifying themselves with Mrs Gandhi, the women were rendered virtually destitute after her demise. And consequently their votes went in favour of her son in whom they

saw a continuation of her traditions.

It would be unfair to overlook the symphonic wave generated by the brutal assassination of the late prime minister for that it contributed significantly. That she died in so unjust a manner, that she was an unarmed, unprepared, defenceless lady attacked by armed young assassins made her appear a martyr for a cause in the eyes of the people. Indira dead became more powerful than Indira alive for never in her lifetime did she suc-

(Continued on page 57)

Religion And Politics

Historically, religion and politics have remained divorced in India. Although the rulers did abide by religious edicts, generally political decisions were bereft of any religious overtones. However, this position substantially changed during the British rule. The British, in an attempt to perpetuate their rule, sought to divide the people and in the multiplicity of religions they found a handy tool. In the early part of the 20th century when the freedom movement started gaining momentum, efforts began to create a rift amongst the Hindus and the Muslims—the two dominant religious communities of the sub-continent—by providing for separate electorates for each. It was due to the active encouragement of the colonialists that the "two-nation theory", based on religion, led to the partition of British India into independent India with a Hindu majority, and Pakistan with a Muslim majority. Thus, partition saw religion making inroads into politics. After independence, however, the towering presence of Jawaharlal Nehru enabled India to pursue a secular path and he succeeded in maintaining a healthy distance between religion and politics. Certain religious groups like Master Tara Singh's Akali Dal did try to disturb the balance, nevertheless, such cases were stray and localised with no national repercussions. The situation had undergone a complete metamorphosis by the time Mrs Gandhi came back for a second innings in 1980. Assam found itself in a conflagration of religious opposition which left nearly 3,000 Hindus and Muslims dead. As if this was not enough, the Anandpur Sahib Resolution snowballed into devastating religious fanaticism which not only left Punjab burning but culminated in the assassination of Mrs Gandhi.

The emergence of Bhindranwale and his exploits thereafter brought forth a grim realisation of the disastrous consequences of mixing religion with politics. Instead of furthering Sikh interests, the infusion of religion into Punjab politics destroyed the economy of the state, the traditional amity between Hindus and Sikhs and wrought havoc on Sikhs outside Punjab. Had religion been given a back seat, a political solution could have been found to the Punjab crisis, thousands would not have lost their lives nor would a prime minister have been murdered. This goes to prove that attempts to settle political scores through

religion always fail.

Religion and politics have different objects. While one aims at spiritual and moral salvation of man, the other seeks to lead the people to physical and material well-being. Any attempt to fuse the two spells dangerous portents for society. Europe could enter modernity and progress only when it broke away from the shackles of the church. The US has been able to prosper primarily because the state is free from religious pressures. On the other hand, the Muslim countries, despite their wealth, limp towards development as they are still struggling to divorce religion from their everyday life. Iran, for example, had an enviable track record for a developing nation. But after the overthrow of the Shah, both the society and economy have slumped because of the orthodoxy of the mullahs.

If India has to progress and attain the glorious destiny that awaits it, it will have to be wary of religious pulls and pressures. The country will have to maintain a secular character. Representation of nearly all religions of the world in India makes it susceptible to fissiparous elements but it has survived 2500 years and will carry on for another 2500 years to come.

Terrorism—The Greatest Threat To Democracy

A democratic society thrives on freedom—freedom of speech and expression, of trade and profession of religion, in general a freedom to every citizen to follow a path of his choice. The consolidation of these choices provides the foundation of a democracy and gives that society a particular direction. However, this may not suit the inclinations and preferences of a few. This minority, failing to achieve its ends through democratic means gropes for other ways to establish itself. Terrorism is one such means.

Terrorism is the despicable resort of cowards. It has been defined as "the use of terror, violence and intimidation to achieve an end". Democracy being based on convergence of diverse interests, is, as Sir Winston Churchill remarked, "the fragilest of all systems". It is, therefore, more susceptible to the machinations of the terrorists. Taking advantage of the freedom offered by an open society, efforts are made to destroy the system and throw the state into turmoil. For, when terrorism succeeds, the political situation becomes fluid and serves the purpose of the terrorists. To

take a recent example, terrorism on a large-scale was witnessed in Punjab. Hundreds of innocent citizens lost their lives in an attempt by extremists to make the people lose their faith in the government and consequently, force the government to concede impossible demands. Having been stamped out by the government they struck by assassinating Prime Minister Indira Gandhi. Their prime objective was to create chaos and destroy the integrity of the country.

While terrorism is a recent development in India, in Europe it has been raising its ugly head for quite sometime. The Irish Revolutionary Army (IRA) in England, the Red Brigade in Italy and the Basque Nationalists in Spain, to name a few, are some examples of the venom that has stung democracies round the globe.

However, though terrorism is the greatest threat to democracy, a democratic society by its general abhorrence of terrorism is able to unite its people against such terrorist acts. If the IRA, Red Brigade and others are still struggling for survival and haven't succeeded in their objectives, despite being on the scene for such a long time, it reflects the rejection of their likes by right-minded people. Indians too paid a rich tribute to democracy and earned universal respect for preserving their unity and integrity despite the provocation offered by Mrs Gandhi's assassination and the bloody aftermath. India, the world's largest democracy, whom few countries can match in diversity, has proved that though terrorism still stalks free societies, it is not a menace which cannot be conquered. Freedom does allow these elements to flourish, but then universal opinion both within and without the country immediately affected, against terrorism, unites people in this struggle. Democratic societies cannot leave their free paths and the terrorists will not give up their destructive ways. They pose a threat to not one country but to the survival of mankind as a whole. Therefore, cooperation between all nations to curb terrorism is necessary. The successful release of hijacked Indian passengers and aircraft from Dubai, alongwith their hijackers after negotiations between officials of India, the US and Abu Dhabi shows that international cooperation can make many a plan of terrorists go awry.

Terrorism is the greatest threat to democracy, but it has a bulwark—unity and cooperation.

Are regional parties a threat to the unity of India?

The growth of regional parties is a new trend in Indian politics. More significant is the fact that these parties have surfaced almost simultaneously. Tamil Nadu has for long been under the strong influence of the DMK and the AIADMK. In Andhra Pradesh, the Telugu Desam has come to stay. NTR has continuously been widening his sphere of influence in this one-time Congress bastion. Assam has been in the midst of a regional movement, in which there is very little for the national parties. The Kranti-Ranga Party in Karnataka (now merged with Congress (I)) was also founded with narrow regional (personal?) ends in mind. The National Conference of Sheikh Abdullah is also in a shambles after his demise. It is strongly felt by some that the emergence of regional parties and regionalism is a grave threat to the unity of the country. This group believes that in a multiparty system, a single party should dominate. There is another school of opinion which believes that regional parties will help in the removal of regional disparities, which have escalated in India in these three decades. This, they contend, will strengthen the forces of integration in the country.

For

■ At the core of regionalism is a profound sense of identity which is very dear to the people living in the region. This feeling often overrides the sense of identity to the nation. Regional parties endeavour to capitalise on this and consolidate their base for personal ends. Therefore regional forces definitely undermine the unity of the country.

■ Regionalism leads to the emergence of a sense of confrontation between the Centre and the states, on most matters, including the division of the national 'cake'. Hence a conflict between national interests and regional interests gets promoted. Such differences endanger the strength of the nation.

■ India has a federal structure where a single political party has had a long reign. With the decline of this strong party, the state leaders have opted for establishing regional parties. Thus, the aspirations of a single individual to make a mark in politics, lies at the roots of the formation of a regional party. An important ingredient is, of course, a charismatic individual with a burning ambition and a large fan following. Since these parties can never rise above narrow grounds, they constitute a threat to the integrity of the country.

■ The regional parties find it expedient to pander to petty and divisive parochial sentiments for personal gains. Such elements strengthen the fissiparous tendencies which hit at the unity of the country. Moreover such parties can easily fall prey to 'foreign hands' and hasten the disintegration of the country.

■ All issues depend on the whims and fancies of the leader. Those measures which ensure votes rather than public welfare, are taken up. Hence the development of the country is jeopardised.

■ The regional parties make no attempts to create among their followers a burning national consciousness transcending loyalty to local, regional and linguistic issues. This weakens the common thread which ought to guide the life of every Indian.

■ The growing influence of regional forces adds to the all-pervasive corrupt atmosphere. Since hero worship is encouraged, sycophancy becomes an accepted norm. Nepotism and dispensation of favours to a chosen few, vitiates all aspects of life. Such tendencies are dangerous for the unity of the country.

Against

■ Regionalism embodies a quest for self-fulfilment on the part of the people of a particular area. In a federal set-up it is vital for people to have some scope for positive expression of their 'collective personality'. This adds to the well-being of the inhabitants of an area and strengthens cohesion in the society.

■ Maldevelopment and the fear of being left out prompts individuals in a region to take shelter under the umbrella of the regional forces. The development process in our country has been such that some regions have been bypassed while others have gone much ahead. Thus the economic component is the crux of the problem. The regional parties fight for these economic rights and try to establish a distinct identity for the state concerned. Therefore regional disparities get minimised and the country's prosperity is augmented.

■ In India the relationship between the Centre and the states is characterised by the 'big brotherly' attitude of the Centre. The desire is to dominate and dictate terms to the states and this leads to the emergence of ethnic and cultural differences in the states. Hence regional parties come up, shielding the region from further exploitation by the Centre. Regional parties therefore do not effect the unity of the nation but act in the interests of the states or regions.

■ The formation of regional parties and their growing influence is a reflection of the widening participative base in politics. The increasing consciousness of people towards politics makes these regional parties a forum for expression of the popular will. This reveals a tendency towards a strong democracy in the country.

■ The rhetoric that regionalism is anti-system and anti-integration is nothing but negative thinking. It only indicates the ambitions and evil designs of the ruling party, whose inner structure is crumbling. To perpetuate its authority and to gain more powers the ruling party dubs regionalism as a threat to the unity of the nation.

■ The aim of Indian nationalism is to develop in the country a cultural, linguistic and political identity based on language. Articulation of demands for their respective regions, by the regional parties, cannot be treated as destabilising forces.

■ Even historically speaking language and cultural identity was supposed to strengthen the federal structure of the country. This was the basis of reorganisation of the Indian states on a linguistic basis. Jawaharlal Nehru had also suggested strengthening of regional identities to bring the states together.

GK.GK.GK.GK.GK.GK.GK.GK.GK.GK.

BY SHIV KUMAR

Postal services were introduced in India in 1837. The first postage stamp was issued in 1852. The Postal Department was set up in 1854; at that time about 700 post offices were functioning in the country. The Railway Mail Service was introduced in 1907 and the Air Mail Service in 1911. The number of post offices as on Dec 31, 1983 was 1,44,147—15,268 in urban areas and 1,28,879 in rural areas. On an average each post office serves 4.81 persons and covers an area of 22.80 sq km. In addition, 70,209 villages were being served through mobile counter service facilities. More than 99% of the villages were provided daily mail delivery by Mar 31, 1983.

The country has postal communication facilities with 166 countries of the world. India has been issuing special commemorative postage stamps since 1931. The total number of philatelic bureaux is 40 and that of philatelic counters 136. Telex services are available in 172 cities. Telephone services have made tremendous progress. India had a 50-line manual telephone exchange in 1881-82 in Calcutta; today there are about 29.33 lakh lines located in 9,288 exchanges.

INSAT-1B, launched in August 1983, connects 28 earth stations which in turn provide telecommunication facilities to far-flung hilly and inaccessible areas. The Indian Telephone Industries produces a wide range of telecommunication equipment. It has five production units at Bangalore, Naini, Palghat, Rae Bareilly and Srinagar.

Rural development aims at strengthening the socio-economic infrastructure as well as alleviation of poverty in rural areas covering 75% of the country's population. This objective continues to be reflected in the package of programmes launched during the successive five-year plans.

With the objective of raising the poorest families above the poverty line by giving them income-generating assets and access to credit and other inputs, a new programme known as the **Integrated Rural Development Programme (IRDP)** has been extended to all the development blocks in the country. With Rs 1,500 crores allocated for the programme under the Sixth Plan, it aims at providing assistance to 150 lakh families with the outlay of Rs 35 lakhs per block. One of its schemes, the development of women and children, has been launched in 51 selected districts from 1982.

Efforts are on to solve the problems of drought-prone areas under the **Drought-prone Areas Programme**. The outlay for the programme in the Sixth Plan is Rs 350 crores. It covers 511 blocks in 70 districts of 13 states. So far Rs 565 crores have been spent on the programme since its inception.

The **Desert Development Programme** is related to the seventy and expansive arid conditions. The programme at present covers 11 districts in Rajasthan, four in Haryana and two each in Gujarat, J & K and Himachal Pradesh. The allocation for the programme during the Sixth Plan is Rs 100 crores.

The **National Rural Employment Programme (NREP)** earlier known as 'Food for Work Programme' aims at providing supplementary employment opportunities to the seasonal unemployed rural workers. From April 1981 the programme is being treated as a regular part of the Sixth Plan. A total provision of Rs 1,620 crores has been earmarked for the programme during the Sixth Plan. A beneficial feature of NREP is the distribution of 1 kg of foodgrains at subsidised rates to workers, as part of wages, in order to improve their nutritional standards.

The basic objective of the **Rural Landless Employment Guarantee Programme (RLEGP)** is to provide employment to one member of each landless labour household on a yearly basis, for a period of 100 days. The Sixth Plan allocation for the programme is about Rs 600 crores. The National Scheme of Training of Rural Youth is meant to equip rural youth with necessary skills and technical assistance for self-employment. Two autonomous organisations—National Institute of Rural Development (NIRD) and the Council for Advancement of Rural Technology (CART)—are engaged in rural development work.

The **National Bank for Agriculture and Rural Development (NABARD)** and the **Regional Rural Banks (RRBs)** are functioning in the field of institutional finance. The Sixth Plan envisages setting up of 170 RRBs covering 270 districts.

To meet storage requirements, a programme for establishing a

National Grid of Rural Godowns exists since 1979-80. During 1983-84 construction of 2,956 godowns with a storage capacity of 14,42,686 metric tonnes was approved.

As a major step towards **land reforms**, over 2 crore cultivators have been brought directly under their respective states by abolishing intermediary tenures. Tenancy reforms with legislative measures have also been introduced. Under land ceiling laws nearly 60 lakh acres have been taken over by the states. Of these 42 lakh acres have been distributed. An area of 5.10 crore hectares has been consolidated till October 1983. There are at present 2,17,319 village panchayats, 4,526 panchayat samitis and 297 zila parishads implementing the rural development programme. Nagaland and Meghalaya, among the states, and Mizoram and Arunachal Pradesh among the Union territories, do not follow the Panchayati Raj system.

Steady progress has been made in the **electrification of rural areas**. By the end of March 1984, over 3.46 lakh villages out of a total of 5.76 villages were electrified. Three states—Haryana, Kerala and Punjab—have electrified all their villages and Tamil Nadu has electrified 99.6% of its villages.

At 40, **Rajiv Gandhi** has joined a select fraternity of pilots-turned-rulers consisting of Hosni Mubarak of Egypt, Jerry Rawlings of Ghana and Hafez Assad of Syria.

Work is in full swing on the **world's longest gas pipeline** from Urengoi to Uzhgorod in the USSR. The eventual length of the pipeline will be 4,451 km and it will produce 32,000 m cubic metres of gas per year. This unique gas pipeline will have 40 compressor stations and two gas cooling stations. Most of the steel pipes have been imported from West Germany, while the French firm Dresser France has supplied compressors for the pipeline.

Around the year 1810, an Englishman hit upon the idea of **compressing dry coal gas** and putting it into small, one-pound tanks. This was compressed 'tank' gas. Five decades later, Julius Pintsch, a German, who was trying to develop a safe portable fuel for railway carriages, created 'Pintsch gas' by cracking oil at high temperatures to form an oil gas. By 1866, Pintsch gas had been introduced into the US and within a short time there were some 100 Pintsch gas plants in the country. Pintsch had made compressed gas in bottles commercially feasible, and, inadvertently, he was the first to liquefy it. He was followed by J.J. Coleman who, in early 1870s became the first to intentionally, and successfully, liquefy petroleum gas. Later Herman Blau, a chemist in Germany, invented another process of liquefying petroleum gas, and his technique, developed in 1901, produced a product which came to be known as Blau gas. This was an evil smelling mixture of liquefied petroleum gases, 'permanent' gases and light fractions of gasoline, all synthetically produced.

The **Suez Canal** was opened for navigation on Nov 17, 1869. The canal is open to vessels of all nations and is free from blockade except in times of war. It is 173 km long, connecting the Mediterranean with the Red Sea. Its minimum width is 197 ft and its depth permits the passage of vessels upto 38 ft draught. The first tunnel below the canal, located 10 miles north of Suez City, was completed on Apr 30, 1980.

The **BBC's domestic radio services** are available on LF, MF and VHF. The broadcasting authorities, whose governing bodies are appointed by Her Majesty, the Queen, as trustees for the public interest in broadcasting, are independent of government in matters of programme content and are publicly accountable to Parliament for the discharge of their duties. In 1981, the Broadcasting Complaints Commission was set up to consider and adjudicate upon complaints of unfair or unjust treatment in broadcast programmes or of unwarranted infringement of privacy in or in the making of programmes.

We invite readers to send us their queries on GK—provided the information being sought is not easily available. Of these a few will be selected for publication too. We regret that no direct correspondence will be possible. Do write to us at GK, C/o Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

PUNJAB PURGE: After taking a drastic turn for the worse, the basically religious agitation in Punjab assumed its most horrifying proportions by May 1984. It was then that the Centre decided, in a last desperate bid to avert disaster, to call in the army. The cethersis began with the launching of Operation

Bluester on Jun 6, 1984. Terrorists were flushed out of their hideouts and peace restored in the Golden Temple complex—converted to a virtual arsenal by the extremists. Both sides suffered grievous losses. But while the fire has been put out by and large, embers continue to flare up.

EIGHTH LOK SABHA ELECTIONS 'I' NG THE RESULTS

After being exposed to wooing of all kinds, by numerous political parties the Indian masses finally went to the polls on Dec 24, 27 and 28 to declare who had managed to win them over. Polling was brisk and heavy and about 60% of the 378m voters exercised their franchise. The elections for 16 states and 6 Union territories took place during the first phase of polling on Dec 24 while on Dec 27 and 28 voting for the remaining Lok Sabha constituencies was conducted.

Polling was marred by stray incidents of booth-rigging, booth-capturing and sporadic cases of violence. The magnitude of booth-rigging is evident from the fact that repolling had to be conducted in 62 polling stations in 15 parliamentary constituencies of UP, Bihar, West Bengal and Haryana on Dec 27. Coupled with this was the problem of the names of thousands of voters missing from the electoral list—a rather uncomplimentary commentary on the efficiency of the concerned authorities.

For the contenders it was an anxious nail-biting wait. The results started coming out Dec 28 onwards and the declaration was emphatic—it was a win unprecedented and overwhelming for the Congress(I) platform. And the Opposition was virtually blasted out of existence. Anyone contesting under the magical Congress(I) ticket invariably emerged triumphant and matters regarding competence, experience or seniority faded into insignificance besides this. Starring conspicuously in the action-packed win were the cine stars—Amitabh Bachchan, Sunil Dutt and Vyjanthimala Bali. What was most noteworthy about their wins was that they defeated the Opposition aces. Bachchan defeated H.N. Bahuguna, the politician with a track record of never having lost the poll race, while the BJP Vice-President Ram Jethmalani suffered ignominious defeat at Dutt's hands.

The outcome of the eighth Lok Sabha elections is as follows: In Haryana the Congress(I) swept through the state bagging all the 10 seats. In Rajasthan it did a repeat performance by winning all 25 seats. Madhya Pradesh was bowled over by the ruling party—it secured the 39 seats contested for (the elections in Bhopal were postponed to Jan 28 owing to the gas mishap). In Maharashtra the Congress(I) had a poll tally of 43 seats of the 48 while the remaining five were divided between the Congress(S)—2, Janata—1, Peasants and Workers Party—1 and Independents—1. In the Janata stronghold of Karnataka, this once popular party fared dismally when only four of its members were returned to power; the Congress(I) won the remaining 24 of a total of 28 seats. The CPM was ousted from Kerala where the Congress(I) won 13 of the 20 seats while the former secured only 1. The other six seats

THE NEW CABINET

Cabinet Ministers

Rajiv Gandhi—Prime Minister
Abdul Ghafoor—Works and Housing
Asoke Sen—Law and Justice
B. Shankaranand—Irrigation and Power
Bansi Lal—Railways
Buta Singh—Agriculture and Rural Development
H.K.L. Bhagat—Parliamentary Affairs
K.C. Pant—Education
Mohsina Kidwai—Health and Family Welfare
P.V. Narasimha Rao—Defence and temporary charge of Planning
Rao Birendra Singh—Food and Civil Supplies
S.B. Chavan—Home
Vasant Sathe—Steel, Mines and Coal
Veerendra Patil—Chemicals and Fertilisers
V.P. Singh—Finance

Ministers of State (Independent charge)

Maragatham Chandrasekhar—Women and Social Welfare
Naval Kishore Sharma—Petroleum
Ram Niwas Mirdha—Communication
T. Anjaiah—Labour
V.N. Gadgil—Information and Broadcasting
Z.R. Ansari—Shipping and Transport

Ministers of State

Arif Mohd Khan—Industry and Company Affairs
Arun Nehru—Power
Ashok Gehlot—Tourism and Civil Aviation
Bir Sen—Environment and Forests
Chandulal Chandrakar—Rural Development
Ghulam Nabi Azad—Parliamentary Affairs
H.R. Bhargava—Law and Justice
Janardhana Poojary—Finance
Khurshid Alam Khan—External Affairs
K.P. Singh Deo—Personnel and Administration Reforms and Culture
K.R. Narayanan—Planning
Madhavrao Scindia—Railways
Margaret Alva—Parliamentary Affairs
Natwar Singh—Steel
P.A. Sangma—Commerce and Supply
R.K. Jaichandra Singh—Youth Affairs and Sports
Ram Dulari Sinha—Home
Shivraj Patil—Science and Technology, Ocean Development.
Yogendra Makwana—Health [Atomic Energy, Space and Electronics]

IN HIGH PLACES: On Apr 3, 1984, Sqn Ldr Rakesh Sharma created cosmic history when he became the first Indian to go on a space cruise. Selected by the Russians to be a member of their three-man crew aboard the Soviet spaceship Soyuz T-11 after undergoing rigorous training along with fellow Indian Wg Cdr Ravish Malhotra, he finally took off for his seven-day space trek. Launched from Baikonour Cosmodrome in Russia, the spaceship docked with the Salyut-7 spacecraft in space and returned to earth on Apr 11, 1984—touching down at Arkalyk. Back on earth now is a starry-eyed Sharma.

were shared by the Indian Union Muslim League—2, Congress(S)—1 Janata—1 and Kerala Congress(J)—2. However, the CPM managed to save face in West Bengal where it won 18 of the 42 seats with Congress(I) following close at heels with 16, CPI and RSP obtained 3 each and Forward Bloc 2. In Tamil Nadu 38 of the 39 seats were contested of which Congress(I) won 25, AIADMK 12 and DMK 1.

Andhra Pradesh was perhaps the main exception to the Congress(I) rule. N.T. Rama Rao established his rajya all over again when his Telugu Desam walked off with 28 of the 40 seats contested for (there are 42 seats altogether); the Congress(I) could manage only 6 while the BJP, Janata, Congress(S), CPM, CPI and Independents bagged one each. In the Hindi belt comprising UP and Bihar, the Congress(I) shattered the hopes of the Opposition (the Charan Singh-led DMKP and Vajpayee's BJP primarily) by pocketing 82 of the 84 contested seats in the 85-seat state of UP leaving DMKP with 2 only, and 48 of the 54 seats in Bihar with the rest going to CPI (2), and DMKP, Janata, Congress(J) and Independents one each. In the northern states of J & K and Himachal, the ruling party put up a fitting fight too, winning the three seats of the four contested for in the latter, even though it lost to the National Conference (Farooq) in J & K. Of the five out of six-seats contested for, the National Conference won three and Congress(I) two. The Congress(I) also had a clean sweep in the eastern belt where in Meghalaya, Arunachal, Nagaland, Manipur and Mizoram it won the 2, 2, 1, 2 and 1 seats contested for respectively, and at the same time winning 20 of the 21 seats in Orissa as well. The remaining one went to the Janata. It was not so fortunate in Sikkim and Tripura where it lost the lone contested seat to the SGSP in Sikkim and the two seats contested for in Tripura to CPM. It was Congress(I) all the way in the Union territories too—the only exception being Dadra & Nagar Haveli where the one contested seat went in favour of the Independents. As for the rest, the Congress(I) achieved a grand slam of all 7 seats in Delhi, while it hauled the sole contested seats from Pondicherry, Lakshadweep, Chandigarh, Andaman and Nicobar Islands and the 2 seats from Goa as well. The total booty the Congress(I) amassed was a staggering 401 (400 now with the demise of one Congress(I) MP) out of a total of 508 seats—by far the greatest win for any political party.

The developments in Bhopal in the past month have thrown light on several new facets of the gas tragedy which shocked people the world over. The population of Bhopal is still reeling in its venomous aftermath.

The arrest of the Union Carbide top brass including Warren Anderson, Chairman of Union Carbide in the US as well as Keshub Mahindra, Chairman of the corporation in India and V.P. Gokhale, Managing Director, while sending shock waves rippling over the corporate sector worldwide did evoke applause at least from the affected multitudes, for the firm hand with which the government dealt with the situation. Anderson was, however, bailed out for Rs 25,000 the same day. He revealed at a press conference in Connecticut that an expert team which had visited the Bhopal plant in June 1982 had reported that the plant was extremely unsafe, potentially hazardous because of lack of implementation of adequate safety measures. Despite being warned about this, both by the experts' report as well as by the accidents which had occurred over the past few years, the Union Carbide management preferred to turn a deaf ear to these and let things continue as they were. This attitude is clearly indicative of the callous, production and profit-oriented approach adopted by multinational concerns—particularly in the less developed poverty stricken Third World. And this, justifiably deserves the indignant outcry it has merited from various sections. And numerous lawsuits worth several billions of dollars have been piled up against Union Carbide. The company is, however, reluctant to adopt the same standards of compensation in India as it would have been forced to do under American or British law. This negligence and reluctance goes to show the low esteem in which human lives of the Third World countries are held by the magnates of the affluent world.

Meanwhile, in Bhopal, the government made concerted efforts to restore the faith of the stricken people both in the authorities as well as in the habitability of their home town. But death and disease had so shattered the hopes and confidence of the masses that the mere announcement of the launching of 'Operation Faith' had them fleeing the town in a frenzy of desperation. No amount of reassurance from the authorities could halt the exodus as people feared a new leak of poisonous gas. 'Operation Faith' consisted of the neutralisation of the remaining methyl iso cyanate (MIC). After analysing the situation scientists came to the conclusion that the most practical and safe way of neutralising was to convert it into a pesticide under fullest safety. Elaborate precautionary and safety measures were taken to prevent any further catastrophe in case of new gas leakage. These consisted of erection of scaffolding (of jute sacking) around the carbaryl plant and the MIC storage tanks. Three air force helicopters were deployed to spray water over the factory to trap any gas leakage. The scrubber and flare tower, the first line of defence which had failed to function on the fateful night of Dec 2-3, were restored to their working capacity. Standby arrangements for first-aid of possible victims were also made.

'Operation Faith' was set in motion on Dec 16 and was completed within three to four days. People this time, not relying on the safety arrangements of the authorities took precautions of their own. They left the town. And so the operation was conducted in a virtually deserted city. But its completion has succeeded in instilling faith in the inhabitants of Bhopal. They are braving it back to their homes once again albeit a little cautiously. For the images of death are still fresh in their memories. And now that they are back—campaigning for the Lok Sabha elections will begin. The elections were postponed to Jan 28 owing to the catastrophe.

MIZORAM TALKS HOPEFUL HEADWAY

A micable talks round the negotiating table are underway, on one side is Laldenga, the self-styled leader of the underground Mizo National Front (MNF). On the other is G. Parthasarathy, Chairman of the External Affairs Ministry's policy planning committee. Also in sight is an accord on the 23-year-old tussle between Mizoram and the Centre. And, therefore hopes are high.

Laldenga's arrival in India on Oct 23, 1984 to resume talks with the Indian Government, thanks to the initiative taken by Mrs Gandhi, set the hopeful speculations. These were shattered by Mrs Gandhi's assassination on Oct 31, the day Laldenga was to meet her. The new Prime Minister however took to hand the task left incomplete by his pre-

A WALK TO DESTINATION DEATH: It was a serene autumn morning on Oct 31, 1984. A smiling Mrs Gandhi walked through the garden path of No.1 Safdarjung Road, her official residence, to meet British actor-director, Peter Ustinov who waited with a TV crew. She was to give him an hour-long interview, little realising that fate was preparing her to give him, and the world, a chilling horror story of barbaric violence. As she folded her hands to greet the two Sikh security guards

standing along the path, and said, "Namaste," the two men, in whom she had laid complete trust, returned her greetings with a shower of bullets—Satwant Singh with his sten-gun and Beant Singh with his .38 revolver. Mrs Gandhi was dead. The loss was too grave for Indians who gave vent to their inner fury by indulging in sectarian violence of the worst kind—witnessed only during the days of partition.

decessor. And in December even as the whole country was preparing for the polls in earnest, talks for seeking a solution to the Mizoram insurgency problems were commenced once again.

The issues taken up during the talks between the Centre and Laldenga included the provision of a Kashmir-type status for Mizoram—the central issue which dominated the talks. For this an accord is being worked out along the lines of the 1981-82 negotiations which had sought to upgrade Mizoram to an autonomous state based on Article 371A of the Constitution. A measure of agreement on the question of special constitutional safeguards to protect the ethnic identity of the Mizos has also been reached.

Rehabilitation of underground Mizos and the dropping of cases against them has been agreed upon too. An understanding on the delimitation of Mizoram has been reached. Laldenga has included in his list of demands, among other things, removal of the Sixth Schedule as it is still applicable in certain areas of Mizoram. Framed under Article 224 and 275 of the Constitution, it provides the Governor with extraordinary powers. Thus even as the Assembly exists, it ensures virtual Central rule.

At the moment, Laldenga is in London, visiting family and friends in this festive season. Negotiations will be resumed upon his return this month. That the Congress(I) has established its unquestionable supremacy in the country may also prove beneficial. Till such time as they sit around the table once more, both Laldenga and the Centre are keeping their fingers crossed.

PUNJAB

SETTING PRIORITIES

The spotlight is on Punjab once again. In fact the Punjab issue was used by both the Congress (I) as well as the opposition parties for furthering their own ends by squarely placing the blame on each other's shoulders. The issue of religious segregation featured prominently in the election manifestoes and campaign speeches of all political parties.

Ever since Rajiv Gandhi assumed office as Prime Minister he was clear about his stance on Punjab. He unequivocally ruled out the acceptance of the Anandpur Sahib Resolution as he felt that its adoption would promote disintegration. It was not permitted by the Constitution either. He, however, gave assurance that due consideration would be given to the demands of Akalis on territorial and river water disputes. In his election campaign Rajiv lashed out at the Opposition for promoting divisive forces by siding the Akalis and their unacceptable demands. He also demanded a public denouncement of the extremists and terrorists by the Akalis.

The Congress(I) wave which has swept the country has not been greeted favourably by the Akalis. They have expressed their displeasure by inviting the defeated Opposition leaders Chandrashekhar (Jahata) and Ram Jethmalani (BJP) to contest the elections in Punjab as and when they are held. As for the Anandpur Sahib Resolution—the Akali Dal

absolutely refuses to consider a solution to the Punjab problem in its absence. Says Lalpura, acting President and senior Akali leader, "The Akalis have one and only one demand—the Anandpur Sahib Resolution and will continue to struggle till its acceptance".

Rajiv Gandhi, now the undisputed leader of the country, has once again reiterated the top priority his government plans to give to Punjab and one of his first post-election moves has been the constitution of a high-level ministerial panel comprising of P.V. Narasimha Rao, Defence Minister; S.B. Chavan, Home Minister; and K.C. Pant, Education Minister, to find ways to resolve the Punjab tangle. For this, he has decided to seek the cooperation of the Opposition as well.

It can only be hoped that the Akalis would give up their dogmatic attitude and assist the government in arriving at a peaceful solution to the Punjab issue.

That the government means business by stating that it will not allow disruptive forces to operate against the country, is evident from its treatment of Jasbir Singh Bhindranwale, nephew of Jarnail Singh Bhindranwale. The so-called organiser of the International Youth Federation, Jasbir Singh had left for Pakistan on the pretext of visiting religious places. Allegedly responsible for inciting anti-Indian sentiments abroad he was shuttled between Dubai, London and Manila where he was refused entry by the concerned authorities and finally cornered in India. At the moment he is being kept in a maximum security prison and cases under Sec 124A, 153A of the Indian Penal Code (sedition and promoting enmity between different groups on grounds of religion) and Sec 13 of Unlawful Activities (Prevention) Act 1967 have been registered against him. This should be an eye-opener for anyone with similar designs residing either in India or abroad.

MANIPUR

TERROR TACTICS

That politics is a deadly game was once again revealed when an attempt was made on the life of the Manipur CM Rishang Keishing on Dec 8, 1984. Although Keishing escaped unhurt, four of his security guards were killed and seven others injured. The car was attacked when he was heading towards his constituency, Phungyar, to address an election meeting.

The Nationalist Socialist Council of Nagaland (NSCN) assumed responsibility for the dastardly action. This underground organisation, currently operating in Manipur's Tangkhul inhabited areas has already killed more than 90 people in the last few years including the former CM Y. Shaiza. Recently, a district council member and a prospective Congress candidate were shot down.

In fact the NSCN had threatened the candidates contesting the general elections with 'dire consequences' and had specifically threatened to make an attempt on the CM's life before Dec 14, 1984. Keishing, who topped the terrorists' hit list, had taken precautionary measures by just campaigning during the day. He had also taken extra

POISON IN THE AIR: Bhopal witnessed the worst-ever industrial accident in world history when a killer gas silently suffocated over 2,500 people, till they were choked to death. People fled their homes, hospitals overflowed with tens of thousands unable to see or breathe and others who bled to death. Methyl isocyanate (MIC), the harbinger of death, had vapourised into Bhopal's night air. The Union Carbide Pesticide Plant authorities had blundered. MIC, a lethal chemical, is used to manufacture pesticides and every possibility of human contact must be eliminated. However, on the tragic night of Dec 2 pressure built up in a 45-tonne capacity gas chamber causing the poisonous gas to leak out, beyond control, into the myriad human systems resting in silence. The Union Carbide's American owners rushed in for help without much effect. The exodus from Bhopal increased, and to ensure the future safety of the people, all the remaining gas from MIC tanks was neutralised by a process termed 'Operation Faith'. But what 'faith' and what 'future' when new-borns in Bhopal are likely to have damaged brains and thousands of children have been orphaned?

care about his personal safety before leaving for his election meeting. But the insurgents proved more crafty and succeeded in carrying out their threat even though they were unable to kill the CM in the attempt. Such acts can succeed only in terrorising people and the leaders further, without being of any use to the terrorists themselves. This has been made amply clear by the Congress(I) win in Manipur where the insurgents' terror tactics were rendered futile. For, violence can achieve nothing in the long run.

TO SIT IN JUDGMENT

India filed a complaint with the International Civil Aviation Organisation (ICAO) against Pakistan for allegedly arming the hijackers of the LA Boeing 737 on Aug 24, 1984 at the Lahore airport. This is a very wise move in the light of the tenuous relations existing between the two countries as the issue can now be resolved without an actual confrontation between them.

On Aug 24, the Boeing was hijacked when on a routine flight from Delhi to Srinagar it was to land at the Lahore airport. It was here that a pistol and ammunitions were supplied to the terrorists by Pakistan authorities. Information regarding the pistol was supplied by the passengers of the hijacked aircraft—in fact a foreigner saw a man in a *salwar* actually handing over a packet to one of the terrorists on the tarmac. This was confirmed by the crew and later revealed by the hijackers during investigations.

The complaint was accompanied by an Interpol confirmation that the pistol in possession of the hijackers was, alongwith 74 other arms, supplied to Pakistan by the West German manufacturers Walther GMBH. Arming of hijackers with an offensive weapon is an unlawful act "unprecedented on the part of any contracting ICAO state". It is also a grave violation of the Montreal, Hague and Chicago conventions and also of ICAO's objectives.

In sharp contrast to Pakistan's reprehensive action was UAE's firm stand on the issue when, after refuelling at Karachi, the plane landed at Dubai. They forced the hijackers to surrender and thereafter handed them over to the Indian authorities.

At a time when terrorism, particularly air piracy, is rampant, open support of such acts is uncalled for. The reprimand, however, rests with ICAO.

INDO-JAPANESE TRADE KNOTS IN THE TIE

Some headway was made for the betterment of Indo-Japanese economic ties when a 52-member Japanese delegation visited India in December last year. Talks were conducted with the Federation of Indian Chambers of Commerce and Industry (FICCI), which revealed the hurdles to the expanded trade between the two countries.

Japan is fearful that import liberalisation and greater accommodation of foreign investors may not continue for long. Also the delegation expressed the need for an appropriate 'investment climate' for the conduction of trade. For this it suggested improvement of infrastructural facilities such as power, transport and communications. It was also agreed by both sides that the existing imbalances should be corrected first and foremost. Then, efforts would have to be made to ensure quality, price and delivery schedules of Indian goods exported to Japan.

The Indo-Japanese Business Cooperation Committee (BCC), further identified numerous areas for industrial collaboration. These include mini and micro-hydel projects, instrumentation and control systems, indigenisation of oil exploration equipment, solar power units, electronics, auto ancillaries and telecommunications. In the agricultural field, hydroponic agriculture, irrigation and management of agriculture were singled out as areas in which cooperation could be possible. The BBC also suggested exchange of information and business delegations in these immediate areas of interest.

Japan has, on its part, identified several items for export to India. Among these are engineering goods, leather and leather products, textiles, readymade garments, household furnishings, gems and jewellery.

SUPREME COURT VERDICTS PROVIDING RELIEF

The highest judiciary in the land has been rather busy recently. The verdicts of the Supreme Court (SC) have sought to provide relief to various sections of the community in one way or the other.

The first case tackled by the SC concerns the freedom of the press. For the past three years the Union Government had been imposing a 15% duty on imported newsprint. This had consequently compelled the newspaper offices to raise the prices of their dailies and, also forced some leading newspapers to file a suit against the Union Government. The SC upheld press freedom when it categorically assured journalists that "as long as this court sits, newspapermen need not have the fear of their freedom being curtailed by unconstitutional means".

THE SON SHINES, STARS TWINKLE: The Congress(I) has done it again! But instead of a landslide victory, the mountain itself has moved, creating history anew. The three-fourths majority sweep in the eighth Lok Sabha poll could be attributed, among other factors, to the sympathy wave that engulfed the nation after the death of Mrs Gandhi. Also, a majority of women who supported Mrs Gandhi have naturally cast their votes in favour of Rajiv. Evidently the Opposition campaign for a coalition government at the Centre did not appeal to the masses. The

Hindu backlash to the political events in Punjab and the entire RSS votes cast in favour of the ruling party were other factors which brought a massive mandate to Congress(I) and routed the Opposition. Strong opposition leaders have been left to eat humble pie. However, this makes the Congress(I) doubly responsible to the nation. For viable Opposition, sure enough, is a necessary adjunct in a democratic polity. Moreover, what the filmstar-turned-MPs will foretell for the country's future, is yet to be seen.

It was the primary duty of all courts to uphold the freedom of speech and expression and invalidate all laws or administrative actions which interfered with it, [the court held. Withholding of government advertisements, imposition of taxes on newsprint and canalisation of import of newsprint in order to make it unjustly costly, were some of the ways by which the governments had tried to interfere with the freedom of the press, the court pointed out.

In another verdict, the SC removed the inequities in the property law enforced in Delhi and, in the process, has also provided relief to building owners—especially those living in their own houses or possessing flats built by corporate societies. By introducing the "standard rent" concept, it has laid down new principles to govern the method of assessing house tax. According to the three judge bench, standard rent and not market rent should determine rateable value on the basis of which tax assessment is made. It has thus sought to link tax directly to the cost of construction rather than to the speculative value of land. Till this day, the municipal authorities were calculating tax on the actual rent received. This had caused distortions between old and new building rates and between those who lived in their own houses and those who rented them out.

The Bench has also made it abundantly clear that in cases of there being two or more methods of fixing dues from citizens, the section favouring the payee should be applied. Taxmen have been ordered to make independent assessments for calculating construction costs.

The SC verdict is beneficial for two other categories of owners. Firstly, those who build their houses in stages will no longer be required to add value of land each time for the determination of tax on the new additions. Secondly, those who rent out a part of their building while occupying a part of it themselves will now be entitled to pay property tax based on "hypothetical" and not actual rent, i.e., a "reasonable rent" that can be fetched by a building.

The SC verdict on house tax has, therefore, succeeded in injecting rationality into the tax structure. The proposed restructuring of the Delhi Rent Control Act may ensure free flow of private funds into the residential units.

A third judgement ordering the Union Government to release due dearness allowance (DA) arrears of Class III and IV Central Government

employees before February end was a welcome move. Additional and ad-hoc DA to these employees had been due on Jan 1, Feb 1, Apr 1 and Jun 1 last, but had been withheld because of the general elections. Withholding of DA arrears is both unconstitutional and illegal. The SC has also ordered the government to pay penal rates of interest on pension and gratuity if these have not been paid to an employee within two months of his retirement. In doing so, the highest court of justice has provided substantial relief to people weighed down by inflation.

NCAER REPORT PLANS AND PREDICTIONS

A mid-year review of the second quarter of 1984 (July–September) by National Council of Applied Economic Research (NCAER) predicts a nearly 5% growth in gross national product (GNP) compared with 1.8% in 81–82, 5.2% in 82–83 and 8.5 in 83–84. The report attributes this growth to timely and widespread monsoon for the second year in succession which predicts a good performance in agriculture. There has, however, been no reduction in the trade deficit but a notable rise in foreign exchange reserves.

The NCAER makes several other observations too. The proposed public sector outlay of Rs 1,80,000 crores at the 84–85 prices for the Seventh Plan, though 84% higher than that of the Sixth Plan, is only 21% higher in real terms.

Also, since in the Seventh Plan balances from current revenue at the base year were "negative", rather than contributing to the financing of the Plan, resource mobilisation of a much higher magnitude is needed. This has resulted in a gap of Rs 40,000 crore—22% of the Plan size. The report recommends additional internal resource mobilisation as a method for diminishing this gap.

Exports present an encouraging picture—a result of continued growth in industrial production. Industrial growth, observes the NCAER, picked up during the subsequent months of '84 especially that of infrastructural industries like coal, steel, cement, petroleum, crude and electricity. And finally, the report stresses the major role the manufacturing and service sectors will have to play in achieving this target growth.

J.S.

SMOOTH SUCCESSION: Yuri Andropov's death was inevitable. Brezhnev's successor 15 months earlier, the Soviet President and General Secretary of the Communist Party of Soviet Union had been suffering from heart disease, kidney trouble and diabetes and his end, when it came on Feb 9, was rather expected. As always, things moved swiftly and smoothly behind the Iron Curtain with Konstantin Chernenko, 72, moving in to fill the void. The transition was quiet, calculated and overtly uneventful.

SRI LANKA

CRISIS DEEPENS

Since Nov 19, 1984 over 400 lives have been lost in sectarian violence in Sri Lanka. The government imposed emergency and indulged in some violence of its own. Air Force fighters and naval vessels attacked boats believed to be bringing guerillas from Tamil Nadu to Mannar in the north-west coast and the government claimed that 10 people had been killed. On Dec 3 the same year 20 guerilla suspects in custody were killed while trying to escape an attack by their comrades. The guerillas attacked two farm settlements and farmer convicts and their families in the Mullaitivu and Vavuniya districts in the north-east and 80 Sinhalese were said to have been killed in the attack. They also killed several people in the two fishing villages of Kukkilai and Nayarau in Mullaitivu.

In the second week of December, the security forces detained 300 suspected Tamil separatists during a two-day weekend swoop and a 42-hour curfew was imposed in a number of areas. Sources said that the arrests were "indiscriminate" and included women, in an effort to spread fear among the people. They also attacked Indian fishing boats and the fishermen claimed that they were well within Indian territorial waters when attacked. The Sri Lankan Government believes that at least 4,000 Sri Lankan Tamils may be undergoing guerilla training in India.

India has steadily rejected such allegations and has, in turn, stated that Sri Lanka is trying to build up a war psychosis in the country. Meanwhile, President Reagan's ambassador at large, Gen Vernon Walters, made his second visit to the island in 13 months. Though the Colombo foreign office opted to remain tight-lipped about the visit, the government media indicated that US arms supplies to Sri Lanka had been on the top of the agenda during the meeting.

On another front, President Jayewardene proposed an amendment to the Constitution for the creation of district and provincial councils and a council of state or second chamber for resolving the island's ethnic problem. Draft bills for the X Amendment which would set up such councils were presented by him to an all-party convention on the ethnic issue, which reconvened in Colombo on Dec 14. Except for the All-Ceylon Tamil Congress, all other Tamil parties, including the Tamil United Liberation Front (TULF) attended the conference but the Supreme Council of the Mahasangha of the Buddhist clergy was absent.

At the end of the conference, Jayewardene requested the delegates to inform him in writing of their views on the 'package' of measures suggested by him to ensure "parliamentary democracy" starting at the village level. The delegates' proposals, he said, would be gazetted and examined by the Supreme Court. He added that he and the Supreme Court may decide on a referendum or a general election if it became necessary. However, all this proved to be an exercise in futility. Shortly after Jayewardene issued his statement hinting at a referendum, Tamil separatists launched a big attack on the army camp at point Pedro at the northern tip of Jaffna peninsula. Two police inspectors of Jaffna were also abducted and a ransom of Rs 50 lakhs was demanded for them. Faced with mounting opposition from the Sinhalese Buddhists, the Sri Lanka Cabinet dropped the government proposals for resolving the ethnic problem on Dec 26. And the killing goes on...

US-USSR

TALK OF TALKS

Soon the US Secretary of State, George Shultz and the Soviet Foreign Minister Andrei Gromyko will meet in Geneva to discuss the resumption of arms control talks. Meanwhile, both sides are seeking solidarity with their own blocs to improve their positions at the negotiating table. The North Atlantic Treaty Organisation (NATO) met at Brussels and decided to boost conventional forces in Europe. The 13 NATO defence ministers agreed to spend \$7.8b over the next six-year period for a variety of improvements ranging from bomb-proof aircraft shelters to building a better communications network. The budget for spending on infrastructure is 40% more than that spent in the last six-year period. The respective countries also agreed to increase ammunition stocks.

On the other side of the Iron Curtain, the Warsaw Pact foreign ministers met in E. Berlin and declared that the East bloc allies "will not allow themselves to fall into a situation of inferiority". They, however, followed a conciliatory line and words of praise for the Shultz-Gromyko meeting were included in the final communique. The defence ministry counterparts, who were meeting in Budapest were less moderate, and the Hungarian Defence Minister, Lajos Czinege, stressed the importance of "preparedness" to counter any NATO aggression. However, the Soviet news agency, Tass, ignored the headline expressed at Budapest and gave full coverage to the foreign ministers' conference instead. Soviet leader Konstantin Chernenko even told a visiting American industrialist, Armand Hammer, that he was ready to meet Ronald Reagan if Washington renounced the first use of nuclear weapons. In a bid to win hearts, the US too is being somewhat conciliatory and a relatively moderate Paul Nitze has been appointed Shultz's Chief Adviser for the Geneva talks.

In domestic developments, the Soviet Defence Minister, Marshal Dmitri Federovich Ustinov, died in late December. He had been ailing for some time and had not been seen in public since Sep 27, 1984. He had headed the military for the last eight years and had been closely associated with Soviet defence since the beginning of World War II. He was also one of the senior-most members of the politburo of the Soviet Communist Party and had been Deputy Prime Minister between 1957 and 1963 and had been the First Deputy Prime Minister between 1963

THE WALK THAT WAS: When the American astronaut, Bruce McCandless floated into space, 165 miles above Hawaii, he actually had no links with the earth. He was untethered from the orbiting spacecraft, Challenger, which had left him to fend for himself. He carried a television camera, no doubt, to relay live pictures back to the orbiter and to earth—lest he opted to stay back in the serene void, far from the madling crowd!

Picture shows McCandless looking like a modern-day Buck Rogers as he models the extravehicular mobility and back-pack manned manoeuvring units. The circular object in front enables a floating spaceman to dock with the orbiting spacecraft while performing repairs and other maintenance work.

days earlier, to ensure that the [went] off smoothly. After the MRD appealed for a boycott, Zia waived the requirement that identity cards should be produced during voting and thousands of unregistered voters were allowed to vote. In spite of all this, the voter turn-out was low. As such, the endorsement is hardly an endorsement. What matters now is that Zia intends to stay in power and for this, he will push through changes in the 1973 Constitution to make it conform to his view of an Islamic political order.

NICARAGUA

ONE UP ON THE US

The International Court of Justice at The Hague has ruled that Nicaragua has a right to bring a suit against the US for its support of the Contras and to seek damages for the guerrilla activities. The dispute had arisen when in February-March, 1984 the US-backed rebels had claimed the responsibility for mining Nicaragua's harbour. The Sandinistas took the matter to the UN Security Council and when the US used its vote to block the resolution, the Nicaraguans took their complaint to the World Court. In a pre-emptive strike, the US asserted that it would not accept the "compulsory jurisdiction" of the court over any Central American matter for the next two years. The court recently rejected this argument.

Since the Court is widely accepted as non-partisan, the US has lost face. Jurists from American-ally countries like Britain, W. Germany, Italy and Japan ruled in favour of Nicaragua. In fact the only dissenting voice was of the American judge, Stephen Schwebel. The real case will now come before the Court and after Nicaragua presents its documents. America will have its chance to respond. But whether it will do so is the question. If the US decides to defend itself, it may well lose the case and have its efforts to end, what it calls, Nicaraguan subversion in Central America, declared illegal. Some US officials feel that it can win if it releases classified intelligence information to prove that Nicaragua has been actively aiding leftist insurgency movements in El Salvador. The US may not be willing to reveal such information, especially because victory in the World Court is not guaranteed even if such disclosures are made. The Americans can also refuse to fight the case and ignore any decision that the Court may come to, since it has no power to enforce its ruling. In fact in the last 15 years, several nations including India, France, Iceland and Iran have refused to submit to its rulings. But this would mean a greater loss of face for America, which has long been viewed as a champion of the rule of law.

While the US faces its dilemma, the Nicaraguans are exhilarated. According to Paul Reichler, an American attorney who helped represent the Sandinistas at the World Court, the "Reagan Administration has to decide whether the US is for or against international law". Meanwhile, the war of nerves between the two countries continues. The Nicaraguans followed up their World Court victory by accepting a regional non-aggression treaty proposed by the Contadora group (Columbia, Panama, Venezuela and Mexico) "in its totality and without modification". The US supported the Contadora deliberation but proposed some amendments to the draft.

On its part, the US again claimed that it had sighted six Soviet ships laden with arms, bound for Nicaragua. In November, they had alleged that Soviet ships had unloaded MiG-21 fighter planes at the port of Corinto. This time it did not specify what arms the ships were carrying since their last allegations had proved to be false. However Reagan warned that if sophisticated Russian aircraft were sent to Nicaragua, then "we can not sit back and just take".

SINO-BRITISH AGREEMENT

HONG KONG ON A PLATTER

Two years after the Sino-British talks began, Chinese Prime Minister Zhao Ziyang and British Prime Minister Margaret Thatcher put their signatures to a 42-page agreement that will turn Hong Kong over to Chinese control on Jul 1, 1997. To assure the people of Hong Kong that China will honour the agreement which guarantees them 50 years of free market autonomy Zhao said, "It is a tradition of the Chinese nation to act in good faith."

Hong Kong's qualified endorsement of the agreement came out in a 53-page report in November. Over 670 organisations and 1,815 individuals had been asked their opinion in a sample survey and it was found that most of those polled had "reservations about China's ability to implement the provisions of the draft agreement." Shortly after the British parliament voted on Dec 5 in favour of the agreement, a delegation of Hong Kong citizens expressed their concern to Westminster that

and 1965. Shortly after his death, Marshal Sergei Sokolov was appointed new Defence Minister. Sokolov was one of the three Deputy Defence Ministers.

ISLAMISATION IN PAKISTAN

HOLY HOAX

On Dec 1, 1984, President Zia-ul-Haq, in a surprise TV appearance, announced that he would hold a referendum on Islamisation in Pakistan. The referendum, it was said, would also act as a de facto presidential election since a "Yes" vote on the Islamisation programme would mean that Zia would be regarded as elected for a five-year term and he would be given the mandate to amend the Constitution and make it thoroughly Islamic before restoring it and withdrawing martial law. Elections to the Parliament would then follow but the members of the new Assembly would not belong to political parties and the Parliament's powers would be limited by Quranic injunctions. The 11-party opposition Movement for the Restoration of Democracy (MRD) stated that the referendum was "the greatest hoax in the name of Islam in 1400 years", called for a boycott and appealed for a "no" from those who found themselves compelled to vote.

Nevertheless, the referendum was held on Dec 19, 1984, and more than 60% of the votes were cast in favour of Zia and Islamization (according to election officials, 98% of the votes cast were in Zia's favour). In the capital city of Rawalpindi, Zia got 69,546 votes out of a total of 1,48,565 and only 2,123 votes were cast against him. The results were not surprising, considering the stringent restrictions under which the referendum was held. It was organised by the army and held under martial law. Opposition leaders were rounded up from all over the country a week earlier. No canvassing was allowed; the courts were immobilised and news was censored. Calling for a boycott was forbidden and army personnel and civil servants were required to vote a few

FOR WANT OF FOOD: Ethiopia is a land famished. In the worst famine in African history, 3,000,000 people have already starved to death in this parched country. Its inhabitants have been reduced to hideous mockeries of life, virtual skeletons who have even forgotten how to eat. In this world where some have more food than they know what to do with, here's a nation perishing for want of food. The affluent world, suddenly awakening to the pathetic plight of this starving humanity, has begun to send in vast outpouring of a belated concern and generosity. But it is too late for those already dead and may well be too late for the dying as well.

passports issued by the territory after 1997 may not be honoured internationally. Prime Minister Thatcher has promised that Britain will persuade other countries to honour Hong Kong's passports.

The Hong Kong agreement is a feather in Chinese strongman Deng Xiaoping's cap. Yet another feather was added three days after Thatcher's departure from Beijing when Ivan Arkhipov, the First Vice Premier of the Soviet Union, paid a high level visit to China, the first of its kind since 1969. The visit was successful and three economic cooperation pacts, including an agreement to set up a Sino-Soviet committee for the promotion of economy, trade, scientific and technological cooperation, were signed. The other two agreements deal with technical collaboration on production technology and knowhow and exchange of scientific and technological scholars and experts. The official Chinese news agency, Xinhua, also reported that the two sides agreed to expand bilateral trade by about 28% in 1985.

LATIN AMERICA

DEMOCRACIES AND DICTATORSHIPS

Uruguay became the latest country in South America to join the democratic club, when elections held in early December returned Julio Mario Sanguinetti of the moderate Colorado Party. The party won 40% of the votes compared with the centre-right Blanco Party's 34% and the leftist coalition Frente Amplio's 21%. Sanguinetti will take over his office in March.

Uruguay has a long democratic tradition. This was, however, interrupted in 1973 when a 24-member military junta seized power from an ineffectual civilian government. Four years ago, the generals miscalculated and held a referendum on certain of their proposals. These were overwhelmingly rejected and the military finally agreed to hold elections. Thus, a civilian government has returned after 11 years of military rule. However, it faces some serious challenges: a 45% infla-

tion rate, a 15% unemployment level, a \$5.2b foreign debt and a huge police and military establishment, so bloated that one out of every 43 Uruguayans is a man in uniform.

The other Latin American countries to replace dictatorship with democracy in the past few years are Argentina, Bolivia, Panama, Honduras, Peru, El Salvador and Ecuador. Brazil and Guatemala will hold elections next year and may become democracies too.

In Chile, however, President Augusto Pinochet Ugarte's rule is as repressive as ever. Early in December, a two-day protest was planned against his regime. Before it could take place, the police made scores of arrests of leftist political and labour leaders, and during the protest days troops were posted every 100 yards in Santiago, while armoured cars and troop transport vehicles roamed down the streets. During the protest, 160 people were arrested, including two Roman Catholic priests and a deacon. The scare tactics proved effective as most schools and shops remained open and several leaders of the five-party Alianza Democratica, the main opposition group, did not endorse the protest in fear of rubbing the government on the wrong side.

In the past 18 months, about 110 civilians have lost their lives in street demonstrations, but Pinochet has refused repeated and widespread demands that he relinquish power to a democratically elected government. As it appears, he is prepared to hold on to power, by military force if necessary. In late December, he further extended a state of emergency declared on Nov 6, 1984, for another 90 days. This empowers the military government to restrict press freedom, ban meetings and send "offending" people into domestic or foreign exile.

GRENADA

ELECTING DEMOCRACY

Not so many months after America invaded Grenada to save the small Caribbean island for "democracy", Grenada is on its way back to democracy as the Americans see it, and the citizens are not complaining. The island held its first election since the invasion on Dec 3, 1984 and it was won by middle-of-the-road Herbert Blaize, whose New National Party won 14 of the Assembly's 15 seats. It won 59% of the votes, while its closest opponent, the former right-wing Prime Minister, Sir Eric Gairy's Grenada United Labour Party (GULP) won 36% of the votes. The revolutionary pro-Cuban party which had ruled Grenada from 1979 till the American invasion a year ago, got only 5%.

Blaize is President Reagan's man, and the Americans pumped a lot of money into his campaign as was evident from its lavishness. Gairy, too, claimed that he had Reagan's approval despite a public rebuff from Washington. America, therefore, has nothing to fear from the island by way of a leftist resurgence in the near future. The leftist party, the slain Premier Maurice Bishop's New Jewel Movement, renamed itself the Maurice Bishop Patriotic Movement (MBPM) and tried to distance itself from the harsher memories of the 1979-83 revolutionary street. Its new leader, Kenrick Radix claimed that the MBPM was basically a moderate left-wing nationalist party and denounced Blaize as America's surrogate slave-driver. However, the twin campaign was in vain and America's victory was a victory for the American invasion.

The critics of the invasion still say that it was illegal, immoral, unnecessary and bad for international security. The Commonwealth and the UN also refused to send observers to the elections. However, under the circumstances since Grenada has so evidently accepted the American "biz stick", conclusions are being re-drawn.

PLO

FUTILE EXERCISES

The 17th session of the Palestine National Council was held at Amman in late November '84. The split in the movement between the Syrian-based faction and Arafat's followers was quite evident but Yasser Arafat emerged as the leader of the more representative part. The Council asserted its independence of Syria, which has been trying to overthrow Arafat for some time.

Although Arafat's hold over the Council appears to be strengthened, nothing major happened by way of a new peace initiative to bring Israel to the negotiating table. The one country that can help Arafat to do so is Jordan, but no joint position emerged on Israel, although there was talk of a joint Jordanian-Palestinian committee being set up in the future. While King Hussein of Jordan wants to base any initiative on the United Nations' Resolution 242 which calls for an Israeli withdrawal from the territory it occupied during the 1967 war and which both the Arab states and Israel accept, the Palestinians are not in favour of it because it refers to them as a "refugee problem".

LOS ANGELES OLYMPICS—OF BOYCOTTS AND BEATINGS: The XXIII Olympics left an indelible mark on the memories of many. Held in Los Angeles (USA) for a fortnight from Jul 28, these Olympics have become famous on numerous accounts. Conspicuous by their absence were Russia and the East Bloc countries who collectively boycotted the Games. Then, America established its convincing superiority by winning 83 golds, 61 silvers and 30 bronzes—a total of 174 of the 687 medals altogether. Twenty-three-year-old black American Carl Lewis alone bagged four golds equalling the world record of his fellow countryman Jesse Owens. America's latest gymnastic protegee Mary Lou Retton captured hearts by her agile tactics in the gym and her charming personality. The first-ever Games with industry-support, these Olympics amassed a staggering, all-time high profit of over \$160m.

Theoretically, however, Arafat is in a stronger position than before. The Council approved of his earlier controversial visit to Egypt and also gave the executive committee freedom to "define the PLO's future relations with Egypt". The new Arab axes of Egypt, Jordan and Iran would also encourage him to negotiate with Israel. The new Israeli Prime Minister, Shimon Peres, accepts the principle of territorial compromise in return for peace. The only problem is that no one is ready to make the opening bid, and meanwhile the West Bank and Gaza, over which the Palestinians seek the right to self-determination, are slowly being woven into the Israeli fabric as more and more Israeli settlers are moving in.

An event which occurred around the time of the Council meeting also showed that, despite outward niceties, no country is still ready to negotiate. Abdel Wahab Darawsha, an Arab member of the Israeli Knesset, wished to go to Jordan to attend the Council meeting. He wanted to tell the PLOs that they must stop calling for the destruction of Israel and expressed his view that Israel should end the occupation of the West Bank and Gaza. The Conservative Likud Party was very critical of Darawsha and even the Labour Party, of which he is a member, reprimanded him. Only left-wingers sung his praises. However, it was not just Israel which did not want him to go to Amman. Jordan, too, did not give him a visa because, it appears, that the Palestinians did not want him to sit-in at the meeting.

THE KOREAS

BACK TO SQUARE ONE

There is many a slip 'twixt the cup and the lip. Matters have again cooled between North and South Korea and the "slip" occurred when Vasily Yakovlevich Matuzok, a trainee diplomat with the Soviet Embassy in Pyongyang defected to S. Korea, in a dramatic 15-minute escapade. He ran across the joint security area in Panmunjom after posing as a tourist and entered the UN command controlled side of the area where N. Korean personnel are strictly banned. Gunfire ensued from both sides and three N. Korean and one S. Korean soldiers were killed and some others were injured. The defection was a grave matter because, according to official sources, Matuzok was a language officer proficient in Korean and had been present during meetings between N. Korean top officials and the Soviet Ambassador, N.M. Shubnikov. Recently, N. Korea's relations with Moscow have been troubled and Matuzok could let out important information.

The defection and the subsequent shooting occurred at an inopportune moment.

because the two sides appeared to be resuming peaceful contacts of late. They had been discussing the possibility of economic exchange and the launching of a joint team to compete in the Olympic Games scheduled for 1988 in Seoul. The S. Korean Government condemned the N. Korean action and the S. Korean President Chun Doo Hwan stated that Pyongyang's violation of the armistice agreement had poured "cold water" over the North-South negotiations. Pyongyang declared that Matuzok had not defected but had been "abducted" by UN command personnel. It also informed Seoul that it was postponing trade talks till 1985. However, in a conciliatory aside it also stated that it hoped that Seoul would take "a responsible step" to eliminate the tension created by the incident so that talks could resume.

The Korean region is a potential hot spot and may some day be the venue for another war. As the Matuzok incident shows, tension escalates fast in the demilitarised zone. A similar incident had occurred in August 1976, when N. Korean troops had murdered two American guards, who were trying to break the branches off a tree not far from where the Matuzok incident took place. The US mobilised its tanks on the demilitarised zone and UN command troops hacked down the trees which the North had planted to protect their observation posts from being viewed by their enemies. Following this episode, the number of armed guards in the joint security area was limited to 35 on each side and they were to carry only handguns. In the present incident, N. Korean soldiers pursued Matuzok into the UN command controlled side, much to the chagrin of Seoul. World leaders played down the incident for most parties are interested in promoting current North-South contacts. However, further incidents could jeopardise attempts at negotiations.

AUSTRALIAN ELECTIONS

SLIGHT SWOOP FOR HAWKE

The Australian elections of Dec 1, 1984, held a surprise for Prime Minister Bob Hawke. A landslide victory had been forecast, but there was a uniform 2% swing throughout Australia to the opposition Liberal and National parties. The middle-of-the-road Labour Government's majority was cut from 26 in a House of Representatives that had been enlarged from 125 to 148 seats. The Labour Party also lost its chance to control the senate and the small Democratic Party holds the balance of power there.

The Labour Party tried to explain its losses by saying that it was the result of the changed voting system. Earlier, voters had to number all the candidates in order of preference on their ballot papers and many papers were invalidated if this was not done. This time, the process was simplified. While this change was brought in for the senate ballot papers, the system for the House of Representatives remained unchanged. However, many Australians were confused and marked one box in the House ballot papers as well. The result was that the number of invalid votes for the House jumped from 2% to 7%. The Labourites say that most of the muddled voters were Labour supporters, which, if true, does not speak very well for them.

What probably happened was that there was a last-minute swing to the Liberals. In a recent television debate, the Liberal leader, Andrew Peacock, bettered Hawke in performance. The overall effect of the election, however, is not so serious for Hawke. Although he is now being publicly criticised from all sides, including his Labour colleagues, for his policies, his voting-system goof and his style of leadership, he will perhaps tone up his government and will be more discreet.

UNESCO

CHARGED FOR CORRUPTION

On Dec 19, 1984 the US formally withdrew from the United Nations Educational, Scientific and Cultural Organisation (UNESCO), because it felt that there was "extraneous politicisation" as well as "an endemic hostility towards the institutions of a free society, particularly those that protect a free press, free market, and above all individual human rights" within the body. Last year when the US had threatened to leave, it had been the only country to take such a step. Recently, however, Britain too gave notice that it may withdraw. W. Germany, Denmark, Canada, Switzerland, the Netherlands and Japan, too, may follow suit unless corrective action is taken. Their basic complaint is common: that UNESCO is politicised, inefficient and corrupt. About 85% of UNESCO's budget comes from the western countries and Japan. The US withdrawal is serious because it financed one-fourth of the agency's \$200m two-year budget.

UNESCO, however, has many friends in the Soviet bloc and the Third

ON THE HIT LIST: On Oct 12, 1984 it was the British PM who became a target of the outlawed Irish Republican Army's (IRA) terror tactics. In their latest act of savagery, these underground terrorists tried to assassinate Margaret Thatcher. A deadly bomb was planted in Brighton's Grand Hotel where Mrs Thatcher and members of Britain's Conservative Party were staying for the annual party conference. The explosion ripped through the hotel and while four prominent Tory politicians were killed and 34 injured, the PM had a miraculous escape—

as she had, just two minutes earlier, vacated her suite's bathroom which was demolished. The IRA immediately assumed responsibility for the inhuman act and added, rather ominously, "Today we were unlucky, but remember, we have only to be lucky once". As for Mrs Thatcher, she exercised remarkable self-control in the face of a harrowing experience. Said she—"Life must go on,"—demonstrating the mettle this Iron Lady is made of

World countries. Among UNESCO programmes which have linked the western bloc is the so-called New World Information Order, which seeks to help developing countries counteract the commercial power of the western press and calls for licensing the restrictions on journalists. Many of the western leaders do not approve of UNESCO's present Secretary-General Senegalese Amadou Mahtar M' Bow and blame him for mismanagement and corruption in the agency. They have been pressuring him to step down for some time but he has recently affirmed that he has no intention of doing so till his term expires. However, he will have to take strong measures to cut down the budget of UNESCO and it is believed that the severest cuts will be made on non-controversial projects like literacy campaigns.

NEW CALEDONIA

TROUBLE FOR FRANCE

French President Francois Mitterand is already neck-deep in domestic and other troubles. And now a new one has been added—New Caledonia, where the native Melanesian, or Kanak, population appears to be set on ending 131 years of French rule over their South Pacific island. The Kanak community makes up 44% of the territory's 1,44,000 population, the rest being white or other settlers. Initially, their revolt had seemed merely exotic, but it took a violent turn in December '84.

Trouble began when the Kanaks, led by the Kanak Socialist National Liberation Front (FLNKS) boycotted elections for a territorial assembly on Nov 18, 1984. The anti-independence party, Rally for Caledonia in the Republic, which is dominated by French and other settlers, resolutely swept the polls. The Kanaks raised their own flag and their leader Jean-Marie Tjibaou, declared a provisional government. In the ensuing riots a white municipal official and a Kanak separatist were murdered and in early December '84 a group of rebels returning from a night-time meeting were ambushed and 10 of them were killed. Tjibaou, who lost two of his brothers in the ambush, however, offered to end hostilities if the government released 17 Kanaks detained by French authorities on charges of disturbing the peace.

Mitterand has sent cabinet veteran Etienne Pisani to find a solution to the problem. Pisani has agreed to Tjibaou's terms regarding the Kanak prisoners. He also stated that he hoped to formulate a plan by Jan 5 on the territory's future and he would give the various factions a month to come to an agreement.

The solution, however, is not as simple as it sounds. The white and

other settlers are opposed to a Kanak-dominated independent state and many of them believe that Francoist France, Australia, which is nearby, is abetting the Kanak militants, some of whom claim that they had received military training in Libya. Mitterand, on the other hand, has hinted that the government may hold a referendum in New Caledonia this year, instead of in 1989, as previously planned. This has been opposed by Gaullists at home who feel that Mitterand is preparing a sell-out. However, the Kanaks feel that if the referendum is delayed, it may never be held because France goes to the polls in 1986, and in the case of a defeat for Mitterand's Socialists in the Parliament, their successors may take a different line on New Caledonia. Mitterand could also decide to separate the territory on ethnic lines, but as the examples of Cyprus, Lebanon and N. Ireland show, this is not a feasible solution.

KUWAITI PLANE HIJACK

VIOLENT HEIGHTS

One of the most brutal hijack dramas occurred in December '84 when Kuwait Airways Flight 221 to Karachi was hijacked by terrorists believed to be linked to the Hizballah (Party of God). Some US officials believe that this is the same pro-Khomeini Shi'ite group which bombed the US Embassy and marine barracks in Beirut last year, killing over 300 people. The Kuwaiti officials had taken a tough stand on the occasion and 17 terrorists had been brought to trial and sentenced to death or prison terms. It was in the hope of forcing Kuwait to release the jailed terrorists that Flight 221 was hijacked.

The aircraft was taken to Teheran's Mehrabad Airport and the drama continued for six days. The hijackers released 153 hostages in batches, but four other hostages were killed by them, two of them American. The Americans were possibly killed to gain, what they hoped would be, Iranian sympathy. They brought out a Kuwaiti passenger on the landing steps and severely beat him up to demonstrate their intent.

Meanwhile, they carried on sporadic negotiations with the Iranian authorities. With 10 hostages remaining and the hijackers threatening to blow up the aircraft (for added effect they even read out their last will and testament) the Iranian authorities decided to act. Commandos moved in, disguised as airport workers, after switching off the floodlights around the plane. A smoke bomb was set off, there was shooting on both sides but no one was killed although the windows of the aircraft were shattered by gunfire. The storming was successful, the hostages were freed and four terrorists were captured. The outcome of this is that Kuwait decided to award death penalty for such crimes. S.B

A to Z of SCIENCE

In an age where high-tech computers are replacing the human brain and plastic pumps the heart, where nuclear physics is opening new vistas while nuclear war looms large on the horizon, where chemists are achieving breakthrough in life-saving drugs while poisonous chemicals and pollution threaten the living planet—lack of scientific knowledge can prove to be a serious handicap both in personal and competitive life. To equip you substantially with the apparatus of scientific knowledge, a comprehensive feature on the A to Z of Science.

SPACE

Cosmic Encounters

Do celestial events pose any threat to life on earth? Man had long believed that celestial apparitions such as comets were a bad omen. But most such beliefs were based on nothing more than sheer ignorance. Recent scientific studies, however, indicate that celestial objects such as comets or asteroids may indeed have had great influence on life on earth in the past. It is now widely accepted that at least some of the large-scale biological events on earth, such as the sudden disappearance of the giant dinosaurs some 65m years ago, were possibly triggered by a comet or asteroid strike. Scientists believe such collisions would have kicked up enough dust into the atmosphere to block sunlight for months and chill the earth leading to large-scale death of the dinosaurs.

But not all such collisions need be catastrophic. Most of them leave only minor scars. The famous Barringer Crater in Arizona, USA, for example, was formed when an asteroid fragment, 45 m in diameter, came down with tremendous impact some 25,000 years ago. The crater is 183 m deep and 1,200 m across. The Lonar Lake in Rajasthan is also believed to have been formed by an asteroid hit.

In recent history, a minor fragment of a comet is believed to have struck central Siberia near the Tunguska river in USSR on Jun 30, 1908, flattening more than 15,000 sq km of forest. When the object hit the upper atmosphere, it is said to have outshone the sun. More recently, on Aug 10, 1972, a small asteroid entered the upper atmosphere over Utah in the US and was visible as a bright object in broad daylight during its 1,450 km passage through the atmosphere before it bounced back into space over Alberta in Canada. It did not hit the earth as it entered the atmosphere at too shallow an angle. Scientists estimate that if it had dipped just a bit deeper into the atmosphere, it would have struck with a force equal to that of a nuclear bomb!

It is now accepted in scientific circles that the mass extinction of the dinosaurs 65m years ago was not the only one of its kind in the earth's long geological history. After studying fossil records of animals that lived at various periods during the past quarter of a billion years, two scientists from the University of Chicago, USA, have come up with the amazing theory that large-scale extinctions apparently are not unique, rather, they occur in cycles—once every 26m years or so. Possible mechanisms for such a cyclic event have also been proposed recently.

One of the commonest objects to hit the earth from space are meteorites. These stony chunks of rock of varying sizes are fragments of asteroids, hoards of which orbit the sun between Mars and Jupiter. Normally, the orbit of asteroids do not take them anywhere near the earth. But there are a few small groups which move in orbits that intersect the earth's orbit (astronomers call them "earth crossers"). Occasionally, a member of one such group approaches quite close to earth as happened in August 1972, and may even hit the earth. However, a direct hit by an asteroid is unknown, although small fragments regularly reach the earth's surface as meteorites.

The second class of objects that may possibly hit the earth from outer space are comets or their

fragments. The famous Tunguska event in 1908 was caused by a 35-m chunk of Comet Encke which returns every 3.3 years. Normally, however, the appearance of a comet is a rather irregular and unpredictable phenomenon. Often, they appear without any prior warning. But rarely do their paths bring them close to earth.

According to a theory developed by the American astronomer Fred Whipple, a comet may be described as a 'dirty ice-ball'. Its core is made up of a conglomerate of rocky fragments held together with frozen gases such as ammonia, methane, carbon dioxide and ice. When a comet approaches the sun during its round trip across the solar system, these substances evaporate giving rise to the most prominent feature of a comet—its beautiful 'tail'.

The origin of comets is still a matter of debate, but it is now accepted that they belong to the solar system. According to the Dutch astronomer Jan Oort, there is a reservoir or 'cloud' of comets girdling the solar system at a distance of a light-year or so (1 light year = 9,500b km) from the sun. A comet from this cloud strays into the solar system whenever the cloud is disturbed by any celestial event such as the passage of a nearby star. Once set loose from the cloud, the comet

From 1 to 3:
1. The first surviving drawing of Halley's Comet appeared in the Nurnberg Chronicle. 2. The first-ever picture of this comet was taken in 1910. 3. Astronomer Edmund Halley after whom the comet was named.

Seven smiles: The record seven-member crew of the space shuttle *Challenger* beaming in unison.

travels sunward, its path determined by gravitational effects of the planets of the solar system, particularly Jupiter and Saturn.

Two theories have been put forward to account for the 26-m year cycle of mass extinctions in the past. Both presume a higher than normal rate of dislodgement of comets from the Oort cloud at regular intervals, but by different mechanisms. According to one theory put forward in 1982 by two astronomers of the Edinburgh Royal Observatory, the Oort cloud is disturbed by dust clouds in the Milky Way every time the solar system crosses the galactic plane during its motion around the galactic centre. This happens once in every 33m years, but the astronomers feel that "considering the great difficulties and uncertainties involved in geological dating and measurement of large-scale astronomical motions, 26m and 33m years seem quite close".

The other theory, the brainchild of a University of California professor, invokes the existence of a dim, undiscovered companion of our sun which moves in an orbit that brings it close to the solar system, and hence the Oort cloud, once every 26m years or so. As the star, named *Nemesis*, approaches the sun, its gravitational pull disturbs the Oort cloud "spilling comets from it and causing an extinction".

Whatever the cause, however, life on earth is in no imminent danger of extinction from celestial collisions. According to palaeontologists, the last large-scale deaths of animals on earth took place about 11m years ago. So, even if there is a cosmic trigger, the next phase of mass extinctions would not be due for at least another 15m years.

Man In Space

When manned space flights began with the historic voyage of Yuri Gagarin on Apr 12, 1961, the missions were mainly exploratory. Their main objective was to find out if man could go and work in space. Today, manned space missions have become a routine endeavour and the missions are more business-like. They are being used for a variety of commercial applications such as to launch satellites cheaply, to observe the earth for resour-

ces survey, and to carry out manufacturing processes not possible on earth.

In recent years, there have been two major objectives of manned space missions. One, to study the effect of prolonged stay in space; and two, to study the utility of the reusable space shuttle [also known as the Space Transportation System (STS)] to launch, retrieve and repair satellites in space. Significant achievements have been reported in both these areas in recent months.

Three Soviet cosmonauts returned to earth on Oct 2, after a record-breaking stay of 237 days in space, on board the orbiting space station Salyut-7. The American space shuttle missions have been successfully used to launch several communication satellites including India's *INSAT 1B* in August 1983. A shuttle crew successfully retrieved, repaired and again put into orbit the crippled scientific satellite *Solar Max* in April 1984. In another shuttle mission in October, the crew successfully carried out 'refuelling' of a satellite in orbit, an operation which can be used to prolong

SATELLITE PLACEMENTS

Of Communication Satellites: At least three geostationary satellites placed 120° apart are needed to make world-wide communication possible via satellites.

The C-band: The radio frequency commonly used for communication between two earth stations, via satellite, is between 4 to 8 gigahertz (1GHz = 10⁹ Hz) and is called the C-band.

Low Altitude Flights: Manned space flights are usually low altitude flights, around 400 km above the surface of the earth, because of the presence of very intense charged particles and X-radiations at greater heights. Such low altitude flights take about 95 minutes to orbit once around the earth.

Spacing of Satellites: According to an international agreement, satellites over the equator must be spaced two longitudinal degrees apart—nearly 1,460 km—so as to avoid interfering with one another's signals.

Geostationary or Synchronous Satellites: These satellites are required for relaying of radio and TV signals and for weather mapping. Such satellites orbit the earth with in a

of experiments carried out during other shuttle missions have shown that the near absence of gravity in space can make possible production of drugs several times more pure than those produced on earth. Similar results have been obtained in experiments with several unusual materials and metal alloys.

The main attraction of space for scientists and technologists is the near absence of gravity, which they call 'microgravity'. It has long been known that objects become 'weightless' in space. But that does not mean that earth's gravitational force really disappears in space. The fact is that at heights of 350 to 400 kms, the force of gravity is about nine-tenths as strong as at sea level. But the orbital motion of a spacecraft counterbalances exactly the effect of earth's gravity. As a result, both the spacecraft and its occupants become weightless.

On earth, we are accustomed to living under earth's gravitational pull which makes things fall to the ground. It is this force of attraction that gives us the sense of 'up' and 'down'. Our heart, blood circulation, and the vestibular system of the inner ear, which helps us keep our balance, are all attuned to working under the influence of earth's gravity. So when this pull is absent, body systems, unless specially trained or 'conditioned', show unusual behaviour.

It has been known since the early days of manned space flight that weightlessness produced physiological symptoms in men. One of the first noticeable effects of weightlessness is a rapid loss of calcium from the bones which make them brittle. The muscles, no longer needed to support the body against the pull of gravity too become weakened. Also, the absence of gravity makes the astronauts physically taller. Weightlessness also produced a sense of disorientation, dizziness and erratic control of one's movements. These effects varied widely in different individuals. They seemed to be slight in some and overpowering in others. In most cases, the symptoms disappeared after a week or two in space and the body became accustomed to weightlessness.

Wanna see bouncy pictures? Well, the only way of transmitting pictures from one side of the world to the other is to 'bounce' radio waves and television signals off a communication satellite. Pic shows satellite Intelset IV which can also transmit up to 9,000 telephone calls at a time. From '85, Intelset VI will relay worldwide 33,000 phone calls and four TV programmes simultaneously.

period of 24 hours and thus stay permanently over a given location of the earth. They have to be stationed at a height of nearly 36,000 km above the surface of the earth.

SPACE FEATS

Errant Satellites Retrieved: One of the most spectacular space events of recent times took place in November 1984 when the crew of the US space shuttle *Discovery* brought back to earth two errant satellites, an Indonesian communication satellite *Pelapa-B2* and United States' Western Union's satellite *Westar-6*, each worth about \$35m, for repairs. Both these satellites had been launched in February 1984 from the US space shuttle *Challenger*. Something went wrong with them almost immediately after launch and instead of orbiting in the geosynchronous orbits they were meant for, they were stranded in useless elliptical paths about the earth, at heights ranging from about 210 km-1,330 km above the earth's surface.

Astronauts Joseph Allen and Commander Dale A. Gardner retrieved these canister-type, 9 ft high, satellites from space and brought them back to earth in the cargo bay of their space shuttle.

The crew, which included Commander Frederick Hauck, Pilot David Walker and Anna Fischer, besides Allen and Gardner, first dispatched the two satellites which they had taken in the space shuttle, into space, before retrieving the two errant satellites.

Allen carried the 1,200-lb (545-kg) *Pelapa-B2* satellite overhead, for a trip around the world at a height of about 360 km above the earth's surface moving at a speed of about 28,000 km/hr.

Space Endurance Record: The three Soviet cosmonauts Leonid Kizim, Vladimir Soloviyov and Dr Oleg Atkov, who have been manning the space station *Salyut-7*, since Feb 8, 1984, created a new space endurance record of spending 237 days in space. They returned to earth landing in Kazakhstan on Oct 2, 1984. The previous record of 211 days was also held by two of their countrymen. This record will be bettered only by a stay of more than 260 days by an astronaut or a group of them as a new record is set only when it is at least 10% longer than the previous record.

The US astronauts, in comparison have stayed in space for a maximum period of 84 days, the record being held by astronauts Gerald Carr, Edward Gibson and William Pogue, aboard *Skylab 3*, in 1974.

Second Woman Space Walker: Svetlana Savitskaya became the first Soviet Woman to walk in space. She spent nearly three hours in space outside the Soyuz aircraft, testing a welding device, in July 1984.

The first American woman to walk in space is Kathryn Sullivan who performed the feat during her 8-day scientific voyage in the space shuttle *Challenger*, during October 1984.

The maximum number of human beings in space at any one time is, however, 11, a record which was set during April 1984 when there were five Russians along with the Indian astronaut, Rakesh Sharma in the *Salyut-7* space lab and five American astronauts aboard the space shuttle *Challenger*, attempting to repair the damaged *Solar Max* satellite.

MAIDEN-OVERS IN SPACE

USSR Firsts

- First man-made satellite launched on Oct 4, 1957.
- Sent the first living being, an animal (dog named Laika) in space.
- The first man Yuri Gagarin sent in space.
- The first woman Valentina Tereshkova sent in space in 1963.
- The first three-man craft launched.
- The first space mission failed in 1967 when cosmonaut Vladimir Komarov died on return.
- The first woman Svetlana Savitskaya walked in space in July 1984.
- The first pictures of the moon's hidden side were shot by an orbiting Soviet camera.

US Firsts

- The first manned voyages to end from the moon in 1969.
- Unmanned landing on Mars, in 1976.
- The first man-made object (Pioneer 10) to leave the solar system, in 1972.
- First space repair job in an orbiting space shuttle *Challenger* performed on the disabled *Solar Max* satellite on Apr. 19, 84. On this flight Bruce McCandless became the first human being to walk in space without a lifeline.
- Retrieval and return of two errant satellites from space, back to the surface of the earth, in November 1984.
- The record number of seven astronauts carried in a spacecraft at any one time.

Courtesy USIS

Floating it alone? Bruce McCandless became the first 'human satellite' when he floated into space, 280 km above earth, untethered from the Challenger.

although the physiological changes became manifest after the astronauts' return to earth. After two weeks back on the ground, it was observed that the body systems returned to normal. Space scientists were interested to find out how long man could be exposed to weightlessness in space and yet recover fully on return to ground.

Although Soviet cosmonauts hold the long-duration space endurance record at present, the Americans led the way more than a decade ago with their *Skylab* mission. The unmanned orbital laboratory was launched in May 1973, followed 11 days later by a three-man crew which established a record stay of 28 days in space. By February 1974, the third and final *Skylab* crew had pushed the space endurance record to 84 days, which remains the longest any American astronaut has spent in space so far.

The Soviet Union was a slow starter. By the beginning of 1975, their own record stood at 29 days, the time two Soviet cosmonauts spent on board the orbiting space station *Salyut-4*. With the launching of the more advanced *Salyut-6* in September 1977, the space endurance record was pushed still further. By November 1978, it stood at 139 days. The Soviets continued to set new records; by 1982 the figure had been pushed up to 211 days, set up by a two-man crew on board *Salyut-7*. The latest record of 237 days was set up by a three-man crew comprising of Leonid Kizim, Vladimir Soloviyov and Oleg Atkov who had been aloft on board *Salyut-7* since Feb 8, 1984.

During their long mission, the *Salyut* crew twice hosted visiting cosmonauts including India's Rakesh Sharma, who along with two Soviet cosmonauts, visited the station in April. In

July, the visiting crew included a woman, Svetlana Savitskaya, who became the first woman to walk in space. She spent three hours outside the space station testing a welding device. The *Salyut-7* crew members themselves made six space-walks totalling more than 22 hours and 50 minutes. They also carried out complicated assembly operations in space.

Apart from hosting visitors and going on space-walks, the *Salyut* crew carried out valuable scientific studies. The vast amount of information gathered from experiments conducted on board the space station will be invaluable for future long-duration missions especially in the setting up of giant permanent stations in space in future.

While the Soviets were pushing their endurance records, the US was busy developing the world's first reusable space shuttle. It was an entirely new concept in space travel. From a technological point of view, the shuttle is the first major breakthrough in manned space flight since Gagarin. Before the shuttle, all spacecraft had to be discarded after a single launch, which added enormously to their cost. The shuttle, on the other hand, is designed to be used again and again after refurbishment. In fact, a shuttle is designed to be reused more than a hundred times, which means a substantial reduction in the cost per flight.

In design, the shuttle is a true aerospace vehicle. It takes off like a rocket, goes into orbit like a spacecraft and lands like an aircraft. In spite of its design complexities, the shuttle cabin is quite similar to that of any modern jet liner. The crew work in their shirt-sleeves without cumbersome spacesuits, breathing normal air just as on earth.

Manned Missions—Landmarks

The first man to go into earth orbit in a spacecraft—Yuri Gagarin (USSR), Apr. 12, 1961.

The first woman to go into space—Valentina Tereshkova (USSR), Jun 16-19, 1963.

The first man to walk in space—Aleksei A. Leonov (USSR), Mar 18, 1965.

The first woman to walk in space—Svetlana Savitskaya (USSR), Jul 18, 1984.

The first man to walk "free" in space—Bruce McCandless (USA), Feb 7, 1984.

The first man to land on the moon—Neil

Armstrong (USA), Jul 21, 1969.

The longest stay in space—Leonid Kizim, Vladimir Solovoyov, Oleg Atkov on board *Salyut-7*, Feb 8-Oct 2, 1984.

The first flight of space shuttle—Apr 12, 1981, *Columbia*. Crew: John Young, Robert Crippen (USA).

The largest space crew in a single mission—Crew of *Challenger* on its sixth flight. Crew: Robert Crippen, Jon McBride, Paul Scobly, David Leestama, Marc Garneau (Canada), Selly Ride, Kathryn Sullivan, Oct 5-13, 1984.

The first shuttle *Columbia* lifted off on its maiden flight on Apr 12, 1981, carrying a crew of two. It has since been to space five times more. Two more shuttle crafts, *Challenger* and *Discovery*, have since been added to the fleet. After more than a dozen successful flights and some dazzling feats including the daring rescue of a crippled satellite in space, the space shuttle has proved its versatility as a space workhorse. The sixth flight of *Challenger* in October was remarkable in that it carried the largest crew ever in a single space

mission. The flight, which took off on Oct 5, carried a crew of seven—five men and two women. During the mission, Kathryn Sullivan, one of the crew members, became the first American woman to walk in space. A notable achievement of the mission, according to mission specialists, "was the fact that although seven people were crammed into an area the size of a small studio apartment, they made it through eight days without any noticeable clashes or even displays of temper".

ASTRONOMY

Astronomy is the science of the study of the sky. It is one of the most ancient of the sciences dating back to prehistoric times, when our ancestors gazed up at the stars and formed them into fanciful constellations. But the real developments in the subject began with the Greeks, who drew up excellent star catalogues, measured the size of the earth, and studied the movements of the sun, moon and the planets. Most of them, however, believed that the earth was the centre of the whole universe.

Indian interest in astronomy dates back to prehistoric times and references to the motion of astronomical bodies such as the sun, moon and the planets are found in the *Rig Veda* (1500 B.C.). The first important astronomical treatise in India, the *Suryasiddhanta*, came out in 400 A.D. It dealt with varied aspects like measurement of time, motion of the sun, eclipses, planetary motions and also some astronomical instruments. The text has been continuously revised and updated by subsequent astronomers.

Modern astronomy began with the invention of the telescope in the early 17th century. In 1609, the Italian astronomer Galileo, using the telescope, made a series of spectacular discoveries. He observed for the first time the satellites of Jupiter, the phases of Venus and the countless stars in the Milky Way. With the development of more powerful telescopes, progress in astronomy became rapid.

Late in 1931, Karl Jansky, a radio engineer in the US, was studying static radio noise using a specially built antenna, when he noticed a steady stream of radio waves coming in from outer space. Having observed them for a year Jansky was sure that the radio waves were coming from the direction of the centre of the Milky Way. Later observations using improved radio telescopes proved him right. Jansky had opened up a new chapter in astronomy—that of radio astronomy.

With refinements in technique, radio astro-

Forty-two years of cold storage! That's the fate of life (if any) in Uranus which has the longest winter in the solar system. Each one of its poles points away from the sun for 42 years and the planet orbits the sun every 84 years. Uranus is itself circled by faint rings and it spins once every 11 hours.

nommy has in the past few decades led to the discovery of unique astronomical objects such as quasars, pulsars, interstellar gas clouds and many other surprises. In recent years, the use of special detectors carried by rockets and satellites have led to the discovery of astronomical objects which emit X-rays, gamma rays and infra-red rays. They have opened up another new discipline of space astronomy. From the knowledge thus gained, an entirely new image of the universe has emerged. It is now known that the universe is much more exciting and explosive than astronomers once thought.

Scientists have long debated the question: How did the universe come into being? Two possibilities have been suggested: (1) The universe was created out of an enormous explosion, thousands of millions of years ago; and (2) it has always been in the process of creation, without any beginning or end. Exponents of the first idea, called the 'big bang theory', believe that all matter in the universe once formed a compact mass, something like an enormous primordial 'atom'. This mass then exploded, forming a vast fireball. Then, in a few minutes, perhaps, matter was scattered across immense stretches of space which ultimately formed stars, galaxies and planets.

The proponents of the continuous-creation, or 'steady-state', theory, on the other hand, say that the universe has always been much the same and that matter is constantly being created. But they do not specify how matter is created from nothing.

In recent years, ample experimental evidence has been collected in support of the big-bang theory including what astronomers call 'microwave background radiation'. Theoretical calculations had earlier predicted existence of such radiation on the basis of the big-bang theory. The source of such radiation, coming evenly from all over space, cannot be explained on the basis of the steady-state theory. For their discovery of the microwave background radiation in 1965, physicists Arno Penzias and Robert Wilson shared the 1978 Nobel Prize in Physics.

Life Of A Star -

Although it may sound strange, stars are like us mortals. They are born, they grow old, they ultimately die. Of course, their lifespan is enormous: of the order of billions of years.

Astronomers now know that stars are born out of gas and dust that abound the interstellar space. The process starts with the contraction of dust cloud due to 'gravitation'. As condensation progresses, individual atoms are drawn towards the centre by force of gravity which also heats them up. After this process has continued for some millions of years, the heating becomes so much that temperatures of the order of 10m degrees or more are reached. At this temperature, the hydrogen in the cloud ignites starting a chain of thermonuclear reactions (similar to those occurring in an hydrogen bomb). And a star is born. The newborn star continues to shine steadily for hundreds of millions of years till the hydrogen fuel in its core is exhausted. After that happens, depending on the mass of the star, the life of a star follows different courses. Stars which have mass upto 1.4 times the mass of the sun gradually contract and grow fainter and denser. For a brief period (100m years or so), such a star may become a 'red giant' increasing enormously in size. But after this stage is passed, the star rapidly shrinks and becomes a 'white dwarf', a small, dense object that gives off little light.

If the mass of the star is more than 1.4 times the mass of the sun, the events follow a different course. Initially, the reactions take place as above but more quickly and the core temperature becomes as high as 3,000m degrees Celsius. At this stage the star explodes with tremendous force and a brilliant flash. During the explosion, a huge cloud of material is thrown out into space

A star is born! But die it must. A red giant is a star nearing the end of its life. Steadily puffing off its outer layers, the star drifts off into outer space, looking like a huge smoke ring. Such a ring is called a planetary nebula. Picture shows the Ring Nebula in the constellation Lyra.

which ultimately becomes interstellar dust. What remains of the original star becomes a neutron star or pulsar. If the original star is very massive, the end product is a 'black hole', a super-dense object with such a strong gravitational pull that even light cannot escape from its surface.

The Solar System

The sun and the nine planets make up the solar system. The sun is an average-sized star—one of the several thousand million in our galaxy. The present age of the sun is estimated to be around 5,000m years; scientists believe it will continue to shine in its present form for at least 5,000m years more before becoming a red giant. The diameter of the sun is about 1,400,000 km, almost 109 times that of earth. Its surface temperature is about 5,500°C.

The planets are the largest bodies in the solar system. In the order of their distance from the sun, the planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto. In size, the earth lies almost midway—it is much smaller than Jupiter, Saturn, Uranus and Neptune, but larger than Mercury, Venus, Mars and Pluto. Each planet travels around the sun in a giant ellipse, which is very nearly a circle.

Except Mercury and Venus, all the planets have one or more satellites. Saturn has the largest number of them, 19, followed by Jupiter, 16. Uranus has five satellites, Neptune four, Mars two. The earth and Pluto have one satellite each. Besides satellites, Saturn, Jupiter and Uranus also have ring systems, the most extensive of them being that of Saturn.

Besides the planets and their satellites, the solar system also contains a large number of large and small rock fragments known as asteroids

which circle the sun between Mars and Jupiter.

Astronomical Terms

Aphelion: The position in the orbit of a planet or a comet when farthest from the sun. The earth is at aphelion in early July, when its distance from the sun is 151.2m km. In early January, when the earth comes nearest to the sun, the distance is only 146.4m km.

Asteroids: Also known as the *Minor Planets*, asteroids are a group of small rocky objects that orbit the sun between Mars and Jupiter. So far, the orbits of about 2,000 individual asteroids have been computed by astronomers. The total number is estimated at more than 40,000.

Astronomical Unit: The basic unit of distance within the solar system. It is taken as the average distance between the earth and sun. The latest value for the unit is 149m km.

Astrophotography: A telescope designed specifically for astronomical photography.

Black Hole: The ultimate stage in the life of a massive star which is so dense that even light or any other form of radiation cannot escape from its gravitational field.

Chromosphere: The part of the sun's atmosphere that lies above its bright surface or photosphere, and below the outer corona. It is visible to the naked eye only during a total solar eclipse when it appears as a reddish rim around the disc of the eclipsed sun.

Conjunction: An event when a planet and the sun both are situated on the same side of the earth and almost lined up. When a planet is in conjunction, it is not visible because in the sky, it appears only during the day and lies close to the sun.

Corona: The outermost part of the sun's atmosphere. It is made up of very thin gas at a very high temperature. It is visible to the naked eye only during a total solar eclipse.

Cosmic Rays: Electrically-charged particles that continuously bombard the earth from outer space. They are made up of a mixture of protons, helium nuclei, nuclei of heavier elements and electrons.

Earthshine: The light reflected by the sunlit side of the earth. It makes the dark side of a crescent moon appear dimly lit.

Ecliptic: The imaginary apparent yearly path of the sun in the sky. The ecliptic is inclined to the earth's equator at an angle of 23.5°.

Equinoxes: Imaginary points in the sky which the sun crosses twice each year when moving from south to north or vice versa. When the sun is on any of these points, the day and night are of equal length at all places on the globe.

Galaxies: Huge conglomerations of stars, often containing many thousands of millions of them, together with gas and dust. More than 1,000 galaxies have been photographed with powerful optical telescopes, but only three are visible to the naked eye: the *Andromeda* which is visible in the northern sky and the two *Magellanic* clouds visible in the southern sky. The sun and the solar system is also part of a large galaxy, the Milky Way.

Inferior Conjunction: When Mercury and Venus lie almost between the earth and sun, they are said to be at inferior conjunction.

Inferior Planets: Mercury and Venus, which have orbits inside that of the earth, are known as the inferior planets.

Interstellar Matter: Materials, both solid and gaseous, which have been detected in the

space between stars in a galaxy. It consists largely of hydrogen together with minute solid 'dust' particles. In recent years, several organic molecules have been detected in interstellar space.

Light-year: A unit distance used in astronomy. It is the distance travelled by a beam of light in one year and is equal to 9.46 mmm/km.

Kepler's Laws of Planetary Motion: Laws laid down by Johannes Kepler between 1609 and 1618. They are: (1) The planets move in elliptical orbits, with the sun occupying one focus. (2) The radius vector, or imaginary line joining the centre of the planet to the centre of the sun, sweeps out equal areas in equal times. (3) The square of the time it takes for a planet to complete one orbit around the sun is proportional to the cube of its mean distance from the sun.

Magnetosphere: The region of the magnetic field of a planet or other body. In the solar system, only Earth, Jupiter, Mercury and Saturn are known to have detectable magnetospheres.

Meteors: Small particles, often smaller than a sandgrain, which become visible when they enter the upper atmosphere and burn up.

Meteorites: Larger objects which reach the earth's surface without being destroyed in the upper atmosphere.

Moon Illusion: When the moon is rising or setting, i.e. is low down over the horizon, it appears larger than when it is high up in the sky. This is pure illusion as can be proved by taking photographs of the moon at both positions and comparing them.

Neutron Star: The remnant of a very massive star which has exploded as a *supernova*. Neutron stars send out rapidly-varying radio emissions and are also known as *pulsars*.

Occultation: The covering up of one celestial body by another.

Opposition: The position of a planet when it lies exactly opposite to the sun in the sky. In this position, the planet is seen highest in the sky at midnight.

Perihelion: The position in orbit of a planet when it is nearest to the sun.

Saros: A period of time, 18 years 11.3 days, after which the earth, moon and sun return to almost the same relative positions. The saros may be used to predict eclipses.

White Dwarf: The final stage in the life of a medium-sized star. It is a very small, dense star.

ENERGY

Energy Perspectives

Man has been dependent on energy in one form or another since the dawn of civilisation. The story of energy starts with wood which the primitive man used when he learnt to make fire using flint stones. Later, wood came to be replaced by coal and coal by oil only partially. In recent years, fast depletion of fossil fuels (coal and oil) and large-scale destruction of forests for fuelwood in the developing countries, have posed serious challenges for the planners and scientists to search for alternative sources of energy.

The first major blow to the world energy scene came in 1973 when an unprecedented hike in the price of petroleum crude was invoked by the oil-producing countries. The worst affected were the developing, oil-importing countries like India. In

Stepping into space: Sputnik I, an orbiting transmitter, was the first vehicle to be launched in space. The USSR did it on Oct 4, 1957. A month later Sputnik II carried the dog Laika into space.

1981-82, nearly 80% of India's total export earnings, about Rs 52,000m, had to be spent for oil imports. More than that, however, was the problem of supplying domestic fuel to 80% of India's population which lived in villages. Indiscriminate felling of trees for fuelwood was creating havoc with our forests. There was an urgent need to discover and develop new sources of energy, especially renewable systems.

The problem was not limited to India; it was a worldwide problem and needed international action. A major step in this direction was taken in August, 1981 with the UN Conference on New and Renewable Energy held in Nairobi from Aug 11-21. The conference discussed 14 new and renewable sources of energy—solar, geothermal, wind, hydel, biomass, fuelwood and charcoal, oil shale and tar sands, ocean energy, peat and drought animals. Some of these were technically too sophisticated and many were not applicable to all developing countries. But the Nairobi conference gave a concrete direction in the development of the new and renewable energy resources.

To popularise the new sources of energy in India, a new department of Non-conventional Energy Sources was created under the Ministry of Energy in September 1982. Since then, there has been rapid expansion in the scale and range of activities for the development and utilisation of renewable sources of energy in India. Today, there are more than 75 manufacturers engaged in the development and manufacture of various renewable energy systems and devices. Among the areas which received special attention of the new department were solar energy, biogas, geothermal energy, biomass, tidal power and wind power.

Renewable Energy Sources

Solar energy has been used for drying grains for ages. It is estimated that the total energy from the sun falling on the earth is about 170m kw. But most of it falls on the oceans and other inaccessible places where it cannot be put to any use. Even where it falls on land, solar energy is highly diffused and needs some sort of collecting or concentrating device before it can be put to use. In recent years, several methods and devices have been developed to convert solar energy into heat and electricity.

Solar energy may be collected and used in two main ways: directly, or through biomass, that is,

by allowing plants to capture sunlight through photosynthesis, and then burning or otherwise using plant products. It may be directly used as heat or as electricity with photovoltaic cells. Use as biomass includes firewood and charcoal, agricultural wastes such as bagasse and rice husk, and biogas.

One of the most important decisions taken by the Department of Non-conventional Sources of Energy, recently, was to set up solar-water heating system in all government-run hotels and hospitals. Several public sector industries have also gone in for solar heating which is economical in the long run.

High priority has also been given to solar pumps which operate by electricity generated from sunlight using solar cells. At present, the cost of solar cells is too high to be useful for general application. But their use has been found economical in remote areas where no other means of power generation is available. To bring down the cost, a co-ordinated project has been taken up by the department to develop cheaper solar cells.

Biogas is one of the most important components of renewable energy supplies. One of its greatest merits is its versatility. It can be used for cooking, lighting, or for generation of power and for all the various uses electricity can be put to. The residue remaining after biogas production is a valuable fertiliser. Despite its many advantages, however, several problems such as high cost, complicated design and maintenance problems still remain. The number of biogas plants now in use in India is about 75,000.

India has very limited resources of geo-thermal and tidal power. Geothermal energy comes from the Earth's interior heat and can be tapped in areas where there are hot springs. So far, only two experimental projects,—one at Parbati Valley in Himachal Pradesh and the other in the Puga Valley in Kashmir—have been taken up for detailed assessment of their geothermal potential. Tidal-power studies have been taken up in the Gulfs of Kutch and Cambay on the west coast and in the Sunderbans area in the east coast. But the potentials appear to be meagre.

Production Of Energy Using Nuclear Fusion

The vast amount of energy continuously emitted by the sun and other stars is produced by the conversion (or fusion) of light hydrogen nuclei into helium nuclei. The process is accompanied by a large amount of nuclear energy and this is called nuclear fusion. It usually takes place at temperatures of several million degrees which exist in the interior of stars. Scientists all over the world are engaged in imitating the process in the laboratory as energy production by nuclear fusion is much less hazardous than energy production by nuclear fission—a process in which a heavier nucleus undergoes fission and breaks up into

International Years

The year 1957-58, which marks the beginning of a significant study of the extremes of the solar cycle is called the International Geophysical Year (IGY). The sun-spot activity was observed to be at its maximum noted so far.

The year 1984-85 is known as the International Year of the Quiet Sun (IQS). In this year the interrelated phenomena of the sun, earth and space were studied during the period of the sun's low activity.

any problems of disposal of radioactive wastes and exposure of workers to harmful radiation.

Fusion research has been given high priority by the Indian Government in its Sixth Five-Year Plan. Research in the field is being carried out by the Plasma Physics Programme group at the Physical Research Laboratory, Ahmedabad. The programme aims at reproducing some of the nuclear reactions that take place in the interior of the sun at temperatures of 5-10m degrees. The machine, known in the scientific language as a tokamak, has been named 'ADITYA'. The project is estimated to be completed over the next three years.

Energy Definitions/Units

Anaerobic Digestion: The process by which certain bacteria break down organic wastes into methane and carbon dioxide. Gobar gas plants work by this process.

Biogas: A mixture of methane and carbon dioxide gases produced as a result of anaerobic digestion of animal and organic wastes in a biogas plant. It has a high fuel value and is clean.

1 British Thermal Unit (BTU): The quantity of heat necessary to raise the temperature of 1 lb of water by 1°F. 1 BTU = 1,055 Joules.

1 Calorie: The amount of energy which will raise the temperature of 1 gm of water by 1°Celsius. 1 Calorie = 4.18 Joules.

Efficiency: A measure of the ratio of the useful energy output to the total energy input. The efficiency of any heat engine depends on the temperature differential on which it works. It is governed by the Second Law of Thermodynamics.

Flat Plate Collector: The simplest and most widely used solar energy device for gathering solar heat. It consists of a blackened back-plate to absorb solar heat and coils of pipes with water or air to carry away the heat to a storage system.

Hydrocarbons: Compounds which contain only carbon and hydrogen. Petroleum, oil and all cooking gases are mostly hydrocarbons.

Hydropower: Electricity generated from the energy of falling or flowing water.

1 Joule: The work done when 1 kg is lifted vertically through a height of 1m against gravity at sea level.

1 Kilocalorie: Equivalent to 1,000 Calories.

Photovoltaic Cell: A device for converting sunlight directly into electricity.

Power: The rate of work done. It is measured normally in watts. A Megawatt is a million watts, a Gigawatt is 1,000m watts.

Pyrolysis: The process of decomposition of substances by heat in the absence of air. In many countries, municipal waste is converted into fuel gases by pyrolysis.

Solar Pond: A unique method of trapping solar heat in the water of a pond, the bottom surface of which has been painted black. The lower level of the pond is filled with brine and the upper level with saline water. The concentration gradient helps maintain a temperature difference between the bottom and upper layers which can be used to generate power.

Tonnes of Coal Equivalent (tce): The amount of energy contained in a tonne of average coal, and is equal to approximately 30,000m Joules.

Tonnes of Oil Equivalent (toe): The amount of energy in 1 tonne of average crude oil. 1 toe = 1.4 tce (approximately).

COMPUTERS

A computer is essentially an apparatus which can perform a sequence of calculations without much human effort. Calculations which will take days to perform if done manually, can be done within a few minutes using modern computers. There are two main types of computers: Digital and Analog.

Digital Computers: These are used in commerce and industry for extensive arithmetical calculations which would otherwise require enormous clerical effort. Such computers carry out mathematical operations with the variables expressed in the computer as numbers, usually in the binary system (given below). These numbers are recorded in the computer electronically, as a series of temporary magnets, each magnetised in one of the two possible directions. The two magnetisation directions correspond to the two numbers of the binary system. The first electronic digital computer, known as the Electronic Numerical Integrator and Computer or ENIAC, was developed at the University of Pennsylvania in 1947 by J. Presper Eckert and John W. Mauchly. In modern digital computers, integrated circuits prearranged to duplicate mathematical processes perform the desired operations on the binary numbers.

Analog Computers: In these computers, instead of using numbers, variable physical quantities are used as the input, the input being proportional to the instantaneous values of these variable quantities. Current, voltage, resistance, capacitance etc are the variable quantities used. They use electrical circuits for the direct execution of mathematical operations, the typical operations including summation, differentiation and integration. These circuits are mainly used for solving a wide variety of complex engineering problems, like investigation of stresses in aircraft, ships and large engineering structures. They can also be used to simulate and set up models of complex installations and study the effect of various operational factors on the complex installations. They can, for example, be used to simulate the behaviour of an aircraft in response to the actions of crew members. Using analog computers, apparent equipment failures or other emergencies can be introduced for proper training of the crew. The first automatic analog computer designed to solve complex differential equations, was described in detail in 1876 by the English scientist William Thomson.

Binary Code: The number system, using the figures 0 to 9, that we use in our day-to-day work is called the decimal system. In computers, the binary code, employing only figures, 0 to 1 is employed. In this code, the numbers are represented as follows:

No. of the decimal system	Binary code
0	0
1	1
2	10
4	100
10	1010

Just as a number in the decimal system, like 3725 can be written as $3 \times 10^3 + 7 \times 10^2 + 2 \times 10^1 + 5 \times 10^0$ (position of 3) - 1 + 7×10^2 (position of 7) - 1 + 2×10^1 (position of 2) - 1 + 5×10^0 (position of 5) - 1

The position to be read from right to left (the position of 5, 2, 7, 3 is 1, 2, 3, 4 respectively);

the equivalent of a number, say 11010, in the binary code will be written as: $1 \times 2^{5-1} + 1 \times 2^{4-1} + 0 \times 2^{3-1} + 1 \times 2^{2-1} + 0 \times 2^{1-1} = 16 + 8 + 0 + 2 + 0 = 26$.

Hybrid Computers: These are computer systems which contain both analog and digital devices in such a way that the properties of each of these can be used to the greatest advantage. Digital and analog computers can be interconnected in such a way that data can be transferred between them. They are usually designed for specific tasks and are used mainly in scientific and technical fields.

Integrated Circuits (ICs): An integrated circuit consists of a number of thin film circuits, each representing an amplifier, oscillator or some other functional stage, interconnected and encapsulated in a small housing. Each of these circuits contains a number of components such as transistors, resistors and capacitors connected together with their interconnections, in film-like layers. Such thin film circuits are usually formed on a ceramic, glass or alumina base, a few thousandths of an inch thick. Vacuum deposited films at appropriate parts of this film circuit are used to obtain the desired resistance, capacitance, etc. Since these circuits do not include any handmade joints or connections, these ICs provide a very reliable service and have been very widely used to meet the requirements of armed forces and space scientists worldwide. They have also been used extensively in computers with large increases in operational efficiency.

Central Processor or Central Processing Unit: It is the nerve centre of a computer and is a highly complex electronic device. It supervises all activities within the computer and interprets the instructions given in the programme. The electronic circuits within it analyse the instructions

and determine the operation to be carried out and also the location(s) of the data on which the instruction is to be carried out.

Microprocessor: The main IC in the computer. It consists of a single silicon chip, a few millimetres in area or a small number of chips, that directs the computer's activities. One tiny microprocessor has the same computing power which a computer containing a large number of vacuum tubes had in the 1950s. Today's chips are vastly smaller and cheaper than the vacuum tubes they have replaced.

Chip: A small piece of silicon containing thousands of built-in electronic components.

Data Processing: It is the rapid conversion of a large amount of information in unorganised form which can be stored and analysed by office machines and computers. It is accomplished by data-processing systems which sort out and organise the information applying several mathematical and statistical operations. It has wide applications and has been used extensively for various purposes, notable amongst these being the census and election tabulation, business cost estimates, physical and social science research and guidance of vehicles through interplanetary space. The mass of information collected during space missions is processed on earth using modern electronic computers for obtaining useful information.

Programming Languages: Computer programmes, called the software, are the means of communication between the computer and the user. Computer programmes are written in the following main languages:

FORTRAN or Formula Translation, is the language most used in problems related to scientific work and engineering applications. It is particularly useful for complex numerical calculations and solving engineering analysis problems.

COBOL or Common Business Oriented Language, a computer language used mainly for business work, is essentially used in commercial data processing.

Computerised marvel: The two endearing robots R2 and D2 in 'Star Wars'.

Courtesy USIS.

Courtesy German Features

Siemens Computers : Installed at the Esro operations centre in Darmstadt, FRG. Computers ensure that more use is made of satellite data than merely relaying the pictures of cloud covers.

BASIC or Beginners All-Purpose Symbolic Instruction Code, is a computer language essentially developed for teaching the use of remote-

control, time-sharing systems. It is perhaps the simplest of all languages and can be learnt by an average mathematician within a few hours and mastered within a few days.

PL/1 or Program Language, is a multipurpose programming language which can be used for solving business as well as scientific problems. It includes the advantages of both FORTRAN and COBOL.

ALGOL or Algebraic Oriented Language or Algorithm Language is mainly used in programming of scientific problems and is more comprehensive than FORTRAN. It is more flexible than FORTRAN and is easier to model. It evolved as a result of international cooperation to obtain a standardised algorithm language.

BIT is the basic unit of information in computing and is an abbreviation of the binary digit. It represents either of the binary digits 0 or 1.

BYTE is the term used for the number of bits used to represent a single letter, number or some other character. In most computers, a byte consists of eight bits.

WORD is the basic unit in which information is stored and manipulated in a computer. Each word normally consists of a fixed number of bits, the number of which may vary from computer to computer. A word may represent an instruction to the computer or some data. A **word processor** is used for creation, storage or retrieval of the written word by the typewriter terminals which use the magnetic type for storage, automatic control, editing and retyping of words.

WHAT'S IN A NAME?

Names of scientists have been associated with different physical quantities since early times to acknowledge the important contributions they have made in their respective fields. Given below is a list of the names of scientists and the units of physical quantities named after them:

Name of the scientist	Physical quantity
Ampere	current
Angstrom	length
Celsius	temperature
Coulomb	charge
Curie	(radio) activity
Fermi	length
Farad	capacitance
Gauss	magnetic induction
Henry	inductance
Joule	energy, work
Maxwell	magnetic flux
Newton	force
Ohm	resistance
Volt	electrical potential
Watt	power

anywhere in the world if the ship is fitted with satellite communication terminals. The INMAR-SAT has a membership of 40 countries.

The fundamental frequency of male voice (nearly 142 Hz) is less than the fundamental frequency of female voice (nearly 260 Hz). That is why, the female voice is shriller as compared to the male voice. The difference is due to the different lengths of vocal tracts in males and females. In men, this length is 17-20 cm whereas in women it is 15-17 cm.

Long Distance Communication Methods

A large number of messages are transmitted every second over distances extremely large as well as not so large. The following major electrical techniques are used for transmission of these signals.

Coaxial-cable System: A coaxial-cable consists of a copper tube, nearly three-eighths of an inch in diameter with a single copper-wire conductor in the middle; the cables are generally grouped in numbers, varying from 8 to 20. They are used to carry radio waves in the frequency range 500 kilocycles to 20 megacycles, corresponding to wavelengths in the range 600—15 m; this frequency range is normally used for AM radio transmission.

Microwave-radio Relay Systems: For this, microwave-radio relay towers, usually spaced 30 to 50 km apart are used. Electromagnetic radiations in the frequency band between 10^9 cycles to 10^{10} cycles are used in this method.

Wave Guide System: In this long distance transmission technique, a single hollow tube

TRANSMISSION

Amplitude Modulation (AM) & Frequency Modulation (FM) Transmission

For long distance communication, as well as for radio and TV broadcasting the audio signals are superimposed on high frequency radio signals and then transmitted, this process being called modulation. In amplitude modulation (AM), the amplitude of the high-frequency radio wave, called the carrier wave, is varied in accordance with the variations in the amplitude of the audio signals to be transmitted. This method of transmission (and reception) is most widely used and in India was the only method till only a few years ago, when frequency-modulation was employed, first at AIR, Madras. The AM reception is generally affected by noise generated by electrical equipment and neighbouring frequencies.

In frequency modulated (FM) transmission, the amplitude of the carrier wave is kept constant while its frequency is varied in accordance with the frequency of the audio signal to be transmitted. The FM transmission is carried out at high frequencies (see chart) and is not affected much by neighbouring frequencies and other electrical disturbances. It is generally used for stereo music transmission where quality of reception is of great importance. It, however, requires more elaborate equipment for reception as well as transmission. In India, FM transmission is done only at some of the metropolitan cities including Madras, Delhi and Bombay.

All About An Antenna

An antenna is a system of conductors used at radio/TV installations to radiate or receive radio waves. In order to be an effective radiator of energy, the dimensions of the antenna should be comparable with the wavelength of the waves to

be transmitted. Thus, antennas for medium and long wave transmitters should be very large, usually hundreds of feet in length. Antennas for VHF (very high frequency) and UHF (ultra high frequency) can be much smaller; however, to give an adequate service area, they have to be mounted on the top of a tower, a hill or a high building. The receiving antennas, can be small, for even if the signal picked up is low, it can be amplified in the receiver circuit.

Instantaneous Communication Link With Ships

India is a member of the International Maritime Satellite Organisation (INMARSAT) which has been established to provide instantaneous communication link with ships anywhere in the sea. A system of three geostationary satellites has been positioned over the Pacific, Atlantic and Indian oceans for this purpose. The satellite system will provide a continuous and more reliable link with the earth-stations; the high frequency radio link used so far has several drawbacks due to congested frequency bands, limited coverage and its dependence on the ionosphere. The three-satellite system can provide ships a link with a place

range of frequencies of frequencies in the range of 30×10^9 to 30×10^{10} cycles per second, having wavelengths in the range of a few millimetres. This system is capable of handling more communication traffic than the other systems.

Communication Using Artificial Earth Satellites

The latest long-distance communication technique makes use of artificial earth-satellites. Communication via satellite was first achieved between Europe and the US using Bell system's TELSTAR satellite. Today, it is achieved commercially using Communication Satellite Corporation's Early Bird satellite, among others.

Multiplexing is the simultaneous transmission of many different messages over the same pathway. The main aim of using this process is economy. A broad-band signal containing many narrow-band signals can be transmitted at a

using many coaxial cables to transmit individual narrow-band signals.

Modulation and Demodulation: The information carried in the human voice (frequencies) can be transmitted to the radiofrequency electromagnetic waves and thus made to travel at their enormous speed of 300 million metre/sec, making long distance communication feasible. This process of transfer of a signal from one frequency band to another is called modulation. Frequencies of the human voice, which usually lie in the range of 200-4000 cycles per second (cps) are superimposed on the radiofrequencies in the megacycle range or microwaves in the range of billion cps. Demodulation is the process of separation of the single modulated signal into its component parts and using the audio signals to drive the speakers, etc. The large number of multiplexed signals in a broad-band can be separated into individual narrow band signals using this process.

PHOTOGRAPHY

The making of a photograph

When light falls on the photographic film, which has silver halide as its active component, nuclei of metallic silver are formed on the film the optical density of which on the film is proportional to the light intensity falling on it. When the film is developed, a visible image is produced due to intensification of metallic silver. The process of fixing the film, leaving it in a solution of sodium thiosulfate (hypo), removes the portion of the film on which no light falls. The process results in the production of a negative in which the dark parts of the picture taken appear light and the light parts appear dark.

A positive print can be obtained from the negative by placing it in contact with photographic paper coated with a layer of silver halide, illuminating it and repeating the process of developing and fixing.

In **colour photography**, the image is recorded in three separate emulsions which are sensitive to the three primary colours, red, green and blue; all other colours in the object to be photographed are registered as combinations of all or some of these primary colours. The negative films obtained are also coloured.

The f-number of a lens (or system) is defined as the ratio of the focal length of the lens to its aperture diameter. Thus, a camera with an f-number $f/2$ has an aperture having a diameter one-half of its focal length. The smaller the f-number of a camera lens, the larger will be its aperture diameter (and hence its light collecting area) compared to its focal length, and hence the sharper the image obtained.

Telephoto Lens is a camera lens, which usually consists of a combination of a convex and a concave lens and is used for taking close-up photographs of objects from a distance. Its effective focal length is quite large as compared to ordinary camera lenses.

Infrared false colour photography is a relatively new photographic process which has important applications in the field of aerial reconnaissance, medicine and several other disciplines. The process uses a film having three layers sensitised to green, red and infrared radiation.

Modern Developments

Light Emitting Diodes (LEDs) are widely used

as indicator lamps in electronic equipments, e.g., in pocket calculators. It is a simple pn junction which emits visible light when voltage is applied in a particular direction across it. Using LEDs, one can obtain light of any colour between red and green but their efficiency is maximum for red.

Liquid Crystal Display (LCD) is a display system in which a thin layer of a liquid is sandwiched between two conducting glass plates between which a desired voltage can be applied. By the application of the voltage to certain specific leads in the conducting area, specified areas of the display can be illuminated. A seven segment pattern of such displays can be used to give a numerical display. LCDs consume much less electrical power compared to LED displays and have superseded them in battery operated calculators and digital watches.

Magnetic Resonance (NMR)

The CAT (Computerised Axial Tomograph) scan introduced in the field of medicine was a revolutionary diagnostic tool, which has still not reached the masses due to its exorbitant cost. The technique, however, is likely to be surpassed, by the NMR tomography, a new kind of imaging technique used in medicine as a powerful diagnostic tool. In this technique, the patient is to be examined for any internal disorders in a strong magnetic field. Radiowaves of selected frequencies incident at the parts of the body excite the hydrogen atoms in the body, which is induced to return these signals. The signals returned by the body are converted into medical images and superimposed to form a complete picture of the part to be examined, using computers. Better image quality in shorter measuring time is possible using this technique.

Electrophotography: This is a process widely used these days in office copying machines. In this process, charges are sprayed on a zinc oxide or selenium layer by a corona wire charged to several thousand volts. When the object to be photographed is exposed, the charges leak off through the photo conductive layer. Image-wise. The photograph is obtained by developing this exposed image by applying an oppositely charged powder which sticks to the charged area. Xeroxing is adaptation of this process.

MIC

One of the worst environmental disasters of the world, leaking gas from a pesticide plant in Bhopal killed more than 2,500 people on the night of Dec 2, 1984. Most of the victims were residents of a shanty colony that had come up near the Union Carbide plant and they died before any medical help could reach them. Initial reports say the leaking gas was methyl isocyanate, or MIC in short, which was used by Union Carbide for the manufacture of a pesticide called Sevin. It is reported that more than 40 tonnes of the poisonous chemical which was stored as liquid in underground tanks, escaped into air and spread into the nearby areas. People, most of whom were caught in their sleep, had little chance of escaping as atmospheric conditions on that night kept the gas cloud almost hugging the ground. Many died while trying to run away, others succumbed in the city's overcrowded hospitals. The worst part of the tragedy was that even doctors did not know how to treat MIC-poisoned victims, for never before had there been such a massive leakage of the chemical anywhere. There were no known antidotes against it.

What is MIC?

Chemically, methyl isocyanate is only of a large group of substances known as isocyanates which are widely used as an industrial raw material. They are so called because they contain the isocyanate, or $-N=C=O$, group. All isocyanates are poisonous, but methyl isocyanate is particularly so as it can easily turn into a gas and spread. Aromatic isocyanates such as phenyl isocyanate is widely used for the manufacture of polyurethanes, commonly known as 'foam rubber'.

There are several routes by which methyl isocyanate can be manufactured. One reaction, for example, uses dimethyl sulphate and potassium cyanate both of which are relatively harmless substances. But a much cheaper method is to use the poisonous gas phosgene as one of the starting materials. In the Union Carbide plant too, phosgene was used as the starting material for the manufacture of MIC.

At ordinary temperatures, MIC is a colourless liquid which boils at round 40°C . But it is highly unstable and decomposes easily, particularly if there is moisture around. Normally, liquid MIC is stored in stainless tanks under high pressure nitrogen gas to prevent any reaction. Another advantage of storing it under pressure (one and a half times the normal atmospheric pressure) is that under those conditions it boils at a much higher temperature, almost 60° instead of normal 40° . And if the liquid is not brought to boiling temperature, there is no way in which MIC can escape as a gas. So one thing is certain about the Bhopal gas leak, that the stored liquid MIC was somehow brought to its boiling temperature on the fateful night before it leaked out.

How did it happen?

While investigation is still on to find out what actually led to the leakage, from whatever is known it appears certain that it was the outcome of a combination of lapses, especially in respect of the safety provisions of the plant. For instance, it was pointed out as far back as 1982, by a visiting team of American experts from the West Virginia plant of the Union Carbide, that the instrumentation in the Bhopal plant was inadequate.

be given to the poisoning victims. But it was known that MIC vapour had a terribly irritating effect on mucous membranes, particularly in the respiratory tract. In the lungs, experts say, MIC breaks down into methyl amine and urea both of which are toxic substances. These substances damage the most important lining material of the lungs and make them incapable of purifying blood with atmospheric oxygen. Also, due to damage to the membranes, large quantities of fluid accumulate in the lungs making breathing almost impossible. The patients in most cases died of asphyxia.

MIC vapour is also known to irritate the eyes making them painful. Since the cornea of the eye is a sensitive membrane and since MIC is known to damage mucous membranes, it is possible that MIC may cause blindness. But nothing is known for certain and it is difficult to predict what the long term effects of MIC exposure would be on the eye.

Another serious condition caused by MIC that came to light after the Bhopal leak was the development of paresis—partial paralysis of the body. The cause of this condition is in all probability damage to the brain due to lack of oxygen supply. When the lungs are incapable of supplying oxygen to blood due to any reason, the brain cells die first as they are the most vulnerable.

'Operation Faith'

After the tragic event, a team of experts was deputed to the Union Carbide plant to suggest the most satisfactory method of neutralising and disposing of the remaining MIC stored in a tank in the plant. The team, led by the Director General of Scientific and Industrial Research, Dr S. Varadarajan, suggested 'neutralisation' of the chemical by converting it into pesticide. In fact, in the subsequent operation codenamed 'Operation Faith', what the scientists did was to restart the plant to manufacture the pesticide Sevin. Of course, adequate precautions were taken this time to prevent any leakage of MIC.

The battle with MIC and its aftermath.

quate. The team had reported that "the feed pipes and the safety valves were poor, with high potential for developing leaks." They further pointed out that the maintenance procedures at the plant were lax.

It is said prior to the massive leakage of MIC, there was a sudden rise in pressure in one of the underground storage tanks. While it is not known how there was the sudden build-up of pressure or what made the liquid violently boil away as gas, it was not caused by a rise in the ambient temperature. On that night the temperature recorded at Bhopal was only 14°C, hardly enough to cause the boiling. Scientists investigating the leakage are of the opinion that it could be due to entry of water in the tank or the presence of some foreign matter which could have started a polymerisation reaction raising the temperature to the liquid's boiling point. It is known that MIC reacts violently with water, even traces of it, with consequent rise in temperature.

But whatever actually happened, the plant was not equipped to handle such emergencies. Like its counterpart in the USA, the Bhopal plant did not have any computerised safety system. Worse than that, even the safety systems that were installed at Bhopal, for some reason, were not operative that night. For instance, it is alleged that one of the two gas scrubbers at the plant, which was meant to neutralise any leaking MIC with caustic soda solution, was under repair because the plant had not been manufacturing pesticide for some time. Another important safety feature, the flare tower is also said to have been inoperative. Normally, a pilot flame has always to be kept lighted on the flare tower to burn out any leaking gas that had escaped un-neutralised from the scrubber. MIC is known to be highly inflammable. Had the pilot flame been on that night, the tragedy could have been avoided. At worst there would have been a big fire in the plant.

Toxic effects of MIC

As said before, there is hardly any reported case of MIC poisoning in man in medical litera-

THE BODY BEAUTIFUL

An Inside Story

Not many of us know ourselves, our minds and most important our own human bodies and their strange complexities. Why then quarrel with the commercial doctor who makes a scapegoat of patients having no real understanding of their ailments—not even of the basics of human anatomy?

Science has been solving the enigma of the body machine for over 2000 years. But there exists a wide communication gap between the medical profession and the general public. Perhaps an inside look at our body constitution would help in narrowing this gap.

The body machine presents a bizarre panorama of multifarious organs, each serving a specific bodily function. All the organs starting from the cell—the creator—to the brain—the controller—are distinct and separate structures. **Cell—the creator**

Each organ has developed from the life building materials called cell. The entire human body is a community of more than a million cells, all developed from just two cells, by the process of reproduction. This development occurs after the

egg cell within a woman's body has been fertilised by a sperm cell from a man, resulting in the division and sub-division of these cells to form a new human being—the baby.

Most of the human cells are about 0.01 mm in diameter—the largest cell visible to the naked eye being the ovum. Cells not only differ in size and function but each type of cell looks quite different from the other. Some are like round blocks of jelly and others like tiny coils, doughnuts, needles or even space satellites. Many cells are shapeless but most cells have the same structure. Each cell is housed inside a thin skin called the cell membrane or the plasma membrane.

Cytoplasm, a watery jelly inside the membrane supports the cell 'structures'—the busy bodies engaged in an amazing variety of activities. The nucleus at the centre of the cell is the 'brain' behind its activities. In it are tiny threads called chromosomes that carry genes. The genes shape the body constitution.

Cells also produce energy, transport nourishment and protect the body against diseases. Various cells combine to form the many tissues in the body like the bone, muscle or nerve, and these tissues, in turn, join together to form organs such as the heart, the lungs or the liver. Some cells in the body die and are replaced by

Cells by mitosis—a process by which a cell divides to form two identical 'daughter' cells, which later develop into full, independent cells.

Bones—the supporters

One look at the adult skeleton could give anyone the creeps—unless of course it is inside the cupboard! But the human skeleton made up of over 200 interlocked, hard bones constitute the entire body framework and supports all its vital organs. The skull itself is made up of 22 bones and almost 26 interlocking bones form the vertebral column. Others are joined together in a system of levers that help the body move when pulled by muscles.

In the earlier stages of life many bones are made up of a rubbery, tough substance called cartilage. In adults cartilage exists as pads covering the ends of bones, at the joints. These pads enable the smooth movement of bones. Ossification i.e. bone deposition in place of cartilage is incomplete during birth and several bones remain cartilaginous until at a time roughly between birth and adolescence. Thereby the stage of ossification can be a useful guide in identifying human remains.

For a pound of flesh

Muscles, commonly known as flesh, are the most abundant tissues in the body, accounting for almost two-fifths of the body weight. No wonder the human anatomy has nearly 650 separate muscles—each being controlled by a nerve. Voluntary muscles, those that we use deliberately, are made up of a bundle of fibres. Involuntary muscles, over which we have no control like the lungs, consist not of fibres but of pointed cells.

When muscles are at work the force they exert is a pulling force. Even when we push an object, our muscles operate by pulling. All acting muscles use up energy from sugar in the blood. Frequent use of muscles make them strong.

Under the Skin

"Don't be thick skinned!" So they say. But what if nature itself has made the skin tough and thick enough to act as a protective shield around the body? As one of the vital organs of human anatomy, the skin protects us against injury and heals fast if damaged. The skin is also a waterproof jacket which prevents rapid absorption and evaporation at the surface of the body. Thus the water content in the body remains constant. The skin is also the most versatile organ of sensation. The two principal layers of the skin are the dermis, up to 3 mm in depth, composed of tough elastic tissues with a rich network of blood vessels and nerves and the

epidermis, protective outer layer of the skin without blood vessels. Hair roots are located in the dermis. The adipose (fatty) tissue beneath the dermis cushions and insulates the body. Some 2m sweat glands (leading to pores) in the skin help to get rid of waste liquids from the body and also to regulate body temperature.

Black may be beautiful, but the fair skin is most sought after; and skin colour varies in accordance with the presence of red

haemoglobin in blood, and the brown pigment melanin produced by cells called melanocytes.

Quite often one comes across somebody's double. But no two persons ever have the same finger prints and finger prints never change even if the outer skin is damaged!

And for the Breath of life

Oxygen is vital for human existence. By the process of respiration air is drawn into the lungs through bronchial tubes and passes through a network of smaller tubes into tiny air sacs called alveoli. Here, oxygen from air separates to enter the bloodstream and carbon dioxide leaves the blood and enters the alveoli and is breathed out.

Have a Heart

Yes, 'one must. For it is the strong muscular heart that keeps life ticking. Tirelessly beating away at the rate of 70 times a minute, the heart pumps blood around the body, under pressure, through a complicated net-work of blood

Blood can pass through a capillary one-at-a-time.

vessels. The blood vessels in each person's body measure thousands of miles. Arteries carry blood rich in food and oxygen from the heart to the various organs and the veins carry blood back to the heart. The arteries divide into smaller vessels called arterioles and the veins divide into venules. These blood vessels are linked, below, by tiny blood vessels called capillaries where rich blood from arterioles exchanges food and oxygen for waste materials from the body tissues. The blood then flows into the venules and back to the heart. The small capillary, above the arterioles and venules carry food and oxygen from the rich arterial blood which pass through its thin walls into the body's cells. In return, carbon dioxide and other waste materials enter the capillary and are carried away by blood to the heart.

Blood, the body's vital fluid, varies in quantity from person to person according to age and weight. However, an adult has about 5 litres of blood—roughly enough to fill seven wine bottles. The two chief blood cells are the red and white corpuscles. The former carry oxygen to the body's tissues and remove carbon dioxide, whereas the latter fight germs. The red substance in the red corpuscles called haemoglobin

are the oxygen carrying pigments. Shortage of the haemoglobin content in a person leads to anaemic conditions. Every person belongs to one of the four blood groups—A, B, AB or O—based on the presence or absence of substances called antigens (A and B) and antibodies (anti-A and anti-B). Antigen A and antibody anti-A react and cause dangerous clotting. The same is true of B and anti-B. Before blood transfusion the donor's blood is matched with that of the recipient.

BLOOD GROUPS

Group	Content
A	A and anti-B
B	Anti-A and anti-B
AB	A and B
O	B and anti-A

Eating and Drinking!

Some live to eat; and put the stomach on the job round the clock. But one should rather eat to live so that the cells that make up the various parts of the body have enough food supply. During digestion, food is broken down into substances that the blood can carry and the cells can absorb. Body chemicals called enzymes help the digestive process. Digestion takes place in the alimentary canal, a winding tube that begins at the mouth and ends at the rectum. In an adult this canal is about 9 m long.

The Controllers

Among the body's control systems are the glands and the nerves. The glands are like little factories manufacturing chemicals that they release into the body. The endocrine glands release chemicals called hormones, into the bloodstream, which control the body's day to day functioning. They also affect the shape, strength, growth and reproductive capacity of human beings. The exocrine glands release fluids directly viz. tear glands, salivary glands, mammary glands in women, liver, intestinal glands and urethral glands in men.

The liver is the largest gland in the body and plays an essential role in digestion. About 500 chemical processes take place in it and it regulates the quantity of food entering the bloodstream.

The Cleaners

The kidney is the body's internal cleaning agent though the work is shared by the lungs, the skin and the liver. Besides expelling the waste materials from the body in the form of fluid, the kidneys maintain a proper balance between water and salts in the body. Every human being has two kidneys. Patients can be kept alive without kidneys or with kidneys that do not work, by some form of dialysis where unwanted matter from the blood is filtered by a machine.

The Bundle of Nerves

Whether we like it or not all of us are a 'bundle of nerves'. The body's communication network is

kept in full swing by the nervous system. The brain and the spinal cord are together known as the central nervous system. The other nerves form the peripheral nervous system. The nerves are like telephone lines carrying information to the brain from the sense organs—the organs of sight, hearing, smell, taste and touch. The brain sends back instructions to the muscles and glands to take appropriate action. However, the beating of the heart is controlled by a system of nerves called the automatic nervous system over which there is no control.

The Sight and Sound show

Imagine living in a dark world of silence, without colour and without music. Sounds rather than Nature's gift of eyes and ears form the most invaluable part of the human body. Though the eyes collect information about the object it sees the actual 'seeing' takes place in the brain. And we need two eyes to see an object stereoscopically i.e. in depth. The cones of the retina—the cells that are sensitive to colour—respond only to bright light. Whereas in dim light, our vision depends on rods—the light sensitive cells of the retina—extremely sensitive even in little light. But they do not detect colour and the image they produce is not sharp. So we do not see colours in darkness.

Ears are not only organs of sound but they also help us to keep our balance. The sound impulses from the outer ear is picked up by the middle ear and transmitted to the brain along the auditory nerve—and we hear sound. A person with a broken eardrum can also hear as the sound passes, above, through the hole in the drum to a smaller eardrum.

The semicircular canals of the inner ear keep the human body in balance. They contain a fluid that moves when a person moves. Nerves carry information about the fluid's movement to the brain which, in return, instructs the body muscles to maintain a balance.

The Brain behind it all

The brain behind the complicated body machine, is, in fact more infinitely complicated than any computer or man-made machine. All life processes have their source in the brain—the control centre of all human organs, thoughts and emotions. But for the brain the progress of civilisation would have been sealed.

The brain is a soft pinky-greyish mass, shaped like a large walnut. It consists mainly of millions of nerve cells, called neurons, and supporting cells called glial cells. Each of the neurons is made up of a cell body and fibres connected to other cell bodies or organs.

As the highest form of creation, man also has a

more highly developed brain than that of any other creature. A person's intelligence or capability is not related to the size of the brain, for a genius may have a smaller and lighter brain than a person of average intelligence or even a feeble-minded person.

Twenty-four centuries ago Hippocrates' brain signalled him to remark that a doctor must teach his patients to care for their own health. But modern brains in the field of medicine signal a different message. It is bad for patients to know too much, they say.

Whom would you vote for? Quick. It's time you knew your mind.

Diseases And Their Causes

Achondroplasia is a condition in which the long bones of the arms and legs (but not the bones of the rest of the body) do not grow to full size. The condition is inherited and its cause is not known.

Acromegaly is a chronic disease in which there is a gradual but conspicuous enlargement of the hands, feet and features of the face. It is caused by an excess release of growth hormone from the pituitary gland in adult life. It is often caused by a tumour in the brain.

Agnosia is a brain disorder in which a person cannot correctly interpret the information from his senses and understand what goes on around him. It may be caused by blocking of blood vessels to the brain by a blood clot or by a tumour.

Alactasia is a condition found naturally in some people that makes them unable to digest milk. It is caused by the lack, or deficiency, of an enzyme, lactase, found in the stomach which helps in the digestion of milk.

Apoplexy is another name for a stroke caused by a cerebral haemorrhage. The cause is mostly high blood pressure or hardening of the arteries.

Athlete's Foot is a chronic disorder of the skin between the toes which often leads to splitting of the skin, blisters and scaling between the toes. It is caused by a fungus which thrives in warm, wet places.

Botulism is a rare but extremely dangerous type of food poisoning caused by bacteria. The bacteria do not infect man but can grow in badly preserved food and contaminate the latter with poisonous substances which they release.

Byssinosis is a lung disease caused by breathing in the dust from cotton and cotton fabrics, over a long period. It is mostly found among textile workers.

Diplopia is another name for 'double vision'. The cause is often the paralysis of eye muscles.

It's not very often that a 32-day-old baby succeeds in creating history. But that's exactly what Baby Fae managed to achieve during her brief earthly stay. Born with "hypoplastic left heart syndrome", a lethal heart defect that afflicts one in 12,000 newborns, little Fae was selected for 'xenograft'—a transplant from one species to another. Since her own heart's left ventricle, i.e., the main pumping chamber, was not fully developed and could not provide adequate blood flow, a baboon's plum-sized heart was put in place of her own heart during an operation which lasted five hours—this, when the baby was only 12 days old. Baby Fae put up a valiant fight for survival for the next 20 days before her little body rebelled against the foreign tissue and rejected the new heart. Born Oct 14. Died Nov 15. A tiny temporary link between ape and man.

but it may also be caused by taking drugs or alcohol.

Folliculitis is the inflammation and the formation of pimples due to the infection of individual hair follicles by bacteria. It occurs on parts of the skin that are frequently shaved such as a man's face.

Gingivitis is the inflammation of the gums that begins around the teeth and causes bleeding. The cause is bacteria which grow on food particles lodged between the teeth and gums.

Glossitis is the inflammation of the tongue. It is caused by too much smoking, highly spiced food, vitamin deficiency or an infection in the mouth.

Grave's Disease is a type of goitre in which the patient's eyes protrude. The condition is also known as exophthalmic goitre.

Gynaecomastia is the enlargement of the male breasts. The cause is generally a hormone imbalance, but can be caused by certain drugs also.

Haematuria is a condition in which blood is excreted with urine. It may be due to some disorder of the kidney, such as a stone formation or tumour. It may also be a symptom of cancer of the bladder.

Haemophilia is an inherited disorder in which the blood clots very slowly. It is caused by the absence of a blood protein which is responsible for clotting of blood.

Halitosis is the medical term for bad breath. The cause is generally tooth decay or diseases of the gums, nose, lungs or sinuses.

Hemiplegia is a form of paralysis in which only one side of the body is affected.

Hepatitis is a medical term meaning inflammation of the liver. It is caused by a virus which

may spread by contamination of food or water supplies, or by way of contaminated blood through hospitalware.

Hodgkin's Disease is an uncommon disorder which affects the lymph nodes and spleen, and reduces the patient's resistance against infections. It may be regarded as an unusual form of cancer.

Hydrocephalus is a rare condition which is seen in newborn infants. The symptom is an abnormal enlargement of the head due to accumulation of fluid. The cause is often a brain tumour.

Hypertension is the medical term for high blood pressure. There may be several causes ranging from narrowed arteries, and diseased kidneys to tumours of the adrenal glands and brain disease.

Iatrogenic Disease is a disease 'caused' by medical treatment such as overuse of antibiotics or steroids.

Jaundice is not in itself a disease, but rather a physiological manifestation of a disorder. The cause may be blockage of the bile duct in the gall bladder, a liver infection such as hepatitis, or excessive breakdown of red blood cells.

Kwashiorkor is a most severe form of malnutrition in children. The cause is mainly protein deficiency.

Laryngitis is the inflammation of the voice box or larynx. The cause may be an infection, or an allergy from dust or smoke.

Leukaemia is a disease in which there is an abnormally large number of white blood cells (leucocytes) in the blood and blood forming tissue. It is usually regarded as a type of cancer.

Meningitis is inflammation of the membranes covering the brain and the spinal cord. It is caused by any one of the several species of bacteria.

Myasthenia Gravis is a chronic disease in which the muscles are weak and tire easily. The basic cause is not understood, but nerve impulses are not transmitted normally to the muscles because of a chemical abnormality.

Narcolepsy is a tendency to fall asleep at any time, anywhere, not due to normal tiredness. The usual cause is a damage to the brain due to an infection such as encephalitis, or a tumour, or from a head injury.

Neuralgia is pain along the course of a single nerve or group of nerves such as the sciatica. The cause may be an injury to the nerves or an

MILESTONES IN MEDICINE

1628: William Harvey, English physician, publishes his work on the circulation of blood through the body.

1683: Antony van Leeuwenhoek, Dutch microscopist, discovers bacteria.

1796: Edward Jenner, English country practitioner, carries out the first successful vaccination with cow-pox virus.

1815: Rene Laennec, French physician, invents the stethoscope. His device was a wooden tube which concentrated the sound of air flowing in and out of the lungs and transmitted it to the doctor's ear. The familiar rubber tubes leading from a chest-piece to each ear came into use towards the 19th century.

1847: Sir James Simpson, English obstetrician, uses chloroform as an anaesthetic. He used it to reduce the pain of childbirth.

1865: Louis Pasteur, French chemist, discovers the relationship between microbes and disease which later led to the development of microbiology.

1865: Joseph Lister, English surgeon, uses carbolic acid as the first successful antiseptic in surgery.

1868: Gerhard Hansen, Norwegian physician, discovers the leprosy bacillus.

1876: Robert Koch, German physician and pathologist, discovers the bacteria that causes cholera.

1895: William Roentgen, German physicist, discovers x-rays.

1898: Sir Ronald Ross, English physician working in India, discovers the malaria parasite.

1903: William Einthoven, Dutch physiologist, invents the electrocardiograph which records electrical impulses from the heart indicating whether it is in good health.

1921: Frederick Banting and Charles Best, Canadian medical researchers, use insulin isolated from animal pancreas for the treatment of diabetes.

1929: Alexander Fleming, English bacteriologist, discovers penicillin. It was used on human patients for the first time in 1941.

1943: Wilhelm J. Kolff, Dutch doctor, builds the first artificial kidney machine to purify the blood of patients with impaired kid-

ney function.

1949: Rustam Jal Vakil, Indian pharmacologist, isolates reserpine from the roots of the plant *Rauwolfia serpentina*, commonly known as Sarpagandha. Since 1953, after laboratory investigations in India, Switzerland and the US reserpine has been used for a wide range of purposes, mainly as a tranquilliser and in the treatment of high blood pressure.

1953: John Heynsham Gibbon, American surgeon, uses the heart-lung machine during an open-heart surgery.

1954: Jonas E. Salk, US physician, uses the first effective vaccine against polio. The injectable vaccine was prepared by killing the polio virus and then mixing it with a small amount of penicillin.

1956: Gregory Pincus, American physiologist, develops the first oral contraceptive based on a mixture of hormones.

1957: Albert Bruce Sabin, American virologist, develops an oral polio vaccine based on live but weakened polio virus.

1967: Christiaan Barnard, South African surgeon, performs the first surgical transplant of the human heart.

1978: Robert Edwards, British physiologist, and Patrick Steptoe, British gynaecologist, perform the first successful test-tube fertilisation of a human ovum and its reimplantation leading to the birth of the first test-tube baby.

1980: World Health Organisation declares total eradication of smallpox.

1982: William DeVries, American surgeon, carries out the first implant of a totally artificial heart made of aluminium and plastic in a human patient. The patient, 61-year-old Barney Clark, survived for 112 days with the artificial heart.

1983: Eli Lilly and Co, American pharmaceutical firm, markets for the first time insulin hormone manufactured by the use of genetically engineered bacteria.

1984: Leonard L. Bailey, American surgeon, transplants a baboon's heart in a 12-day-old infant afflicted with a congenital heart defect. The infant, named Baby Fae, died 21 days after the transplant.

Perky pedalling: Barney Clark, the world's first artificial heart recipient, pedalling a bicycle exerciser.

JARVIK JARGON

First it was Barney Clark. Now it's William J. Schroeder. The second person in the world to receive a Jarvik-7, an artificial heart, continues to live very really! The Jarvik-7, about the same size as a human heart, consists of two hollow chambers of polymethane and aluminium, and each contains a flexible plastic diaphragm. Two plastic hoses alternately swell and collapse the diaphragms to pump blood through the pulmonary artery to the lungs and aorta. But while this heart facilitates living, it certainly restricts movement because the recipient of the heart has to spend most of his time tethered to a large and cumbersome air compressor through six-foot long hoses. In any case, if Schroeder manages to pull through and continues to live then it will surely be heartening news for heart patients. So Jarvik-7—beat on!

irritation.

Neuritis is the inflammation of nerve or several nerves. It is often associated with pain along the course of the inflamed nerve.

Neurodermatitis is the inflammation of the skin caused by a nervous disorder.

Ophthalmoplegia is the paralysis or weakness of the muscles which control eye movements. The cause is usually a disorder of the nerves from the brain.

Osteomalacia is an abnormal condition in adults, similar to rickets in children, in which the bones gradually become softened due to lack of calcium and phosphorus. It is generally caused by a deficiency of Vitamin D.

Otitis is the inflammation of the ear caused by fungus infection or germs that grow in the ear-wax.

Paraplegia is a type of paralysis in which the legs and lower part of the body are affected. The cause may be an infection of the nervous system such as in polio, or damage to a part of

the brain or the spinal cord by injury or a tumour.

Pneumoconiosis is a general term for the formation of fibrous tissue in the lungs by inhalation of dust laden air. The condition reduces the efficiency of the lungs.

Pneumonia is the acute inflammation of the lungs, in which the tiny air sacs become filled with fluid making breathing difficult. The cause is generally a bacteria.

Poliomyelitis is an acute infection of the central nervous system by a virus which often leads to paralysis of certain organs and limbs.

Scurvy is a disease caused by a severe lack of Vitamin C in the diet.

Sepsaemia is the medical term for blood poisoning.

Spondylitis is the inflammation of one or more of the vertebrae, the bones in the spine. It may be caused by an injury, or may be due to other diseases such as arthritis or tuberculosis.

Stomatitis is the inflammation of the inside of the mouth due to any of the several causes including local infection of the gums or inflammation of the tongue.

Tetanus is a serious infectious disease which causes spasms of the muscles. Caused by a poisonous substance (toxin) released into the blood by a type of bacteria found in the soil.

● The earth rotates on its axis from west to east.

This rotation makes the sun and the stars appear to be moving across the sky from east to west.

● The sky appears blue because the light of the sun is spread or scattered by the myriad dust particles in the air. In space, the sky would appear black as there are no dust or air particles to scatter the light.

● The launching of earth-satellites should be from a place near the equator to take the fullest advantage of the earth's movements. The regions of the earth close to the equator are moving fastest through space as compared to regions elsewhere. Thus, at the equator, rockets would start off with a speed of nearly 1600 km/hour. Further, rockets are usually fired in the direction of the earth's rotation, i.e. into the east for the same reason.

● At places having extremely cold climate, water pipes sometimes burst in winter. This is due to the expansion of water on freezing. The force of expansion acting on the pipes is sometimes sufficient enough to cause the bursting of pipes.

● The freezing compartment inside a refrigerator is at the top because the air in contact with it becomes cold and heavy and sinks downwards, cooling the rest of the compartment. The relatively warm light air at the bottom

EVERYDAY SCIENCE

● When hot water is poured into a glass tumbler, heat does not easily pass from its inner surface to the outer surface. The two surfaces (inner and outer) expand by unequal amounts, which generally causes the glass tumbler to crack.

● A group of soldiers on a bridge are advised not to walk in step because their movement causes the bridge to vibrate. If they walk in step, the frequency of vibrations thus produced may match the natural frequency of vibration of the bridge; this will make the amplitude of vibration of the bridge very large, due to the phenomenon of resonance, causing the bridge to collapse.

● A swimmer just out of the river feels cold, particularly if it is windy, because of evaporation of water from his body surface. The evaporation is more on a windy day.

● A wick in a stove keeps burning continuously as kerosene rises in the wick due to capillary action.

● A copper vessel left in air for a long time turns green. This is due to the formation of copper carbonate when copper reacts with carbon dioxide and moisture present in the air.

● When the wind is blowing at high speed, the roofs of hutments are sometimes blown away. The pressure at the top falls much below the pressure below the roof (Bernoulli's Theorem) due to high speed winds above the roof top causing the roof to be blown away.

● In deserts, day temperatures are very high and night temperatures extremely low, because the specific heat of sand is very low. It, therefore, absorbs heat readily and its temperature rises by a large degree during the day. At night, sand radiates heat equally readily, making the temperature low.

● Water extinguishes fire because as it evaporates, the temperature of the burning body is lowered thus retarding or stopping the burning action. Also, the resulting water vapour surrounds the burning substance cutting off oxygen supply, thus inhibiting the burning process. Infact, hot water will extinguish fire more quickly than cold water as hot water will vaporise faster.

● When you witness lightning, the flash is seen first and the thunder heard after a small interval. This happens because the velocity of sound is less than the velocity of light. Thus, although the flash will be seen almost at the same time as it occurs (velocity of light being 3×10^8 m/s) thunder is heard after a few seconds.

● A lightning conductor is a *pointed* metallic conductor, usually fixed to tall buildings which runs down to and is buried in the earth. Its main

purpose is to protect the building from the destructive effects of lightning. A charged cloud passing over a building induces an opposite charge on the lightning conductor. As the end of the conductor is pointed, the surface charge density becomes very large thus providing a stream of oppositely charged particles which neutralise the cloud before it can accumulate sufficient charge to cause damage to the building through a lightning discharge.

THE ANTARCTIC KRILL

The icy waters around the continent of Antarctica are the home of tiny red shrimp-like creatures called the krill which hold promise as a future food resource for mankind. Such is the abundance of these creatures in Antarctic waters that when they congregate near the surface, they stain the sea as if with blood. Scientific estimates of the amount of krill in Antarctic waters range from 183m to 1,350m tonnes. At present, only a small fraction of it is being harvested, mainly by the Soviet Union and Japan. The annual catch of krill by the two countries at present does not exceed 5,00,000 tonnes. When the fourth Indian Antarctic expedition gets under way, India will become the third country to go in for krill fishing in the Antarctic waters.

There is ample reason for man's interest in the Antarctic krill. In their vast swarms, these tiny crustaceans represent a potential source of human food. Biologists say that krills are a valuable, high quality food—mainly protein, rich in essential amino acids, vitamins and minerals. Various krill products have been produced experimentally, including whole meats, coagulated paste, and protein concentrates. Large scale use of krill as human food is yet to come. Most of the krill harvested today goes in to fatten fish in fish farms or is processed into feed for livestock and poultry. But it has been forecast that by 2000 A.D., krill might become a

regular part of human diet even in the advanced countries of the world. For the poor Third World countries, the Antarctic krill offers an abundance of cheap protein.

The name krill comes from *krill*, an old Norwegian word once applied to tiny creepy-crawly things, lively vermin, and fish larvae. Today, the term is used for a wide range of whale food including tiny crabs and other crustaceans. The scientific name for the Antarctic krill is *Euphausia superba*. It is the almost exclusive food of the giant baleen whales that inhabit the southern oceans. Today, largescale hunting by man has almost killed off the once numerous whales leading to large abundance of the krill in Antarctic waters. Experts calculate that the potential annual yield of this "unutilised whale food" could exceed the present world harvest of all other edible marine species combined.

In appearance, the Antarctic krill looks like tiny shrimp with 11 pairs of legs. It is essentially herbivorous living on tiny, single-celled plants called diatoms or floating phytoplankton that abound in the polar waters. After hatching, *E. superba* develops slowly in the icy Antarctic waters. Growth to a mature length of about 6 cm may take three to four years. If food supply is not abundant, the Antarctic krill simply stops growing, resuming its growth only when enough food becomes available.

and the cycle continues till the whole compartment attains a uniform temperature.

- Alcohol is sometimes rubbed on the body of a person suffering from high fever. As soon as it is applied on the body, alcohol evaporates taking some of the body heat. Since evaporation has a cooling effect, the body temperature can be reduced considerably by rubbing alcohol.

- Whenever there is water loss from the body,

of the mouth and stimulating the sensation of thirst. Intake of fluid then helps in restoring the loss of water.

- Gigantism in human beings is due to the hyperactivity of acidophilic cells, present usually from birth. It results in abnormal linear growth of the skeleton, the subject attaining a height of 7-8 ft. There is a proportionate increase in the size of muscles and other tissues.

biophila: Any element found in a living organism e.g., carbon, nitrogen, calcium.

blind spot: Point of entry of the optic nerve at the back of the eyeball where lack of nerve endings prevents reception of light stimuli.

bulb: Organ of reproduction comprising a stem with fleshy, scale-like leaves.

Caesarian section: Removing the foetus through an abdominal incision.

calcification: Deposition of calcium in body parts, necessary for bones but undesirable in tissues.

calorie: Metric system unit of heat, defined as the amount of heat required to raise the temperature of one gram of water by 1°C.

capacity: The degree of power and the current which a device can safely carry.

capillary action: The elevation or depression and adhesion or cohesion of a liquid in a thin tube, placed in the liquid; the phenomenon is attributed to surface tension between the molecules of the liquid and solid.

carcinogen: Any substance which can cause cancer.

cartilage: Tough elastic animal tissue in two forms: *hyaline*, where cells are embedded in a homogenous intercellular substance and *fibro*, in which the intercellular substance (known as matrix) is fibrous.

catabolism: (or katabolism): Process of breaking down tissues into simpler substances or destructive medical changes.

catalysis: The speeding up or promotion of a chemical reaction by a reagent (catalyst) which itself remains unchanged.

cauline: Referring or belonging to the stem.

caustic: A substance which burns or corrodes organic tissue e.g. caustic soda.

chemiluminescence: Light produced by chemical action.

chemotropism: The attraction or repulsion of micro-organisms and cells to a chemical stimulus (attraction is called positive chemotropism while repulsion is called negative chemotropism).

chromosomes: Threadlike structures present in the nucleus of every animal and plant cell which carry the hereditary determiners or genetic material.

Clarke cell: A primary electric cell used as a standard of electromotive force. It is especially suitable for accurate measurement needs.

clone: An asexually produced group with members having a common ancestor. Here reproduction occurs either by simple mitosis, grafting or a similar process.

cohesion: Force of attraction between molecules of the same kind.

communications satellite: An earth satellite placed in orbit to provide optimum reflection of radio, television and other signals for a communications path between two points on the earth.

compound: Two or more different substances combined in definite proportions which acquire properties different from the original composing substances.

convection: Transmission of heat by movement in a gas or fluid because of temperature and density variations.

co-polymerisation: The combination of like or unlike molecules without loss of any atoms or molecules. The essential structural features of each molecular constituent are retained by the resultant form.

cosmogony: Any hypothesis concerning the

ALPHABETICALLY YOURS

abacus: A manual digital computer which has at least nine wire bars on which beads are strung. Basic arithmetic operations such as addition, subtraction, multiplication and division, are accomplished by sliding the beads from one end to the other of the wires. Originally used in ancient Greece and Rome the abacus is still popular in China and Japan.

aberration: In astronomy it connotes a seeming shift in position of a celestial body because of the observer's position on a moving earth as well as to the motion of light.

chromatic aberration: The dispersion of light due to the unequal bending of different wavelengths of light as they pass through a lens. This causes colour effects along the edges of images and can be corrected to a large degree.

spherical aberration: The distortion of images seen through a lens due to unequal bending of light rays passing through its centre and those passing through its edges.

ablation: In surgery it means removal of tissues; in geology, a wearing away of surfaces, while in aeronautics "ablation cooling" is the removal of materials from the surface of an aircraft travelling at hypersonic speed during re-entry in order to preserve the spacecraft.

acauliscent: A plant without an obvious stem or only a short one.

acceleration: The rate of change of velocity measured in time units: as per second per second (cm/sec²).

achene: The name given to a one-celled, dry, indehiscent fruit in which the testa and pericarp are not firmly attached.

achondroplastic: A type of dwarfism characterised by a shortening of limbs.

acoustics: The science of heard sound.

acromegaly: Abnormal physical development caused by excessive pituitary secretion—a disease causing gigantism or enlargement of the hands and feet.

adipose: Animal fat or connective tissue in which fat is stored and cells are distended.

albinism: Applies to animals and plants deficient in natural pigmentation—the absence of this results in white skin, whitish hair and pink eyes in animals.

amitosis: Direct cell division where the nucleus is halved without chromosome formation.

amorphous: In Biology, lower forms of life having no specialised structure; and in Chemistry, chemicals that have no crystallinity.

anabolism: Constructive metabolism; an animal or plant process in which food is converted to living tissue.

annealing: Tempering glass or metals to prevent brittleness, by regulating the rate of cooling

The long and the short of it: Heights vary throughout the world. Dwarfism can be caused by a lack of hormones in the pituitary gland. Sometimes this gland develops a tumour which enlarges the gland. The enlarged gland begins to secrete too many hormones, one of these being the growth hormone which affects the size of the skeleton. Such a person might reach a height of 2.4 m. The condition is known as gigantism.

after treatment by heat.

atavism: Reversion to a more primitive ancestral form.

azeotropic mixture: Mixture of two or more liquids having a constant boiling point.

bacteriophage: A bacterial virus, an ultra-microscopic biological substance having a dissolving (lytic) effect on bacteria.

barometer: An instrument that measures atmospheric pressure by means of a column of mercury (as in the case of a mercury-type barometer) or a pressure-sensitive barometer (aneroid type).

basal metabolic rate (BMR): The quantity of energy used by the human organism at rest based on oxygen consumption as well as heat produced and expressed in calories per hour per square cm of skin surface. BMR is thus the rate and extent of metabolism.

bell metal: Alloy of tin and copper used for making bells.

berry: Fruit with fleshy mesocarp and endocarp and seeds embedded within e.g., grape.

binary fission: Type of asexual reproduction by which a unicellular organism divides into two.

binomial nomenclature: Principle of using two identifying names for each species of plant or animal organism—genus name followed by species name.

origin of the universe.

countdown: Step by step course of action in the complex preparation of launching any propulsion rocket.

creep: Slow deformation, in metallurgy, of metals subjected to stress. This varies with temperature.

Curie point: The critical temperature above which ferromagnetic substances like iron and cobalt, lose their permanent magnetisation properties.

cybernetics: Study of control and communication mechanisms of complex machines and physiological mechanisms in animals.

cyclotron: An atomic acceleration which imparts particles with velocities equivalent to millions of electron volts in a powerful magnetic field between two electrodes, causing the particles to move in a spiral path with increasing speed.

cytology: Science which deals with cell structure and function, both in animals and plants.

damping: The progressive decrease, caused by dissipation of energy, in the amplitude of oscillations or waves.

decay: The disintegration of a radioactive atom, leaving behind a different element as in the case of a polonium atom which decays to form lead with the ejection of an alpha particle in the process.

dehiscence: The splitting open of a fruit or an anther.

deliquescent: Substance which absorbs moisture from the air and becomes liquid.

desiccation: Removing water from substances thus causing them to dry up.

dew: The condensation of water vapour of the air on the surface of cool bodies.

dialysis: Separation of substances through a semi-permeable membrane because of differing sizes of molecules of substances.

diathermancy: The transmission of infra red or heat rays.

diathesis: Constitutional weakness that makes an organism susceptible to a particular disease.

diffraction: The bending of light, radio or sound waves around the edges of an obstacle.

dolichocephalic: Condition where width of the skull is less than four-fifths of the length; long-headed.

double decomposition: Also called metathesis or exchange reaction, it is a type of chemical change in which elements or radicals of compounds involved trade places; e.g., $\text{NaCl} + \text{AgNO}_3 \rightarrow \text{NaNO}_3 + \text{AgCl}$

ductility: Property of a material to undergo deformation or be drawn into wires without breaking.

dynamics: A branch of mechanics dealing with action of forces on bodies in motion or at rest.

dysharism: The body symptoms caused by changes in atmosphere or space pressures. This does not include hypoxia.

earthing: Grounding of an electrical conductor as the earth usually has a zero potential.

ebullioscope: Instrument used to measure boiling points of solutions.

ebullism: Bubbles of water vapour in body tissues resulting from a reduction in environmental-atmospheric pressures.

echo: Reflection of sound waves from a surface which produces a repetition of sound. It also refers to reception of radio waves later than the

Regeneration — Oh ! how generous : The artificial limb industry would have never evolved had man been endowed with the ability to regenerate and be able to grow lost arms and legs. However, some living creatures like the star fish and a few worms can replace their lost structure and organisms. And wonder of wonders, from a small part left of these creatures a whole new body can grow !

anticipated time.

ecology: Study of the relations of animate and inanimate organisms with respect to their physical and biological environment.

electrodes: Conductor elements at elevated voltage responsible for generating or influencing the flow of electric charges through an electrolyte, a gas or even vacuum.

electrolysis: The chemical decomposition of a compound in solution, molten form or natural form resulting from the passage of an electric current through it.

estrogen: Hormones, naturally produced by ovaries, affecting sexual characteristics of female mammals.

eugenics: Science dealing with race improvement through control of parentage.

extensors: Muscles which straighten flexed limbs.

eyepiece: A magnifying lens used in combination with an image forming lens in an optical instrument.

f number: The ratio of the focal length of a camera lens to its effective aperture.

filtration: Separation of solids from liquids with the help of a porous material which retains the precipitate.

fission: In physics it refers to the splitting of an atom's nucleus into two parts with an accompanying release of a large amount of radioactivity and heat, while in biology it implies asexual reproduction of a one-celled organism by division of the parent body into two or more reproductions.

fixing: Removal of silver halides left in the photographic film after development so as to 'set' the image.

fluorescence: Emission of radiation within the duration and also resulting from exposure to radiation from another source.

flux: An agent added during ore smelting to aid melting and get rid of impurities.

frequency: The number of regular vibrations or cycles occurring in a given unit of time. In electricity it means complete alternations in an alternating current per second.

fundamental: The lowest frequency of a complex vibration.

fuse: A metal safety device having a low melting point which breaks an electric current if it becomes excessive or overloaded.

galvanism: Production of electricity by chemical action. In physiology it refers to treatment or stimulation by an electric current.

garbage: Debris present in a space orbit consisting usually of expendable parts of space rockets.

genotype: The germ (reproductive cell) constitution of an organism.

ghosts: A duplicate television image caused

by a reflected signal in addition to the direct signal.

gonads: Organs of reproduction (ovary and testis) which produce gametes and also secrete gonadotropic hormones.

habitat: The natural living environment of an organism.

hail: The precipitation of ice pellets during a violent thunderstorm.

half-life: Also known as decay coefficient or disintegration constant; it is the period of time taken by half of a given number of atoms of a radioactive material to disintegrate or, in other words, it is the rate of decay of radioactive materials.

hemophilia: Abnormal tendency of haemorrhaging or bleeding heavily.

heredity: Transmission, through continuity of germ plasma; characteristics from parent to offspring.

herpetology: The branch of zoology dealing with reptiles and amphibians.

holophytic nutrition: Type of plant nutrition requiring photosynthesis of inorganic matter.

holozoic nutrition: Type of animal nutrition which requires consumption of food.

homeostasis: Regulation of variables by an organism in order to maintain a steady state of its internal physiological composition.

homocraft: Vehicles which can move on all kinds of terrain.

hydraulics: Study dealing with forces in liquids, particularly water.

hydrophilic: Easily hydrated colloids which do not coagulate readily.

hydrophobic: Colloids which do not hydrate easily and consequently coagulate readily.

hydroscope: Instrument used for viewing objects below the surface of water.

hydrotropism: Growth movement of plants in response to water.

hypoxia: Detrimental effects of lack of oxygen in body cells and tissues.

ignition: Bringing material to the point of combustion or incandescence.

illumination: Concentration of light from source to object measured in foot-candle, candle metres or lumens.

imbrication: Biological overlapping patterns e.g., scales of fish.

immunisation: Rendering humans or animals safe from diseases and foreign bodies.

inaniition: Illness or exhaustion resulting from deprivation of nourishment or inability to assimilate it.

incandescence: Luminosity which accompanies extreme heat.

inductance: Characteristic of a circuit which permits the occurrence of electromagnetic induction.

gas: Gases which have a molecular structure that tends to prevent formation of chemical compounds under ordinary conditions e.g., helium, neon, argon etc.

inertia: Tendency of matter to remain stationary but assume uniform direction and motion when under compulsion to move.

innervation: The reciprocal relation between antagonistic muscles so that when one contracts the other relaxes.

insolation: Rate of delivery of solar radiation per unit area of time.

insulation: Isolating an object by surrounding it with non-conducting material.

intermodulation: Distortion in electrical amplifiers caused when two frequencies combine to form sum and difference frequencies.

interphase: Stage of the cell nucleus when it is not actively involved in mitosis or splitting.

invert sugar: Mixture of levulose and glucose produced by hydrolysis.

irritability: The capacity of plant or animal tissue to respond to stimulation.

irradiation: The apparent enlargement of a brilliantly lighted object when seen against a dark background. It also refers to exposure to radiation.

isomerism: A given group of atoms can unite in more than one way to form a molecule. This

the presence of dust particles in the atmosphere.

lactation: Secretion of milk and suckling of the young.

lambert: A unit of brightness. It is equivalent to the uniform luminance of a perfectly diffusing surface emitting/reflecting light at the rate of one lumen per sq cm.

laser: An instrument which generates powerful beams of light by stimulating high energy atoms.

latency: A biological term that refers to the period of delay between stimulus and reaction.

latent heat: Amount of heat required to bring about change of state without an accompanying rise in temperature.

leaven: An agent used to facilitate the fermentation process, e.g., yeast.

lenticular: Having a shape like a double convex lens.

lignified: Process of impregnation of cell walls with lignin which makes them hard and woodlike.

limnology: Study of fresh waters which covers their chemical, biological and physical aspects.

linin: The lacy network in the nucleus of a cell which suspends chromatin granules and resists staining by dyes.

times a machine can multiply the force applied to it.

Megahertz: Unit of radio frequency equal to 1 m cycles per second.

melting point: Temperature at which a solid substance changes into its liquid form.

meninges: Series of three membranes that cover the brain and spinal cord.

mesophyte: Plant that can grow in moisture conditions which are neither too dry nor too wet.

metabolism: Chemical activities occurring in cells of living organisms in which breaking up of substances into simpler parts (catabolism) and building up of complex substances from simpler ones (anabolism) take place simultaneously.

metamorphosis: Biological transformation during the growth process involving a change of structure, e.g., growth from a tadpole to a frog.

mitosis: Division of cells nucleus in which each chromosome splits into two and moves to opposite poles of the spindle so that each daughter cell receives each one of the chromosomes. Mitosis involves four steps namely prophase, metaphase, anaphase and telophase.

mnemonics: System for memory improvement involving symbols and fundamental principles

monovalent: Study dealing with form and structure of an organism without referring to functions.

mutation: A sudden genetic variation in the normal type of an organism due to a radical reorganisation of genes and chromosomes.

mycology: Study of fungi.

narcotic: Sleep inducing substance used as a pain reliever too.

nebula: Luminous misty mass in the sky that consists of a galactic system of faint stars (or island universes) or of gaseous matter with accompanying dustlike material.

necrosis: The death of a tissue part of an organ, in zoology, while in botany, it refers to a plant disease caused by dead tissue. Also, in cryogenics it is the localised freezing and killing of certain types of tumours.

neotony: The continuing of an early developmental stage in the adult form of a species e.g., the adult feathers of an ostrich resemble immature down feathers of flying birds.

neutral: A chemical substance which is neither acidic nor alkaline; or in physics, devoid of either positive or negative charge.

neutrino: A fundamental particle with a rest mass close to zero and having no electrical charge which is thought to be an emission product in the beta-decay process and meson disintegration.

noble metals: Metals having low chemical activity when compared to the very active base metals. Example of noble metals include gold, silver and platinum.

noise: Interference of a random nature which makes received signals different from the originally transmitted ones.

normal solution: Solution containing 1 gm equivalent of the dissolved substance per litre of solution.

nosology: Science of classification of diseases.

nucleonics: Application of nuclear science and techniques in fields such as Physics, Biology, Chemistry and astronomy.

nucleophilic: A base-catalysed reaction involving an electron donor as the reagent.

The gene(s): The characteristics of parents are passed on to the child in the nucleus of the egg cell and in the nucleus of the sperm cell. These nuclei consist of a large number of particles called genes which are strung along threads like a necklace of beads. About 23 pairs of these strings develop when the egg and sperm unite. These are called chromosomes.

phenomenon is called isomerism.

isotonic: Describes two solutions having the same osmotic pressure.

isotope: Two atoms of the same element having the same nuclear charge but different masses. They contain the same number of protons in the nucleus.

jerk: In the flight of missiles or crafts it refers to the vector specifying the time rate of change of acceleration.

joule: A unit of electrical work equivalent to work done by an electric current of one ampere through a resistance of one ohm in one second.

junction: Contact point or surface in an electrical circuit.

katatone: With reference to metamorphic rocks it is a high temperature and pressure zone deepest in the depth zone classification.

keratin: Albuminous substance of horny tissue such as feathers and hair.

kindling temperature: Temperature at which a substance starts to burn, the ignition temperature.

kinaesthesia: Perception of movement or muscle sense. Afferent nerves perform this function.

kinetic energy: Energy possessed by a moving body or the capacity of an object in motion to do work.

koniroscope: Instrument used to indicate

liquefaction: Heating a metal to its melting point in order to separate it from metals of higher melting points.

liquefaction: The condensation of a substance in gaseous state to form a solid.

lixivation: Process of treating soluble and insoluble minerals with solvents to partly dissolve them. Precious metals can be extracted from their ores by this process.

luminescence: The giving off of cold light by bodies like fireflies or gems due to absorption of external radiant or corpuscular energy.

lysis: The swelling and bursting of host bacterial cells caused by infiltration of bacteriophage particles.

magnet: The natural or artificially induced property of a metal of attracting other similar metals.

magnification: Enlargement of the image of an object with the help of a lens. It also refers to the ratio between image size and object size.

marsupial: A warm-blooded, hairy mammal with an abdominal pouch to carry the underdeveloped young.

mastication: The crushing or chewing of food.

matrix: An intercellular substance enclosing cells. Also the formative cells for nails, teeth or other such structures.

mechanical advantage: The number of

nucleide: A nucleus having distinctive composition and properties and stable enough to be considered a specific, discrete form in itself.

nympb: An early development stage of an insect type characterised by gradual metamorphosis. The wings usually begin to appear at this stage.

occipital: Back of the head.

occlusion: Also known as adsorption, it refers to the ability possessed by certain solids to absorb gases on their surface without undergoing change in chemical properties.

occultation: The temporary obscuring of a celestial object by another.

oculist: Doctor who specialises in eye treatment.

oersted: Measure of magnetic field strength or intensity. One oersted is equal to a force of one dyne applied to a unit magnetic pole.

oestrus cycle: Process of hormone concentration release of eggs and uterine changes which control reproduction in animals.

oocyte: The diploid cell in a female in which meiosis begins and leads to the production of a single egg cell.

orbital: Path of an electron about the nucleus of an atom.

organic: Describes any substance which contains carbon.

oscillation: Vibrations or back and forth movement. In electric circuits this term refers to fluctuations which represent the flow of alternating charges.

osmosis: Process of unequal rates of diffusion of liquids through a semi-permeable membrane; the tendency in this case is for movement from a lower concentration fluid to one of higher concentration.

osteologist: Doctor who deals with bones.

oviparous: Producing young by eggs hatched outside the body as is the case with fish, birds and reptiles.

ovoviparous: Production of young by eggs which are hatched within the parent body but are separated from it by an egg membrane until such time as the embryo acquires maturity.

oxidation: The chemical reaction of oxygen with compounds and free elements. It however includes reaction where the combining capacity of an element towards nonmetal tends to increase by losing electrons to an oxidising agent.

pad deluge: The dousing of a missile launching pad with water so as to reduce temperatures generated at launch time.

paedogenesis: Developing of sexual maturity and reproductive capacity in larval animals or the young.

paleontology: Study of fossils, plants and animals leading to knowledge of past geological ages.

parachor: Relation between density and surface tension of a specified substance. It is proportional to molecular volume of the substance.

parallax: The apparent shift in position of a distant object when observed from different positions.

parasite: An organism living at the expense of another organism.

parthenogenesis: Reproduction from an unfertilised egg.

pathology: Science of diseases, their origin, nature, progress and effects on the body.

pedology: A science dealing with the type,

origin, properties and use of soils.

peristalsis: The progressive wavelike movements caused by muscular contractions particularly of the alimentary tract.

permeability: The property of a membranous substance of permitting the passage of another substance.

phagocytosis: The process by which any scavenger, blood cell or amoeba engulfs, ingests and destroys foreign matter invading the body.

phenology: Study of living organisms and their environment.

phenotype: A type identified by appearance regardless of its genetic makeup.

phloem: Portion of vascular bundle concerned with transport of synthesised food material and made of sieve tubes and cells.

phosphorescence: The giving off of light without the accompaniment of heat resulting from exposure to radiation from another source. The emission continues even after the exposure.

photosynthesis: The process by which green plants containing chlorophyll manufacture carbohydrates from water and carbon dioxide in the presence of sunlight.

phyllotaxy: Arrangement of leaves on a stem.

phylogeny: Evolution or development of a plant or animal species.

physiology: Branch of biology concerning the activities and life processes in both animals and plants as carried out by their various organs and parts.

plasmolysis: Collapsing of a cell's protoplasm caused by the loss of water through the cell wall by osmosis.

poikilothermal: The variable temperature disposition of animals.

polymerisation: Formation from simpler molecules of the same type, a complex molecule of greater molecular weight.

presbyopia: Far-sightedness due to loss of elasticity of the crystalline lens which occurs in advanced age.

pseudocoels: A false body cavity without a tissue lining.

psychical: Referring to mental activity.

putrefaction: The decomposition of organic matter especially proteins with a release of strong foul odour.

pyroelectric: The property of some crystal materials to become electrically charged upon heating.

pyrolysis: Chemical decomposition caused by application of heat.

qualitative analysis: Determination of chemical components and characteristics of a substance.

quantitative analysis: Determining the amount or percentages of chemical components of a substance.

Q-value: Energy absorbed or liberated during a nuclear reaction.

radioactivity: The emission of alpha or beta particles or gamma rays by nuclei of radioactive materials.

radio dating: Determining the age of substances or objects by means of measuring their radioactivity.

radiology: Branch of medicine using X-rays and other radioactive emanations to diagnose and treat certain diseases.

rarefactions: Increase in volume of a gas without a corresponding increase in mass which

causes it to expand.

recrystallise: The bright glowing of iron or steel when cooled from a white hot temperature as it reaches a certain temperature.

rectification: Purifying a liquid by distilling repeatedly in order to obtain a product of pre-calculated strength.

regeneration: The renewal of a damaged organ or tissue.

remnance: The magnetic induction that remains in a substance upon removal of the applied magnetic field.

reversible reaction: A chemical reaction in which the products may react to form the original reactants. In a reaction like this which proceeds in both directions a state of equilibrium is reached at a certain temperature.

rheology: Study of the response of materials to an applied force. It deals with the deformation and flow of matter.

salinometer: Instrument used to measure the concentration of salt solutions.

saponification: Conversion of fats into soap in the presence of an alkali-like soda.

scatter effect: Dispersing of radio waves due to variations in topology of the earth.

slurry: Suspension of fine particles of a solid in a liquid.

sol: A colloidal dispersion in a liquid.

sonic: Movement at the speed of sound in aerodynamics.

stoichiometry: Branch of chemistry which deals with weights and proportions of elements in a chemical combination and the methods to determine them.

strabismus: Cross-eyed condition in which eye muscles fail to bring the two visual axes together on an object.

symbiosis: Condition wherein two dissimilar organisms are dependent on each other in various ways.

tactile: Refers to sense of touch.

tenacity: Characteristic of solids by which they resist being pulled apart.

torison: The rotational stress or elastic twist caused by two opposing couples acting in parallel planes.

toxicology: Scientific study of poisons, their origin, properties and behaviour.

transpiration: Loss of water vapour by plants particularly through leaves.

typhology: Science dealing with blindness.

Valence: The capacity of an atom to combine with other atoms to form molecules or in other words, the combining capacity of an element.

vestigial: A part once developed and functioning which has degenerated in the embryo or ancestral form.

viviparous: Producing young which are living instead of being hatched from eggs.

wrought: Molded and hammered into shape.

xenogamy: Cross-fertilisation.

xyletomy: Cutting wood into sections for microscopic examination.

yield point: Smallest unit stress at which structural material will undergo deformation without increase of weight or load it will bear.

zoometry: Branch of science devoted to measuring of animal parts in relation to one another.

zwitterions: Dipolar ions.

zymology: Science dealing with enzymes.

BIMAN BASU, B.L. ARORA
PRABHA GOPAL & J.S.

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating : Evaluate your performance on the basis of the following score-card:

100 questions in 60 minutes	—	Excellent
60 questions in 60 minutes	—	Good
50 questions in 60 minutes	—	Fair
35 questions in 60 minutes	—	Poor

Tips : 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

SCIENCE

FOR NDA, POs, CDS...

Presuming that you are now familiar with the basics of Science, attempt the following practice tests meant for PO, NDA, CDS and other exams.

DIRECTIONS: For each question in Sections 1 & 2, tick mark the choice that best answers the question. Answers are given at the end of this test.

SECTION 1

- Joulesec is the unit of
 - Power
 - Angular momentum
 - Linear momentum
 - Energy
- _____ is the smallest planet?
 - Mercury
 - Pluto
 - Mars
 - Uranus
- The cause of bacillary dysentery, which took an epidemic form in West Bengal recently, is thought to be
 - Bacillus Papillae*
 - Anopheles*
 - Hepatitis-B
 - Shiga's bacillus
- _____ is not a nuclear nation.
 - France
 - The UK
 - China
 - Italy
- On heating, the resistance of _____ is likely to increase.
 - Germanium
 - Silver
 - Mercury
 - None of the above
- For a _____ gas, the ratio of specific heat at constant volume to specific heat at constant pressure is 0.6.
 - Monoatomic
 - Diatomic
 - Triatomic
 - None of the above

The equivalent resistance of the combination shown in the diagram above

- _____ is
 - 5 ohms
 - 2 ohms
 - 0.5 ohms
 - 0.2 ohms
- _____ was the first satellite to be repaired in space.
 - Challenger
 - Palapa-B
 - Solar Max
 - Soyuz-T11
- India's third Antarctic expedition sailed aboard
 - Polar Circle
 - Finn Polaris
 - Sagar Kanya
 - Columbia
- The time taken by INSAT-1B to complete one revolution around earth is nearly _____ minutes.
 - 54
 - 95
 - 780
 - 1440
- The velocity-time graph of a particle is

shown in the figure above. The force acting on the particle is withdrawn when it is at
(a) A (b) B

- C
 - Both at B and C
- The distance covered by the particle in the first two seconds is
 - 6 m
 - 5 m
 - 4 m
 - 3 m
- The velocity of light in a medium is
 - Same for all wavelengths
 - Maximum for red light
 - Minimum for red light
 - None of the above
- _____ is used in India for fumigating foodgrains.
 - Ethylene dibromide
 - Aldrin
 - Sodium arsenite
 - Copper sulphate
- _____ is the world's principal source of mercury.
 - Galena
 - Cinnabar
 - Bauxite
 - Monazite
- A nucleus of deuterium contains
 - 2 protons
 - 1 proton, 1 neutron and 1 electron
 - 1 neutron and 1 proton
 - 2 neutrons
- Oxidation is a chemical reaction which involves the _____ of an electron by an atom or an ion.
 - Gain
 - Loss
 - Gain or loss
 - Depends on the atom or ion
- The joining of two atoms of oxygen to form an oxygen molecule is an example of
 - Oxidation
 - Ionic bonding
 - Vander waal bonding
 - Covalent bonding
- The volume occupied by ice is (the) _____ than (as) the volume of water from which it is formed.
 - More
 - Less
 - Same
 - Depends on the ice
- When the cap of a bottle of soft drink is removed and the liquid poured into an open glass tumbler, there is rapid evolution of a gas. This is an example of
 - Evaporation

- (b) Effervescence
(c) Phosphorescence
(d) Sublimation

21. In _____, Hepatitis-B claimed several lives during April-May 1994.
(a) Gujarat (b) West Bengal
(c) UP (d) Maharashtra
22. Hepatitis-B virus affects the
(a) Brain (b) Kidneys
(c) Liver (d) Heart
23. Large thorium deposits are found in
(a) Tamil Nadu (b) Kerala
(c) Haryana (d) Maharashtra
24. The _____th World Energy Conference was held in New Delhi in September 1983.
(a) 5 (b) 10
(c) 12 (d) 15

25.

A gas molecule moving along AO is reflected along OB (see diagram above), when it hits the wall WW' of a container. The force exerted on the wall due to collision is along
(a) OB (b) OX
(c) Along OX and OW'
(d) OW'

26. The electric field inside a uniformly charged metallic solid sphere
(a) Decreases towards the centre
(b) Increases towards the centre
(c) Is constant (non-zero)
(d) Is zero
27. The following four wires are made of the same material. Which of them will have the largest resistance?
(a) Length—50 cm, diameter—2 mm
(b) Length—100 cm, diameter—4 mm
(c) Length—100 cm, diameter—1 mm
(d) Length—200 cm, diameter—2 mm
28. The S.I. unit for magnetic induction is
(a) Weber (b) Newton
(c) Tesla/m² (d) Weber/m²
29. The ratio of electrical force to gravitational force between a proton and an electron is nearly
(a) 2.2×10^{15} (b) 2.2×10^{39}
(c) 4.5×10^{-39} (d) 4.5×10^{-15}
30. If the N-pole of a bar magnet is brought near a circular coil from above, the

current flowing in it

- (a) Zero
(b) In the anti-clockwise direction
(c) In the clockwise direction
(d) In a direction which depends on the material of the coil
31. Vector A makes an angle θ with a given direction. The component of the vector in a direction perpendicular to the given direction is
(a) 0 (b) $\cos \theta$
(c) $A \sin \theta$ (d) A
32. When a magnet drops freely towards a closed coil, it will fall with an acceleration
(a) Less than g
(b) More than g
(c) Equal to g
(d) Equal to zero
33. _____ is not accelerated in an electric or magnetic field.
(a) Electron (b) Proton
(c) Neutron (d) α particle
34. The amount of radiation emitted by a surface per unit area per unit time varies with temperature T (as)
(a) Square of its absolute temperature
(b) Fourth power of its absolute temperature
(c) Inversely as the fourth power of T
(d) Inversely as square of T
35. The excess pressure inside a soap bubble is given by
(a) $T/2R$ (b) T/R
(c) $2T/R$ (d) $4T/R$
36. A stone is allowed to fall inside a well. After it has fallen through a sufficient distance,
(a) Its velocity will become constant
(b) It will stop
(c) It will keep on falling with a constant acceleration
(d) It will start oscillating about a mean position
37. Under similar conditions of temperature, the ratio of diffusion of CH₄ and SO₂ will be
(a) 0.5 (b) 1
(c) 2 (d) 4
38. The maximum number of electrons in the $n = 3$ orbit can be
(a) 6 (b) 8
(c) 12 (d) 18
39. A _____ compound will have the highest melting point.
(a) Covalent (b) Ionic
(c) Vanderwaal (d) Molecular
40. A polar covalent bond is (may be) formed between
(a) Atoms of the same element
(b) Atoms of different elements
(c) Atoms of the same as well as of different elements
(d) Atoms of compounds only
41. Which of the following halogens is most reactive?
(a) Fluorine (b) Chlorine
(c) Bromine (d) Iodine

42. Deficiency of _____ causes swelling of the thyroid gland.
(a) Bromine (b) Fluorine
(c) Iodine (d) Chlorine
43. Aqua-regia is a mixture of concentrated nitric acid and concentrated hydrochloric acid in the ratio
(a) 1:1 (b) 1:2
(c) 2:1 (d) 1:3
44. German-silver is an alloy of
(a) Ag, Cu and Zn
(b) Cu, Ni and Sn
(c) Cu, Zn and Ni
(d) Cu and Ag
45. Permanent hardness of water is due to the presence in water of
(a) Heavy water
(b) Calcium and magnesium bicarbonates
(c) Sulphates and chlorides of calcium and magnesium
(d) Sodium carbonate
46. In a colloidal solution, the size of the solute particles is of the order of
(a) 10 \AA (b) $100-1000 \text{ \AA}$
(c) $10,000 \text{ \AA}$ (d) 10^6 \AA
47. India ink is made from
(a) Charcoal (b) Graphite
(c) Lampblack (d) Cellulose
48. The boiling point of kerosene is in the range of
(a) $400-500^\circ\text{C}$ (b) $150-300^\circ\text{C}$
(c) $100-130^\circ\text{C}$ (d) $70-100^\circ\text{C}$
49. CH₄, C₂H₆, C₃H₈ are examples of
(a) Isomers (b) Homologues
(c) Allotropes (d) Isotones
50. A solid dissolves in a liquid with liberation of heat; with rise in temperature, its solubility will
(a) Increase
(b) Remain unchanged
(c) Decrease
(d) Increase or decrease depending on the solid
51. A nephrologist deals with the study of diseases of
(a) Nerves (b) Kidneys
(c) Teeth (d) Plants
52. Approximately _____ per cent of land area is under forests in India.
(a) 7 (b) 23
(c) 27 (d) 2
53. _____ is not concerned with eyes.
(a) Astigmatism (b) Conjunctivitis
(c) Hypermetropia (d) Encephalitis
54. Carrot is a rich source of
(a) Vitamin A (b) Vitamin C
(c) Vitamin D (d) Proteins
55. Vitamin _____ will increase one's resistance to infection.
(a) A (b) B
(c) C (d) D
56. Producer gas is a mixture of
(a) Methane, hydrogen and carbon monoxide
(b) Hydrogen and carbon monoxide
(c) Nitrogen and carbon monoxide
(d) Butane and methane

- (a) Apr 4 (b) Jun 6
 (c) Nov 19 (d) Dec 14
58. India has _____ national parks.
 (a) 8 (b) 12
 (c) 15 (d) 20
59. Adrenalin affects
 (a) Sugar metabolism
 (b) Blood pressure
 (c) Growth and metabolic rate
 (d) Kidney-urine volume
60. _____ is not a plant hormone.
 (a) Cytokinin (b) Auxin
 (c) Thyroxin (d) Gibberellin
61. Cement contains maximum amount of
 (a) Calcium oxide
 (b) Silicon oxide
 (c) Aluminium oxide
 (d) Calcium carbonate
62. Quicklime is
 (a) CaO (b) CaCO₃
 (c) Ca(OH)₂
 (d) CaOCl₂
63. The average gestation period for a cow is _____ days.
 (a) 150 (b) 285
 (c) 340 (d) 380
64. Penicillin was discovered by
 (a) Christaan Barnard
 (b) Louis Pasteur
 (c) Alexander Fleming
 (d) Edward Jenner
65. Angina pectoris is a disease of the
 (a) Liver (b) Heart
 (c) Kidney (d) Brain
66. Saffron commercial consists of _____ of the plant.
 (a) Roots
 (b) Leaves
 (c) Stigma
 (d) Anther and leaves
67. Bright's disease affects the
 (a) Eyes (b) Throat
 (c) Veins (d) Kidneys
68. Sleeping sickness is caused by
 (a) Contaminated water
 (b) Female anopheles mosquito
 (c) Tse-tse fly
 (d) Sleeping in a room with a burning charcoal furnace
69. Galena is an ore of
 (a) Zinc (b) Lead
 (c) Iron (d) Copper
70. The co-winner of Nobel Prize for Physics, for 1983, alongwith Prof S. Chandrasekhar, was Prof
 (a) K.G. Wilson (b) William Fowler
 (c) Abdus Salam (d) Weinberg
71. Apple is a type of
 (a) Berry (b) Drupe
 (c) Pome (d) Pepo
72. _____ is a false fruit.
 (a) Tomato (b) Mango
 (c) Strawberry (d) Orange
73. Knots in wood are formed by
 (a) Ageing

- curling
 (c) A naturally occurring process
 (d) Regular chopping of wood
74. Triticale is a hybrid between
 (a) Wheat and rice
 (b) Wheat and pea
 (c) Gram and rice
 (d) Wheat and rie
75. Among Mendel's seven characters chosen for genetic experiments, which of the following was not present?
 (a) Pod colour
 (b) Pod shape
 (c) Leaf shape
 (d) Seed colour
76. Ephemeral is a plant which grows and makes seeds in
 (a) 6 months
 (b) 1 year
 (c) 2 years
 (d) Few weeks
77. Arrangement of foldings of leaves in a bud is called
 (a) Venation
 (b) Vernation
 (c) Vernalisation
 (d) None of the above
78. Caries is a disease of the
 (a) Teeth (b) Ears
 (c) Eyes (d) Lungs
79. Hydroponics is growing plants in
 (a) A glass house
 (b) Sand
 (c) Solution of necessary nutrients
 (d) Water
80. _____ is/are concerned with the discrimination of colour by the eye.
 (a) Rods (b) Cones
 (c) Both rods and cones
 (d) Neither rods nor cones
81. In the cut end of the stem, _____ is responsible for root initiation
 (a) Kinetin (b) Gibberellin
 (c) IBA
 (d) None of the above
82. Coir of coconut is the
 (a) Mesocarp of fruit
 (b) Endocarp of fruit
 (c) Epicarp of fruit
 (d) Endosperm
83. Litmus is obtained from
 (a) Moss (b) Algae
 (c) Lichen (d) Fungus
84. Cystolith of rubber plant is
 (a) Calcium oxalate
 (b) Calcium phosphate
 (c) Sodium oxalate
 (d) Calcium sulphate
85. _____ is a long-day plant.
 (a) Chrysanthemum (b) Wheat
 (c) Rice (d) Tomato
86. _____ satellite is
 (a) A naturally-occurring body moving around a planet
 (b) A man-made object moving around the earth
 (c) Any alloy containing iron

- chromium and tungsten
 87. Parsec is a unit of
 (a) Distance (b) Time
 (c) Velocity (d) Acceleration
88. _____ is used as moderator in a nuclear reactor.
 (a) Uranium (b) Cadmium
 (c) Sodium (d) Graphite
89. Mass of deuteron is
 (a) Equal to the mass of a proton (Mp) and mass of a neutron (Mn)
 (b) More than (Mp+Mn)
 (c) Less than Mp+Mn
 (d) Equal to mass of a neutron
90. Seedless fruits are obtained when unfertilised flowers are sprayed with
 (a) N.A.A. (b) I.A.A.
 (c) A.B.A. (d) Gibberellin
91. The region immediately above the earth's surface is called
 (a) Stratosphere (b) Troposphere
 (c) Tropopause (d) Ionosphere
92. _____ has maximum protein.
 (a) Wheat (b) Peas
 (c) Green gram (d) Coconut
93. Two wires W₁ and W₂ of the same length and material and radius R and 2 R, are connected in series. If a current is passed through them, the ratio of the heat developed in them will be
 (a) 1/2 (b) 1/4
 (c) 2 (d) 4
94. If the refractive index of glass with respect to turpentine oil is 1.1 and the refractive index of turpentine oil with respect to air is 1.4, the refractive index of glass with respect to air will be nearly
 (a) 1.54 (b) 1.27
 (c) 1.22 (d) 0.8
95. A galvanometer of resistance G shows a deflection θ when current is passed through it. If a resistance G/10 is connected in parallel with it, the deflection of the galvanometer would become nearly
 (a) 10θ (b) $\theta/10$
 (c) $\theta/11$ (d) $10 \theta/11$
96. Two forces of magnitude 2 N each act on a body at an angle of 60° to each other. The magnitude of the resultant force acting on the body is
 (a) 2N (b) $2\sqrt{3}N$
 (c) $3\sqrt{2}N$ (d) $2\sqrt{3}N$
97. Uranium-233 has been used successfully by India to produce nuclear power in the _____ reactor.
 (a) Apsara (b) Poomima-II
 (c) Priyadarshini (d) Rohini
98. _____ does not occur naturally.
 (a) Uranium-233 (b) Uranium-235
 (c) Uranium-238
 (d) All of these occur in nature
99. If C and R denote capacitance and resistance respectively, the units of CR will be
 (a) Volt (b) Ohm

- (c) Second (d) Second
100. The Chairman of the Atomic Energy Commission is
(a) Prof M.G.K. Menon
(b) Prof U.R. Rao
(c) Prof Satish Dhawan
(d) Dr Raja Ramanna
 101. If the radius of the earth were one half its present value, the value of the acceleration due to gravity on its surface would be nearly.
(a) 4.9 m/s² (b) 19.6 m/s²
(c) 2.45 m/s² (d) 39.2 m/s²
 102. Man has been in outer space for a maximum period of nearly _____ months.
(a) 3 (b) 4.5
(c) 6 (d) 7
 103. Spot the odd one out.
(a) Neutrino (b) Electron
(c) Proton (d) Muon
 104. Aditya is the name of the
(a) First Indian nuclear reactor
(b) First Indian satellite
(c) India's proposed nuclear fusion generator
(d) India's cosmic ray research project to go aboard the US space shuttle
 105. The first human being to walk in space without a life line is
(a) Svetlana Savitskaya
(b) Bruce McCandless
(c) Robert Stewart
(d) Kathryn Sullivan
 106. _____ number of satellites have been launched into space so far.
(a) 500 (b) 1,500
(c) 2,700 (d) 3,500
 107. Under how many different names has the US launched its space shuttles?
(a) One (b) Two
(c) Three (d) Four
 108. The first Indian geostationary satellite was
(a) Aryabhata (b) Rohini
(c) APPLE (d) INSAT-1B
 109. Rohini revolved around the earth once every
(a) 66 min (b) 95 minutes
(c) 24 hours (d) 2 days
 110. The volume of a given amount of water is the
(a) Same at all temperatures
(b) Minimum at 4°C
(c) Maximum at 4°C
(d) Maximum at 4°F
 111. The escape velocity at the surface of the moon is nearly
(a) 2.4 km/s (b) 7.4 km/s
(c) 11.2 km/s (d) 60.8 km/s
 112. The boiling point of sea water at atmospheric pressure is
(a) 100°C
(b) More than 100°C
(c) Less than 100°C
(d) None of the above
 113. Tokamaks are

- (a) Fundamental particles of which all other particles are made up of
(b) Nuclear power generators using nuclear fission as a source of energy
(c) Nuclear fusion generators
(d) None of the above
114. Which of the following have frequencies in increasing order?
(a) Radio waves, X-rays, microwaves
(b) X-rays, microwaves, radiowaves
(c) Radiowaves, microwaves, X-rays
(d) Microwaves, radiowaves, X-rays
 115. India's cosmic ray research project to go aboard the US space shuttle Challenger is.
(a) Apsara (b) Anuradha
(c) Aditya (d) Priyadarshini
 116. The weight of a person will be zero
(a) On the surface of the moon
(b) In an orbiting geostationary satellite only
(c) In any orbiting satellite
(d) At all points inside the surface of the earth
 117. Velocity of sound is maximum in
(a) Gases (b) Liquids
(c) Solids (d) Vacuum
 118. If there was no atmosphere around us (and suppose we could live in such circumstances), the sky would appear to us to be
(a) Blue (b) Black
(c) White (d) Greenish
 119. An object on the surface of the earth at a point on the equator moves with a velocity of nearly
(a) Zero (b) 600 km/hr
(c) 1,200 km/hr (d) 1,600 km/hr
 120. A water tank 6 ft deep would appear to an observer to be nearly _____ ft deep.
(a) 4 (b) 6
(c) 4.5 (d) 5.2
 121. An ice cube is floating in a glass of water. When the ice melts, the level of water in the glass will
(a) Remain the same
(b) Increase
(c) Decrease
(d) None of the above
 122. An electric fuse blows off when an electric device is plugged in. The fuse may not blow off if we use a _____ wire of the same material.
(a) Thinner (b) Thicker
(c) Longer (d) Shorter

SECTION 2

1. _____ % of incoming solar radiation is utilised in photosynthesis.
(a) 0.01 (b) 0.1
(c) 0.2 (d) 1.0
2. _____ carat is pure gold.
(a) 22 (b) 20
(c) 24 (d) 18
3. Alternating current cannot be used in
(a) The refrigerator (b) Welding

- (a) Electroplating (b) Boiling
4. Malaria affects the
(a) Pancreas (b) Liver
(c) Spleen (d) Kidney
 5. Soft drinks are normally filled with pressurised
(a) Carbon monoxide
(b) Carbon dioxide
(c) Air
(d) Nitrogen
 6. Sea of Tranquility is on the
(a) Moon (b) Earth
(c) Mars (d) Jupiter
 7. One quintal is equivalent to
(a) 10 kg (b) 50 kg
(c) 1,000 kg (d) 100 kg
 8. Borlaug award is given for
(a) Literature
(b) Agriculture
(c) Space science
(d) Journalism
 9. What causes solar energy?
(a) Nuclear fission
(b) Nuclear fusion
(c) Shining of the Sun
(d) Sun spots
 10. The human heart beats _____ times per minute.
(a) 80 (b) 65
(c) 70 (d) 90
 11. Gelatin is added to ice-cream to
(a) Avoid crystal formation
(b) Hasten freezing
(c) Give flavour
(d) None of the above
 12. _____ metal is used in storage batteries.
(a) Zinc (b) Tin
(c) Lead (d) Copper
 13. _____ has been eradicated worldwide.
(a) Cholera (b) Chickenpox
(c) Cataract (d) Smallpox
 14. Laws of heredity were formulated by
(a) Robert Hooke
(b) Charles Darwin
(c) Gregor Mendel
(d) Trevor Bailey
 15. The India-born US scientist who won the Nobel Prize in Medicine is
(a) C.V. Raman
(b) J.V. Narlikar
(c) J.C. Bose
(d) Hargobind Khorana
 16. Sriharikota is situated in
(a) Andhra Pradesh
(b) Tamil Nadu
(c) Kerala
(d) Rajasthan
 17. India's first nuclear reactor is
(a) Zerlina (b) Circus
(c) Apsara (d) Rohini
 18. Man used _____ first.
(a) Iron (b) Gold
(c) Copper (d) Aluminium
 19. The doctor checks the pulse for a _____ count.
(a) Temperature
(b) Blood pressure

20. Pascal is the unit of
(a) Pressure (b) Power
(c) Flow of water (d) Heat
21. Indian Standard Time (IST) is the local time of _____ meridian.
(a) $82\frac{1}{2}^{\circ}\text{E}$ (b) $88\frac{1}{2}^{\circ}\text{E}$
(c) 90°E (d) $80\frac{1}{2}^{\circ}\text{E}$
22. The chick comes out _____ days after the egg is hatched.
(a) 14 (b) 7
(c) 21 (d) 28
23. The liver
(a) Stores glucose as glucogen
(b) Helps in digestion
(c) Promotes respiration
(d) Purifies the blood
24. Age of a tree can be determined by
(a) Counting annual rings
(b) The thickness of the bark
(c) The number of leaves
(d) Its height
25. In the Einstein equation $E=mc^2$, c denotes
(a) Velocity of sound
(b) Wavelength of light
(c) Velocity of light
(d) Constant factor
26. Rain-yielding cloud is known as
(a) Cumulus (b) Nimbus
(c) Circus (d) Stream
27. Vitamin C is also called
(a) Folic acid (b) Niacin
(c) Citric Acid (d) Ascorbic acid
28. The SI unit of temperature is
(a) Kelvin (b) Celsius
(c) Centigrade (d) Fahrenheit
29. Oncology is the study of
(a) Birds (b) Cancer
(c) Tissues (d) Mammals
30. Analgesics are used to relieve
(a) Fever (b) Pain
(c) Nervousness (d) Anxiety
31. To a spaceman, the sky would appear
(a) Blue (b) Black
(c) Pink (d) Violet
32. _____ is not used for the production of atomic energy.
(a) Radium (b) Uranium
(c) Thorium (d) Barium
33. Black Holes are celestial bodies which have a strong _____ force.
(a) Electric (b) Magnetic
(c) Gravitational (d) Cosmic
34. Plants are green because of
(a) Haemoglobin (b) Xanthophyll
(c) Chlorophyll (d) Anthocyanin
35. Light-year is the unit of
(a) Velocity (b) Distance
(c) Light (d) Time
36. The sex of a child before birth can be determined by
(a) Amniography (b) Amnioscopy
(c) Amniotomy (d) Amniocentesis
37. Morning and evening, the sun appears red. Why?
- (b) Reflection of light
(c) Refraction of light
(d) Velocity of light
38. The earth is nearest to the sun in
(a) July (b) June
(c) January (d) April
39. Deficiency of _____ causes diabetes.
(a) Sugar (b) Glycogen
(c) Iodine (d) Insulin
40. The commonly-used coolant in refrigerators is
(a) Ammonia (b) Freon
(c) Oxygen (d) Nitrogen
41. When iron rusts, its weight
(a) Increases (b) Decreases
(c) Remains the same
(d) First increases and then decreases
42. Municipal water is commonly treated with
(a) Bleaching powder
(b) Alum
(c) Chlorine gas
(d) Potassium permanganate
43. _____ changes its colour.
(a) Lizard (b) Turtle
(c) Viper (d) Chameleon
44. _____ is the brightest planet.
(a) Mars (b) Venus
(c) Mercury (d) Jupiter
45. _____ rocks are formed when molten magma solidifies.
(a) Metamorphic (b) Igneous
(c) Sedimentary
(d) None of the above
46. _____ energy causes least pollution.
(a) Solar (b) Thermal
(c) Nuclear (d) Chemical
47. Cosmology deals with
(a) Cosmetics (b) Medicine
(c) Universe (d) Satellites
48. The essential component of cement is
(a) Gypsum (b) Sandstone
(c) Limestone (d) Bauxite
49. Stainless steel is made up of
(a) Copper and cadmium
(b) Zinc and tin
(c) Chromium and carbon
(d) Aluminium and zinc
50. _____ is not a primary colour.
(a) Red (b) Blue
(c) Green (d) Yellow
51. The fastest growing tree is
(a) Casuarina (b) Teak
(c) Eucalyptus (d) Mango
52. All biochemical reactions in a living organism come under
(a) Anabolism (b) Metabolism
(c) Catabolism
(d) None of the above
53. The only diamond mine in India is located in
(a) Maharashtra
(b) Madhya Pradesh
(c) Karnataka
(d) Rajasthan
54. Who wrote *Origin Of Species*?
- (b) Charles Darwin
(c) Thomas Huxley
(d) Francis Hitching
55. The lowest temperature theoretically possible is
(a) -273°C (b) -273.15°C
(c) -270°C (d) -237.15°C
56. Study of sound is known as
(a) Decibel (b) Blastics
(c) Caustics (d) Acoustics
57. Aero-metal is an alloy of
(a) Aluminium, lead and copper
(b) Aluminium, zinc and iron
(c) Aluminium, zinc and copper
(d) Aluminium, lead and iron
58. Nitrogen was formerly called
(a) Natrium (b) Azolla
(c) Azote (d) Nicotine
59. Bordeaux mixture is a(n)
(a) Insecticide (b) Herbicide
(c) Nematicide (d) Fungicide
60. Milk protein is known as
(a) Caesin (b) Pepsin
(c) Lactin (d) Albumin
61. Acid rain is caused by
(a) South-west monsoons
(b) Humidity
(c) Pollutant gases
(d) Population explosion
62. The element of an electric heater is made of
(a) Copper (b) Tungsten
(c) Nichrome (d) Aluminium
63. Trachoma is a disease of the
(a) Liver (b) Eye
(c) Brain (d) Kidney
64. _____ water contains calcium and magnesium ions.
(a) Heavy (b) Lime
(c) Hard (d) Soft
65. Human blood is _____ in nature
(a) Acidic (b) Alkaline
(c) Neutral
(d) None of the above
66. Alfred Nobel invented the
(a) Atom bomb
(b) Machine gun
(c) Dynamite
(d) Hydrogen bomb
67. Galena is the ore of
(a) Lead (b) Antimony
(c) Bismuth (d) Copper
68. The equatorial radius is _____ miles.
(a) 3,963 (b) 3,693
(c) 3,669 (d) 3,369
69. A mixture of alcohol and water can be separated by
(a) Evaporation (b) Filtration
(c) Decantation (d) Distillation
70. If a red object is seen in blue light, it will appear
(a) Violet (b) Red
(c) Green (d) Black
71. Time taken by sunlight to reach the earth is
(a) 15 sec (b) 8 sec
(c) 15 min (d) 8 min

72. EEG is related to the
(a) Brain (c) Heart
(c) Eyes (d) Kidneys
73. _____ is responsible for the colour of the human skin.
(a) Melanin (b) Carotin
(c) Melanin (d) Anthocynin
74. _____ is the largest planet.
(a) Pluto (b) Saturn
(c) Jupiter (d) Neptune
75. Selenology is the study of
(a) Selenium (b) Moon
(c) Venus (d) Mars
76. _____ is the most abundant element in the human body.
(a) Carbon (b) Oxygen
(c) Iron (d) Nitrogen
77. Common household sugar is
(a) Glucose (b) Galactose
(c) Maltose (d) Sucrose
78. In Siberian winter, water in the lake starts freezing first
(a) At the bottom
(b) At the surface
(c) In the middle
(d) None of the above
79. Humidity in air is measured by
(a) Hydrometer (b) Hygrometer
(c) Barometer (d) Manometer
80. The most essential element for plant growth is
(a) Nitrogen (b) Phosphorus
(c) Potassium (d) Sulphur
81. _____ records the intensity of earthquakes.
(a) Electograph (b) Oscilloscope
(c) Seismograph (d) Spectrograph
82. _____ is called Plaster of Paris.
(a) Calcium sulphate
(b) Calcium ammonium sulphate
(c) Magnesium sulphate
(d) Copper sulphate
83. Dry ice is
(a) Liquid CO₂ (b) Water vapour
- (c) CO₂ gas (d) Solid CO₂
84. _____ is the longest and heaviest human bone.
(a) Tibia (b) Femur
(c) Humerous (d) Clavicle
85. The minimum velocity required to escape from the earth's gravitational field is _____ km/sec.
(a) 11.9 (b) 11.2
(c) 11.6 (d) 11.4
86. _____ measures the angle of crystals.
(a) Anglometer (b) Goniometer
(c) Tensiometer (d) Crystallometer
87. Mycology is the study of
(a) Algae (b) Bacteria
(c) Fungi (d) Actinomycetes
88. The Indo-Gangetic plain has _____ soil.
(a) Alluvial (b) Lateritic
(c) Red (d) Black
89. What's the Avogadro's number?
(a) 6.023×10^{21} (b) 6.023×10^{23}
(c) 6.023×10^{20} (d) 6.023×10^{25}
90. Einstein was awarded the Nobel Prize for (the)
(a) Theory of Relativity
(b) Einstein shift
(c) Photoelectric effect
(d) $E = mc^2$
91. Sunspots are
(a) Dark spots on the sun
(b) Spots due to heat stroke
(c) An eclipse of sorts
(d) None of the above
92. _____ is the most important constituent of soil.
(a) Sand (b) Silt
(c) Clay (d) Earthworms
93. Sansa Wildlife Sanctuary is situated in
(a) UP (b) Rajasthan
(c) Kerala (d) Madhya Pradesh
94. Man has _____ bones.
(a) 108 (b) 306
95. The Central Rice Research Institute is located at
(a) Dehradun (b) Cuttack
(c) Trivandrum (d) Hyderabad
96. A sudden fall in barometric pressure indicates
(a) Rain (b) Storm
(c) Hot weather (d) Clear sky
97. Man has _____ chromosomes.
(a) 48 (b) 46
(c) 44 (d) 42
98. Acupuncture is common in
(a) The US (b) India
(c) Japan (d) China
99. Unit of work is
(a) Joule (b) Dyne
(c) Pound (d) Newton
100. Greenhouse effect is due to the increase of _____ in the atmosphere.
(a) Nitrogen (b) Oxygen
(c) Helium
101. The normal temperature of the human body is
(a) 36.9°C (b) 98.4°C
(c) 50.8°C (d) 47.6°C
102. Cylindrical lens is used to correct
(a) Myopia (b) Astigmatism
(c) Hypermetropia
103. Isotopes of an element have the same
(a) Atomic mass
(b) Atomic number
(c) Density
(d) Atomic weight
104. Minamata disease is caused by
(a) Cadmium (b) Mercury
(c) Arsenic (d) Lead
105. _____ is a semi conductor.
(a) Silicon (b) Carbon
(c) Aluminium (d) Phosphorus

NEWS CAPSULE

AWARDED

The Krishnan Gold Medal for 1984 to B.H. Briz Kishore, visiting scientist at the Jawaharlal Nehru Technological University, for his contribution in the field of geohydrological modelling. The award was instituted by the Indian Geophysical Union (IGU) in 1964, to be awarded to eminent scientists in the field of earth sciences.

APPOINTED

Iqbal Akhund, former Pakistan Ambassador to the UN, as head of the UN Centre against Apartheid, replacing India's Enuga Reddy who retired at the end of 1984. Reddy, who joined the UN as an intern 37 years ago, took charge of its anti-apartheid activities 17 years later and was responsible for the Centre becoming a major force against South Africa's racist policies.

Marshal Serguei Sokolov, one of the three Soviet Deputy Defence Ministers, as Defence Minister succeeding Dmitry Ustinov upon the latter's death.

R.N. Kao, former Security Advisor to late PM Indira Gandhi, and Director of the Research and Analysis Wing (RAW), as member of the Policy Planning Committee of the External Affairs Ministry. Kao will assist the committee's Chairman, G. Parthasarathy.

Roland Dumas, the government spokesman and European Affairs Minister replaced Claude Cheysson French Foreign Minister in a minor Cabinet change announced on Dec 7.

ELECTED

Kurt Fugler, 60, the veteran Christian Democrat on Dec 6 as Switzerland's President for a year for the third time. Fugler was elected with 177 out of 222 votes by Parliament which chooses the President annually in rotation and according to seniority.

EDUCATION

Programme for the educationally backward: The National Council of Educational Research and Training (NCERT) is to take up its first exclusive programme for the educationally backward minorities at the instance of the Union Home and Education ministries. The emphasis will be on the improvement of the quality of education in minority pockets of the country. To end educational isolation of the minorities, NCERT will provide remedial classes, offer educational and vocational guidance and upgrade the quality of school education.

SCIENCE

Planet beyond solar system observed: Astronomers in the US have discovered what is apparently a giant ball of hot gas orbiting around the star **Van Biesbroek 8**, which is 200 light years from the earth, making it perhaps the first planet observed beyond our solar system. A university of Arizona team, led by Donald McCarthy Jr, calculates that the object must be some 30 to 80 times more massive than

Jupiter; the largest of the nine planets in our system. Further studies would be needed to determine characteristics of the object such as the timing of its orbit, its mass and chemical composition.

Spacecraft to study Halley's Comet launched: The Soviet Union on Dec 15 launched its first automatic spacecraft, **Veha**, for a meeting with Halley's comet in March 1986. The Venus-Halley's comet project was the result of collaboration between Soviet and European scientists. The spacecraft consists of two parts—the descent craft that will be lowered onto Venus and the craft that will fly onto the comet. The rendezvous will take place on Mar 6 and 9, 1986.

SPOT to facilitate urban planning in India: India is to utilise **Satellite Probatoire D'Observation De La Terre** (SPOT), the French remote sensing satellite, from next year for facilitating its urban planning programme. About Rs 1.5 crore have been set apart for establishing ground installations to receive photographs sent by SPOT. The cost of SPOT photo covering a 60 sq-km region will be Rs 10,000. According to ISRO director U.R. Rao, the first of the Indian series of operational remote sensing satellites will be launched from the Soviet Union in 1986. The design of the series will be compatible to the indigenous booster, the Polar Satellite Launch Vehicle (PSLV) which will be available in 1990. The PSLV has the capacity to place in orbit a 7000 kg class remote sensing satellite.

Fourth Antarctica team sails: The fourth Indian expedition to the Antarctica set sail from Goa's Monuqao Harbour on Dec 4. The 82-member expedition is led by Dr B.B. Bhatlacharya, Director of the Indian School of Mines, Dhanbad. The **Finn Polars** has on board an 18-tonne crane, a garage structure, 300 tonnes of stores for the garage, 30 tonnes of materials for alternate accommodation and 40 tonnes of food, apart from scientific instruments. During its six-month stay on the frozen continent, the team will conduct studies and experiments in various fields including seismology, geology and biology. It will set up a new communication link between India and the **Dakshin Gangotri**.

SUCCESSFUL INDIAN OF '84

Have you reached a consensus? Write in whom you think fills the above bill. Only:

- The person must be an Indian citizen;
- Must not be a politician;
- Must have achieved something in 1984 which had made every Indian proud;
- Must have risen to the top.

As none of your candidates have received a clear mandate, the date of receiving nominations has been extended to February 25. Send in your entries on a postcard with your name, address and age. Also indicate in four lines the reason for your nomination. Of the 25 successful nominations the first 5 will be awarded books worth Rs 25. The next 20 will receive slick ball points.

The Successful Indian of '83 was Gavaskar.

India's manned station through INSAT-1B. Also, a six-member group will trek down to the South Pole, which is 6,000 km from the station. The cost of the expedition will amount to Rs 5.8 crore.

Scientists create comet: The world's first artificial comet was created on Dec 27 in an experiment designed to unlock the secrets of the solar winds and the earth's magnetic field. The \$ 78m experiment is part of a three-satellite study involving West Germany, Britain and the US. The comet streaked into space 112,500 km above the Pacific Ocean and its progress was monitored by the Applied Physics Laboratory at the John Hopkins University in Maryland, USA. The experiment, earlier scheduled for Christmas, was postponed because of poor viewing conditions and bad weather at various observation points.

India to invest in scientific research: India will spend about Rs 1,430 crore on research and development relating to science and technology during the current financial year. This is a 23% hike over the Rs 1,237.56 crore spent in 1981-82. Over 2,000 institutions in the public and private sectors are engaged in research and development activities now. In 1982-83, 0.85% of the GNP was devoted to such activities, about 18% of the expenditure on basic research, 37% on experimental development and 15% on other activities. About 87% of the expenditure was borne by the government and the rest by the private sector.

DEFENCE

Pakistan to get reconnaissance planes from USA: Pakistan is reportedly pressuring the US to sell it early warning reconnaissance planes to deter Soviet and Afghan air raids along its western border. Washington will probably send one aircraft to Islamabad early in 1985 for tests along the frontier. Pakistan reportedly wants at least two F-2C Hawkeye aircraft, which are compact turboprop planes with radar domes. The aircraft will give the Pakistan Air Force enough warning to deploy its F-16s to deter intruders.

Anti-tank warhead for NATO: The US and its European allies - West Germany, Britain and France—have approved the joint development of a highly advanced anti-tank warhead. Development of the warhead will probably take six to seven years but it will provide NATO with a weapon that would overcome the Soviet Union's growing superiority in armoured vehicles. The first development contract will be awarded to a consortium of four companies—one from each country.

GCC members join forces to meet threats: The six Arab members of the Gulf Cooperation Council (GCC) have formed a joint military force to meet threats to the region's security. The formation of the force was announced on Dec 1, at the end of a three-day GCC summit. The force is ready to take "immediate action" in the event of foreign aggression.

Light Combat Aircraft to be made in India: The government has sanctioned a multi-crore rupee scheme for indigenously design-

ing and manufacturing a light combat aircraft. Addressing the 36th annual general meeting of the Aeronautical Society of India in New Delhi on Dec 1, Vice-President R. Venkataraman said India had "without doubt" demonstrated its ability to meet its defence requirements indigenously for military aircraft and other equipment.

Increase in world military expenditure: The world's military expenditure will cross the trillion-dollar mark in 1985, spending in 1984 is estimated at \$970b, according to a study by the US Government Arms Control and Disarmament Agency (ACDA). NATO and the Warsaw Pact countries account for nearly three-fourths of the present global defence spending. Growth in real military spending by developed countries, increased from an annual 2% in the 1970s to over 45% in 1982-84; in developing countries, the growth slackened from 12% in 1972-75 to 2% in 1982-84. The US and the Soviet Union have a combined armed forces strength of 6.5m, costing \$453b, in 1982. China, which has the biggest force in the world, numbering 4.5m, spent \$49.5b in 1982. The world now has 27.5m men in military uniform, ACDA estimates. Of them, 17m are in the developing world.

ENVIRONMENT

Environmental misuse can cause war: Misuse of environment can cause war and bloodshed, according to an international research organisation based in Washington. Soil erosion and massive deforestation in El Salvador and other Central American countries are as important as political factors threatening the region. Such problems could be the major causes of future wars and conflicts, says the author of *Environment And Conflict*. Starvation conditions similar to those in Ethiopia can break out soon in the African Sahel region, south of the Sahara, which is on the edge of "total ecological collapse". Deterioration of agriculture, has forced huge migrations to Third World cities and turned many of them into "time bombs" of violence and revolution. The worst may still be ahead.

World's most endangered species: The world's largest butterfly, the largest flower and the smallest mammal are all in danger of extinction, according to the International Union for the Conservation of Nature (IUCN). They are among 12 animals and 12 plants identified by IUCN as the world's most endangered species. The bumblebee bat, the smallest mammal in the world weighing just two grams, is being threatened by proposed hydroelectric projects in its habitat in Thailand. The world's largest flower, the giant one-metre-wide Rafflesia, is threatened by the destruction of rain forests in Sumatra. Queen Alexandra's birdwing of Papua New Guinea, the largest known butterfly measuring 30 cm, is also nearing extinction because of the expanding oil palm and logging industries.

NEIGHBOURS

Islamic parties form NUF in Bangladesh: Seventeen Islamic fundamentalist parties on Dec 9 formed a National United Front (NUF) in Bangladesh, pledging to resist forces of aggression and protect national independence and sovereignty. The Front's leader is former President Khandaker Mushtaq Ahmed. The Front

called for free elections under the suspended constitution to pave the way for withdrawal of martial law in the country.

Pakistan denies having nuclear capability: Pakistani Ambassador in the US, Ejaz Azim, on Dec 14 denied that Pakistan is about to join the nuclear club with the capacity to produce nuclear arms. Azim was responding to a statement by Leonard S. Spector, an authority on nuclear proliferation, that Pakistan had acquired nuclear weapons capability. But Azim declared that "we have no intention of going beyond peaceful uses for nuclear energy," saying Spector's theory was based on false assumptions. Spector, a senior associate with the Carnegie Endowment for International Peace, said in a recent study that with Pakistan now on the verge of nuclear capability the risk of a nuclear arms race in South Asia is sharply increasing.

Elections to be held in Bangladesh: Bangladesh president H.M. Ershad announced in December that elections for a new Parliament, twice postponed in the past one year, would be held in April 1985. Ershad also announced a five-point plan for transition from military rule, which includes phasing out of the posts of district, sub-zonal and zonal martial law administrators by Jan 31 and the dissolution of martial law tribunals and courts by Jan 15. Fundamental rights would be restored and high court jurisdictions revived by Jan 15.

ADB to give loans: The Asian Development Bank (ADB) has approved loans totalling \$6.2m to Pakistan, Bhutan and Nepal. The largest loan of \$40m went to Pakistan for the Chashma Area Development Project in the north-west frontier province (NWFP). Nepal receives \$17.8m for infrastructure improvements.

Zia to develop science: Pakistan President Zia-ul-Haq has approved a four-point programme aimed at developing a strong base for space science and technology in Pakistan over the next 10 years. As part of the programme, it plans to develop the capability to build and launch its own satellites. The programme also includes setting up tracking stations and receiving stations capable of transmitting and receiving signals from satellites.

CORE ISSUES

Get down to the core of the matter—with *CCTimes*. For four more information-packed issues, from March to June we focus on one particular area of competition:

- March looks at Indian History with valuable information on all aspects including the Freedom Movement. This issue will also include the comprehensive Quarterly Review.
- April will focus on the ever-topical Indian Polity.
- May will be a Sports special with data and information for competitions.
- June tests your Mental Ability with a special on the subject. Quarterly Review will be of additional advantage.

A serial on English by Prof R.P. Bhatnagar will run through the issues; some tips and articles on how to study for competitions will be an added boon.

Whatever competition, whichever exam—these specials are likely to see you through.

Indian pilot dies in crash: A Royal Airline's plane crashed on Dec 27, shortly after take-off from Tumlingtar, 250 km east of Kathmandu, killing 15 people. Among the victims was a member of the Nepalese National Legislature, Govinda Man Singh Adhikari, Capt Kuldip Krishna Wattal, the Indian pilot of the aircraft, and two other crew members.

Lankan minister dismissed: Sri Lanka's Minister for Industries and Scientific Affairs, Cyril Mathew, was dismissed on Dec 24 for publicly criticising President Junius Jayewardene's proposals to the all-party conference to solve the ethnic crisis. Mathew, a strong critic of minority Tamils, had said the proposals would rob the majority Sinhalese of their land. Mathew alleged his dismissal was made at the behest of India's G. Parthasarathy. The allegation was, however dismissed as "baseless" by the Indian External Affairs Ministry.

ECONOMY—National

Rupee worth highest in Calcutta: The real worth of the 1960 consumer rupee in September 1984 was the highest in Calcutta at 21.79 paise, and lowest in Jaipur at 17.12 paise. The all India average real worth of the rupee was 18.59 paise. Madras had a rupee value of 17.33 paise, Bombay 18.48 paise and Delhi 19.34 paise. The annual inflation rate was the highest in Hyderabad at 11.1% in September 1984 over September 1983, and the lowest in Pune at 6.5%. The all India average was 8.7%. Among the metropolitan cities, it was the highest in Madras (9.3%), followed by Bombay (8.9%), Calcutta (8.8%) and Delhi (8.6%).

Increase in trade between India and Spain: India and Spain have agreed to increase their volume of trade and will explore the possibility of Indian export of garments, tobacco, and finished leather to Madrid. India will study the possibility of applying Spanish technology in agriculture and fisheries. The present trade volume between the two countries is about Rs 165 crore annually, the major Indian exports being fish, coffee, pearls and precious stones. India imports synthetic fibre, iron and steel and printing paper from Spain.

Japanese team assured liberal policies: The then Finance and Commerce Minister Pranab Mukherjee on Dec 4 assured a high-level Japanese economic delegation that liberalised economic policies would continue and infrastructure facilities would be improved; they were the two pre-conditions set by the Japanese for higher investment in India. The 23-member delegation led by Goro Koyama, President of the Japanese Chamber of Commerce, was sent by PM Yasuhiro Nakasone to assess the investment climate in India. The delegation suggested that Japanese trading houses be allowed to operate in India to facilitate export of Indian goods and reduce India's adverse balance of trade which stood at 320m in 1983.

Hike in India-USSR trade turnover: India and the Soviet Union have agreed to increase their trade turnover to a record Rs 4,620 crore in 1985, a 20% hike over the current year's Rs. 3,840 crore. This will re-establish Moscow's status as India's largest trading partner. Exports from India are expected to touch Rs 2,500 crore (Rs 2,000 crore in 1984) and imports from the Soviet Union Rs 2,120 crore (Rs 1,840 crore in 1984). A protocol for 1985 was

after a week's talks in New Delhi on Dec 7 between delegations of the two countries. The protocol envisages a significant breakthrough in many of India's export sectors including chemicals (43%), textiles (36%) and engineering goods (25%).

Record production of potato in 1983-84: The all India production of potato reached an all time high of 12.25m tonnes during 1983-84, surpassing the 1982-83 production level by 23%. It also surpassed the previous peak of 10.13m tonnes achieved during 1978-79 by 21%. India is currently the fifth largest producer of potatoes in the world. During 1970-71 India ranked tenth among potato producing countries in the world. Potato is a supplement to cereal crops in many of the principal growing states in terms of carbohydrate content. In some of the developing countries, production of potato is also taken into account while reckoning total cereal production.

Improved industrial output: The National Council of Applied Economic Research (NCAER), in a mid-year review of the country's economy, says the overall economic prospects look a "shade better" with an increase in industrial production and a check on inflation. Timely and wide-spread rains for the second successive year hold out promise for as good a performance on the agricultural front as last year's. There is no reduction in the trade deficit but there is a notable rise in the country's foreign exchange reserves, mainly due to a spurt in remittances. These developments "reassure" a near 5% growth in the GNP during 1984-85, compared with 8.5% in 1983-84.

India's exports up by 11.7%: India's exports during September 1984 were worth Rs 806.66 crores and imports Rs 1,071.16 crores, taking the total exports and imports in the first six months of the financial year to Rs 5,024.26 crores and Rs 7,344.84 crores. That makes for a trade deficit of Rs 2,290.58 crores, Rs 134.58 crores lesser than what it was in April-September 1983. According to revised figures in the annual trade data for 1983-84, exports totalled Rs 9,965.30 crores and imports 15,762.95 crores. Figures for 1982-83 were Rs 8,834.21 crores and Rs 4,359.99 crores respectively.

Soft loan pact with Japan: India signed a soft loan agreement totalling 61,460m yen (about Rs 300 crore) with Japan on Dec 26, for five developmental projects in key sectors. They are: Anpara B thermal power station, the gas pipeline project, the Aonla fertiliser project, a telecommunication project, and the eastern Gandak canal hydro-electric project. The loans, which are to be repaid within 30 years at an annual interest rate of 2.75% to 3.25%, will be used to procure materials, equipment and services for the projects from Japan and other countries.

ECONOMY—International

EEC to provide aid: The 10-nation European Economic Community (EEC) and 65 African, Caribbean and Pacific (ACP) countries on Dec 8, signed a new five-year treaty on economic cooperation between Europe and its former colonies. The "Lome-III" treaty will go into effect in March to succeed the second Lome agreement, the main aim being to promote the independent economic development of the ACP countries. Under the new agreement,

the EEC will provide some \$5.5b worth development aid and make available low interest credits through the European Development Bank.

Investment: Guarantee Agency idea revived: The World Bank is reviving the idea of a Multilateral Investment Guarantee Agency (MIGA) to attract more foreign private investment into the Third World through guarantees against non-commercial risks. The proposed organisation will cover three traditional types of risks. One of these called the transfer risk, deals with the problem of converting local currencies, into foreign currencies and transferring them out of the country where the investment is made. Another is the expropriation risk covering nationalisation. The third risk to be covered is the war risk including war, civil unrest and public violence that may affect investments. It is proposed that the capital of the bank be \$1b.

Progress not linked to population: Efforts to pressurise poor countries into instituting family planning measures are unjustified on moral and economic grounds, according to Lord Peter Bauer of the London School of Economics. Bauer told a population seminar in Washington on Dec 6 that fast population growth has not held back economic progress in either rich or poor countries. He listed Malaysia, Taiwan, Hong Kong, among others, as countries where rapid population growth has been combined with "rapid, even spectacular economic growth for decades on end."

OPEC proposal on production and prices: OPEC's 12-member states, on Dec 27, agreed to create special group to enforce discipline within the cartel by policing production and prices. The lone dissenter was Nigeria which said it wants OPEC to let it sell at lower prices so that it would compete with Britain and Norway, non-members which have the same quality oil. The decision to create the special group was taken at OPEC's year-end conference in Geneva.

China and USSR to improve trade ties: China and the Soviet Union on Dec 28 signed three agreements on economic, technical and scientific cooperation at the end of a nine-day visit to Beijing by Soviet First Deputy Premier Ivan Arkhipov, the highest ranking Soviet leader to visit Beijing in 15 years. The two communist giants also agreed to establish a joint commission to oversee their developing economic, trade, scientific and technological relations.

World economy to lose buoyancy: The

world economy, which was buoyant in 1984 both in output and trade, will slow down in the new year, and non-oil developing countries will face uncertainties on the external payments front. Though some non-oil developing countries, like India, registered a creditable growth rate in 1984, as a group some of these face structural imbalances. Reduction of external imbalance in the developing world, has come through mainly from compression of imports rather than expansion of exports. But in the new year, export volumes are projected to decline by one percentage point, while import volumes are expected to be maintained at the 1984 rate. Their current account deficit is expected to increase to \$43b in 1985 after having fallen by \$2b to \$39b in 1984, because the terms of trade are likely to worsen.

STATES

MP Labour Minister resigns: The Labour Minister Shyam Sunder Patidar resigned on Dec 28 from the ministry, accepting moral responsibility for the Bhopal gas tragedy. The resignation was accepted by CM Arjun Singh "to respect the feelings of Patidar, who, it is abundantly clear, had no personal responsibility for the incident".

Tripura's Seventh Plan approved: With greater emphasis on social and community developments Tripura's draft Seventh Plan proposes an outlay of Rs 1,235.55 crore. The Plan was approved by the state Cabinet at a meeting on Dec 27. The state's annual Plan for 1985-86 has been fixed at Rs 202.86 crore.

Tohra elected SGPC President: Gurcharan Singh Tohra was on Nov 30 elected President of the Shiromani Gurudwara Prabandhak Committee for the 14th year. Tohra defeated SGPC Vice-President Atma Singh 72-53 in a straight contest. On the same day, the SGPC passed a resolution upholding the supreme status of the five high priests. It condemned the violence that erupted after the assassination of Mrs Gandhi and held the Congress (I) responsible.

Punjab will remain a restricted area till Feb 2, 1985. No foreign passport holder can enter Punjab for any purpose without obtaining a special permission granted by the government.

Attempt on Manipur CM's life: Manipur CM Rishang Keishing escaped unscathed from an attempt on his life on Dec 8, but four security personnel were killed and seven injured in the ambush on the CM's motorcade in Ukhrul dis-

A GARDEN OF EDEN

After a record grain harvest in the European Community, wine and fruit surpluses are expected too. The grape harvest is in full swing And, talking of fruits, let's not miss the apple of their eye: the 'forbidden fruit' is the German's favourite. Rhenish orchards have had a bumper apple harvest where about 800 growers gross DM 40m on 2,400 hectares. And they certainly don't go waste. For the Germans eat 45 kg of apples per head a year, including 15 kg imported from France, Italy, Holland, South Africa, New Zealand, Argentina and Chile. Sweet used to be the taste of 'original sin' in this Eden. Not any more. Now sweet-and-sour tops the pop list.

underground National Socialist Council of Nagaland which had earlier warned those contesting the Dec 27 elections of "dire consequences". All border outposts along the Indo-Burmese border in Manipur and Nagaland were put on a "red alert" following the ambush.

EVENTS—National

EC move for poll reforms: The Election Commission (EC) prepared a list of recommendations for modifications in the law after the 1984 elections to ensure fair, free and smooth polls. One of the prime recommendations will be to increase the security deposit to check non-serious candidates from contesting. The increase will be from Rs 500 to Rs 5,000 for the Lok Sabha poll and Rs 250 to Rs 2,500 for the Assembly. Another recommendation would be that candidates who fail to secure one-fourth of the votes should be disqualified and prohibited from contesting for another six years.

SC stays verdict in Escorts case: The Supreme Court on Dec 10 stayed the operation of the Bombay High Court judgement in the Escorts case, saying its interim order of Jul 31, 1984 relating to the arrangement and constitution of the Escorts board of directors would continue. The judgment came on two applications filed by the Life Insurance Corporation. On Jul 31, the Supreme Court had said that the directors who were purported to have been removed at the general body meeting and those elected in their place shall not function as directors until further orders.

India's concern over Pak actions: Foreign Secretary M. Rasgotra has conveyed to his Pakistani counterpart Niaz Naik, India's concern at Islamabad's recent actions, saying these were not conducive to improvement of relations between the two neighbours. Pakistan's tie-up with the terrorists, the arming of the hijackers of the Indian Airlines plane and its refusal to return the earlier hijackers or even to put them on trial, are glaring instances that cause only suspicion and misgiving. Rasgotra also drew Naik's attention to the manner in which Sikh extremists were allowed to indulge in "highly objectionable anti-Indian activities" at the Nankana Sahib pilgrimage.

Indo-Bangla river water talks: The Indo-Bangladesh joint rivers commission concluded its 27th meeting in New Delhi on Dec 15. It discussed the sharing of the Teesta waters, problems of embankments on rivers common to the two countries and the sharing of dry season flows of the Ganga, among other subjects. The next meeting will be in Dhaka.

Review of levy on newsprint: The Supreme Court on Dec 6 directed the government to re-examine the entire question of levy on imported newsprint and allowed as an interim measure a reduced rate of Rs 550 per tonne. The court passed the order while allowing with certain directions the writ petitions of the Indian Express Newspapers Ltd, which had challenged the levy of duty fixed at Rs 825 a tonne at present.

Fresh AASU, AAGSP demands: The AASU and the AAGSP, spearheading the movement against "foreigners" in Assam, have put forward fresh demands before the Election Commission (EC). The two bodies want their rep-

resentatives present at the time of scrutiny of electoral cards that have been filled in by prospective voters. They fear the Supreme Court directive that only citizens should fill the cards, is being violated. They also want the EC to carry out "total and extensive" scrutiny of the people living on reserved lands because most "non-citizens" live in those areas.

UK Defence Secretary's visit postponed: A visit to India by British Defence Secretary Michael Heseltine, due in February, has been postponed indefinitely at India's request. Britain's *Sunday Times* says the visit was postponed because of "India's anger at Britain's apparent refusal to curb the activities of Sikh extremists".

EVENTS—International

Hawke's party wins poll: PM Bob Hawke led his Labour Party to victory in the Australian general elections but with a reduced majority. Hawke secured an 18-seat majority in the expanded 148-seat Assembly, upsetting opinion polls which had predicted a bigger win than his 25-seat landslide win in March 1983.

NNP wins Grenada polls: The US-backed New National Party (NNP) won a landslide victory in Grenada's first general elections in eight years on Dec 4. Eleven NNP candidates won elections to the 15-member Parliament of the Caribbean nation which saw a leftist coup in 1979 and an American-led invasion last year. Herbert Blaize, the 66-year-old head of the NNP who will become PM, scored a personal triumph, receiving 1,662 votes to 147 from his nearest competitor, Lyle Bullen of the leftist Maurice Bishop Patriotic Front.

Warsaw Pact nations for reduction of N-arms: Foreign ministers of the seven Warsaw Pact nations on Dec 4 met in East Berlin and called for serious negotiations to reduce nuclear arms, saying that the "chance of a change for the better in the international situation now exists". They decided that the talks should cover the full complex of arms issues including medium range rockets based in Europe. "What is needed is a change to a policy of realism and businesslike cooperation in solving problems".

Draft treaty to outlaw torture: UN member states, including many who are accused of maltreating political prisoners unanimously joined on Dec 5 in adopting a resolution to outlaw torture. The General Assembly Social Committee approved the draft convention. The committee's action came after what US delegate Richard Schifter called "seven years of arduous negotiations". The treaty goes into force after ratification by at least 20 countries.

US assurance to UK on Star Wars: Reagan has agreed that the US will not deploy its controversial Star Wars missile defence system before holding talks with the Soviet Union. The agreement was voiced during a meeting between Reagan and British PM Margaret Thatcher at Camp David on Dec 22. Mrs Thatcher endorsed research on the Star Wars programme but reportedly stopped short of blessing its eventual deployment. Reagan also agreed that the US and the West should aim not at superiority but at a balance of forces.

No solution to Gulf war at Islamic meet: The annual meeting of foreign ministers from the 45-nation Islamic Conference Organisation

closed in Sanaa, South Yemen, on Dec 22 without progress on ending the war between Iran and Iraq. The meeting adopted a resolution calling for an end to the war, but it was dismissed by Iran's Foreign Minister Ali Akbar Velayati who said Teheran's aim was "complete victory" on the conflict. A new feature of the conference was the presence of Egypt for the first time since 1979. Egypt was suspended then for the peace treaty with Israel but it was invited back this year.

Singapore withdraws from UNESCO: Singapore has withdrawn from UNESCO, becoming the First Third World country to do so. The decision, according to Singapore's permanent representative to UNESCO, indicated neither disagreement with nor criticism of the organisation. "We're a small country and we've got priority objectives for our limited resources," he said.

US withdraws from UNESCO: The US on Dec 19 formally withdrew from UNESCO because of complaints about its Third World policies and budget. UNESCO had a year to take corrective action since the earlier US warning. But it had failed to substantially improve itself, a Washington statement said. It cited "extraneous politicisation," "endemic hostility towards the institutions of a free society, particularly those that protect a free press, free market, and above all individual human right" as UNESCO's basic faults.

Singapore PM returns to power: Singapore PM Lee Kuan Yew's People's Action Party (PAP) returned to power for another five-year term in the general elections held on Dec 22, winning 77 of the 79 seats in Parliament. The two other seats went to opposition leaders Joshua Jeyaretnam and Chiam See Tong. Lee promised to the people continued prosperity and a "glorious city of distinction in 1999".

Freedom of Namibia urged: The UN General Assembly on Dec 13 adopted a 69-point omnibus resolution 128-0 (25 abstentions), condemning "persistent attempts" by the US and South Africa to delay the independence of Namibia. US Ambassador Jeanne J. Kirkpatrick personally appealed to the Assembly's 159 members to delete specific, critical references to the US and Israel in the main resolution and in two related resolutions. But the Assembly overrode US objections to overwhelmingly adopt a total of five resolutions dealing with

WHERE VOLCANOES DARE

It is a generally accepted fact that volcanic eruption and earthquakes generally change the earth's surface. This is especially true of the Philippines and it is said that without volcanic eruptions, the Philippines would not have existed at all. For instance, the seven lakes of San Pablo were formed due to a powerful explosion, which occurred in an area of low relief some thousand years ago, known in science as 'Mar'. It created seven volcanic craters which became lakes. Similarly Lake Aligator and the Maujan Lake were formed as a result of volcanic eruptions.

The Philippines lies within the ring of fire where more than 75% of the world's 850 active volcanoes are located. It has 24 active volcanoes—12 in Luzon, seven in the Visayas and five in Mindanao.

FIECONS

CIVIL SERVICES (PRELIMINARY) EXAM: 1985

(New Personalised programme scheme: NPP)

- (I) Our commitment — 'Help those who need it' — and our experience of the last two years during which more than 95% of our candidates having secured our NPP programme scaled high in the merit list, goad us to offer the same programme to the new candidates of civil services (prelim) exams, 1985. Our experts, erudite scholars from J.N.U., I.I.T. and D.U. and in-service probationers have something more, scientifically formulated programme, to offer you. Their 'Handouts' contain subjectwise analysis of the syllabus—both optional and general studies papers, reading list and model question papers with introduction to the objective type examination. We also make available to our candidates all books mentioned in our reference list, when they enroll themselves in our programme. This service of ours aims to bridging the gap arising out of relative educational deprivation and inequality that make the elite class to dominate as successful candidates in the civil services exams. In this sense it is not a business enterprise. Secure our help writing to us for details with Rs.5/- Bank draft or postal order to the Managing Director, FIECONS.
- (II) We also supply all kinds of information and guidance both inland and abroad, regarding educational (Engineering, M.B.B.S., M.B.A., Social Sciences, Agricultural Science etc.) and employment opportunities.

FLUENCY DEVELOPMENT COURSE

■ By Post ■ In 3 months

You may be well-qualified, and good at writing in English. You may be good at translating, too. But can you **SPEAK** English fluently?

You may be a good scholar and may have a good knowledge of everything. But can you **SPEAK** in English about what you know without faltering?

- Our Course will make you break free of **hesitations and speak English with a stream-like flow.**
- Our Course will make you speak by juggling **with English-speech.**

Our learners include All India Service Officers, Judicial Officers, Commissioned Officers, Advocates, Doctors, Engineers, Executives, Businessmen, Civil Service candidates and candidates for all career competitions.

Booklet and Application Form for Rs. 3/- from :

**ADULT
FACULTIES
COUNCIL**

Hong Kong transferred to British: PM Margaret Thatcher and her Chinese counterpart Zhao Ziyang on Dec 19 signed a historic agreement transferring capitalistic Hong Kong to communist rule in 1997. The accord will end 150 years of British colonial rule in Hong Kong, the world's third largest financial centre. Thatcher said the pact removed a "shadow" that had clouded Sino-British relations.

Mauritanian President overthrown: Lt Col Mohamed Khouna Ould Haidalla, the Mauritanian Chief of State, was overthrown and a former Premier, Col Maouya Sid'ahmed Taya, assumed power on Dec 12. Haidalla was attending the 11th summit of Francophone African countries in Burundi when the coup took place. Haidalla had been President of the West coast African nation since January 1980. Mauritania is a former French colony which became independent in 1960. It has a population of about 1.5 m.

Cambridge University Press four centuries old: The year 1984 marked the 400th anniversary of the world's oldest publishing company, the Cambridge University Press. It is also 450 years since King Henry VIII granted the university its right to print.

MISCELLANY

India one of 53 'free nations': India is one of the 53 "free nations" and is rated No. 2 in respect of political rights and No. 3 in civil rights, according to Freedom House, an American organisation that monitors political and civil rights in the world. The "not free" countries includes the Soviet eastern bloc, Pakistan, China, Afghanistan, Iraq and several African nations. Freedom House said 1984 had been a good year for freedom in most countries, based on the degree to which fair and competitive elections occur, industrial and group freedoms, are guaranteed in practice and press freedom exists. Pakistan got a rating of seven for political rights and five for civil rights, while Sri Lanka and Bangladesh were designated "partly free".

DIED

John B. Higgins, 45, an internationally acclaimed singer of South Indian classical (Carnatic) music, was killed on Dec 7 in Middletown, Connecticut, after being struck by a hit-and-run driver. Higgins was named Director of the Wesleyan University's centre for the arts in 1968 after achieving prominence in India as the first known westerner to master the difficult art of singing Carnatic music.

Anoka Mehta, 73, former Union Minister and economist, on Dec 10 in New Delhi, of chronic respiratory and cardiac disease.

Vicente Aleixandre, 86, Spanish poet who won the 1977 Nobel Prize for Literature, on Dec 14 in Madrid, of intestinal haemorrhage.

Frank Spedding, the Canadian-born scientist who developed the processing of uranium for the first atomic bomb, in Ames (Iowa, USA).

Sam Peckinpah, 59, Director of movies like *The Wild Bunch* and *Straw Dogs*, who earned a reputation as an unorthodox director, for introducing a new level of violence in films, on Dec 28 in Oglewood, California.

Isaak Kiokin, 76, a prominent physician who helped develop the Soviet atom bomb, on Dec 28 in Moscow.

Marshal Dmitri Fedorovich Ustinov, 76, Soviet Defence Minister and senior member of the politburo of the Soviet Communist Party, on Dec 20, after a long illness. Ustinov was closely connected with Soviet defence affairs for almost four decades. He was overlord of the Soviet military for the last eight years.

Dharamvir, 49, Union Minister of State for Labour and Rehabilitation, on Dec 22 in New Delhi's All India Institute of Medical Sciences, where he lay in coma for 10 days following cerebral haemorrhage.

ELECTIONS '84

(Continued from page 13)

ceed in achieving the colossal mandate which her death obtained for her party.

And while establishing the undoubted supremacy and popularity of the Congress(I) the elections have also established the Opposition as a non-entity. The democracy has, at this stage, no Opposition worth the name. The magnitude of this can be measured by some rather revealing statistics. Of the 220 seats the Bharatiya Janata Party (BJP) contested for, it managed to secure only two. The Janata Party fielded 208 candidates winning only 10 seats while the same party was responsible for dislodging the ruling party from power in 1977 when it had won 281 of the 504 seats. Charan Singh's trump card, the Dalit Mazdoor Kisan Party (DMKP) did not turn out to be the ace he had expected. The only national opposition party which managed to save face to some extent was the Communist Party of India (Marxist). It managed to stem the country-wide Congress(I) tide in West Bengal though it wasn't successful in Kerala and bagged 22 seats overall. The highlight of the elections has surprisingly turned out to be the emergence of regional parties as major opposition forces. The N.T. Rama Rao-led Telegu Desam made an impressive showing bagging 28 of the 42 seats in Andhra Pradesh. But perhaps this victory can be attributed to NTR's personal charisma and loyalty he commands from the masses. Whether the party would have been able to put up a fitting battle in his absence is now a rhetorical question.

The AIADMK also did exceptionally well from Tamil Nadu. For the third consecutive time the party has won an absolute majority in the Tamil Nadu Assembly. In the Lok Sabha elections the AIADMK-Congress(I) alliance has performed the spectacular feat of winning 37 of the 38 seats. The alliance has won in every constituency it contested from, individually—the AIADMK bagging 12 seats and the Congress(I), 25. In the Assembly elections held simultaneously the AIADMK touched an all time high by securing 133 of the 232 seats. In Kashmir the Farooq Abdullah led National Conference(F) also fared better than the Congress(I) capturing 3 of the 5 seats contested; the ruling party could bag only 2.

Overall then, the Opposition's dismal eclipse from Indian politics can primarily be attributed to their futile internal squabbles and unsuccessful bids at unity, all of which boomeranged on them. The exit of the main Opposition stalwarts, prominent among them being Atal Behari Vajpayee (BJP), Ram Jethmalani (BJP), H.N. Bahuguna (DMKP), Devi Lal (DMKP), Karpuri Thakur (DMKP), has left the Opposition floundering and rudderless, rather like ships without captains or crew. Even in Karnataka, once a Janata stronghold, the Janata managed to retain only 4 seats of the 28, 23 of them going to the Congress(I). This compelled C.M. Ramakrishna Hegde to tender his resignation and he now heads a caretaker government till the commencement of the Assembly elections. It can now only be hoped, for the welfare of the Indian democracy, that the Opposition fares better next time.

Now that the verdict has been delivered categorically and comprehensively in favour of Rajiv Gandhi and Congress(I) it is upto them to live up to the expectations of the people and rise up to the challenges and tasks ahead. Success should not go to their heads and laxity should not be allowed to seep into the ranks. For, the mere winning of elections is not sufficient. What is needed is evidence to prove their credibility and capability for future times to come. The Indian masses have time and again demonstrated that those who do not come up to their expectations are not given another chance to make amends as was evident both in 1977 and 1980. If the new government provides the stability, unity and security the people are so desirous of, it will add to its popularity, and if not then it will be voted out of office without the slightest hesitation. And while going about its tasks the government should give due thought to the economy as well and convert it from a scarce to a surplus economy—a stable economy, being a pre-requisite for future growth and development. The Opposition should also learn its lessons from its numerous mistakes and make amends. For, the Opposition is as important to a democracy—an inherent safety valve and corrective instrument which prevents the ruling party from becoming too powerful to commit follies and get away scot free. The need of the hour is a strong, efficient Centre and a substantial Opposition as well. The country has been handed over. It can only be hoped that it is in capable hands.

SPORTS

ATHLETICS

Asha Aggarwal, the best long-distance runner from India among women, finished third at the Singapore Marathon on Dec 9, clocking 2:45:40.0. The second-placed Evy Palm (Sweden) also clocked the same time but just managed to pip Asha at the tape. Christie Jakobson of Denmark was the winner. Among the men, Tommy Persson (Sweden) beat the 10,000 strong field to win, ahead of two Belgians, Jose Revigin and J. Gremont.

BADMINTON

The Pro-Kennex Grand Prix finals ended in Kuala Lumpur on Dec 16. This tournament is held as the grand finale after a series of about 16 tournaments held during the year in which points are awarded. The top 12 men and top eight women participate, divided into four groups of three and two groups of four, respectively. The men's final was deservedly won by Morten Frost Hansen of Denmark, who knocked out Liem Swie King of Indonesia 15-5, 15-4. The women's final as expected was won by Han Ai-Ping of China who defeated Ivanha Lie-Ing Hoa of Indonesia 11-3, 11-2.

BOXING

The 31st National Championships held in Calcutta, on Dec 16 were dominated by the Services as they won 10 of the 12 titles.

Results:

Light-fly: Lok Bahadur Gurung b D. Gurumurthy (Steels); **Fly:** G. Kamble b H. Mahida (Rlys); **Bantam:** C. Shanmugham b P. Subramani (Rlys); **Feather:** S. Nityanandan b S. Choudhary (Haryana); **Light:** M. Xavier b D. Mathivanan (Rlys); **Light-welter:** S. Jayaram b Jawahar Ali (Rlys); **Welter:** Gopal Dewang b S. Gupta (Rlys); **Light-middle:** M.P. Singh b A. Khan (Rlys); **Middle:** K. Satyanarayana b R. Bhardwaj (Rlys); **Light-heavy:** Palwinder Singh (Rlys) b C. Gurung (Ser); **Heavy:** Mukhtiar Singh b P.C. Bhaskar Sen (Rlys); **Super-heavy:** Jaipal Singh (Punjab) b N.B. Thapa (Ser).

S. Nityanandan was adjudged 'best boxer'.

CHESS

At the World Chess Olympiad, USSR won both the men's and women's sections easily. After the 14th and final round at Salonika (Greece) on Dec 5, in the men's section, England won the silver medal by defeating Philippines, while USA had to be content with the bronze, as they could not beat Bulgaria. In the women's section, Bulgaria took the second position and Romania the third. Indian men came a miserable 33rd and the women 15th.

CRICKET

The wheel turned full circle, when, on Dec 3, India won the First Test against England at Bombay, by eight wickets. The last occasion when India won a Test match was in the 1981-82 season at the same venue against the same team. The hero this time was a young 18-year-old Laxman Sivaramakrishnan, who bagged six wickets in each innings. The final scores:

England (1st innings)—195, India (465 for 8 dec); England (2nd innings)—317, India (51 for 2). Thus India won after three years and 31 Tests of wilderness. The 235-run partnership between Ravi Shastri and Syed Kirmani eclipsed India's seventh-wicket stand against all countries. The earlier record was 186 runs between Eknath Solkar and Dilip Sardesai against West Indies at Bridgetown in 1971.

★ ★ ★

The first one-day international between India and England at Pune on Dec 5 ended in victory for the men from 'Old Blighty' by four wickets.

★ ★ ★

West Indies beat the Aussies in the Third Test in Adelaide on Dec 11 by 191 runs. Thus the five-Test series is already with the Windies, who having won the first two Tests have secured their first-ever series win on Australian soil. But in the Fifth Test in Sydney on Jan 3, West Indies suffered their first cricket defeat in 28 Tests when they went down by an innings and 55 runs to a rejuvenated Australian team.

It was a sad ending for skipper Clive Lloyd, playing his last Test, after leading the West Indies in over 100 Test matches. He was given a standing ovation by the Sydney crowd after scoring a defiant 72 runs in an attempt to stave off defeat on a crumbling wicket.

★ ★ ★

The Third and final Test between New Zealand and Pakistan ended in a draw in Karachi on Dec 15. With this draw, Pakistan have won the series 2-0. Stephen Bock (New Zealand) and Iqbal Qasim (Pakistan) were voted 'Men of the Series'.

In a Test match of fluctuating fortunes, the Second Test at Ferozshah Kotla in New Delhi ended on Dec 17, in an eight-wicket win for

Henrik Sundstrom (above): Upsetting McEnroe? Stefan Edberg: Dramatic doubles display at Goteborg, Sweden, in Davis Cup final.

England.

With a first innings arrears of 111 runs, India started its second innings cautiously and were safely placed at 128 for 2, going into the final day. They, however, succumbed for 235. England, left to score 125 runs in 60 minutes and 20 mandatory overs, accomplished the task with eight overs to spare.

This sensational twist in the turn of events levelled the series one-all with three more to play. And even more sensational was the announcement by the selectors after the match that Kapil Dev, India's ex-captain and one of the best all-rounders in the world, had been dropped from the team for "indiscipline"—ostensibly for the "rash stroke" he played to get out at a crucial stage in the match. Later, the Board of Control for Cricket in India (BCCI), pointed out that only the BCCI could censure players for indiscipline, and that it was beyond the jurisdiction of the selection committee. Sure enough, the selectors withdrew their statement and said that Kapil was dropped on "cricketing grounds". But, the man who seems to be behind this sorry state of affairs, captain Sunil Gavaskar, is keeping his customary "no comment" face. He is reported to have said, "I don't want Kapil."

FOOTBALL

The Asian Cup for football was won by Saudi Arabia when they defeated China 2-0 in the final at Singapore on Dec 16. Shaye Al-Nafisah scored in the 11th minute to give the Saudis the

new Captain Majed Mohammed scored with a brilliant shot. Defending champions Kuwait beat Iran 5-4 on a penalty-kick shoot-out, after a 1-1 draw, to finish third.

★ ★ ★

The Liaoning Football Club of China made their DCM Trophy debut a memorable one by winning the cup with a deserving one-nil victory over the Soccer Federation of Western Australia, in the final at Ambedkar Stadium in New Delhi on Dec 21.

HOCKEY

The Jawaharlal Nehru Tournament in New Delhi was won by the crack Indian Airlines (IA) team, when they defeated Border Security Force (BSF) by three goals to two in the final on Dec 11.

The start of the match was electric, as only in the third minute, Virender Bahadur (IA) entangled his stick with Bhengra's (BSF) in the 'D' and Kuljit converted the resultant penalty stroke to give BSF the lead. This was maintained till the 19th minute, when Vineet Kumar Sharma converted the second penalty corner to come the Airlines way. Only nine minutes later Merwyn Fernandes converted a penalty stroke to give IA the lead into the second half. The celebrated forward line of IA—Gurcharan, Tikken, Mohd. Naeem, Fernandes and Zafar Iqbal—now came into its own, and had it not been for Tajinder Singh of BSF, the scoreline would have read like a tennis score. In the 46th minute, Sharma did not take a direct hit off a penalty corner, but passed to Gurcharan in the centre, who in turn tapped to Tikken waiting unmarked on the right, who made no mistake. BSF got a consolation goal, as Baldev Singh scored off a penalty corner, two minutes before the end.

★ ★ ★

The Sixth Champions Trophy Tournament ended in Karachi on Dec 14 in victory for the defending champions Australia, despite the fact that five of their stalwarts, including Rick Charlesworth, were not in the team.

It was a six-nation tournament played on league basis, with the last match between hosts Pakistan and Australia being as good as the final. The World and Olympic Champions were absolutely off-colour, they just could not combine and the young Aussies played to a plan, with quick passing. They took an early lead as Warren Birmingham, who was unmarked, received a quick pass from Terry Walsh, and scored. The winning goal of the 2-0 win was scored when Michael Nobbs took the penalty corner hit in place of the usual Craig Davis, and cleanly deflected towards Nigel Patmore who put the ball in the back of the net, from point blank distance.

The '81 and '82 champions, Holland finished fourth here, as Great Britain, the surprise team of 1984, beat them 3-1 to finish third. New Zealand finished fifth and Spain took the wooden spoon. India and W. Germany did not participate. Perth in Australia will be the venue for the 1985 tournament to be held in November.

TABLE TENNIS

The Asian Cup Championship ended in New Delhi on Dec 23 with China winning the finals in both the sections. The results:

Men: Pui Jant's Ch. Zhen Hui 21-18, 19-21, 21-12, 21-18.

Women: Tong Ling b Ni Xialian 19-21, 21-12, 21-15, 21-15.

The top-seeded Indians were Kamlesh Mehta (10th) and Indu Puri (5th) in the two sections.

TENNIS

The 1984 Davis Cup final between the US and Sweden, which began on Dec 17 at Goteborg in Sweden, turned out to be a classic final with five of the top seven in the world on display.

Mats Wilander (Sweden), playing brilliantly, outclassed Jimmy Connors 6-1, 6-3, 6-3 in the opening encounter. In the second match of the rubber, Henrik Sundstrom created a major upset as he knocked the wind out of the world No. 1 John McEnroe, winning 13-11, 6-4, 6-3.

In the doubles, Stefan Edberg and Anders Jarryd defeated McEnroe and Peter Fleming 7-5, 5-7, 6-2, 7-5.

McEnroe was able to regain lost pride as he defeated Wilander 6-3, 5-7, 6-3 in the first reverse singles. But Sundstrom made the tie 4-1 as he beat Jimmy Arias 3-6, 8-6, 6-3.

AWARDS

The sports writers of the Associated Press in Europe voted for the Best Sportsman and Sportswoman of the year 1984 and for the second year running Carl Lewis and Martina Navratilova emerged as winners.

SANJEEV GUPTA

Michael Ferreira: Championship hat-tricked at Bangalore billiards

INDIAN SPORTS '84

HIGHS AND LOWS

Snooker: Om Agarwal beat Terry Parson in the final of the World Amateur Snooker Tournament in Dublin to win the World Amateur Snooker Title. This was the first time in almost a quarter of a century that the trophy, donated by India, had been spirited away from the British Isles.

Billiards: Michael Ferreira is the reigning and three times World Billiards Champion.

Tennis: Ramesh Krishnan moved upto 23rd place on the Association of Tennis Professionals computer ranking. Vijay Amritraj too returned near the top 20 after a long time. India lost the Davis Cup encounter to France in New Delhi before the first ball was served. Vijay being unfit did not play.

Badminton: Indian ace Prakash Padukone lingered amongst the top 10 but injuries kept him away from the top-three bracket. India organised the zonal Thomas and Uber cups but once again performed well below expectations.

Cricket: India changed their cricket captain from Kapil Dev to Sunil Gavaskar on account of the former being unfit for the Asia Cup match at Sharjah, UAE. Gavaskar emerged victorious and returned to lead the team for the five one-day internationals against Australia and the tour of Pakistan. India suffered defeat in three of the five one-day internationals while two were abandoned. The Indians managed to draw two Tests in Pakistan though they were outplayed and lost a one-day international while the other was abandoned. At home, India won their First Test against England, but lost the one-day international and the Second Test. This led to Kapil Dev and Sandip Patil being axed from the squad.

1984 Olympics, Los Angeles: India's hurdle queen P.T. Usha faced a major hurdle with the clock when she learnt that she had lost the bronze medal by 1/100th of a second. The Indian hockey team, gold medal winners of the 1980 Moscow Games, finished fifth and failed to enter the semi-finals. The wrestling and shooting squads were neck deep in controversy and accordingly their performance suffered. The marksmen put up the worst ever show by Indian sportsmen in the Olympics. A weightlifter had to be packed home as he was found to be over weight.

South Asian Games, Kathmandu: The South Asian Games in Kathmandu which cost Nepal \$4.4m to host, came as a quick reverse for the flop at Los Angeles. Indian swimmers—Bula Chowdhry, Wilson Cherian, Anita Sood, Persis Madan and Khajan Singh struck gold. Khajan Singh won eight of the 22 gold medals. Indian boxers, athletes and weight-lifters also did well against moderate opposition.

Football: The Nehru Cup was won by Poland with one-to-nil victory over China in the final. The Asian Cup was won by Saudi Arabia who shocked China in Singapore. India scored a fine two goals-to-one-victory over Malaysia and made a trip to Singapore where a "betting plot" was unearthed against China. Despite the brilliant goal-keeping of Atanu Bhattacharya, which saw India hold Iran to a draw, India never had a chance of qualifying for the semi-finals.

PARSHANATH CHATTERJEE

NORTH-SOUTH DIALOGUE

BY J. V. ARUN KUMAR

C.S. Pandit, Special Correspondent, *Amrita Bazar Patrika* spoke on the 'North-South Dialogue' at the CCTimes lecture series held recently in Kirori Mal College, Delhi. A summing up:

The North-South Dialogue represents the problems of countries like India, in a world dominated by a handful of rich countries endeavouring to corner benefits of all kinds and going from strength to strength. It is a forum that provides an opportunity for poor countries to be assertive and make demands in order to alleviate their miseries.

A beginning in this direction was made immediately after World War II, when the reconstruction of the war-shattered economies was aided by the "only unaffected country"—the United States. The aid, under the 'Marshall Plan', enabled the affected countries to speed up their rebuilding operations. As a result, today, these countries have become rich, dominating the world scene and dictating their terms to the underdeveloped world. A new neo-colonialism is thus emerging, crushing the Third World countries and the newly independent countries in Asia and Africa. It is now evident that political freedom is meaningless without real economic power.

The terms 'North' and 'South' are not precise in terms of geographical classification. In fact the forum has been christened North-South dialogue mainly to reflect the peculiar trade relationship between countries where North and South are broadly synonymous with advanced capitalist countries and developing countries, respectively. There is a set of countries, forming the South which specialise in producing raw materials; the other set of countries, the North, buy these raw materials cheap, and sell the final products to the South, at very high rates. The South thus receives low prices for their export of raw materials, whereas the final export products are made available to them at exorbitant rates, creating enormous trade problems. The North-South dialogue is an attempt to reduce the miseries of the South by helping them to negotiate with the North to relent and help them.

It was the oil crunch of the '70s which shook the rich nations and made them bow to the combined strength of the Gulf. The latter formed a cartel, the OPEC and demonstrated how they could get a better price for oil, and turn the terms of trade in their favour. This can be considered as the

beginning of the New International Economic Order (NIEO), which meant judicious, equitable and a just economic order—all vaguely defined.

This injection of prosperity in the countries relying on exports was short-lived. The inner capacities of these economies could not be developed and economic development could not be sustained as they failed to develop an indigenous base for science and technology. At a time when prospects of aid are falling, the Third World countries have to develop perforce, a strong technological base. This becomes all the more important because the poor countries are unable to borrow from the market to promote development.

The idea of the North-South dialogue germinated with the coming up of the UN and its subsidiary agencies. The entire UN, however, is concerned more with the problems of the rich, to the detriment of the Third World countries. Even ECOSOC, a subsidiary agency of the UN, is making more efforts to deal with the problems of the rich nations of the West. ECOSOC deals with esoteric concepts like human rights when millions of people in Asia and Africa are starving and leading a miserable existence. Thus the feeling of being ignored by a world agency like the UN led to the demand for a forum to discuss the trade and development problems of the poor.

The United Nations Conference on Trade and Development (UNCTAD) can be called the beginning of the North-South dialogue. At the first UNCTAD meet, there was an open confrontation between the underdeveloped countries and the rich nations. The conference, of course, provided an opportunity to the "poor" to assess their combined strength and articulate their demands.

At their second conference in 1971, the entire question of percentages of aid to the developing countries was discussed and the principle of general preferential system initiated. The salient feature of UNCTAD-III was the focus on monetary reforms. The "poor" once again reached an agreement on this point and demanded monetary reforms. Their problems emanated from the fact that their raw materials were going cheap but their purchase of goods entailed heavy payments. The high interest rates prevailing in the open market prevented them from obtaining loans and hence the high dependence on aid from the UN. The demand for monetary reforms came up in the wake of

violent fluctuation of our exchange rates, leading to devaluation, or upvaluing of currencies. The instability of the Third World currencies made them more vulnerable to the rich.

The oil crisis made the rich nations wiser and it became quite evident that by forming cartels, the "poor" can bargain better for their raw materials. This realisation was the basis of a suggestion for the creation of a 'buffer' which could prevent fluctuations in prices of products of the Third World. This was, in fact, the theme of UNCTAD-IV. But a conspicuous exclusion from this 'buffer' suggestion was oil, which meant that the rich countries were keen to get benefits from the oil glut in the market in terms of crash in prices, as it suited them.

The treaty for the creation of the 'buffer' was to be ratified by 90 countries of the group. However, the treaty remains ineffective by and large, and the Third World countries' products are still facing wide price fluctuations. In 1976, once again, global negotiations were started in right earnest but the concept remained vague.

The Cancun Summit at Mexico, promised much for global negotiations but failed to attain much.

Later, monetary institutions like the International Monetary Fund (IMF) and the World Bank tightened the screw on loans. With aid prospects remaining dim and commercial markets almost inaccessible, owing to high interest rates, the Third World is in a quandary. The Group of 77, the economic wing of the non-aligned nations, views these developments as attempts by rich nations to increase the number of conforming countries due to the pressures such a move entails. The countries which toe their line receive maximum benefits in terms of aid, military assistance etc. Thus, the instrument which can promote economic development in poor countries is being utilised for pressuring the countries at the political level.

Under such circumstances, the Third World countries are pressing for monetary and financial reforms. The NAM summit in New Delhi agreed on the need for an international conference on money and finance, with proper representation from all over the world. Interestingly, the Soviet bloc countries, presently, do not have any role in these institutions.

The pressure further mounted on the Third World countries, with recession in the West and the subsequent "protective walls" hampering trade prospects for the poor. To get over this problem, the concept of South-South cooperation is being promoted but is still on a very low key. The future is not very promising for the North-South dialogue and it seems quite obvious that only those countries which will be subservient to rich nations will come all assistance from the western countries. ■

Evaluating The US Dollar

BY K.N. PANDY

The soaring value of the American dollar has baffled monetary theorists all over the world and has generated intense controversy in the US itself. In terms of the major currencies of America's other trading partners, the dollar is over-valued by about 34%. Indian currency has depreciated from Rs 8.75 per dollar to Rs 12.01 per dollar, a drop of about 45%. That the dollar is the most sought after acceptable currency can be seen by the fact that the businessmen in England and France want all payments to be made in dollars and are shying away from their own currencies.

The US is running record trade deficits: \$36b in 1982, nearly twice as much in 1983 (\$65b), and as much as \$110b projected for 1984. Under such circumstances the US dollar should have fallen in value so as to restore the balance in merchandise trade. However, instead of weakening, the dollar is gaining strength day by day. This is a unique phenomenon in the world of monetary economics.

The fixed exchange rate system, established at Bretton Woods in 1948, came to an end in 1973. Dollar convertibility was suspended. Freed from its moorings to gold, the dollar see-sawed for a few years, mainly in the downward direction. But, especially in the last five years, it has steadily moved up in relation to all other currencies.

Some economists attribute the upward swing to the "dirty float" system now in operation, which ensures two things—first, changes in economic variables in one part of the world will have repercussions, via trade and capital movements, on the rest of the world and second, importers and exporters will have to pay greater attention to movements of currencies in determining their trade and investment decisions.

It is in this setting that countries, especially of the European Economic Community (EEC), are crying, almost in one chorus, for an end to the high priced dollar sustained by a massive inflow of capital induced by very high interest rates. The culprit, it is claimed, is the US, which, with its high interest rates and budget deficits, is causing serious problems not merely to Third World countries but also to the developed countries.

According to the conventional economic theory a high balance of payments deficit implies an over-valued

currency. Massive deficits should have weakened the dollar leading to its collapse. But this has not happened. Instead the US economy is booming as never before.

This is based on the inter-relationship between the budget deficit and high interest rates. Unwilling to finance the deficit (by allowing money supply to increase) the Federal Reserve has raised interest rates. The high rates have in turn led to an inflow of international portfolio capital and reduced outflow from the US. This surplus on capital account is what is sustaining the current account deficit—in essence President Ronald Reagan is financing his annual military budget of \$200b by borrowing from other countries.

Conventional economic theory fails on another account. According to it, an increase in government expenditure financed by borrowing will lead to a rise in interest rates and a "crowding out" of private investment; producers would shelve some projects while consumers would reduce purchase of durables which are bought mainly on credit. The fact is that economic theory has always neglected the income distribution effects of an increase in interest rates. The 2% increase in interest rates in the US has led to a \$24b increase in consumer savings held in the so-called "money market" funds.

Intense competition for funds among banks has led to consumers getting higher returns on their savings, a development which has been facilitated by the relaxation of certain rules. The end result has been, increased consumer expenditure which further strengthens the dollar. Firms too have benefited. The generous fiscal incentives for investment enacted in the 1981 Tax

Act have offset rising interest costs.

Finally, withholding tax requirements for foreign investments has resulted in the net real return on investment in the US being among the highest in the world. Hence, there has been sustained inflow of capital from overseas markets to the US. Not surprisingly, foreign investment has increased from \$4.6b in 1979 to \$26b in 1984.

This has led to the very high real rates of return on US corporate capital. If one compares the present US inflation rate of about 5% with 11% to 10% in Europe, the real return in the US today would be highest in the world. Given the weaknesses of other developed economies (barring Japan) this picture is unlikely to change in a hurry.

One most unfortunate side-effect of the strong dollar is the increased protection it has fostered in the US, leading to an overall reduction in world trade. A strong dollar implies reduced American exports and increased imports. The latter leads to demand by American producers for import restrictions. The US is a major market for exports from developing countries, and protectionism there, would create import and debt repayment problems for developing countries.

The principal avenue by which a rising dollar can affect Indian economy adversely is by an increase in import prices. This is especially important in the context of the current policy of import liberalisation which has as its objective the import of new technology, machinery and vegetable oils. If planned well, the ascending dollar cannot much affect such transactions. It is thus, too much to say that project costs are severely affected by the changing value of the dollar.

On the other hand, the export effort has received a tremendous fillip in recent years. The steep decline in their dollar value has made Indian exports highly competitive in world markets. Thus, exports of readymade garments increased by 21% during 1983-84. Thanks to the soaring dollar, our balance of trade with the US has moved in surplus. India has more to gain through increased exports than to lose from the rising dollar. Her external debt burden unlike many developing countries is not difficult to service. It may thus not be too much to say that the booming dollar has been a blessing in disguise for India. ■

SENSING REMOTELY

The first remote sensing satellite is expected to be launched by Europe in 1989. The E 325m project will provide global wind and wave information to offshore industries, shipping and those involved in oceanographic, fishing and other maritime operations. It will complement the US Landsat satellites which have been observing the earth and supplying data and pictures since 1972 including information about crop production, availability of water and location of minerals. Thirteen member states of the European Space Agency are expected to be involved in the project.

JIPMER PG Course

Jawaharlal Institute of Postgraduate Medical Education and Research (JIPMER) invites applications on prescribed forms for admission to the post-graduate degree and diploma course for the session commencing from April 1985, under the University of Madras.

Application forms and prospectus pertaining to the eligibility requirements can be had from the office of the Director, JIPMER, Pondicherry-605 006 on payment of Rs 3 by money order.

The last date for receipt of filled in application forms is 1.2.85. For further details, see *Employment News* dated 29.12.84.

Master Of Computer Applications Course

The Department of Computer Science University of Delhi will conduct a three-year postgraduate degree course in Master of Computer Applications (MCA). The admission test will be conducted

on 17.2.85. Minimum qualifications: bachelor's or master's degree in Science, Engineering, Mathematics, Statistics, Economics or Commerce. Age limit: 20 years before 1.10.85.

Application forms may be obtained by post on payment of Rs 3 by crossed IPO, payable to the Registrar, University of Delhi, Delhi, along with a self-addressed stamped envelope (10"x7") affixed with Rs 1.30 postage stamps. Last date for receipt of completed application forms is 31.1.85.

Direct Entry Artificer, Indian Navy

Here is a chance for you to join the Indian Navy as a Direct Entry Artificer, if you are an unmarried male citizen of India, born between 16.3.63 and 15.3.67, and possess a diploma in Mechanical, Aeronautical, Electrical, Radio Engineering, Internal Combustion Engineering, Electronics, Telecommunications or Instrumentation

Engineering from institutes recognised by the Government of India for recruitment to subordinate services.

For application forms and other details see *Employment News* dated 5.1.85.

Sub-Inspector (Executive), CISF

Applications are invited from male Indian citizens for the posts of Sub-Inspector (Executive) in the Central Industrial Security Force (CISF).

Educational qualifications: a bachelor's degree of a recognised university. Proficiency in games, sports and athletics and membership of National Cadet Corps desirable. Age limit: not below 19 years and above 25 as on 1.1.85.

Selection will consist of physical efficiency tests; those who qualify in this will have to appear in a written test consisting of a paper in General Knowledge and Essay Writing. For the format of the application, see *Employment News* dated 5.1.85. The last date for receipt of applications is 9.2.85. ■

Answers to TEST YOUR WORD POWER

- acid:** B: deeply or violently bitter, sharp, acrimonious. Hindu-Muslim marriages have provoked acid passion and communal antagonism in the past and still do.
- aquatic:** B: living in or near water, as fish, whales, ducks, etc. Water pollution severely affects aquatic life.
- asylum:** C: protection from persecution, given especially to political refugees by a nation; place of refuge or safety. We in India are not so naive as not to know that Britain is a free society and that it values its tradition of providing asylum to political refugees.
- auspices:** A: patronage; helped and favoured by. The International Conference on the Reagan Administration's Foreign Policy was convened in Brussels from Sep 28-30, 1984 under the auspices of the International Progress Organisation.
- cinders:** C: ashes; remains of burnt coal. Each super-power has, over the years, accumulated sufficient nuclear weapons to reduce the other to cinders.
- emblem:** A: symbol, device that represents something, e.g., a dove's badge. For centuries an inspiration to poets and artists, the Japanese crane has so captured the imagination of the Japanese people that, with the sun and chrysanthemum, it has become a national emblem.
- founder:** A: to stumble, fall; collapse. The new Labour Government of David Lange is trying to throw a life-line to an economy that foundered during the nine-year tenure of the previous Prime Minister, Sir Robert Muldoon of the National Party.
- gourmet:** C: person expert in the choice of wine and food. Gourmets are very particular about food and wine.
- halcyon:** D: prosperous; affluent; golden; calm and peaceful; joyful. The value of world trade is growing in real terms in the industrialised countries for the first time since the halcyon days of the 1970s.
- hooch:** C: alcoholic liquor, especially when inferior or illicitly made. The latest craze in Japanese bars is a hooch (shochu) which looks like petrol, is made from barley and is mixed with lemon soda.
- lethal:** B: deadly; causing death. The discovery that people exposed to cowpox gained immunity to human smallpox led to the first vaccine against a lethal disease.
- mystic:** B: one who seeks direct communication or union with God by self-surrender. Founded by a 15th century mystic, Nanak, as a monotheistic blend of Hinduism and Islam, Sikhism emphasises morality and good deeds.
- penal:** C: connected with punishment. The penal code includes harsh punishment for kidnapping.
- propagate:** A: to spread from person to person, as a doctrine or belief. When the Sikh extremists are in Britain, it is London's obligation to ensure that they do not propagate, finance and assist terrorism.
- pupil:** B: person being taught; student. By 1947, when the country finally won independence, Gandhi had hand-picked his superstar pupil, Jawaharlal, to become the nation's first Prime Minister.
- retinue:** B: group of persons attending a person of rank. Reagan aides estimated that it cost an extra \$20,000 to \$40,000 a night just to house the presidential retinue for the Reagan campaign.
- rigours:** D: severe conditions; harshness; strictness. Britain's businessmen, never fully converted to the rigours of Mrs Thatcher's economic regime, are beginning to grumble more audibly.
- trickle:** D: weak or thin flow. The flow of labour between countries is a trickle when measured against the flood of people who leave their villages to seek a living in the cities.
- yarn:** B: story; a narrative of adventures, especially a tall tale; also fibres which have been spun for knitting, weaving, etc. A World War III yarn (in which the American heartland is invaded by Russian, Cuban and Nicaraguan forces), *Red Dawn* is the most controversial and vilified Hollywood film of 1984.
- yield:** A: to produce; give forth. Even if another hectare was never cultivated in Africa, its fertile soil is capable of producing about 10 times what it yields today.

Vocabulary Ratings:

20-18 correct	exceptional
17-15 correct	excellent
14-12 correct	good

CCTimes Symposium

Religion And Politics In India

BY SANJUKTA BANERJEE

A symposium, jointly sponsored by the Student's Union of Gargi College, Delhi University and the Career & Competition Times was held on Dec 20 at Gargi College. The topic for discussion is of current interest to everybody, especially the student body, if one can go by the audience turn-out and participation. An attempt was made to thrash out the underlying aspects of 'Religion and Politics in India'. The speakers were Dr C.P. Bhambhri, Dean, School of Social Science, Jawaharlal Nehru University, Khuswant Singh, journalist, Dr Mushir ul Hasan, Professor of History, Jamia Milia University and Dr Ashwani K. Ray, Chairman, Centre for Political Studies, Jawaharlal Nehru University.

TOI Executive Director, Ramesh Chandra inaugurates as the three main speakers (left to right) Dr Ashwani Ray, Dr Mushir ul Hasan and Khuswant Singh look on.

politics, and second, which social group is using religion for what purpose? About the progressive role of religion in politics, Dr Ray said it plays an important part in liberating capitalism from clerical orthodoxy. It was in this way that Mao used Confucianism in China and Khomeini used Islam against the Shah. But, the retrogressive aspect is more pertinent e.g. the use of Islam by President Zia of Pakistan and of Islamic fundamentalism by Khomeini now. However, Dr Ray added that the nexus itself was neither progressive nor retrogressive.

The Executive Director of the Times of India Group of Publications, Ramesh Chandra, set the mood for the symposium with his opening remarks. Drawing on history, he said that when Aurangzeb made a statement that Islam was the only pure religion, Guru Tegh Bahadur said that all religions are pure, and what matters are noble deeds. Ramesh Chandra added that basically there were no problems; these arose only when there was a violation of the Constitution.

The symposium began with Dr Ashwani Ray, making some interesting comments on the place of religion in politics. He said, the nexus of religion and politics was a social reality at any point of time, and society was never really given a choice about deciding on this nexus. The goal of politics is accumulation of power and the means of achieving it, is religion. There is, therefore, a symbiotic relationship between the two having both progressive and retrogressive potentials. The potential, itself, depends on two important questions: first, which is the primary force, religion or

About communal violence, he said that the erosion of moral and political legitimacy of any government leads to social and political violence and this, in a plural society, means communal violence. In fact, he felt that communal violence is closely related to the general level of social violence and where the level of conflict resolution (like the police and the bureaucracy) was weak, violence tended to increase. In the final analysis, conflict could be resolved only in a revolutionary situation which would provide the motivation for economic development and social transformation, and lead to the establishment of the primacy of politics over religion and all other social forces. In the short run, however, this kind of revolutionary solution is not possible; therefore the alternative was to give serious thought to the instruments of conflict resolution: the police, the judiciary, the press, the bureaucracy, etc which were equally significant in a democratic structure.

Khuswant Singh took a two-pronged approach to the problem, and he said that religion depended on three different kinds of

relationships: of man to his maker and destroyer, of man to his fellow human being and of man to himself. He expressed the view that there has been erosion in all three spheres, but more so in the first two. Scientists have tried to give the answers to questions like how the world began and what the future holds for us, and thus have interfered in man's relationship to God, which earlier was a total mystery. Law has taken over the second sphere, by specifying how man should deal with his fellow human beings. The third is the only sphere of religious practice now. Singh drew a line of distinction between the two bodies of religion, the Hebraic and the Hindu, and said that while the followers of the first (Christians, Muslims, Jews) emphasised man's relationship with his fellow beings, the second stressed his relationship to himself.

Coming to the Sikhs, Singh stated that like the other religions of the Hindu family, its concern was not with doing *seva*. It took its theology from *Bhakti* and emphasised that salvation lay in the repetition of the *naam* for which reason it has also been called the *naam marg*. He said that the 'Khalsa Panth' which came later also did not emphasise man's relationship with other men. The five 'K's' of Sikhism had nothing to do with other men. The *rahat*—the code of conduct—too, was entirely personal. The only exception was the rule which stated that in warfare, Sikhs should not touch Muslim women, and this too was basically a moral and personal code. He further stated that a good Sikh was one who said his prayers regularly and went to gurdwaras. If a Sikh cheated, he was not considered a bad Sikh, but if he clipped his beard, he was certainly not a good Sikh.

According to him, the present change in Sikh religion has come about as a result of the divorce between ethical values and the practice of religion. The Bhindranwale phenomenon is the logical conclusion of this divorce between ethics and morality. Giving a very personal view, he stated that fundamentalism has taken root in Punjab only recently. To this end, entire cities and roads were renamed.

On politics, Khuswant Singh said that it was a system of administration only. Religion was a personal affair, and politicians had no right to display religiosity publicly. India, he said, was a secular state. This meant a respect for all religions and a clear cut distinction between the church and the state. The problem has arisen today because there is no such distinction. In a secular society, the state has no right to propagate religion, but the Indian governmental machinery inadvertently does so, by broadcasting religious music, etc, over its communication media. Finally, he added that the state should not patronise any institution that brainwashed children

(Continued on page 66)

BETTER ENGLISH

BASICS OF ENGLISH-2

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

So far we have been discussing the grammar of the simple sentence. It is a basic type of sentence which is always a statement, affirmative, active, and which has only one main verb. In addition it has a fixed word order according to which the elements are arranged in the following sequences:

Subject—Verb—Object—Complement—
S V O C

Adverbial

A

For proficient use of a language, however, one has to go beyond the simple sentence types. This is not a difficult thing to do because all non-simple or non-basic sentences are merely transformations of the basic types. All that, therefore, one has to do is to learn the ways of transforming basic into non-basic types of sentences.

We are first going to take up the most important transformations.

Statement into Question

For learning question transformation the knowledge of the following special verbs is important: *is, am, are, was, were, do, does, did, have, has, had, shall, should, will, would, can, could, may, might, must, dare (to), need (to), ought (to), used (to)*.

There are two main types of questions: *Wh*-questions (those which begin with words like *when, where, which, who, how*) and *yes-no* questions (those which can be answered either by saying *yes* or *no*).

The special verbs listed above are used for forming *Yes-No* questions. The word order of such a question requires that the special verb be placed first, followed by the subject and everything else afterwards:

Are you going to Delhi?

May we go now?

Has she written to you?

Do children dream like adults?

In the case of *Wh*-questions the *Wh*-word comes first. It is followed by the verb (the auxiliary verb, if there is one, comes first) and then by the subject. The subject-verb inversion is necessary in *Wh*-questions, except when the *Wh*-word itself is the subject:

Who broke the glass? (No inversion)

There is inversion in all other cases:

Which doors have you painted?

When will she return?

How did you do it?

Tag Questions

These are questions added to the end of a statement. They ask for confirmation of the

truth of the statement. If the statement is positive, the answer expected is 'Yes'. It is 'No' if the statement is negative.

The rules are usually observed in forming tag questions:

1. If the statement is positive, the tag question is negative, and vice versa.
2. If any one of the 24 special verbs occurs in the statement, it is repeated in the tag question. Otherwise, *do/does* or *did* is used.

Here are a few examples:

They were quarrelling, weren't they?

She teaches English, doesn't she?

They sold the house, didn't they?

He shouldn't sleep, should he?

They could not answer your question, could they?

It is becoming intolerable, isn't it?

He will come, won't he?

Affirmative into Negative

If the affirmative sentence has any one of the 24 special verbs, the negative is formed merely by the addition of *not* after the special verb:

They might refuse to answer.

They might not refuse to answer.

He will issue a public statement.

He will not issue a public statement.

We ought to help beggars.

We ought not to help beggars.

In the case of sentences having other than these special verbs *do/does* or *did* is used before *not*:

The police rescued the girl.

The police did not rescue the girl.

They like pop music.

They do not like pop music.

She teaches history.

She does not teach history.

Active into Passive

The structure of an active sentence is:

NP₁ + V + NP₂ (NP = Noun Phrase; V = Verb)

The passive sentence has the following structure:

NP₂ + *be* + V *en* + *by* + NP₁

(*be* = the proper form of 'be', i.e. being, is, am, are, was, were; *en* = the past participle form of the verb)

Here is an example:

She wrote a letter (Active)

NP₁ V NP₂

A letter was written by her (Passive)

NP₂ *be* V *en* NP₁

The following points must be noted:

(a) In the passive construction NP₁ takes up the object position and therefore it must take the object form (*he, she, I, we, they* become *him, her, me, us*,

(b) The tense and number of the *be* form in the passive are decided according to the tense of the verb and the number of NP₂ in the active sentence.

Unless the mention of the agent represented by NP₁ is necessary, the 'by + NP₁' are not included in the passive sentence:

Someone has broken the window. (Active)

NP₁ V NP₂
The window has been broken. (Passive)
NP₂ *be* + V *en*

It is wrong to think that active and passive constructions are interchangeable. It is the context and the situation which determine the use of one or the other.

More than one Main Verb

A sentence which has two or more main verbs is either complex or compound. Usually complex and compound sentences are formed with the help of conjunctions. A complex sentence has, besides the main clause, one or more subordinate clauses. A compound sentence has more than one independent clauses which are coordinate. While coordinate clauses are joined together by coordinate conjunctions (like *and, or, but*), the main clause and the subordinate clause are joined together by subordinate conjunctions (like *after, although, as, because, before, if, however, since, that, till, unless, until, while*).

Here are a few examples of complex and compound sentences:

Complex Sentences

Though she was ill, she came to the college.

He disappeared before I could talk to him.

She sent word that she was going to America.

There can be no compromise unless you radically change.

Compound Sentences

Sudha teaches history and Sheila teaches music.

You can go to a hill station or go to a bird sanctuary.

They played many tunes but did not get any applause.

Conditional Sentences

The usual structure of a conditional sentence is

if P then Q

It can take three forms depending upon the kind of condition sought to be stated:

1. If I go to Bombay I will meet the sheriff.
2. If I went to Bombay I would meet the sheriff.
3. If I had gone to Bombay I would have met the sheriff.

Sentences 1 and 2 refer to future time, 3 to past time. Sentence 1 states an 'open' condition. The condition has an almost 50-50 chance of being fulfilled. Sentence

an unreal or hypothetical condition. The speaker considers the possibility of the condition being fulfilled, remote. Sentence 3 states a rejected condition. It was just not fulfilled.

Indirect Speech

It is a style used to tell what somebody said without repeating the actual words. It is also called Reported Speech since someone reports someone else's or one's own speech :

A to B : I'm happy you've passed.

B to C : A said (that) he was happy I had passed.

: A told me (that) or he was happy I had passed.

Depending upon the purpose of the original speaker, the reporter can use verbs like *ask, request, suggest, advise, warn, order* in the indirect speech. Generally, in reporting past events demonstrative adjectives (this, these) and adverbs of time and place (now, here, etc) are changed into their related forms showing distance of reference, time and place (that, those) (then, there, etc). Further all personal pronouns (I, you, we etc) and possessives (my, yours, etc) are changed into their third person (he, she, they, his, her, hers, etc). Also if the reporting verb is

in the past tense, the verbs in the reported speech are also changed into their past tense forms :

A to B : I know I have failed.

B to C : A told me (that) he knew he had failed.

Reporting the two types of questions (*wh*-and *yes-no*) requires a somewhat different treatment :

A to B : Where do you live?

B to C : A asked me where I lived.

A to B : Are you a vegetarian?

B to C : A asked me if I was a vegetarian.

(The subject-verb inversion of the original questions is undone in the indirect speech.)

The most important thing to remember in changing Direct into Indirect Speech, however, is that *the changes effected are situational, not mechanical.*

Sentences Beginning with 'it'

One important non-basic type of sentence begins with *it*. There are three subtypes :

1. Sentences showing time, weather and distance :

(a) It is 7 o'clock.

(b) It is hot.

(c) It is 10 miles from here.

2. Certain sentences used in colloquial and informal English :

(a) It is true that she is charming (informal).

That she is charming is true. (formal)

(b) It is a mystery how she got that idea. (informal)

How she got that idea is a mystery. (formal)

(c) It is doubtful whether she will come tonight. (informal)

Whether she will come tonight is doubtful. (formal)

3. Sentences which have verbs like *happen, seem, appear* in them and which cannot begin with a *that*-clause.

It happened that she was not at home.

It seems that the train is late.

It appears that she is not a dancer.

Another non-basic type of sentence frequently used is the one beginning with *there*:

There is a book on the table.

There are some people in the room.

There are many Indians in Africa.

In such sentences the verb comes before the subject and the grammatical number of the former must be the same as that of the latter.

CCTIMES SYMPOSIUM

(Continued from page 63)

and religious education should not be given to children, since they were the politicians of tomorrow.

Prof Bhambhri spoke mainly on the roots of Hindu communalism. He said that initially the role of the intellectual elite had been important in establishing the relationship of man to his maker. But soon religions became mass-based and changes came in. Now, all religions are irrational. They are all centred around places of worship, and are based on scriptures, the interpretation of which are binding on all. All religions have created the feeling that theirs was the best religion. All religions contend against one another and no religion leaves anybody as a person in relation to his maker. In India, religion has become a public and not a private business. Since all religions thrive on preaching irrationality and have become so entrenched in society, it is important to fight the tyrannical role of religion, if one wishes to end the divisive tendencies in society.

The most important strategy, in this sphere, is to have a confederation of religions. This was tried during the nationalist movement, but the partition belied all hopes. We inherited a weak kind of secularism from the Western liberals. While our nationalist leaders were patriotic, they revived religious festivals as cultural festivals to bring about an "Indian"

resurgence and this was against the basics of confederal nationalism. Since the basic approach was wrong, post-independence India faced a multiplicity of communal (as opposed to secular) problems.

According to Dr C. P. Bhambhri, politics reflects society, and if the society is communal, then politics, too, is communal. Communalism leads to fascism and minority communalism responds to it. In the final analysis, he said that if religion is not weakened in society, the problem would not be resolved. In this connection, the use of the mass media, as well as the development of scientific thought, should be encouraged.

Speaking on Muslim communalism, Dr Mushir ul Hasan traced the roots of the problem and said that theoretically, Islam does not recognise the difference between temporal and spiritual affairs. In early times, the Caliph was the temporal as well as the spiritual head of Islam, and the *ulema* (Muslim clergy) were the guardians of Islamic law. Many of our present problems are however, a legacy of the nationalist leaders, who made many tactical mistakes. Symbols were drawn from the dominant religions which proved divisive. The demand for a separate Muslim homeland evolved from fears about the position Muslims would occupy in a "Hindu India". The British no doubt encouraged them in their fears, but at the same time, the heightened communal consciousness of the times weakened the secular character of the anti-imperialist struggle. The National Congress became susceptible to

religion and communal influences and developed links with the Arya Samaj type organisations which ultimately did not act as a cohesive catalyst. One serious weakness of the Congress was that, lacking ideological coherence, it often pandered to the religious sentiments of the minority community. It took up wrong causes, like the Khilafat cause, as the most important cause of the Muslims. There was also a tendency to assume that the Muslims were an exclusive community.

However, there was political consensus for the time being. The adverse effects were seen only in the post-independence era. The secular lead given by Nehru was not followed up and in time, we have accepted caste, linguistic groups and majorities and minorities as exclusive categories. The election process, too, has reinforced twin kind of thinking and there has been an increased communalisation of politics. The minorities, especially the Muslims and the Sikhs, have fallen prey to fundamental reactionary elements. Among the Muslims can be seen greater exclusiveness and a greater confidence, and Dr Hasan wondered whether this could be linked to Arab money or trends in other parts of the Muslim World.

The four speakers gave thought-provoking talks which led to a lively discussion. However, one feels that there was one common lapse. The problem exists and it was analysed: what is important, however, is to provide a viable solution. A few strategies were hinted at but nothing definite was stated.

CAREER COUNSELING

BY G.J. UNNITHAN

Director, Students Advisory Bureau, University of Rajasthan

I wish to appear for the Licentiate Exam of the Federation of Insurance Institutes. What are the eligibility requirements and from where can I get the prospectus and application forms?

Devan, Bombay

Exams for the award of diploma in insurance are conducted by the Federation of Insurance Institutes, Universal Insurance Building, Sir P.M. Road, Bombay-400 001. The exams are conducted for Licentiate, Associateship and Fellowship and are of a very high standard. The Licentiate exam is of a preliminary nature and deals with the basic principles of insurance and its various branches. At the Associateship level candidates are expected to specialise in any one branch, i.e., Life, Fire, Marine, Miscellaneous or General. At the Fellowship level the candidates study Management and are also initiated into the study of Statistics, Marketing, Economics, Accounting and Management Accounting. The exams are conducted at more than 80 centres all over the country, and also at the overseas centres once a year, in October, except for the Licentiate exam which is conducted twice a year, in April and October. The diplomas are recognised by insurers, various state governments and the Indian Government.

The papers for the Licentiate Exam include (a) Life: Principles of Life Assurance; Practice of Life Assurance; Elements of Modern Commerce; (b) Non-Life: Principles of General Insurance; Practice of General Insurance; Elements of Modern Commerce.

I am a Science graduate in Biology with six years teaching experience. I want to do B.Ed. through correspondence. Which universities in north India offer this course?

V. K. Karan, Bihar

Correspondence courses in B.Ed. (for in

service teachers) are conducted by the following universities in north India: Bhopal University, Bhopal-462 006; University of Jammu, Jammu-180 001; University of Kashmir, Srinagar-190 006; University of Rajasthan, Jaipur-302 004; Utkal University, Bhubaneswar-751 004.

I am interested in Optometrics. What are the basic qualifications needed for pursuing a career in Optometrics and which institutions in India and abroad offer specialisation in this branch?

Ratna Thawait, Raipur

Basic qualification for Optometrics is class XII (Science). The All India Institute of Medical Sciences, New Delhi-110 016 conducts a B.Sc. (Hons) course in Ophthalmic Techniques. Diploma courses are offered by Gandhi Eye Hospital, Aligarh; Medical College, Trivandrum; Minto Ophthalmic Hospital, Bangalore; Eye Hospital, Sitapur (UP); Madurai Medical College, Madurai.

What are the addresses of institutes in the US offering Health Management courses for medical graduates?

Sujeet Kumar, Raipur

The number of universities/institutes in the US offering postgraduate courses in the management of Health Services is quite large. Some of the addresses are: Director, Business Graduate Program, School of Business and Administrative Sciences, California State University, Fresno, Cal. 93740; Assistant Dean for Graduate Programs, School of Business Administration, University of Connecticut, Storrs, Conn. 06268; Graduate Counselling Office, College of Business Administration, Georgia State University, Atlanta, Georgia 30303; Boston University School of Management, M.B.A. (Health Care Program), 685 Commonwealth Avenue, Room 133, Boston, Mass 02215; Director of Admissions, University of Chicago, Graduate School of Business, 1101 East 58th Street, Chicago, ILL. 60637.

For a complete list of addresses please contact the USEFI in Bombay ("Sundeeep", 4 New Marine Lines, Bombay-400 020).

Can you provide details regarding admission to B.Sc. (Dairying) in the National Dairy Research Institute, Karnal?

George Mathew Tharakan, Calicut

The minimum qualifications for admission to B.Sc. (Dairying) is 10 + 2 (or its equivalent) with Physics, Chemistry, Mathe-

matics and English with 50% marks in the aggregate and 45% in each of the Science subjects. There is an objective-type entrance test, usually held in June at Karnal, Bangalore, Bombay and Kalyani (West Bengal). Candidates are examined in Physics, Chemistry, Mathematics and General Knowledge. Final selections are based on state-wise representation-cum-merit. The advertisement for admission is published in March.

I am interested in a career in Architecture and would like to know the addresses of the various institutions in India offering the course.

Zeenat Niazi, Jaipur

Most courses in Architecture are of four to five years duration, after the XII with Science and Mathematics as subjects. There is an entrance test to these colleges. Some of the institutions offering the course in India are: College of Fine Arts & Architecture, Hyderabad-500 488; M.S. University of Baroda, Baroda-390 001; Centre for Environmental Planning and Technology, University Road, Navrangpura, Ahmedabad-380 009; Visvesvaraya University College of Engineering, Bangalore-560 001; B.M.S. College of Engineering, Bangalore-560 019; H.K.S. Engineering College, Gulbarga-585 102; Mangalore University, Manipal Institute of Technology, Manipal-576 119; College of Engineering, Trivandrum-695 016; Sir J.J. College of Architecture, Bombay-400 001; B.R.P. Sabha's College of Architecture, 2043 Sadashir Peth, Chitranalacharya Purnam Chowk, Tilak Road, Pune-411 030; School of Architecture & Planning, Madras-600 025; University of Roorkee, Roorkee-247 276; Government College of Architecture, Lucknow; University of Calcutta, Bengal Engineering College, Howrah-711 103; Faculty of Engineering & Technology, Calcutta-700 032; Chandigarh College of Architecture, Chandigarh-160 012; School of Planning & Architecture, New Delhi-110 002; College of Engineering, Farmagudi, Goa-403 405; Vishveshvaraya Regional College of Engineering, Nagpur; Regional Engineering College, Tiruchirappalli-620 015; Indian Institute of Technology Kharagpur. Courses in Naval Architecture are conducted at IIT Kharagpur and IIT Madras and at the Department of Ship Technology, Cochin University, Cochin.

Employment prospects are fairly good. Freshly qualified architects generally take up salaried jobs in private firms, in the government or in similar organisations.

Are there any undergraduate scholarships awarded by the Indian Government for pursuing engineering and technology abroad?

Tarashanker Bohara, Sundergarh

There are no such scholarships.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on **Careers** or **Career Counselling** in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

Coffee Break

WIZARDS BEHIND THE WIRE

"Hundreds of newspapers, though published in cities scattered from coast to coast, were as alike as so many peas in a pod", remarked Marlen Pew, editor of *Editor And Publisher*, in the 1920s. An exaggeration, perhaps, but true none the less, thanks to news agencies which simultaneously supply news to large numbers of newspapers both in their country as well as worldwide.

Any newspaper has limited resources which makes the job of covering developments all over the world rather difficult. It is here that the news agency, wholesale collector and distributor of news, steps in to render assistance. Ninety sovereign countries have news agencies while 40 have none.

There may be agencies functioning at the regional, national or international level. UNESCO defines a world agency as an agency which maintains a network of correspondents to collect news in a great number of countries and a headquarters staff which edits these news items as well as domestic news and despatches them as quickly as possible to (a) the agency's bureaux abroad for local distribution; (b) to national agencies with which it has an agreement; and (c) directly to subscribing newspapers and broadcasting stations abroad. And for the reception and distribution of these services, extensive telecommunications like telephones, teleprinters and satellites are used.

Perhaps the best overview of a world agency appeared in a *London Sunday Telegraph* editorial. According to this it is "...like the air we breathe. It is nowhere, but it is everywhere. It is shapeless but it shapes men's thoughts. It has no policy but policy cannot be made without it. It is journalism at its most self-effacing, yet at its most essential.

"It has only one product, and that the most perishable of all news..."

At present, there are five major world news agencies: AP, Reuters, AFP, Tass and UPI.

AP or Associated Press is a US-based agency with headquarters in New York. Founded in 1848*, it is the oldest of the world agencies. In praise of AP, Mark Twain, the celebrated American novelist, once said: "There are only two forces that can carry light to all corners of the globe—the sun in the heavens and the Associated Press down here." Ten thousand newspapers, radio and TV stations in over 110 countries utilise the service of this cooperative, non-profit organisation known for its independence and objectivity.

Reuters, the second-oldest news agency, came into existence in 1850 due to the perseverance of Julius Reuter (see box). **AFP** or

Agence France Presse was constituted in 1944 soon after France was liberated from Nazi occupation. It is an autonomous public body. At the moment its services are being used by 1,200 subscribers and for this, it has 92 offices abroad and 1,500 correspondents on its staff.

Tass or Telegrafomir Agencija Sovetskoro Sojuzm is the Moscow-based central news agency of the USSR. Its control is vested in the government but it is self-supporting financially and has 10,000 subscribers. **UPI or United Press International**, the second biggest news agency in America, was formed in 1958 following the merger of United Press Association and International News Services. Operating in 114

countries, it has over 6,400 subscribers.

India, too, has efficient news agencies of its own among which are two English news agencies and two Indian language news agencies. The former include PTI and UNI and the latter Hindustan Samachar and Samachar Bharati.

The Press Trust of India (PTI) was set up in 1949. The largest national news agency, PTI is a non-profit venture with a total staff of about 1,300 and over 70 bureaux spread over the country and for world news it has arrangements with foreign news agencies. The **United News of India** or **UNI** is a substitute of the 25-year-old UPI (United Press of India). Founded in 1961, it has 53 bureaux across the country and a staff

LORD NEWSBREAKER

In today's world, most newspapers would find it nearly impossible to function without news agencies. But it was not always so. In 1850, when Paul Julius Reuter tried to sell his news services to London dailies, they scoffed and clearly told him that they would manage perfectly well themselves. But Reuter did not give up and it is thanks to his efforts that the importance of news agencies was highlighted.

Reuter, born of Jewish parents in Cappel, Germany, in 1816, began his career by working in a bank. After a couple of years, he figured out that he could make more money if he could obtain and sell advance business news. Accordingly, he set up an office at Aulx-Chapelle (now Aachen) and bought some carrier pigeons. Each day, he would send a couple of pigeons to a friend in the Brussels stock exchange by the mail-coach. His friend would attach the latest stock prices to the birds and set them off. The pigeons arrived three hours before the mail-coach and Reuter supplied this information to businessmen who paid him for this service.

With the commissioning of a telegraph cable from London to Paris, Reuter was shrewd enough to move to the British capital for it was the principal business city, not only of Europe but of the whole world. His business soon built up and with agents in Berlin, Vienna, even India and the Far East, Reuter felt that he could sell general news too, particularly as the popularity of newspapers was growing. But here, he found the going difficult and despite circulating some foreign news freely to the dailies, Reuter was able to lure only a few of them.

The clincher came in the form of Napoleon III's speech in Parliament. This speech was looked forward to by the whole world for it was rumoured that war was going to break out between France and Austria. Reuter obtained a copy of this speech which he promised not to open till Napoleon had started

speaking. (The first known attempt of self-embargo.) Reuter also hired the London-Paris cable for the time when the speech was to be made. When Napoleon rose in the French Parliament, Reuter opened the speech package and began telegraphing it to his subscribers even while the speech was being delivered. Non-subscribers, not wishing to let such 'scoops' go by in future, hastily joined the bandwagon.

Reuter strived hard to provide comprehensive coverage of news and outdo his competitors. When the Franco-Austrian war broke out, his correspondents fanned out into the French, Sardinian and Austrian camps. As a result, he was able to give three different coverages of the same battle. With the breaking out of the American Civil War in 1861, Reuter instructed his New York agent to collect and despatch the latest news on board the weekly steamer for Europe. (There was no Atlantic cable those days.) Once the ship neared Ireland, the messages were thrown overboard where they were picked up by a motor boat, taken ashore and telegraphed by a special line to Cork laid by Reuter for the very purpose. This news was later wired to London. When President Abraham Lincoln was assassinated, Reuter's agent chartered a fast steamer, overtook the mail boat and lunged the message on board. It reached London a full week before other reports came in.

Reuter's efforts were lauded and he was given the title of Baron in 1871. He retired as the head of his news agency in 1878.

Today, Reuter's is a public non-profit organisation that sells its services in over 110 nations. It has 600 full-time and 1,200 part-time correspondents spread over 183 countries. Besides, it has over 3,000 people on its staff. Reuters does not do any domestic coverage in Britain for which it depends on Press Association, a local agency. It has 11 regional bureaux all over the world.

V. Niranjan, New Delhi

*It was first named Harbour News Association and reorganised as AP in 1892.

multilingual agency and started functioning in 1948. *Semacher Bhasini* commenced its operations in 1967 and, like *Hindustan Semacher*, caters mainly to the needs of small and medium language newspapers.

News agencies provide newspapers with well-balanced, comprehensive news coverage and work in accordance with deadlines every minute. The job of the agency man has been aptly summarised by the *London Sunday Telegraph*: "The agency man is a special kind of journalist. He must recognise news the moment it happens—then look at once for its sequel.... His task is the thankless one of seizing on news at all times of the day or night, and circulating it immediately to thousands of newspapers and radio stations around the world. He may feel sometimes that he is filling a bottomless pit, but he is the vanguard of the war against ignorance."

Despite their rather thankless job, news agencies do manage to win applause for outstanding contributions in the journalistic world too.

K. Singh, Chandigarh

Assignment—War

Vietnam. The war that unmade President Johnson... and made some outstanding journalists. One of them, Peter Arnett, won the 1966 Pulitzer Prize and made his way into John Hohenberg's collection. The Pulitzer Prize Story II. Excerpts:

War is as much a battle between man and man as it is between truth and falsehood. Nowhere else was lies purveyed as facts than by the American Government in its conduct of the Vietnam War. The oldest news agency in the world, the Associated Press, did some spectacular, honest coverage of the Vietnam War in all its ramifications. Exposed to threats, innuendos and insults, it yet carried out its "thankless job" regardless. None better can expound on its saga than Peter Arnett.

Arnett, a doughty little New Zealander with the face of a cherub and the heart of a lion, covered the Vietnam War for AP for eight-and-a-half years. More often than not, he risked his life under fire to get the news.

The pitiless accuracy of his stories about American defeats, when Washington was claiming glorious victories, earned him the enmity of the American establishment in Saigon. He was spied upon, attacked in the most scurrilous terms by the embassy's men and treated as if he had been an enemy agent. But he emerged from the cauldron of the war unchanged either by the vicious criticism he had undergone or the many honours that had been heaped upon him.

He won the Pulitzer Prize for International Correspondence for his Vietnam War reporting in 1966, the 50-year anniversary of the awards.

One of his best stories was one in which he landed by accident in the midst of a firefight between a Marine supply column and Soviet-and-Chinese-supported Viet Cong in the Ia Drang Valley. Here it is, as he wrote it that hot summer afternoon with the smoke of battle still lingering about him.

THE AGONY AND DEATH OF SUPPLY COLUMN 21

By Peter Arnett

From the Associated Press in the *Louisville Times*,
August 19, 1965

VAN TUONG, Vietnam (AP)—The mission of US Marine Supply Column 21 yesterday was simple:

Get to the beachhead, resupply a line company and return to the 7th fleet mother ship anchored a mile out in the bay.

It never found the line company. And it never returned.

Supply Column 21 was a formidable force made up of five steel-shod amtraks—35-ton amphibious vehicles—to carry food and ammunition—and two M 48 tanks to escort them once ashore.

The column packed a total of 287 tons of steel. It was made up of 30 men.

The paths that led to its destruction were paved with confusion.

Failing to locate the designated line company immediately, Column 21 set out to look for it.

But the huge amtraks, once out of the water, were unwieldy. They flopped from one rice paddy to another, with their crews calling at one battalion and then the next. No one seemed to pay much attention.

At 11 a.m., Supply Column 21 was about 400 yards ahead of the nearest Marine rifleman. The vehicles were deep in Viet Cong territory and, suddenly, were deep in trouble.

Survivors said the Viet Cong rose out of hedge rows and swamps.

Lance Corporal Richard Pass of Homewood, Illinois, said his amtrak veered aside as explosions erupted around them. The leading tank was hit with an armour-piercing shell. Two men inside were wounded.

The terraced paddies made manoeuvring difficult and the supply men were not trained for it. Attempting to get into good firing positions, three of the five amtraks backed into a deep paddy and bogged down.

The other two edged towards the tanks for shelter. One didn't make it. A Viet Cong knocked it out by dropping a grenade down its hatch, killing two Americans inside and wounding others.

Mortar fire bounced off the vehicles and cannon put three holes in one tank. The wounded driver squeezed himself through the 18-inch wide escape hatch under his vehicle only to be riddled by bullets.

Corporal Pass saw Viet Cong with ammunition bandoliers, black pajama uniforms, and camouflaged steel helmets move right up to an amtrak 30 yards to his left.

He said the doors of the vehicle clanged open as the two drivers tried to make a break to Pass's

The agency at work: UPI sneps a displaced South Vietnamese family during Operation Nathan Hale against Viet Cong.

vehicle. One of the Americans was killed as he leaped out.

The other was plunging through the paddyfield swinging his Marine knife when he went down. When pulled out dead today, he still had the knife clutched in his hand.

Soon after noon, as the hot sun beat down on the scurrying figures and the steel vehicles, the Viet Cong knocked out a third amtrak. Survivors massed in the other two.

Corporal Frank Guilford of Philadelphia said machine guns sliced into the guerillas, but they kept coming.

The men took turns as sharpshooters at peepholes on top of the vehicles. All were wounded in some degree.

"I couldn't manoeuvre up there," said Pfc. James Reeff of Seattle, who escaped with a slight injury.

A young corporal shouted, "Okay, men, we're marines. Let's do the job."

He started to climb out of the vehicle but never got his rifle to his shoulder. A bullet hit him between the eyes.

Among those sweltering in the other amtrak was Staff Sgt. Jack Merino of Limita, California. He said he almost passed out from heat exhaustion. The men took turns splashing water over each other from resupply cans within the vehicle.

Merino said that in midafternoon he heard a man outside whispering, "Amtrak, amtrak." He proved to be a wounded tank crewman. Merino and others pulled him inside.

"It was a hair-raising moment but we managed it," Merino said.

The Marines continued with the nerve-racking task of keeping off the attackers. The enemy bodies began piling up.

In late afternoon, air strikes eased the pressure.

By this time, a lieutenant had been killed and another wounded.

Another tank joined the beleaguered group.

At daybreak, a solitary helicopter landed at the scene. It had mistaken the landing zone.

At the drone of the helicopter, the Americans surged from their amtraks like moths to a flame.

Crouched, and with weapons at the ready,

own and the enemy. They carried the wounded to the helicopter and left the dead.

The helicopter came back once for more wounded.

Ground forces arrived to relieve the others. In the interval they had scoured the nearby padd-fields and brush for Viet Cong bodies. They found 18.

Corporal Earle Eberly of Sycamore, Illinois, said:

"We don't like being here and killing people and being killed. But this is a job we've been told to do, we have to do it, and we're going to do it."

The fate of Supply Column 21 was sealed at noon.

The men thought the disabled vehicles might be carted off and repaired. But an officer of the relief force told them:

"Take your personal belongings out of the vehicles. We're going to blow them up."

The remains of the amtraks at Van Tuong will be a reminder of Supply Column 21.

Arnett rode to battle in the supply helicopter that landed by mistake in the midst of the dying

the Viet Cong.

He had managed to talk his way on the helicopter at Da Nang at 5 a.m. after having landed from Saigon in an emergency flight with only two hours' sleep. He was the only reporter to see action that bloody day.

When he was plumped into the thick of the fighting, he found a US tank and three amtraks had been destroyed, seven Americans dead, 28 others wounded, and many survivors in shock from the intensity of the ferocious Viet Cong attack.

Arnett remained on the job with Supply Column 21, sharing the Marines' agony and their danger, until the relief column arrived six hours later. And when he emerged, dirty and tired but intact, he found outraged American information officers loudly denying that the enemy had knocked out any US armour.

But Arnett had pictures to prove his story and, once again, the lying was demonstrated to be a sorry part of the American military command character in Vietnam. There was never any doubt in his war reporting, during the eight-and-a-half years he spent in Vietnam, about who was telling the truth.

Do you love a good story? Nothing can be better than the Arabian Nights. An illustration from the tale of the Fisherman and the Genie.

Booktalk

THE MASTERS IN PIECES

They are all there, from Homer's *Iliad* and *The Bhagavadgita* through Dicken's *David Copperfield* and Melville's *Moby Dick* to Pasternak's *Doctor Zhivago* and Graham Greene's *Brighton Rock*. But....

Lawrence Durrell writes in his introduction to *100 Great Books: Masterpieces Of All Time** that it is "the plain man's vademecum to culture", and adds, perhaps a little sceptically, that "it should whet the curiosity of the young reader today". And never were words so truly written.

The book leaves much to be desired. It would, perhaps, have been better had the publishers just compiled the titles of what they consider to be 100 great books (it is fortunate that they did not call it "100 Greatest Books", because what is one man's meat may be another man's poison) and added a short summary of each book. This would have whetted the curiosity of "young readers" because one feels that this book has had just the opposite effect. A large number of reviewers have attempted to give their analysis of the books included in this work and some of them have even given short biographies of the authors and written a few words about their own works. The analysis, however, are amateurish and the beauty of the masterpieces does not come through at all. Take, for instance, the review of Milton's *Paradise Lost*. The reviewer first cites the exquisite lines of Milton depicting Satan's first sight of Adam and Eve in the Garden of Eden:

"Two of far nobler shape, erect and tall,
Godlike, with native honour clad,
In naked majesty seem'd lords of all...
So hand in hand they passed, the loveliest pair."

Then, the reviewer goes on to add his own.

*100 GREAT BOOKS: MASTERPIECES OF ALL TIME, edited by John Canning; published by Rupa & Co., New Delhi, by arrangement with Souvenir Press Ltd., London; pages: 640; price: Rs 50.

positively absurd, comments: "In this ecstatic description of the first human lovers in their heavenly bower, was Milton thinking of his own wedding night in the bedroom on Aldersgate Street? Eve was very unlike the first Mrs Milton, who was far from submissive...."

To take another instance: Henry Fielding's *Tom Jones*. One of the world's greatest picaresque novels has been made to sound like the adventures of a lecherous young man in this review and one fears that the wrong kind of interest may be aroused in the young reader.

The reviews are not all bad, however. It is evident that when the reviewers deal with non-fiction, the effect is more interesting. Rousseau's *Social Contract*, Kant's *The Critique Of Pure Reason* and *The Koran* have been dealt with rather well and give a factual account of what the books actually contain without trying to analyse them critically. There are a number of illustrations, as well, some of which are quite rare. Further, as Durrell writes, it provides the beginner with a list of books which are certainly all-time greats. Anybody who wishes to improve his knowledge of literature has a ready guide to go by in this edition of the *100 Great Books: Masterpieces Of All Time*.

S.B., New Delhi

Extracts from the book:

DOCTOR ZHIVAGO

By Boris Pasternak

Boris Pasternak was born in Moscow in 1890, the son of cultured parents. After graduating in Law from Moscow University, he realised that poetry was his vocation and devoted almost his whole life to writing. Always an inner emigre and an opponent of the Soviet regime, he showed courage on several occasions by dissociating himself from its actions; for a period after 1945 his work was banned. At this time he began writing *Doctor Zhivago*; it first appeared in 1957 in Italian and in English the next year. The same year he was awarded the Nobel Prize for Literature. This released a storm of condemnation by the Soviet authorities and he was obliged to renounce the prize for the sake of stay-

ing in his homeland. He died in 1960.

The novel presents a graphic panorama of life in Russia during the Revolution, the Provisional Government and the Civil War, with many characters from all sections of the population caught in the turmoil and struggling to survive.

Life breaks in with elemental force in the public aspect of the novel, but also in the private world of two characters, Yuri Zhivago and Larissa ("Lara") Guishar, and it is their story, running parallel to and influenced by political events, which provides the main thread. Just as Russia is fated for revolution, so are they predestined for each other.

We first meet Yuri in 1901 as a child weeping at his mother's funeral outside Moscow. His father, once a millionaire, has long since abandoned his family for a life of dissipation and has been impelled to suicide by an unscrupulous lawyer named Komarovskiy who has battered on him. The orphaned Yuri goes to live in Moscow with the Gromekos, a cultured family of intellectuals who have a daughter Tonya.

These are wealthy people, but in a poor part of the city another much impoverished family has come to live—Amalia Guishar, widow of a Belgian engineer, and her young daughter Lara. Komarovskiy, who was a close friend of her husband, becomes Amalia's lover, but his eyes are already on the beautiful Lara.

Meanwhile, railway workers are organising a lightning strike, among them Antipov, a track overseer, who is later given a long prison sentence for his involvement. His son Pasha, an intelligent, obsessively tidy boy, then goes to live with another working class family and soon, amidst rioting all over Moscow, is lucky to escape with his life when caught in a mob being dispersed by Cossacks.

But now something terrible happens. We gather that by a mixture of skilful flattery and self-abasement Komarovskiy has succeeded in seducing Lara. The scene is not described, only its effects: Lara's conscience-stricken regret and her sense of a stain that can never be expunged.

Three years pass during which, to escape Komarovskiy, Lara works as governess to a wealthy family. She now leaves, intending to set

and ask Komarovskiy for the necessary money which she feels he ought in partial reparation to give her. If he refuses or tries to humiliate her, she resolves to kill him. It is Christmas, 1911, and knowing that Komarovskiy can be found at a party given by some friends of the Gromekos she sets out through the snowbound city with a pistol hidden in her muff. On the way she calls on Pasha Antipov, with whom she has been friendly since childhood. Pasha, now grown into a politically idealistic student, adores her. She finds him dressing for the party and on impulse asks him to switch off the electricity and light a candle. "The flame spluttered.... then sharpened to an arrow and steadied.... On the window pane, at the level of the flame, the ice melted, leaving a black chink like a peep-hole." She tells him she is in serious trouble and asks him to marry her as soon as possible, to which he joyfully agrees.

Meanwhile, in the intervening years Yuri Zhivago has qualified as a medical practitioner and developed a strong poetic imagination. Having grown up together, he and Tonya have become engaged. Now, muffled in furs, they are being driven to the same party, past the very house where Lara and Pasha are talking. Yuri looks up and notices the candle-flame shining through the window. It seems to be waiting for someone. "A candle burned on the table, a candle burned," he whispered to himself—the confused, formless beginning of a poem; he hoped that it would take shape of itself, but nothing more came to him."

At the party Lara does not speak to Komarovskiy, but fires a shot at him which misses, and she is arrested. Fearing a scandal, he uses his influence to settle the matter out of court and Lara then marries Pasha, leaving with him for the Urals where they mean to take up teaching. Tonya meanwhile bears Yuri a son and he continues working at a Moscow hospital until, a year after the outbreak of world war, he is drafted to the Galician front as a doctor. By now Lara, too, has had a child, a girl, but there are domestic difficulties and Pasha joins the army while, leaving the baby Katya in the care of friends, Lara volunteers for nursing at the front. Eventually she arrives at the hospital where Yuri is working and he recognises her at once.

With subtlety Pasternak describes how the first threads between Yuri and Lara are spun. They both sense that something lies in wait for them and are reluctant to accept it. After all, both are married and have children. But, talking enthusiastically of the Russian Revolution now beginning, Yuri then turns to "private, individual revolutions" and suddenly something in his voice betrays him. "That is what I've been afraid of," says Lara softly, as if to herself, and pleads with him to "be as I've known you till now and as I want you to be".

A week later Lara goes back to the Urals to teach at the town of Yuryatin and soon Yuri returns to his family in Moscow. It is the time of the Provisional Government under Kerensky and there is fighting in the streets. Food and fuel are hard to come by and through a harsh winter the Zhivago family, including Tonya's father, only just manage to survive. In the spring they decide to migrate to the Varykino estate outside Yuryatin, once owned by Tonya's grandfather, where they can hope to be self-supporting. After a nightmare journey in freight trucks across the war-torn countryside, they settle in a part of the abandoned house. Yuri becomes unofficial doctor to the

keep alive. But Yuri has long since realised that people of his class are destined for destruction and their days are numbered. Once he wrote poetry, but nothing comes to him now; the spirit of the age is against him and the revolution is going sour.

One day he rides into Yuryatin to visit the town library and sees Lara there. He does not speak to her at once, but then calls on her at her flat and when they meet, sensing the future and now accepting it, feeling sure of one another, they talk in plain, unextravagant language and when Lara shows him where she hides the key to the flat she says merely: "You might come one day when I'm out—you can open the door and make yourself at home till I come back."

After many trips to see Lara in the following weeks, always returning to Varykino in the afternoon, there comes a time when Tonya does not see him till the following morning, to be told he has been detained on business. Yuri is acutely conscious of his offence against Tonya, but is powerless in the grip of his love for Lara until one day, returning from Yuryatin, he resolves to break with her and make a full confession to his wife. But at that moment, he is taken prisoner to serve as doctor to a group of Red partisans.

For two years Yuri perforce shares in the desperate misery of warfare against the Whites in the Siberian forest and Pasternak scathingly contrasts the bombast of political catchwords with the realities of starvation, treachery and slaughter. Yuri thinks of Lara and of Tonya: "Tonya, you are my everlasting reproach." Then one day he manages to escape.

After a terrible journey on foot across Siberia, he eventually staggers, half-starved, into Yuryatin and learns that, fearing attack by bandits, the people up at Varykino—his family—left some weeks ago for Moscow. Greatly depressed he manages to reach Lara's flat, finds her out and falls into a sleep of exhaustion, dreaming pathetically of his son. He wakes to find her bending over him and nearly faints with joy. He soon recovers and Pasternak tells us: "They loved one another greatly.... To them—and this made them unusual—the moments when passion visited their doomed human existence like a breath of timelessness were moments of revelation, of ever greater understanding of life and of themselves."

Lara tells him of the blight cast on her life by Komarovskiy and also speaks of a certain Strelnikov, a ruthless ally of the Bolsheviks whom Yuri once met in awkward circumstances on the train journey to Varykino. Strelnikov, who slaughters by the book to achieve his ideals, is none other than her husband, Pasha Antipov, who returned from a German prison camp after the war and made himself useful to the Reds. She senses that he lives only on sufferance and his days, too, are numbered.

Yuri's early enthusiasm for the revolution has evaporated, not for personal reasons but through bitter contempt for the men of blood and doctrine, hostile to life, who have climbed to power. Their idealism has given way to witch-hunting and he and Lara are now in danger, particularly in Yuryatin where there is a revolutionary tribunal, so they decide to go back to Varykino. But before they can leave, out of the blue Komarovskiy appears and urges them to go with him to the eastern maritime provinces where an independent government is to be set up. They both refuse.

During the winter when they stay themselves in the house till an illusion of ordered domesticity is created and they enjoy a brief taste of life as it might have been, Yuri feels an urge to write and at night, while Lara and her daughter are sleeping, composes poetry. In particular, those lines that came to him long ago complete themselves: "A candle burned on the table, a candle burned...." and he knows now that it burned for him and symbolised the love awaiting them.

But within a fortnight Komarovskiy seeks them out again and this time there is not a moment to lose. A train for the Far East is under steam at Yuryatin station, and if they do not catch it the chance may never recur. Lara, for the sake of the child, agrees to go with Komarovskiy, but not without Yuri; so Yuri, determined in fact to go to Moscow to find his family, invents a pretext to follow their sledge in a few minutes on another horse. Thus there is no farewell to Lara, only a wave of the hand, and he waits with death in his heart to catch a last glimpse of her as the sledge climbs a distant hill.

The last eight years of Yuri's life are told in a single chapter. He goes to Moscow, again on foot, finds that his family has been expelled from Russia and gone to Paris. He tries and fails to obtain a visa to join them, and then marries the daughter of the former steward at the Gromeko home. All the time his grip on life and himself is disintegrating till finally he can neither write nor work as a doctor. One day, in a crowded tram, he has a heart attack, struggles out into the fresh air, collapses in the street and dies.

But by coincidence Lara is in Moscow and visits the house where Yuri is laid for friends to take their last farewell. In simple, familiar words she takes her leave, talking as she has always talked to him: "... your going, that's the end of me... the riddle of life, the riddle of death, the beauty of loving—yes, that we understood... as for such trifles as re-shaping the world—no, thank you, these things are not for us... Good-bye my dear one, my own, my pride. Good-bye my swift deep river..."

In a single short paragraph we are now told that soon after this Lara is arrested in the street, as so often happened in those days, and vanishes into a concentration camp, or dies somewhere, "forgotten as a nameless number on a list which was afterwards mislaid". But his poems have survived and, as we now learn, their child survives. There is an epilogue, the scene being the Russian front during the Second World War. Tanya, a laundry girl working with the troops, meets a major General Zhivago and tells him the story of her hard life as an orphan and, guessing who she is, he promises to send her to college and look after her. He is, in fact, Yuri's half-brother on his father's side, illegitimate son of a Kirghiz princess and, though appearing only occasionally in the narrative, always to help Yuri over some difficulty, a character of mystical importance, real yet symbolic. He it is who is both the spirit of Yuri's death and his guardian angel and, recognising this, Yuri is for a long time puzzled about his role. How can death be a help to life? But finally, as we hear from the mouth of Lara, they both understand the riddle, for they have lived it: they have lost parents, home, family, career, comfort, possessions, security, have become penniless waifs, yet in dying to all this have for that very reason, being stripped of everything but themselves, found deep and enduring love. ■

Sports Quiz-39

BY NAROTTAM PURI

WIN RS 100 IN BOOKS

1. From which year were six runs awarded for a hit over the boundary?
2. What is the Sir Robert Menzies Cup?
3. When and in whose name was the Subroto Cup started?
4. Where was the Asian Cup football final played?
5. What is the ball used in ice hockey called?
6. In which sport is the racquet called crosse?
7. Who is the only bowler to have taken two hat-tricks in a Test?

PRIZES

SPORTS QUIZ-39:

2 First Prizes

Sports books worth Rs 50 each from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no all-corrects) pulled out of the hat.

Plus 5 Consolation Prizes worth Rs 20 each from **Rupa & Co.**

KENWORDS-39:

2 First Prizes

Arthur Hailey's *Strong Medicine* & Sidney Sheldon's *Master Of The Game* from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no all-corrects) pulled out of the hat.

Plus 5 Consolation Prizes—A Sentence Dictionary from **Rupa & Co.**

HOW TO ENTER

- Print the answers neatly in capital letters alongwith your name, age and address. Each crossword must be pasted/clipped to a larger piece of paper.

- You may send in any number of entries, but each must be numbered accordingly and accompanied with its respective COUPON.

- Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the two contests: February 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions to this issue's contests will be published in April '85.

SAUSAGE TALE

The Spaniards have done it again! In the tradition of food extravaganzas, they have surpassed themselves once again—this time to produce the longest sausage in the world. The 1.6-km long sausage was made over eight hours in the Catalan village of Espluges de Llobregat by 150 cooks using a tonne of meat, half a tonne of bacon, 30 kg of salt, 3 kg of pepper and 100 litres of water.

The giant *butifarra*—a catalan variety of sausage—was passed across a 100-m long grill burning two tonnes of charcoal. Twelve thousand Spaniards then proceeded to devour it—after dividing it into 16,000 portions. Quite a mouthful, that!

Aspirants to

Civil Services (Preliminary) Exam. 1985

A Personalised Programme to equip you with the right perspective and right orientation for the preparation.

Civil services exams are completely different from the typical university exams and a requisite for success in this exam is the comprehension of the course structure in right perspective proper orientation for preparation and access to relevant reference. **Above all, the right kind of guidance is very crucial for success.**

Majority of aspirants to the civil service come from a different socio-economic background and feel handicapped due to inadequate and improper education imparted to them. **NECONS — a specialized and dedicated team of scholars and experts** bridges the yawning gap of relative educational deprivation and places you at par with the educationally privileged competitors.

NECONS under its new personalised programming scheme endeavours to mitigate the indifference inflicted on the aspirants belonging to semi-urban and rural areas with non-public school background by offering handout which contains besides introducing you to the nature of the exam course content and various areas of emphasis, the chapter wise analysis of the syllabus with clues to the trend and probable types of questions, the hints as to how to ward off the catches and attempt them and model test papers.

Club Desk

Let's start the New Year on an enthusiastic, energetic note. Park up your clubs' activities—remember the most active, innovative club will be awarded the 'Club of the Month' title. There's so much to do these days. The Bhopal tragedy has inflicted agony and misery on thousands—how about joining hands to organise relief funds for them? The results of the Lok Sabha elections can give rise to numerous topics of discussion and debate. For starters, 'New trends behind the poll', 'Role of Opposition in a democracy', '1977 reversed', 'United we stand, divided we fall', 'The Indian voter comes of age'.... Set your brains a-ticking and you'll find many more topics too.

Meanwhile, for your convenience, we are continuing with our alphabetical list of CCTimes Clubs all over the country. If you aren't a member of a CCTimes Club, become one and if you already are then pull your socks up and move. And inform us of your movements at: The CCTimes Club Desk, C/o Career and Competition Times, 10 Daryaganj, New Delhi-110 002.

HISTORY

CORRIDORS OF TIME

If you're over 18, and have stopped growing, but are still not as tall as you'd like to be, INSTA-HEIGHT guarantees to increase your height upto 15 cms.

"INSTA HEIGHT is a new, safe and scientific method of s-t-r-e-t-c-h-i-n-g- your body to increase your present height. Permanently. Thousands of men and women in the U.S.A. have reported height gains of upto 15 cms. by following this revolutionary new height increasing method. I am not surprised. I have thoroughly analysed INSTA-HEIGHT. Unlike other so-called height improvements methods I can fully endorse INSTA-HEIGHT and say it works. Effectively and permanently"

Dr. (Mrs) D. U. GIANANI

Dr. (Mrs) D. U. GIANANI

TALL MEN AND WOMEN DOMINATE OTHERS !

You are judged by your looks ! Often, your whole career depends on the first impression you create. Look around you and see for yourself, most people who are successful have the added asset of a tall and imposing personality.

INCREASE YOUR CHANCES FOR SUCCESS !

The taller a person, the more easily he seems to reach social success, love, sports, jobs and other pleasures. You too, can now enjoy the benefits of being tall.

Whether you are 18 or 30, you can still possess the tremendous assets of a striking figure. Just 2 weeks after going through and practising this simple step-by-step course, you will be able to gain as much as 5 cms to 15 cms, in height. Thousands of men and women in America have experienced phenomenal height increases by following the revolutionary new INSTA-HEIGHT method.

SPECIAL 7-DAY MONEY-BACK GUARANTEE !

INSTA-HEIGHT (a division of Business Development Associates)
3/305 Navjivan Society, Lamington Road, Bombay 400 008

Please rush me your Insta Height programme immediately under your one week guarantee period. If I am not satisfied I understand I can return it within a week for a full refund (less packing and postage)—no questions asked. Please tick ☐ appropriate box.

- ☐ I am enclosing Rs. 27 (Plus Rs. 3) by cheque/Bank Draft/I.P.O.
☐ Money Order for Rs. 30 sent (M.O. No. ... dated ...)
☐ I am not enclosing any money but shall pay postman Rs. 30 on delivery by V.P.P.

Norvicsun

God gave him eyes.

You can give him sight.

He can feel a flower but he cannot see it. He has eyes. But he has no sight.

He has his whole life ahead. But his spirit is crushed. By one of the most dreadful inflictions of all. Blindness.

But young Iqbal's case is not without hope. His blindness like many others, is not without cure. There is a remedy that's simple, doesn't cost anything and is effective. Only it needs you.

A simple cornea transplant can restore sight to the blind. The useless cornea, replaced by a healthy one. And the healthy one could be yours.

Eye removal leaves no scar or disfigurement. And once you've pledged to donate, you'll live with the gratifying emotion that your eyes will live much longer than you. And that some blind person will see ... through them.

If your heart goes out to the blind during your lifetime, let your eyes go out to them after death.

It's the most precious gift you can give them.

To know more about eye donation, and what kinds of blindness can be cured, send us the coupon for a detailed brochure.

Do it today. Remember, miracles can't cure the blind. You can.

I would like to know more about eye donation and cornea grafting. Send me a detailed brochure.

NSB
Your Course
to a Career In
Banking

Bank Recruitment tests are considered toughest among the objective competitive exams. Examination blues and jitters are not an uncommon spectacle at Bank Recruitment exam halls.

In these intensely competitive exams—and particularly those of Bank Probationary Officers—what ultimately leads you to success is not only how well you prepare before the exam, but also how well you gear up yourself to think spontaneously while you are in the examination hall. What a candidate, therefore, needs most is the **TOP OF THE WORLD FEELING**, before and during the exam in the examination hall.

NSB accomplishes exactly this critical task. A candidate, who studies thoroughly, our specialised Books and materials,—developed and perfected over the years—can alone marshal his mind and thoughts to accept the gauntlet and challenge of the P.O. examinations. Besides, our unique and well-known achievement of having succeeded in building a parallel Question Bank, years of specialisation and research, analysis and on-going study of P.O. exams, their changing patterns—and timely revision of our Courses—is what has enabled NSB to fully unravel the mystery of Bank P.O. exams and place our students—and

resultantly NSB—on the Top—as a coaching Institute of All-India repute and unrivalled distinction.

No wonder our students join Banks as Probationary Officers and Clerks, in their thousands.

LETTERS

End Of A Winner

To win is not the end but the end is to win till the end. The real challenge for winners is to maintain victory effectively and forever.

S.K. Chatterjee, Satna

Best Letter: Rs 40

Novel Pests

We, in India, suffer from many problems like flood, drought, poverty, communal riots, etc. But, today, most problems are caused by *khaki* and *khadi*.

Neeraj Varma, Patna

Prize-winning Letter: Rs 25

Nice Homework

Hats off to the retired Brigadier for his superb *Geography Homework* (Jan'85).

Suhas Rao, Bhopal

The special feature was an enjoyable brain teaser on global knowledge.

C.M. Srikant, Dist. Gulbarga

Geography Homework is an excellent feature in that it is definitely a boon to jobseekers and especially to Civil Services aspirants.

G. Sudarshan, Hyderabad

The special feature was very informative and specially helpful for competitive exams.

Girish Parvathkar, Hyderabad

Geography Homework made excellent reading. Can I hope for a similar issue on Geology as it is also a leading Science today?

Ratan

THEY SAY IT

There has been a variable response to Mukesh Kumar Sri's opinion (*You Said It! Letters*, Dec'84) that Arts and Commerce graduates be given more weightage than Science graduates in banks and insurance companies. Some opinions

Commerce students have been taught the method of maintaining bank accounts, insurance companies' accounts and balance sheets. Now, what is the benefit of having a Commerce degree, if we are treated at par with the novice Science graduate in bank jobs?

R.K. Agrawal, Hojai (Assam)

By competing for banking and insurance jobs and other similar jobs Science graduates are only wasting their vital talents to the detriment of national interest. Science graduates should be debarred even from jobs where their talents are not utilised properly and beneficially.

V. Radhakrishnan, Bombay

Many commissions invite applications from Arts, Commerce and Science graduates simultaneously for administration and other

Youth Rule

The year 1985 has been declared as the International Year of the Youth. It is a matter of coincidence that India is now in the hands of young rulers.

P.K. Praveen, Bhopal

The stunning mandate received by the Congress(I) proves that the electorate could not be bothered any more by the antics of defectors. The torch has gone to a new generation of youth, with new ideas and new horizons.

Shanmugam Mudaliar, Pune

A young man of 40 can be the prime minister of India. Then why can't a man of 40 be eligible to join a government service?

A.K. Mukul, Patna

Politics is the last refuge of a fading film star.

Shiv Pratap Singh Tomar, Mathura

The unity and integrity of this vast country cannot be disturbed for long either by foreign hands or by internal strife because the massive mandate proves that nationalism is in the Indian blood.

Dinesh Ranjan, Birpur (Bihar)

The Gracious Psephologist

My psephologist maid, a 40-year-old woman, had predicted long before the election results that the young and suave Rajiv Gandhi will be the dynamic successor to Mrs Gandhi.

Saraswathy S. Mudaliar, Pune

Insured Opposition

Sweden is said to have an insurance against 'bad luck'. India could take the cue from them, and introduce such an insurance scheme so that opposi-

subordinate services. Hence, it is obvious that competition demands competence and hard work irrespective of the field of specialisation.

Shamim M. Khan, Seyala (Rajasthan)

Preferential treatment to Arts and Commerce graduates can only be justified if it is found that they are more suited for jobs in banks and insurance companies in comparison to Science graduates. Otherwise there is no harm in considering any capable graduate

Humayun Jamil Khan, Patna

It is necessary to give weightage to Arts and Commerce graduates in banks and insurance companies. At the same time it is necessary to increase the standard and efficiency of Arts and Commerce students and prepare them for stiff competition.

D.P. Malliya, Bombay

The need of the hour is the realisation of the fact that success is not something one can beg for it is something one will have to struggle for. Hence Arts students should reorganise and reorient their efforts. Mere requests to provide concessions will prove worthless

Satvir Dehiya, Rohtak

the Government of India. The Government of India has decided to introduce a scheme for the contingencies created by voters, once every five years.

V. Radhakrishnan, Bombay

A threat to democracy becomes a reality when the Opposition is weak. The only major opposition party in the Parliament is Telugu Desam. It is for the Opposition to prevent the ruling party from becoming

D.W. Mudhakar, New Delhi

The Opposition in Parliament is an endangered species. As responsible citizens we should be vigilant enough to point out the errors in the policies of the Rajiv Government.

Prashant K. Thakur, Delhi

Corruption Nationalised

In the recent Lok Sabha elections, there was much extravagance by a particular party in our town. "So, corruption has been nationalised in this country" a friend remarked.

Samarandranath Mahapatra, Vani Vihar

Arms And The Man

Reflecting on the recent purchase of Harpoon missiles and other sophisticated weaponry by a neighbouring country, one has this to say:

Home he brought the Harpoons for raid,

He'll sooner or later pry,

All the watching countries said,

The debt of Harpoons will make him cry.

R.N. Mitra, Jaipur

Unsporting Sports

Dropping Kapil is only an attempt by Gavaskar to get even with the former Indian skipper who had dropped him during the two World Cup matches. By indulging in such politics, Gavaskar is not only spoiling the career of the cricketer concerned but is harming the future of Indian cricket as well.

R. Padmavati, Bhilai

Why do we have only one P.T. Usha to boast of? Is it because ten others have been discouraged right from the start, their interests curbed?

Suman Bose, Nagpur

Achievement Pleased

It's high time the Planning Commission is renamed Achievement Commission. Or even after years of independence we might still keep planning without having any major achievements to display.

S.Arune Chari, Baroda

Educational TV

As far as the educational telecast is concerned, most of the indigenously prepared programmes are uneducative and uninteresting. On the contrary, the series on Optics obtained from the British Council is engrossing.

Amik Paul, Lucknow

The Baby Bomb

Bombs are less dangerous than the baby boom. If long term self-sufficiency in food is not achieved, then India will soon become another Ethiopia.

N. Mahendran, Coimbatore

IFT

The correct address of the Indian Institute of Foreign Trade is Ashok Bhawan, 93, Nehru Place, New Delhi 110019 (*Career Counselling*, Jan'85).

Sahaj Ram, New Delhi

Hello folks...

Come summer, and begins job hunting. The "lucky guys" graduate in Engineering, Computer Science, Management or in a discipline highly sought after by employers. They, in fact, can afford to select employers for they often get more than one job offer. However, the number of such "lucky guys" is limited.

The majority graduate in areas where the number of pass-outs far exceeds the jobs. And the competition is certainly tough. This does not mean there are no jobs; it is just that jobs are being chased by a large number of aspirants. Like the "lucky guys", you cannot afford to sit back and wait for employers to come to you. Since the jobs are there and employers, in their own interest, have to fill them up, why don't you try to get a job? If you do try, why shouldn't you get it? What should you do to get it? That is what we are going to discuss now.

But wait. Before we start on the job-hunt, let's make one thing very clear: be ready to receive a large number of rejections. Some organisations may not even reply or acknowledge your letter. It is part of the game and should cause neither disappointment nor frustration.

The job-hunt is a six-step operation: self-analysis; identification of the job-market; information gathering; strategy formulation; preparation of a resume; and the interview.

Self-analysis, an attempt to know oneself, is primary to career planning. Much before entering the job-market, you have to find answers to certain questions: What is your temperament? What are your interests? What is your ultimate aim? What are your achievements? What are your weak points? The entire exercise is for your benefit and has to be undertaken seriously, thoroughly and honestly. It involves a bit of

research on your background and psychology and your relationships with others. Some of the questions you can ask yourself are:

- What are the things you can do best and with what are they related: people, machines, nature (plants and animals), etc?
- Can you express yourself clearly to others?
- Can you lead a team and get work done or do you just follow directions and do things as told?
- When under pressure, do you manage to work normally or are you tense?
- Can you work fast with accuracy?
- Do you enjoy new ideas, people and situations or are you comfortable with known routines, people and places?
- Do you wish to work only in your own city or can you go anywhere in India or even abroad?
- Do you prefer a low-salaried secure job or a high-salaried insecure one.
- Are you a clock-watcher who likes a 10 to 5 job, or would you like a job which does not go by the clock?
- Do you love travelling or do you want to be tied to one place?
- With what type of people do you feel most comfortable—educated, illiterate, rural, urban, men, women, children, young or old?
- Do you want to work for a large organisation or a small one?
- What areas are you weak in?

If you answer these questions honestly and prepare an essay on yourself, you will be able to open up yourself. The exercise will help you analyse things important to you, jobs you are interested in and organisations where you should try to work. You will realise the kind of individual you are, and this will be invaluable later when you prepare your bio-data and appear for an interview. This inventory on yourself will help you answer several questions your prospective employers may ask in the interviews. The analysis will be a good memory aid to ensure that you do not forget important details about yourself.

After self-identification comes career awareness. You may not be having a clear idea about the various careers, nature of work and promotional prospects. Do not hesitate to discuss the subject with your relatives and family friends.

You should know that you are in the buyer's market. Being the seller of your services you are the weaker one. Therefore, be sure you do not concentrate on one type of career or job. Identify at

least three alternatives for which you are qualified and are willing to work. The more options you have, the better your chances.

The second equally important step, is **identifying the job market or job search** for which you have to look for advertisements in newspapers and magazines. Your job search has to be wide and not confined to one or two newspapers. Many advertisements which appear in *The Hindu* are not seen in the *Deccan Herald* and never in *The Hindustan Times*. *The Times Of India* and *The Statesman* do not carry the same advertisements. So you have to develop the habit of going through several newspapers and magazines from different parts of the country.

How should you go about doing it? No one can afford to buy all the newspapers and magazines. The best way is to visit a library once a week and go through list of newspapers and current magazines. You must go through ads and note down the posts vacant, qualifications needed, jobs to be done, names and addresses of employers, the last date for sending in applications and the names and dates of the relevant newspaper or magazine.

The third step in the job hunting operation is **collecting information on jobs** connected with your career. You must start from the important question, would you like to go in for a government job or a private one? Before you take the final decision, find out the major differences between the two and also the promotion prospects in each area. Once you have decided where you would prefer to work, your efforts should be to find out the major employers in that area. It would be better to find out as much as you can, about various employers. This part of the operation is rather difficult because the sources of information are not clear and known. Sometimes you will be groping in the dark and not much will be known. However, you should not be discouraged and, instead, talk to your relatives, friends, teachers and others who may know about employers. Knowing somebody who knows somebody helps, and can sometimes be the most effective way of collecting information. The point is that no single opportunity should be overlooked. More next time.

R. Thakur

Keltron Digital Watches Worth every second you wear one

Planning to buy a good digital watch? Well, here's information that could save you a lot of money and time.

The fact is that there are just two kinds of digital watches to choose from: cheap foreign watches that could breakdown any time - and leave you stranded without service and spare parts.

Or watches like Keltron Digital Watches that are guaranteed against failure.

Yes, Keltron Watches are guaranteed to work constantly, with precision,

every second of the year.

Why? Because Keltron Watches incorporate high-tech Hitachi (Japan) modules - with time, day, date and light functions and with the lowest battery power consumption - less than 1 micro-amps.

Because Keltron Watches are quality tested at Keltron's sophisticated Testing and Development Centre.

What's more, Keltron Digital Watches also look as perfect as they work.

Both ladies' and gents' models are designed elegantly. And built tough

to last—with stainless steel casing, strap, and a scratch proof mineral glass top.

To top it all off, Keltron Digital Watches are backed by the most efficient and extensive after-sales service in the country. Which means, even if you want to wear a Keltron Watch for a life-time, you can. Without running around to get service.

So, let the good times roll. Drop in at your nearest Keltron dealer.

It's high time you got yourself a Keltron Digital Watch.

Keltron Digital Watches—Built to stand the test of time.

TEST YOUR WORD POWER

Tick the word or phrase you believe is nearest in meaning to the key word:

1. **edifice**: A: skill B: total amount C: old and wise saying D: a wise man
2. **ambidextrous**: A: cross-eyed B: good handwriting skill C: able to live both on land and in water D: able to use both hands equally well
3. **aroma**: A: pleasant smell B: warm emotion C: strong alcoholic drink D: strong odour
4. **bulwark**: A: a place where bulls are kept B: any person who works like a bull C: any person or thing giving strong support in time of need D: a powerful tractor
5. **contentious**: A: devious B: friendly C: ominous D: quarrelsome
6. **gaunt**: A: lean B: insane C: hazy D: bitter
7. **hiatus**: A: vain pride B: gap in a series C: strained relations D: a narrow inlet
8. **impunity**: A: freedom from violence B: compensation for loss C: freedom from punishment D: safety
9. **infuse**: A: to fill B: tempt C: show enthusiasm for D: please greatly
10. **invest**: A: to put (money in) B: examine C: receive property D: lend money
11. **pristine**: A: formal B: conservative C: shining D: unspoiled
12. **psychologist**: A: one who studies the development of man B: an expert in map-making C: one who makes a scientific study of election trends D: one who studies the science of law
13. **refrain**: A: to hold oneself back B: restore to original position C: get in the way of D: make less
14. **rendezvous**: A: meeting place B: point of no return C: secret hideout D: mixture
15. **resilient**: A: determined B: able to recover from trouble C: easy to solve D: coming back into use
16. **shun**: A: to avoid B: prohibit C: refuse D: put to shame
17. **throng**: A: to crowd B: strangle C: prosper D: disturb
18. **upheaval**: A: unexpected outcome B: great and sudden change C: difficult task D: noise and excitement
19. **vogue**: A: an increase in numbers B: a fashion show C: strong alcoholic drink D: popular favour
20. **weary**: A: easily broken B: strenuous C: tired D: sad

(Answers on page 73)

IDIOMS & PHRASES

1. **In sack cloth and ashes**: in repentance. After having lost his kingdom, King Porus went about in sack cloth and ashes for some time.
2. **To sail forth**: to rush out suddenly. They sallied forth in wave upon wave on the enemy.
3. **To savour of**: to have a flavour of. Your actions certainly savour of idealism and high-mindedness.
4. **At sixes and sevens**: in disorder. When Malti returned home, she found everything at sixes and sevens; her children had gone on a rampage in her absence.
5. **Jointly and severally**: collectively and individually. The members of a cooperative society are liable to pay back a government loan jointly and severally.
6. **To be a sheet in the wind's eye**: to be intoxicated or overdrunk. Towards the fog end of his life, the poet became a sheet in the wind's eye and soon died.
7. **To have a second string to one's bow**: to have a second alternative in case the first fails. A person who takes great risks must have a second string to his bow.
8. **To play truant**: to shirk duty, specially run away from school. Students often play truant to see a cinema-show.
9. **In twaddling clothes**: still immature. Many politicians still appear to be in twaddling clothes.
10. **To take time by the forelock**: not to let an opportunity slip. A resourceful man will always take time by the forelock.
11. **To be up and doing**: to be active. We should be up and doing if

- we want the country to prosper.
12. **Under the umbrella of**: under the patronage of. Many countries flourish under the umbrella of the US.
13. **To be an ulcer**: to be a corrupting influence. Bribery is an ulcer in the body politic of any nation.
14. **Under-board**: clandestinely; dishonestly. Business people make many transactions under-board.
15. **Vaporous webs**: fanciful ideas. You cannot build the hard work-a-day world with vaporous webs.
16. **Variegated view**: a scenic panorama. This window offers a variegated view of the landscape.
17. **Full of verbosity**: containing superfluous words. A minister's speech is most often full of verbosity.
18. **Of easy virtue**: of loose character. A prostitute is a woman of easy virtue.
19. **Vertebrate writings**: writing characterised by strength, firmness or consistency. Carlyle is famous for vertebrate writing.
20. **Verve, vim and vigour**: with full force. The new government should work with verve, vim and vigour to fulfil its pledges to the people.

QUOTABLE QUOTES

Give me a firm spot on which to stand, and I will move the earth.

Archimedes

A plausible impossibility is always preferable to an unconvincing possibility

Aristotle

Is't so small a thing
To have enjoyed the sun,
To have lived light in the spring,
To have loved, to have thought,
to have done?

Matthew Arnold

What's the use of worrying?
It never was worth while,
So, pack up your troubles in
your old kit-bag,
And smile, smile, smile.

George Asaf

If a man be gracious and courteous to strangers, it shows he is a citizen of the world.

Francis Bacon

There is no more miserable human being than one in whom nothing is habitual but indecision.

William James

Happiness: a good bank account, a good cook and a good digestion.

Jean-Jacques Rousseau

Irrationally held truths may be more harmful than reasoned errors.

T.H. Muxley

The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure.

Thomas Jefferson

Earth is here so kind (Australia), that just tickle her with a hoe and she laughs with a harvest.

Douglas Jerrold

Example is always more efficacious than precept.

Dr Samuel Johnson

Two things fill my mind with ever-increasing wonder and awe, the more often and the more intensely the reflection dawns on them: the starry heavens above me and the moral law within me.

Immanuel Kant

Advice to persons about to marry—Don't.

Punch

In giving freedom to the slave, we assure freedom to the free—honourable alike in what we give and what we preserve.

Abraham Lincoln

I might have been a gold-fish in a glass bowl for all the privacy I got.

Saki

A falseness in all our impressions of external things, which I would generally characterise as the 'pathetic fallacy'.

John Ruskin

THE MAKING OF A BUDGET

BY BECO

On Mar 31 the Union Finance Minister will throw open the dreaded Pandora's box containing fresh budgetary provisions that might pinch the common man's purse. But how does the government frame the budget? Who is at the controls?

What is budget? How is it prepared and presented to Legislatures? How does Parliament exercise control over the annual budget? Answers to these topical questions would be interesting now that both the Central and state governments are going to finalise their budgets for 1985-86 shortly and present them to the Parliament and state Legislatures.

Concept

The concept of a budget is traceable to the 'Money Bag' available for expenditure in ancient Greek village republics. In Britain, the term 'budget' was used to describe the 'Leather Bag' in which the Chancellor of Exchequer carried to Parliament statements concerning the needs and resources of the government.

Gradually, it came to imply the documents relating to the government's income and expenditure plans. Budget thus represents the financial documents prepared by the government for balancing anticipated receipts and expenditure for a specific period, usually one year.

Though basically a financial plan, the budget is now considered as an instrument of economic planning. Economic developments are reflected in the budget in so far as it regulates the volume of taxation and national expenditure, in line with the economic policy of a nation. Again, the budget should meet all threats of inflation or economic recession.

Preparation

The Central Budget is presented to Parliament in the Budget Session which generally begins in February. State budgets are also usually presented in February and March, although traditionally there are no fixed dates for the purpose. Preparation of budget commences right from the beginning of July or August. Each government department prepares its own estimates, keeping in view the standing charges, expenditure on schemes under execution and on new schemes. The Finance Ministry examines these estimates in consultation with the Planning Commission and the ministry concerned, fixes priorities and allocates funds for various schemes in a rational manner. Consolidation of these estimates takes place in the Finance Ministry sometime in January. The

taken, in appropriate cases, before consolidation. The questions of policy and proposals regarding fresh tax levies are considered by the government at various levels and decisions are taken in the light of various factors operating in the country's economy. This is followed by preparation of the Annual Financial Statement—the budget and the Demands for Grants—for presentation to the Legislature.

The Budget Division of the Finance Ministry is primarily responsible for the preparation and submission of the budget, other than the Railway Budget. Every ministry has a finance division associated with it. These associated divisions are responsible for preparing the budget of their own divisions or ministries. Finally, the Budget Division of the Finance Ministry with the assistance of these associated divisions prepares the budget. The Budget Division takes care of various other functions which have a direct or indirect bearing on the budgets of both Central and state governments.

The Planning Commission plays an important role in budget-making. The Commission formulates the Five Year Plans, and separate plans for each state and for each Union territory are also formulated. Annual Plans are also prepared. The size of the plan and the priorities are determined, the financing pattern is decided and the quantum of the Central assistance to each state for Plan financing is indicated. The states also indicate the amount of additional taxation they would be prepared to undertake in order to meet the Plan obligations. Similarly, Plan items in the Central Government Budget are decided in consultation with the Planning Commission. The result of all these consultations and discussions is reflected in the Central Budget as well as in the state budgets. A special document, named, 'Plan Budget Link', indicates the above parameters in detail.

Documents

Apart from the Finance Minister's speech, several vital documents are laid on the table of the House. They are: (a) Budget document, indicating estimates of receipts and disbursement; (b) An 'Explanatory Memorandum' on the budget. This memorandum provides short notes in respect of estimates of receipts and disbursements in each case; (c) The Finance Bill, incorporating changes made in respect of taxes and related administrative matters; (d) A memorandum explaining the provisions in the Finance Bill; (e) The Plan-Budget link, showing the amount of expenditure on Plan projects included in the budget; (f) Ministry-wise demands for grants; (g) Defence services estimates;

(Continued on page 14)

INSURGENCY ON THE RAMPAGE

BY UDITA CHANDRA

The politics of insurgency has been spreading its tentacles throughout the nation. But its grip has never been tight enough to wring out the strong sense of unity among the Indian populace.

Insurgency is defined as the act of rising in open rebellion or revolt against the established authority. In the field of politics, insurgency is the act of a part of a country demanding its right to form an independent, sovereign state of its own, free of the influence and control of the established government of the country. The case of USSR is unique in that it gives its units the constitutional right to freely secede from the USSR.

Since 1860 when, by a resolution, the state of South Carolina declared itself seceding from the US, insurgency has been a problem faced by many countries. In England, the Irish problem has been raging for four and a half centuries with the Irish Republican Army (IRA) demanding the union of north and south Ireland, free of British control. In Sri Lanka, the question of a separate state demanded by the Tamil minority, and the violent retaliation by the Sinhalese majority has led to the nation being completely spilt along racial lines.

In India, the problem of insurgency is as old as the nation itself. There are calls for separate states from the north-east, fighting for freedom from the brown colonists of New Delhi. Punjab poses one of the most serious problems facing India today. In the south, some symptoms of the same sickness were witnessed, but fortunately, they never gained momentum.

In the north-east, insurgency has, to begin with, been a result of the divide and rule policy of the British colonists, who deliberately isolated the tribals of the north-east from the national mainstream. After independence, the problems of partition kept the national leaders preoccupied and the north-east, which was not emotionally integrated with the rest of India, felt more isolated and alienated. There was a 'crisis of identity' among the people of the north-east. It is alleged that various Maoist organisations fomented the discontent and encouraged secessionist tendencies among the tribals.

Spreading terror: Revolting by indulging in nefarious activities.

Even today, the north-east is in a ferment. There is a conflict between the traditional cultures and the forces of change that manifest themselves most conspicuously in the form of agitational, often violent political activity.

The movement for secession that started in Nagaland, with the Naga tribes taking arms in 1956 under the Naga National Council led by Z.A. Phizo who established an underground government, soon spread to the other volatile states and Union territories in the north-east. Though the army action is said to have crushed the movement, pockets of resistance still exist. The Shillong accord of November 1975 has been rejected by Z.A. Phizo and the other charismatic leader of Nagaland, T. Muivah of the National Socialist Council of Nagaland (NSCN). The dominant presence of the army hardly deters the rebels from mounting hit-and-run attacks.

In Manipur, the People's Liberation Army (PLA), a Maoist organisation, and the People's Revolutionary Party of Kangleipak (PREPAK), a Marxist-Leninist group, both demand the freedom of Manipur from the control of the Indian Government. The PLA guerrillas are allegedly trained in China and Tibet, and on their return indulge in shooting, arson, bank robberies and kidnapping.

Mizoram, still a Union territory, also presents the same problem to the Government of India. In 1966, the insurgent Mizo

Army, under the leadership of the Mizo National Front (MNF), 'liberated' almost the entire Union territory and held it for several days before the massive Indian Army intervention gradually pushed them back. 'President' Laldenga was the leader then, and to date he remains the most crucial element in Mizo politics. Since the peace moves broke off on Jan 20, 1980, when a Home Ministry note accused him of being "intransigent", Laldenga has been living in Britain and criticising India constantly.

In Tripura, extremist activities have been increasing and insurgency has been a result of the inability of the Indian Government to settle the tribal and non-tribal disputes. The Tripura National Volunteer force (TNV) and its various factions are spearheading the secessionist movement in the state. The extremists visualise themselves as 'liberators' and see themselves as freeing Tripura from the "colonial backed refugee government and foreigners."

The self-styled Supreme Commander of TNV, Bijoy Hrangwal, who escaped in 1982, is still operating from his headquarters in the Chittagong district of Bangladesh.

In Assam, the movement against foreign nationals has sometimes taken on the colours of a secessionist movement. Though the majority of Assamese still consider themselves Indian, ambitious politicians steer the course of the movement dangerously close to secessionism. The term 'aliens' that once referred to illegal immigrants from Bangladesh, soon came to refer to even non-Assamese Indians.

In 1960, Madras state was also shaken by the politics of secession. The DMK and the Nam Tamil jointly organised a campaign throughout the state to demand secession of Madras from India and the creation of an independent, sovereign state of Tamil Nadu. The DMK, sometime later, even proposed that the states of Madras, Andhra Pradesh, Mysore and Kerala should secede and form an independent 'Republic of Cravid Nad'. They did not gain much support outside Madras.

The agitation by the DMK continued, but in its manifesto on the eve of the Lok Sabha elections in 1977, there was no mention of secession, though there was a demand for state autonomy, which, they asserted was neither "secession-oriented nor anti-national".

Though the first demands for the creation of "Khalistan" were heard at the time of independence, voiced by the Akali Dal

later been reduced to a call for greater state autonomy. It is only during the last three years that Punjab has become the scene of a series of agitations. A communal and extremist movement started in Punjab and soon degenerated into secessionist and anti-national activities. Under Jarnail Singh Bhindranwale, there was a systematic stockpiling of arms and ammunition. The secessionist movement received the support of a number of groups operating from abroad, and finally the army had to be called in to carry out Operation Blue Star and Operation Woodrose. While the calls for secession and the creation of Khalistan are heard loudest and clearest from Sikhs settled abroad, it is a fact that extremist activities in Punjab are still continuing.

While the Punjab is of utmost concern, the situation in the north-east is also alarming, with the efforts of the guerillas to secure a meaningful coordination among the rebels, finally appearing to bear fruit. The PLA and the NSCN have come closer under one unified command. The NSCN foreign secretary has set up links with PRE-PAK, while the MNF is training TNV volunteers. The movement is slowly turning towards Maoism, thus broadening its ethnic base.

But all is not lost—there is some hope in the form of the visit of the MNF leader Laldenga, who was in New Delhi at the invitation of the late PM, Indira Gandhi. He

Policy Planning Committee G. Parthasarthy Back once again from his short interim trip to London, Laldenga has reaffirmed his desire for a solution. An accord is being worked out. If successful, it will provide the much-needed breakthrough in solving the problem of insurgency in the north-east.

Secessionist movements have always proclaimed their demand for a right to "self-determination", which is given to every nation. The genuineness of this demand is debatable. What actually constitutes a nation? Can the Sikhs claim to be a separate nation when they are said to be the militant protectors of the Hindu faith?

All demands for secession have been made by regional parties and regional political leaders—be it the Akali Dal or the DMK. All talk of economic exploitation, discrimination against a particular community and racial differences are only political gimmicks used to gain a mass base. Nothing can fire the imagination of a youth more or earn his loyalty better, than a call to fight for justice, and to protect his people from the 'colonists' of New Delhi. Secessionism in India, is more or less a purely political phenomenon used by local politicians to gain support.

In India, foreign powers interested in destabilising the country have involved themselves in the politics of insurgency. The weapons used by the extremists have foreign markings on them. Pakistan has

Government's attempts to end and insurgency. A pro-Phizo delegation is said to have visited China last year for procurement of arms.

Though some states may feel that they would be better off outside the Union of India, this is not logical. Ours is a planned, interdependent economy where the development of one state is linked and is dependent on the development of the others. No state is self-sufficient. Foreign powers, so eager to aid the insurgents now while they have a vested interest, may not be so enthusiastic once India is stabilised, or the federation is broken up. These states could hardly create viable economies and defence would be their eternal problem.

The reorganisation of states on linguistic lines may well be taken as a major cause for insurgency. The creation of linguistic states has created sub-national feelings and parochialism. Each state is gradually becoming isolated and less tolerant of other states.

India has traditionally been known for its diversities. India's greatness lies in the assimilation of many races and religions. The country's eternal problem has been the search for unity in diversity and the building of an integrated civilisation based on the higher values of life like mutual tolerance, peace and harmony. India may have diversities, but we are one nation. ■

THE MAKING OF A BUDGET

(Continued from page 12)

(h) Economic classification of budget. The aim of presenting this classification is to assess the economic effects of government activity.

Adoption

Before adoption by the Parliament, the budget has to be presented to the Legislature. It is discussed in Parliament and voting on the demands of various ministries takes place. The Appropriation Bill is then put up for consideration of the House. Finally the House considers the Finance Bill. The Finance Bill which indicates the proposed changes in taxes and other matters is introduced in Parliament; on the same day the budget is presented. The Finance Bill is generally referred to a select committee of the House. After the committee's report is received, the Finance Bill is discussed clause by clause. During these discussions on demands for various ministries and the Finance Bill, members place their views before the House and try to convince and justify their assertions.

A lot of uncertainty exists before the presentation of the budget. In the backdrop of existing economic conditions, every section of society anticipates the budgetary measures in its own way and

assesses their impact upon its day-to-day living. Allocation of resources made through the budget and the raising of revenues through new taxes creates an adverse effect upon some while it is beneficial to others. Hence the budget generally becomes an object of both praise as well as ridicule. However, the point has to be appreciated that in a democratic set-up, the budgetary process has its own limitations, even if it is desired to make optimum use of the financial resources.

Parliamentary Control

A budget may be well formulated, but if there is no effective financial control, the whole scheme of budgeting might go wrong. This requires the introduction of discipline and the establishment of a certain degree of rigidity in the budget execution. Hence, various types of controls including financial regulations are exercised. These financial regulations are initially allowed in the form of general orders or executive instructions which are generally consolidated in the form of codes and manuals. Besides, the Parliament exercises control over the budget through its financial committees viz, the Public Accounts Committee, the Estimates Committee and the Committee on Public Undertakings.

The main function of the Public Accounts Committee is to ensure that the moneys disbursed were legally available and were used properly and that the expenditure was properly sanctioned. It also looks to various other aspects of expenditure such as prudence, economy and financial propriety. The Estimates Committee draws its members from the Lok Sabha, and their term of office is generally one year. The main objectives of the Estimates Committee are to ensure economy and efficiency in administration. It is expected to see that the money is well laid out. If a close examination reveals that a certain policy is defective or that its implementation involves wastage of funds, the committee can suggest alternative policy for consideration by the government.

The Committee on Public Undertakings, whose members are drawn from both Houses of Parliament is a relatively recent creation. The scope of the committee is mainly to examine the reports and accounts of public undertakings and to assess if these organisations are being managed in accordance with sound business principles and proven commercial practices. These committees are contributing towards exercising control over public expenditure, in their own way. ■

FIECONS

CIVIL SERVICES (PRELIMINARY) EXAM: 1985

(New Personalised programme scheme: NPP)

- (I) Our commitment — 'Help those who need it' — and our experience of the last two years during which more than 95% of our candidates having secured our NPP programme scaled high in the merit list, goad us to offer the same programme to the new candidates of civil services (prelim) exams, 1985. Our experts, erudite scholars from J.N.U., I.I.T. and D.U. and in-service probationers have something more, scientifically formulated programme, to offer you. Their 'Handouts' contain subjectwise analysis of the syllabus—both optional and general studies papers, reading list and model question papers with introduction to the objective type examination. We also make available to our candidates all books mentioned in our reference list, when they enroll themselves in our programme. This service of ours aims to bridging the gap arising out of relative educational deprivation and inequality that make the elite class to dominate as successful candidates in the civil services exams. In this sense it is not a business enterprise. Secure our help writing to us for details with Rs.5/- Bank draft or postal order to the Managing Director, FIECONS.
- (II) We also supply all kinds of information and guidance both inland and abroad, regarding educational (Engineering, M.B.B.S., M.B.A., Social Sciences, Agricultural Science etc.) and employment opportunities.

FLUENCY DEVELOPMENT COURSE

■ By Post ■ In 3 months

You may be well-qualified, and good at writing in English. You may be good at translating, too. But can you **SPEAK** English fluently?

You may be a good scholar and may have a good knowledge of everything. But can you **SPEAK** in English about what you know without faltering?

- Our Course will make you break free of hesitations and speak English with a stream-like flow.
- Our Course will make you speak by juggling with English-speech.

Our learners include All India Service Officers, Judicial Officers, Commissioned Officers, Advocates, Doctors, Engineers, Executives, Businessmen, Civil Service candidates and candidates for all career-competitions.

The Front Door To The Civil Services

BY LALIT VARMA, IAS Topper, 1983

The rat race for the Civil Services continues, unabated. You may be a runner too, sooner or later. So here's good luck to you and more from a topper's pen who elaborates on the method of preparing and taking the Civil Services Exam, in the first of a series of four articles on the subject.

Every year the UPSC holds exams for recruitment to various Civil Services. The competitive exam is conducted in three stages: (i) Preliminary Exam [Prelims] (objective-type) for the selection of candidates for the Main Exam; (ii) Main Exam; and (iii) Interview (personality test). Final ranking is based on the combined marks obtained in the Mains and interview.

Prelims

It consists of two objective-type papers (multiple-choice questions mainly) that carry a maximum of 450 marks: Paper I—General Studies, 150 marks; Paper II—one subject to be selected from the list of optional subjects (Agriculture, Botany, Chemistry, Geography, History, Law, Psychology, Zoology, etc), 300 marks.

Question papers are set both in Hindi and English. The course content of the syllabi for the optional subjects is of degree level. The government notification gives the detailed syllabi as well as a few sample questions. The concerned issue of *Employment News* can also be consulted for the same.

This exam is meant to serve only as a screening test and the marks obtained in the Prelims are counted only for admission to the Mains and not for the final ranking. Yet, the Prelims are not to be taken lightly. Out of nearly one lakh applicants for the Prelims only about 10,000 are admitted to the Main Exam.

In the multiple-choice, objective-type questions a number of short questions are asked and the candidate has to choose the correct answer from four or five alternatives given. All questions are compulsory in the multiple-choice paper and, since the questions are generally drawn

from the entire course the candidate has to be thorough in his subjects.

In general these papers test the candidate's precision and may also test his ability to distinguish between similar terms or ideas, and, in some papers, his ability to make estimates rapidly.

Apart from knowing your subject thoroughly, the best way of preparing for this kind of exam is to repeatedly practise on actual test papers. It is essential to be aware of the type of questions asked and the answers supplied so that you know what to expect. For example, though the General Studies paper covers practically every subject area, a careful study of the old question papers reveals that maximum questions are asked in General Science, Mental Ability, General Knowledge, Indian History and current events. Accordingly these areas should be given more weightage while preparing for the exams.

The following may be observed while preparing for or even answering one of these papers in the exams:

- Speed is essential, though not at the cost of accuracy. Time is limited. Work steadily and with full concentration, without wasting time on a doubtful, controversial or ambiguous question. Come back to these after having scored the answer for clear-cut questions.

- Since results depend on the number of correct answers, there is no point in leaving any question unanswered. Sometimes it is easy to eliminate unlikely and ridiculous responses and mark the most probable response as the correct response.

- Besides reading books, newspapers and magazines to increase depth and width of knowledge one must indulge in group or solo brainstorming in order to generate likely, anticipated questions.

- Time management is essential to distribute time equally over various subjects and topics. While preparing for the Prelims the Mains must also be kept in mind so that preparations are simultaneous for both. This becomes more important in the light of the fact that the time gap between the Prelims results and the Mains is hardly 90 days.

- One must be on the lookout for questions which differ from the usual form. In most questions one has to just decide which one of the four answers is true. But, among these questions, there may be a few for which the right answer might consist of a combination of two or more alter-

natives, e.g.,

Which of the following sequences of events are true?

1. Sequence X
2. Sequence Y
3. Sequence Z
- A. 2 only
- B. 2 and 3 only
- C. All
- D. None

Another tricky variant is in the form of 'except' questions which reverse the usual form and ask you to identify the incorrect statement among a number of correct ones, e.g.,

* All the following data about Akbar is true except...

A candidate working with speed and used to one form of questions may mark the wrong response in such odd questions even if he knew the right answer. Similarly one must be on guard for the tricky words—best, the only, odd, least, most likely etc. and also for the particular condition that may have been specified in the question.

- Scoring on the answer sheet should be done meticulously and as per given instructions. Make sure you make the right kind of mark and in the right place. It is preferable to use a ruler on the answer sheet which can be moved as the questions are answered so that you do not lose the right place where the answers are to be marked.

Main Exam

The Mains are held sometime in November. Candidates are admitted to the Mains on the basis of the Prelims results (declared in August/September) of that year. The number of candidates to be admitted to the Mains is about 12 times the total number of vacancies to be filled up in that particular year (nearly 800 per year).

The Mains include a written exam of eight conventional essay type papers, each carrying 300 marks:

Paper I (300 marks)—One of the Indian languages included in the Eighth Schedule of the Indian Constitution.

Paper II (300 marks)—English.

Papers III and IV (300 marks each)—General Studies.

Papers V, VI, VII and VIII (300 marks each)—Any two subjects to be selected from the list of optional subjects. Each subject will have two papers.

The Indian language and the English
(Continued on page 74)

ESPIONAGE

NET AROUND SPY-RING

The fact that most of the secret projects of vital importance to India have, all along, been nothing but open secrets, (thanks to spy infiltration into top-most government offices) has immensely frightening connotations. And the report that several Indians are a part of the espionage network operating in the country is even more terrifying. On Jan 17, Rajiv Gandhi informed Parliament of the existence of a spy network within the country with wide ramifications. Days later, details started pouring in, of the nexus between counter-intelligence agencies and their Indian 'moles'. Among these moles are reportedly P.C. Alexander's private assistant and three others in the PM secretariat, and two other low ranking officials from the President's office. They were alleged to be supplying photostat copies of top-secret documents to one Coomar Narain the alleged kingpin of the spy ring in India. He is the Delhi Regional Manager of a Bombay-based trading and manufacturing firm T. Maneklal Manufacturing Co. Ltd whose Managing Director Yogesh Maneklal was arrested following Coomar's confession that he had been spying for 25 years and had contact with French, Polish, East German and Russian diplomats. The French diplomat has already been identified as Alain Boileau, a defence attache in the French embassy. He was recalled on the advice of the Indian Government as was French Ambassador Serge Boidevaix. The name of the Polish diplomat figured in the Press but the External Affairs Ministry is neither confirming nor denying his recall. Nothing is known about the identity of the other Soviet Bloc spies.

It is still unclear what made the intelligence suspect the existence of a spy ring. Presumably, it was the conspirators who grew careless. For a long time, government officials were passing on top secrets to Coomar. When he was arrested and his Hailey Road office raided, trunkloads of photostated classified documents were seized. Apart from this, 300 top secret documents on combat and laser weapons, nuclear research projects, counter-intelligence and defence preparedness reports as well as policy papers on India's relations with Sri Lanka and Pakistan have also been seized from the premises of various suspects. India's secret diplomatic ciphers were leaked out too—matters unknown even to Cabinet ministers.

It is believed that France basically sought information on India's defence procurement and may have made available to other countries additional information received in the process. The French decision to withdraw the ambassador is also an official admission of France's participation. The role of the Soviet-bloc diplomats is still unknown.

Dr Alexander, too, tendered his resignation soon after the disclosure about the participation of his staff in the spy scandal which was accepted by the PM, albeit with regret.

The startling revelations of this espionage have highlighted the laxity prevailing in offices of bureaucrats. The leakage of information of such vital importance to the country, in order to strengthen foreign hands, is a matter of grave concern. Immediate tightening of security is the need of the hour to prevent the likes of it occurring again. Draining of national secrets can prove hazardous for the country's well-being.

ANTI-DEFECTION BILL

TIMELY ANTIDOTE

The incidence of sullied politicking of defection and deception which had of late become an undesirable but integral part of Indian politics is likely to abate to quite an extent, though perhaps not totally disappear from the political scene. The passing of the Constitution Amendment Bill on Jan 30 puts a ban on defections in both Houses of Parliament and the state Legislatures. This is the 52nd Amendment to the Indian Constitution and its main objective is to check the scourge of unprincipled defections. It leaves no scope for being challenged in a court of law, unlike ordinary anti-defection legislation which may be challenged under Article 19, which provides Freedom of Speech and Expression and the Right to Form Associations or Unions among other rights, or under any other provision of the Constitution.

According to this Bill a member of the legislature will automatically lose his seat if he voluntarily resigns from the party on whose ticket he was elected formally, in accordance with its rules and procedure. However, the accompanying clause which laid down that a member would incur disqualification if he were to be expelled from the party to which he belonged was dropped.

The Bill also defines a split and merger. It states that a split shall be deemed to have occurred in a party if no less than one-third members, of the concerned House, belonging to that party break away from it. There will also be no disqualification in the event of a merger where a member's original party merges with another and he claims that he along with other members of the original party have become members of the new party formed; neither will there be any disqualification if he and any other members of the original party opt to function as a separate group while rejecting the merger. The merger would be valid only if it received the approval of two-thirds of the House. The amendment also provides for conscience vote, i.e., a member voting against the party whip or abstaining from voting will incur disqualification if such voting or abstention is not condoned by the political party within 15 days.

As defection has all along marred the basic structure of India's parliamentary democracy the Bill may well prove to be the first step towards cleansing public life. However, the Bill, like most laws of the land has loopholes; for instance, it does not specify the necessary action to be taken in case there is suspicion that a government is losing its majority, particularly when the House is not in session. The Opposition, while backing the Bill, has also expressed concern over the fact that the authority for deciding questions of disqualification on grounds of defection will be vested in the Chairman or Speaker of the House concerned as the Bill may establish the dominance of the PM as well as the Opposition leaders. Coming at a time when the Congress(I) is the undisputed force in the Lok Sabha this amendment should also secure the Rajiv Gandhi rule at least till the end of his official tenure. But, all in all, it will undoubtedly succeed in curbing the politics of opportunism.

INDO-LANKAN RELATIONS

STALEMATE EXISTS

India appears to have grown tired of being patient and finally retaliated in kind by capturing a Sri Lankan navy boat, with seven crewmen, that had intruded into Indian territorial waters and was engaged in harassing Indian fishermen. The patrol boat had, after firing at the fishermen, seized the catch and equipment of about 20 vessels and was consequently seized by the Indian coast guard vessels on Jan 11, 1985. Earlier, on Jan 7 two Indian fishermen had been killed by the Sri Lankan patrol boats when they were in India's waters, on the pretext that they were Tamil militants. This had resulted in an intensified vigilance by the Indians.

The attack resulted in the expected heated protest by Colombo for the immediate release of the captured boat. But, for once, New Delhi emerged with an upper hand and was prepared to negotiate only on its terms, viz the release of 17 Indian fishermen facing persecution in Sri Lanka for alleged poaching, and compensation for loss of life and property to the families of fishermen killed in similar encounters.

Meanwhile the increasing student militancy in Sri Lanka as well as the effort to colonise the predominantly Tamil north with settlements of Sinhalese families, in an attempt to reduce the Tamil majority and create local support for security forces, further antagonised the Tamil guerrillas. They demonstrated their displeasure by blowing up a Colombo-bound train which resulted in the death of 34 people including 23 soldiers. On the other hand the atrocities on Tamils continued unabated. In a gun battle between Tamil militants and the army 17 militants were killed while in another incident Indian fishermen were injured in firing within the Indian territorial waters.

The PM expressed his concern over the hostile stance adopted by Sri Lanka and said that even though the ethnic issue is an internal problem of the island, the influx of refugees into India and their hardships, is India's concern as well. While Sri Lanka appears to favour a military solution,

exchange for the return of the captured Sri Lankan boat and crew. High level talks between the two countries are also on the cards to solve the Tamil issue which is a positive step towards breaking the existing stalemate.

SIX NATION SUMMIT

AVERTING THE HOLOCAUST

Once again the six nations, representing the collective non-aligned interests, got together to express the world's growing concern over the nuclear arms race. In the one-day six-nation summit held in New Delhi, on Jan 28, the heads of states or governments (India—PM Rajiv Gandhi; Argentina—President Raul Alfonsin; Greece—PM Andreas Papandreu; Mexico—President Miguel de la Madrid; Sweden—PM Olaf Palme; and Tanzania—President Julius Nyerere) focussed their talks, primarily, on nuclear disarmament. As a follow up of their joint appeals issued to the five nuclear powers viz, the US, the USSR, China, the UK and France, on May 22, 1984 to halt production and deployment of nuclear warfare, these nations once again urged the nuclear weapon states to immediately halt testing of all kinds of nuclear weapons and to conclude the Comprehensive Test Ban Treaty (CTBT), at the earliest. They also called for the prohibition of development, testing, production, deployment and use of all space weapons, as they felt outer space should be used for the benefit of mankind and not suffused with nuclear weapons, to be converted into a virtual battleground of the morrow.

At this juncture when the world sits in terror at the prospect of a nuclear conflict, which could completely devastate the earth, such moves are widely acclaimed. As USSR aptly puts it these summits reflect "the international public's growing desire to contribute to safeguarding peace as also their deep concern over world tensions and their growing determination to take urgent steps to prevent nuclear war". This, coupled with the US expressing its respect for the "sincerity and purpose and commitment to peace" of the summit augurs well for entire humanity. It also goes to show that anti-nuclear and peace movements conducted the world over have compelled the two superpowers, who, between themselves, possess nine-tenths of the world's nuclear stockpile, to re-evaluate their outlook from one of establishing nuclear arsenals to one of a yet hesitant consensus on disarmament. The Geneva agreement between the US and the USSR, to start bilateral negotiations on questions concerning space, nuclear arms—both intermediate range and strategic—have been eagerly welcome by all quarters. The permanent representatives of the six nations in Geneva will jointly call on delegations of the US and the USSR when they met on Mar 12, 1985 for resuming disarmament talks to inform them about the Delhi Declaration. Perhaps it will go a step further in persuading the two superpowers to ultimately agree on a nuclear freeze.

The Indian PM, in his first major appearance on the international scene, won applause for recommending the 4-Point Plan on nuclear disarmament. The plan urges the five nuclear powers:

- to put a freeze on production and deployment of nuclear weapons
- to embark on physical reduction of nuclear stockpiles
- to ensure that all discussions and agreements in this sphere are applicable to all possessors of nuclear weapons
- to devote themselves to the basic objective of elimination of all nuclear weapons.

At the moment then, the world is keeping its fingers crossed that the Geneva talks will advance onwards, from the talking to the negotiating stage, and that its collective plea had not fallen on deaf ears.

ASSEMBLY ELECTIONS

ON THE MARK...

Within a fortnight of the formation of the new Cabinet, the PM affected a minor reshuffle of various portfolios. These changes, however, are not permanent. Relinquishing charge of the Ministry of Commerce and Supply which was initially looked after by him, Rajiv Gandhi allocated the additional temporary charge of this ministry to the Union Finance Minister, V.P. Singh. The Minister for Chemicals and Fertilisers, Veerendra Patel was given the additional temporary charge of the Ministry of Industry and Company Affairs. However, the Defence Minister P.V. Narasimha Rao, who was temporarily holding additional charge of Planning had to relinquish his portfolio. The Governor of RBI, Dr Manmohan Singh was appointed Deputy Chairman of the Planning Commission, of which the PM himself is the Chairman.

In the midst of these changes the final lap of the general elections was

being run. In the five contested Lok Sabha seats the Congress bagged two—its candidates B.L. Shailesh and K.N. Pradhan emerged victors from the Chail constituency in UP and Bhopal in MP, respectively, taking the Congress tally to 403 seats in the Lok Sabha. The Telugu Desam, too, bagged two seats—the Srikakulam and Rajampet constituencies in Andhra and thus 30 of the 42 seats in the state. The remaining seat went to the DMK in the north Madras Lok Sabha constituency. The DMK emerged a surprise victor in both Lok Sabha and Assembly elections. In the latter DMK won two seats defeating its arch rivals AIADMK and the Congress(I). In the three by-elections to the Kerala state Assembly the Marxist-led Left Democratic Front (LDF) convincingly defeated the ruling United Democratic Front (UDF).

And even while the hubbub of the Lok Sabha polls has still not subsided the dates for the Assembly elections have been finalised. On Mar 2 and 5, a 279m electorate comprising 73.6% of the total electorate of 378m will once again exercise its franchise to decide the fate of 2,532 seats in the Legislative Assemblies of 11 states and one Union territory. Maharashtra and Bihar will have polling on both days while polling in Andhra Pradesh, Arunachal Pradesh, Gujarat, MP, Karnataka, Orissa, Rajasthan, Sikkim and the Union territory of Pondicherry will be held only on Mar 5. The elections are timely in that the five-year term of the Bihar, Gujarat, MP, Maharashtra, Rajasthan, UP and Orissa Assemblies expires in June/July this year. In Karnataka and Andhra the Governors dissolved the Assemblies at the CMs insistence, and in Himachal Pradesh too, CM Virbhadr Singh rather surprisingly decided to seek dissolution of the Assembly in order to hold mid-term poll in the state, on Mar 5. Once again the country is busy preparing to line up at the polling booths.

ASSAM

SOLUTION IN SIGHT?

The concerted efforts of Rajiv Gandhi may finally succeed in finding an acceptable solution to the foreigners' problem in the troubled state of Assam.

In a fresh bid to solve the issue the Centre showed its desire to restart talks with the Assamese agitation leaders. The new initiative on Assam was finalised early in January at a meeting between the CM Hiteswar Saikia and high-level Union Government committee. What egged the government on was the enthusiastic response of the agitating All-Assam Students' Union (AASU) who seem to be in a conciliatory mood at the moment. This can be attributed either to a desire on their part to convince the Centre to conduct elections in the state, which will provide them with the opportunity to rehabilitate themselves politically or it may be due to a genuine desire on their part to end the tussle once and for all. For it is rather obvious that their influence has waned over time.

Whatever be their reasons the AASU leaders showed their willingness to negotiate with the government, provided the negotiations were conducted in two parts. The first round of talks would centre around creating conditions conducive for holding elections. The second round would concentrate on resolving the foreigners issue once and for all. Talks between the Centre and the state were broken off in 1982 owing to irreconcilable differences which resulted in the gruesome Nellie massacre.

The crux of the Assam problem all along has been the manner in which migrants of the 1961-71 period are to be disposed of. In the 1982 talks the agitation leaders, while conceding that it might not be possible to deport the refugees back to Bangladesh, insisted that they be accepted by other states. The Union government, however, found the demand unacceptable as it wanted the acceptance of these migrants as Indian citizens on humanitarian grounds since most of them were Hindu refugees who had left their homes fearing persecution in the erstwhile East Pakistan. Apart from this the agitation leaders also sought the dismissal of the Saikia Ministry and the dissolution of the Assembly. This faux pas brought a halt to the talks then.

While the agitation leaders now appear to have accepted 1971 as the cut off year for foreigners they are not satisfied with the manner in which door to door enumeration is being carried out. And since the Centre has at last relented and given the green signal for holding the elections as soon as intensive revision of electoral rolls is completed, the Assamese leaders have submitted a memorandum to the Election Commission (EC) urging it to formulate its own procedures on the basis of the Supreme Court directives for preparing the electoral rolls.

Closed curtain talks were held in New Delhi in the last days of January and early February between the Centre and the agitation leaders. The

torial rolls have not been finalised. If an agreement is reached on the vexed foreigners issue it will be coupled with a new problem for the Centre—the problem of reinstating the multitude of stateless persons in Assam.

TAMIL NADU

RETURN OF THE NATIVE

In M.G. Ramachandran's absence, Tamil Nadu became a virtual arena for the power wars between the AIADMK parliamentary party members resulting in the shredding of the party fabric. And MGR, who returned to India on Feb 4, after a three-month-long treatment in the US, has ahead of him the unenviable task of sewing it together into some semblance of dignity.

Dissensions among party ranks first appeared when the Commercial Taxes Minister and leader of the AIADMK youth wing S. Thirunavukkarasu was deprived of his portfolios of excise, handlooms and textiles and instead given the portfolio of the nutritious noon meal scheme. The change was effected through a letter from MGR to the Governor, S.L. Khurena—rather surprising because MGR was, at the time, incapable of moving. The outraged Thirunavukkarasu immediately tendered his resignation though he did not relinquish his party membership. But what ultimately led to the split in the party was the removal of Jayalalitha, the deputy leader of the parliamentary party, from the post, once again allegedly under the orders of MGR. The ex-actress immediately lashed out at the conniving coterie comprising the state Finance Minister, V.R. Nedunchezhiyan, party General Secretary P.U. Shanmugam, state Information Minister, R.M. Veerappan and V.N. Jenaki, MGR's wife. And keeping into consideration Jayalalitha's role in the Lok Sabha elections and state Assembly poll campaigns, as well as the favours her political mentor MGR had bestowed upon her, the move does seem as an attempt to undermine the considerable power she wielded in the party in MGR's absence. The loyalties of the party members now lie divided among those who support Jayalalitha and those supporting the Nedunchezhiyan—Shanmugam—Veerappan clique. To add to the slight, Jayalalitha was not even allowed to meet MGR upon his return.

Now that MGR is back home and decidedly showing marked improvement in his health the swearing in of his AIADMK Ministry is imminent. What he decides to do about his erring party members is, at the moment, anybody's guess. But surely now that the cat is back the mice will have to stop playing their own games.

PUNJAB

PERPLEXING AS EVER

Punjab remains a vexatious issue even for the Rajiv Government. The appointing of a high-level ministerial committee to study the various facets of the Punjab tangle was followed by extensive discussions within the Central ranks. The Centre adopted a rather conciliatory attitude to begin with and was quite prepared to hold early elections in the state with a view to restoring popular government, in full awareness of the fact that the Akali Dal itself may be voted back to power. The Centre wanted to make sure that the Akali Dal would be prepared to allow any other elected party to govern the state. Apart from this the Centre was also ready to consider the release of Dal and SGPC leaders detained under the National Security Act (NSA), provided no criminal cases were registered against them. The Akali Dal, on its part, was enthusiastic about these proposals as it expected to secure a mandate to rule.

Soon dissensions started, following the Haryana CM, Bhajan Lal's suggestion to reunify Haryana, Himachal Pradesh and Punjab to constitute a single state. This, the CM thought, would automatically resolve the disputes over the river waters, territory and also Chandigarh. The move was acclaimed by both Haryana and Punjab but promptly rejected by the Akali Dal ad hoc executives and the SGPC.

To worsen matters further, an attempt was made on the life of the Akal Takht head priest, Jathedar Kirpal Singh. On Jan 16, Kirpal Singh along with two of his *sawedars*, was seriously injured when shot by three unidentified assailants.

Installed as head priest of the Akal Takht in 1982, Kirpal Singh is among the select band of Sikh leaders openly opposed to terrorism. He had, at an earlier stage, even banned the entry of arms into the Golden Temple complex. The attempt on his life was probably made with the view to increase the rift between the Centre and the state and sabotage the possibility of resumption of talks. Upon his recovery, Kirpal Singh reportedly indicated that the head priests were prepared to play the role

of mediators to the Punjab problem. The statement was later taken up by him. The Akalis are persistent in their demands for the release of the detained Akali leaders "to create a congenial atmosphere", as also consideration by the Centre to the Anandpur Sahib resolution. This resolution, according to the head priests, has been grossly misinterpreted by the government and the government should now refer to the specific clauses it objects to so that those can be specifically considered by the priests and Akalis.

The Centre had however, prior to these latest developments, been resolute in its stance that the Akalis unequivocally condemn terrorism and give assurance that a solution will be found within the framework of the Constitution. The Anandpur Sahib Resolution had been described unconstitutional by the government. The Centre has not as yet expressed its opinion with regard to these developments. Meanwhile, a substantial part of the country will go to the polls on Mar 2 and 5. Punjab will, once again, be conspicuous by its absence.

VISITS

CULTIVATING FRIENDSHIPS

It is heartening to note the PM, even while taking stock of domestic problems, is still finding time to cultivate friendship with foreign countries and nurture the existing ones. Obviously believing in building bridges not wells, Rajiv's efforts to enlist the goodwill of these countries will undoubtedly prove beneficial in the long run.

The President of Argentina, Raul Alfonsin, was among the first to respond to a friendship call from India. His visit coincided with the six-nation summit in which he participated. Talks with India proved beneficial for both countries. Wide ranging agreements on economic cooperation as well as an agreement for cooperative efforts in science and technology, were signed. A programme for cultural exchange was approved and the decision to set up a joint commission with the view to strengthen bilateral relations was also finalised. Both countries welcomed the furtherance of mutual cooperation and the marked improvement in bilateral relations in practically all fields. India, on its part, extended its support to Argentina on the Malvinas Island issue.

The King of Bhutan arrived in New Delhi on a four-day state visit starting from Feb 1, 1985. King Jigme Singya Wangchuck reaffirmed Bhutan's complete trust in India and expressed satisfaction over the growing economic cooperation between the two countries. The issues discussed during this visit ranged from regional issues to bilateral cooperation in wide-ranging fields. India's assistance to Bhutan's developmental projects also featured in the talks.

RBI REPORT

PROPHECY FOR IMPROVEMENT

The Report on Currency and Finance, 1983-84, submitted by the RBI indicates improvement in the economic trends during the current financial year. The price situation in 1984-85 (April-March) has shown distinct signs of easing. Also the extent of the rise in prices is likely to be much smaller than the rise recorded in the preceding year.

It is estimated that the industrial growth for this year may touch the 7-8% mark compared to the 5.5% growth it achieved in 1983-84. The rate of increase in non-food credit at nearly 8% from March to November 1984 as against 5% in the corresponding period in 1983 reflects this acceleration of industrial growth.

In contrast to the discouraging trends in the price situation in the early part of 1984, the prospects for containing the price rise within a range considerably lower than that in 1983-84 have brightened. In fact the price rise up to Nov 17, 1984 during the current financial year works out to 5.4% on a point-to-point basis or 7.9% on an average basis compared to the 9.3% and 8.8% during the corresponding period of 1983-84. Even on the assumption that the price rise during the remaining part of the year would be as large as it was during 1983-84, the extent of price rise for the full current year would be much smaller than in the preceding year.

The industrial production during the first half of 1984-85 (April-September) registered an increase of 7.2% against 4% in the same period in 1983-84. Manufacturing has risen by 5.5% compared to 3.7% in the last financial year. Mining and quarrying has risen from 9.3% to 10.7% while electricity from 2.7% to 13.5% primarily due to significant improvement in power generation. The performance of the infrastructure industries has been highly impressive and this will ensure acceleration of industrial growth during 1984-85:

In the agricultural sector, output of kharif foodgrains is likely to be sus-

(Continued on page 24)

CURRENT EVENTS

US-USSR

OF STAR WARS & WEAPONS

The one agreement that Soviet Foreign Minister Andrei Gromyko and US Secretary of State George Shultz reached at Geneva was to talk some more. The agreement was that the US and the USSR will conduct three series of negotiations simultaneously and the single negotiating teams of each nation will be divided into three sub-groups. While one will discuss long-range strategic weapons (nuclear warheads carried by inter-continental missiles or launched from submarines or bombers), another will bargain about intermediate range weapons (especially the Soviet SS-20 missiles and NATO's Pershing II missiles), and the third will discuss defensive systems including America's Strategic Defense Initiative (SDI), anti-satellite (ASAT) weapons and Soviet ground-based systems like anti-ballistic missiles (ABMs), radars and anti-aircraft devices. The most contentious issue will be the third one, which is also called President Reagan's star war programme and which seeks to intercept and destroy nuclear missiles. While the Americans were happy that Kremlin had agreed to resume what in effect, is the START (Strategic Arms Reduction Talks) and INF (Intermediate-range Nuclear Forces) talks, which the Soviets had walked out of in Nov 1983, when NATO had begun to deploy nuclear missiles in Europe, the Russians too are pleased because Washington had wanted to keep the offensive and defensive systems separate. The Russians had managed to get the US to put star wars on the same general forum as the offensive weapons.

Immediately after the talks, however, it became apparent that it was easier to talk than to get anything done, and even the talks may get off at a dead end. In separate television interviews, US Defence Secretary Casper Weinberger ruled out not only the possibility of stopping star wars research but also any ban on deployment of the weapons that this research may produce, and Shultz said that it "remained to be seen" what would happen if progress was made on missiles but not on anti-missiles. On the other side of the iron curtain, Gromyko in a similar TV interview declared that without reaching a simultaneous accord on all three directions, "there can be no advancement of what was agreed upon in Geneva". While not demanding an immediate halt to star war research or a total ban on the deployment of space weapons, he said that such a ban was the goal of the Soviets.

While such discourse was going on a Pershing II missile which had just arrived for deployment in West Germany, accidentally exploded, killing three American servicemen and injuring 16 others. Luckily, the missile was not armed and there were no nuclear warheads in the immediate vicinity. While this accident led to questions about the reliability of the Pershing II, many similar accidents having occurred during the time of testing in 1982 and 1983, it added fuel to the fire of European pacifists who do not want such missiles in their country. The Belgian Government is already split on the question of missile deployment in Belgium and the Belgian PM made this clear to Reagan during his visit to Washington on Jan 15. Early in February, the Greek PM Papandreu said that although Greece was a member of the NATO, its decisions were not binding on Greece and asked America to remove its nuclear weapons from the country.

On the Russian side, too, a mishap occurred in January. A Soviet cruise missile apparently got away and after flying over parts of Norway crashed in Finland. Weinberger stated that the "run away" missile had been shot down by the Soviets themselves and this means that the Soviets themselves have a strategic defence system of their own.

REAGAN ADMINISTRATION

DEFENCE BUDGET BELLOWS

Ronald Reagan was sworn in as President of America for a second term in an elegant ceremony. His second term agenda comprises three major issues: arms control, tax simplification and the federal budget system. The Shultz-Gromyko meeting in Geneva showed his anxiety to begin talks in the field of arms control. No less important is the budget. If no cuts are made in the current spending, the deficit will grow from \$218b this year to \$235b in 1988, and the

national debt will rise to \$2.5 trillion. However, Reagan appears to be relaxing at the moment since the economy has picked up since last summer. Interest rates fell to 10.5% in late January. Reagan's goal is to reduce the annual deficit to 2% GNP (\$100b). As he has ruled out tax increases or cuts in defence and social security, cuts have been suggested by Budget Director David Stockman in well-entrenched entitlement programmes like medicare, agricultural subsidies and student aid. However, powerful lobbies are against such cuts. The Senate Republican leaders, on the other hand, favour a freeze on most federal programmes, including defence and social security. The defence budget has been growing at the rate of 8.3% over the past four years. The proposed \$313b budget for the next year is expected to come under special scrutiny by Congress.

Meanwhile, Reagan had begun to shake up his administration for the second term. The Treasury Secretary, Donald Regan, has been made the White House Chief of Staff, while James Baker, the outgoing White House Chief of Staff has been given Donald Regan's former post. Edwin Meese has been nominated Attorney General. The Energy Secretary Donald Hodel will move to the Interior Department and White House Personnel Director, John Herrington will take over as Energy Secretary. William Bennett has been given the post of Education Secretary. Vernon Walters, the former Deputy Director of the Central Intelligence Agency (CIA) will replace Jeanne Kirkpatrick as the US Ambassador to the UN. Kirkpatrick will return to teaching and writing.

In Soviet Russia, the sudden postponement of the Warsaw Pact's planned summit meeting in January raised speculations that President Chernenko's health problems may be more than serious. The meeting was to be held in Sofia, Bulgaria around Jan 15. Western Kremlin-watchers even speculated as to whether he was still alive. Chernenko has not been seen in public since Dec 27. Early in February, an official spokesman, while declining to comment on Chernenko's state of health said that he was taking a winter holiday near Moscow.

JAPAN

DIPLOMATIC TRIUMPHS

It was a month of diplomatic triumphs for PM Yasuhiro Nakasone. He followed West German Chancellor Helmut Kohl and British PM Mrs Thatcher as an equal in the procession of Western allies meeting with President Reagan. At Los Angeles, therefore, Japan's importance as an emerging global power was felt. The meeting was the fifth in two years between the two leaders and was dominated by two main issues—trade and arms control. The US has a trade deficit of \$36b with Japan and has a growing market access problem. However, Nakasone took the initiative and said that he was determined to solve the trade problems and had set up a new seven-minister committee, which includes three foreign members, one of them being the President of the US Chamber of Commerce in Japan, to look into them. The two leaders agreed on high level market access talks, which will concentrate on electronics and computers, medical equipment and pharmaceuticals, forestry products and telecommunications, which could increase US exports by \$10b in the long term.

On arms control, Nakasone tried to get a clear view of the American stance. He persuaded Reagan to pledge that the US will not negotiate any agreement with Moscow which permits Soviet SS-20 missiles to be moved from Europe to Asia.

Nakasone added to his diplomatic triumphs by visiting the South Pacific nations of Australia, New Zealand, Papua New Guinea and Fiji between Jan 13 and 20. This was a clear sign that Japan is taking on a more active role in the region. In Los Angeles, Nakasone had reaffirmed Japan's commitment to share a "global partnership" with the US and take greater responsibility for coordinating strategic and economic policy in his part of the world. During his trip, he assured his hosts that Japan was committed to peace and prosperity in the region.

Nakasone was the first Japanese PM to visit Fiji and Papua New Guinea. He offered development aid to both countries and promised to expand cultural and economic exchanges. The rationale behind such commitments is that these mini states are important from the strategic point of view: if the Soviets build bases in the area, the task of the West

...region's economic life. ...
 ...in the region, its trade with its Asian
 neighbours now rivals the total amount of trade with the US. It depends
 on the region for quite a few of its basic natural resources. About three-
 fourths of Australia's total iron ore exports and more than half of Papua
 New Guinea's copper exports go to Japan.

ISRAEL

WITHDRAWAL PLANS

STAGES OF ISRAELI PULLOUT PLAN

"Israel will be out of Lebanon, in nine months," said a senior official, and so it appeared. The Israeli Cabinet voted 16 to 6 in favour of a unilateral, step-by-step withdrawal of about 22,000 Israeli troops from South Lebanon. The occupation had begun with Operation Peace for Galilee on Jun 2, 1982, when Israeli troops had swept into Lebanon to sweep the area clear of Palestine Liberation Organisation (PLO) guerrillas who had used Lebanon as a base for launching military operations into northern Israel. The first phase of the withdrawal will begin within five weeks and will involve the city of Sidon and the area along the Awali river. The troops will redeploy 25 miles inside Lebanon between the Zahrani and Litani rivers. The second phase involves the eastern sector including part of the Bekaa valley, where 40,000 Syrian troops are also present. In the third phase, the Israelis plan to create a zone six to 12 miles inside Lebanon under the control of a 2,150-men Israeli-trained and -financed South Lebanon Army, which consists predominantly of Christian militia.

The withdrawal scheme is opposed by some hardliners in the Likud Party, including Deputy PM and Foreign Minister Yitzhak Shamir. They feel that a pull back without firm security guarantees by the Gemayel Government would lead to the re-population of South Lebanon by PLO guerrillas. However, Israel has lost a large number of men in the area in the past few months. The Shi'ite Muslims, who are in a majority in the region, have launched their own attacks against the Israeli Army with the help of Syria. The Shi'ites are also tough in their attitude towards the Sunnis and the Christian minorities, and an Israeli withdrawal may lead to a civil war in the region.

Washington, too, is not too happy about the Israeli decision and are in favour of a quick diplomatic solution. Negotiation, which had been going on between Israel and Lebanon at Naqoura were abruptly broken off after the 14th round, because neither side was ready to compromise. However, after the Israeli Cabinet passed the unilateral withdrawal plan, Lebanon again decided to resume negotiation.

PAKISTAN POLLS ANTICIPATION AGAIN

President Zia-ul-Haq announced on Jan 12 that Pakistan would hold its elections in February. The National Assembly elections were scheduled for Feb 25 and elections for the Provincial Assemblies for Feb 28. The Provincial Assemblies will elect the Senate in mid-March. According to Zia, Pakistan is moving towards a shurocracy, meaning democracy, Islamic style, the word *shura* being derived from an Arabic word denoting Consultative Assembly. Parties will not be allowed to contest, only individuals. Islamic theorists feel that parties are divisive and in any case a parliamentary Opposition is not required to challenge the government's programme, since it is based on the Quran. However, one should bear in mind that Pakistan is more a Muslim dominated country rather than an Islamic one, and Zia himself is far from being a true Imari, who according to Islamic ideals, should rise to eminence as a result of his goodness and wisdom.

On Jan 19, Pakistan's main Opposition alliance, the 11-party (all banned) Movement for the Restoration of Democracy (MRD), decided to boycott the elections, unless they were held under the suspended 1973 Constitution. Zia lifted electoral ban on office-bearers of most opposition parties, former ministers, etc, but the MRD held firm that he must lift the 1979 ban on political parties, free all political detainees, remove Press curbs, disband military courts and restore the curtailed powers of the judiciary before the elections. Later in the month, the MRD categorically ruled out any negotiations with the military regime regarding their participation in elections and said that it was another *sham* like the referendum of Dec 18.

TURKISH-CYPRIO TALKS

HANDSHAKE OF THE CENTURY

On Jan 17, 1985 Cyprus President Kyprianou and Turkish Cypriot leader Rauf Denkash met in New York at the UN-sponsored meet to resolve the Cyprus problem. The talks however ended in a stalemate, with the two sides blaming each other for the failure.

In three rounds of earlier talks, both parties had come to an agreement in principle over the unification of the Turkish northern Cyprus and the Greek southern Cyprus into a bicameral federal government which would be presided over by a Greek Cypriot President and a Turkish Cypriot Vice-President. Further, the Turkish Cypriots who control 37% of the island agreed to reduce their portion to less than 30%.

However, when the two leaders met recently it became evident that both sides had come to New York with different views. While the Turkish Cypriots claimed they had come to sign a draft agreement worked out with de Cuelar in earlier discussions, the Greek Cypriots said there was no draft agreement and the purpose of their meet has to negotiate the issues discussed earlier before a draft agreement could be formulated. Nevertheless, a positive outcome of the meeting was that the two sides had met each other for the first time since 1979. In fact, Denkash called it the "handshake of the century".

The recent history of Cyprus has been one of turmoil. Cyprus, an island in the Mediterranean was formerly a British colony. After a determined guerilla war, it was granted independence on Aug 16, 1960 and Archbishop Makarios III, who was the head of the Greek Orthodox Church in Cyprus became the first President of the island republic. Serious inter-communal violence between the Turkish and the Greek Cypriots resulted in the installation of a UN peace-keeping force in 1964. In 1974, President Makarios was overthrown in a coup; he fled the country only to return again to resume the presidency. Meanwhile, the Turkish Cypriot leader Rauf Denkash invited the Turkish Army to protect the Turkish community and to prevent Greece from establishing control over the island. The Turkish Army occupied northern Cyprus and in February 1975, the Turkish Cypriots declared the establishment of the "Turkish Federated State of Cyprus" with Denkash as President. The state was recognised only by Turkey. President Makarios died in 1977 and was succeeded by Kyprianou. In 1980, the UN-sponsored peace talks were resumed and in May 1983, the UN General Assembly voted in favour of the removal of Turkish troops from Cyprus. The Turkish Cypriots responded by proclaiming a unilateral declaration of independence and called their state the "Turkish Republic of Northern Cyprus", with Denkash as President; this was again recognised by no other country except Turkey and was duly condemned by the UN Security Council. Following this all attempts for peace between the two communities failed.

The basic problem in the unification talks still remains over the

1974 and number around 17,000-20,000. The Turkish Cypriots do not want Turkey to be involved in any part of an agreement. The Turkish Cypriots will not make any concessions about the Turkish military presence as they feel it will hamper their own security interests.

After the present stalemate, UN sources reluctantly admitted that the earlier agreements which had been worked out between the two sides were practically useless.

However, the UN Secretary General hoped to bring the two sides back for another round of discussions by the end of February.

KAMPUCHEA

VIETNAMESE OFFENSIVE

In the most spectacular part so far in the most aggressive dry season offensive of the Vietnamese against the three factions of the anti-Vietnamese Democratic Kampuchea coalition, Vietnam launched a massive attack on Ampil, the headquarters of one of the factions, the Khmer People's National Liberation Organisation (KPNLF), the leader of which is the one time republican PM Son Sann. By Jan 8, Ampil, which is a kind of "model city" and not a mere guerilla hide out, fell. Unlike during earlier attack, the Vietnamese did not put Ampil to the torch, and there were speculations that they may wish to establish a semi-permanent force at Ampil.

The Vietnamese offensive began in November with an attack on Noug Chan, and since then nine camps have been captured. There are about 1,55,000 refugees now in the Thai side of the border. Of the three factions—the KPNLF, Prince Norodom Sihanouk's group and the Khmer Rouge (the Democratic Kampuchea coalition's communist partner, whose leader is Pol Pot)—the KPNLF has suffered the most and of its eight camps only one, Dongrek, which has a civilian population of 17,000, has remained untouched so far. The main object of the present offensive appears to be the elimination of the KPNLF, which is militarily vulnerable. On the other hand, it is politically very active and has grown fast in the past years. It had set up a number of "model cities" as a symbol of their political legitimacy in the country. Sihanouk's group is not as large, and the Khmer Rouge, though militarily formidable, has little political credibility with anyone except their Chinese backers because of their genocidal rule in 1975-78. However, the attack on Ampil has restarted a debate within the KPNLF about the feasibility of fixed positions as defence centres. The swing appears to be in favour of guerilla warfare.

Late in January, the six-nation Association of South-East Asian Nations (ASEAN) and China decided to jointly work to bring Vietnam to the negotiating table in a bid to find a solution to the Kampuchean conflict. China declared that it was willing to negotiate with Vietnam if it withdrew its troops from Kampuchea and also agreed to provide more support to the three anti-Vietnamese resistance groups. Meanwhile, the UN Secretary General, Javier Perez de Cuellar, visited Vietnam and held talks on the political settlement of the Kampuchean conflict. On their part, the Vietnamese called on the US to resolve the conflict and said that Washington could easily contribute to peace in South-East Asia.

BRAZIL

DEMOCRATIC INCLINATIONS

Bom dia, Democracia means "Good Morning, Democracy" and indeed, it was a new day for Brazil when Tancredo de Almeida Neves was elected the nation's first civilian President after 21 years of military rule. Democracy is not yet complete in Brazil as its 131m population did not have a direct say in Neves' election. The new leader was chosen by a 686-member electoral college made up of the Chamber of Deputies, the Senate and delegates from each of Brazil's 23 states. However, Neves was the nominee of the Opposition Brazilian Democratic Movement Party and he won 480 votes to the 180 won by Paulo Salim Maluf, the candidate of the military-backed ruling Democratic Social Party. The Brazilian Constitution provides for a six-year presidential term, but Neves has said that he will support direct election for 1988. He has also called for a Constituent Assembly to permit a popular vote.

Brazil is thus slowly inclining towards full democracy. However, the transition is being skillfully controlled by a group of businessmen, political and military leaders. The military will continue to exercise influence over some areas of government, including the armaments industry. They have also extracted assurances that Neves would not promote any embarrassing investigations into past human-rights abuses and corruption, like his neighbour Raul Alfonsín in Argentina.

Neves has won widespread acceptance. According to a poll conduc-

This is because he is a conciliator and has managed to steer a careful course between the military and its civilian opponents in politics. He began his political career in 1934 as a city councilman and in 1961 became the PM of Brazil. After the 1964 military coup he served as a federal deputy, and tried to find a way to restore democracy via a Congress severely limited in its power. He became a Senator from his home state Minas Gerais in 1979 and its Governor in 1982. Now, as the President, he will not find the going too easy. Brazil has a huge foreign debt of about \$100b. Although it had a trade surplus of \$13b last year, \$10b of that went as the annual interest due on the debt. The inflation is at 230%. During his campaign for the presidency, Neves made few promises beyond pledging to restore direct presidential elections and curbing the inflation rate. He visited the US in late January when his diplomatic skills were on trial. The US has fixed import limits on Brazilian steel, textiles and shoes and the Brazilian plea was for easier access to American markets.

NORTH-SOUTH YEMEN

WOOLING THE WEST

There may be changes in the entrance to the Red Sea, which is of international significance, because it is the vital route of Arab oil to the West. North Yemen (Yemen Arab Republic) has been playing all sides for some time. It has 15 American F-5 jets and about 60 Soviet MiGs in its air force. In 1984 President Ali Abdullah Saleh signed a 20-year treaty of friendship and co-operation with the Soviet Union, but still retains its non-aligned status. In July 1984, the Hunt Oil Co. of Texas discovered oil near North Yemen's ill-defined border with South Yemen and Saudi Arabia and there are signs that it would tilt more towards the West, because it has sought to obtain American oil drilling technology. On the Arab front, it recently hosted the Islamic Conference and welcomed Egypt to the fold, despite protests by Iran and Syria. Relations with South Yemen, too, have been good and there is a strong sentiment in favour of the unification of the two countries, despite centuries of separation.

South Yemen (People's Democratic Republic of Yemen) has also been showing signs that it may start looking to the West for help. So far, since it won independence from Great Britain in 1967, it has been staunchly Marxist. But North Yemen's oil find has whetted its own appetite for oil and it has been wooing the West to let its prospectors find oil, which the Soviets have been unable to find so far. It has resumed border negotiations with Oman and strengthened its ties with Saudi Arabia, Great Britain and other West European allies. It has also been encouraging Western companies. A French company has built a hotel and South Yemen now wants Air France to be the first European airline to fly through the country. It has also bought two American-made Boeing 737 commercial jetliners and two American technicians arrived in the country with the planes. While Washington declared that it would welcome US investment in South Yemen, since this would help to balance the Soviets, who already have a naval base at Aden and the South Yemen island of Socatra in the Arabian Sea, it added that it could not protect American oil-men and other investors until diplomatic ties, which were broken in 1967, were restored with the country.

NEW CALEDONIA

FORMULATING PEACE

After a fresh spurt of violence, the French President Francois Mitterrand decided to visit the French Pacific colony of New Caledonia on Jan 17. The idea was to sell a peace formula to the warring Kanaks, the black Melanesians who narrowly form the largest single ethnic group on the island, and the Colons, the French settlers. While the former want independence from France, the Colons wish to remain with France. Mitterrand's formula spells autonomy and not total independence. The settlers could keep their French citizenship under the plan, and the French police would protect them.

Whether such a plan would be acceptable to either side is debatable. The island has been rocked by violence for the past few months and already have over 6,000 French policemen in New Caledonia, which has a population of only 1,45,000, the ratio being one policeman to every 24 islanders. The French Agricultural Minister Edgar Pisani, had been sent as Special High Commissioner in December to break the deadlock which had developed after the Kanaks had boycotted the territorial election held on Nov 18. He had presented his ideas on Jan 7 in which he had suggested that a referendum should be held in July to decide whether New Caledonia should have an "independence association". He

...especially in its national security, social, currency, transportation and communications. He also proposed that France should cooperate with New Caledonia on its economic development, agriculture, tourism and exploitation of maritime resources.

While the leader of the Kanak Socialist National Liberation Front (FLNKS), Jean Marie Tjibaou, partly welcomed the proposals, the French settlers denounced them as a "monstrous idiocy".

The situation was further aggravated when a group of Kanaks killed a white teenager, Yves Tual, in a white-owned farm on Jan 11. The enraged French rioted in the capital city of Noumea and the next day two Kanak extremist leaders, Eloi Machoro and his lieutenant Marcel Nonnero, were killed by a group of gendarmes. While the official account says that they had refused calls to put down their weapons, the FLNKS says that they had come out to talk to the gendarmes from a farm house and had been assassinated. Pisani had to stop the violence by declaring a state of emergency and imposing curfew.

Mitterrand's visit temporarily calmed the enraged feelings and he has put the prestige of his office behind his formula. The danger, however, is that extremists on both sides may not heed his plea and antagonisms would then become more fierce. Mitterrand, however, feels that "the dialogue continues".

SINGAPORE

PAP'S POOR SHOW

In Singapore's recent elections Lee Kuan Yew's People's Action Party (PAP) won all but two of the 79 seats in Parliament. However, Lee was not too happy because while in 1980 the PAP had won 76% of the popular vote, it won only 63% this time and a number of PAP members came close to losing. The Opposition Working Party leader, J.B. Jayeretnam, who had gained his seat in a 1981 by-election, retained it and another opposition leader, Singapore Democratic Party's Chaim See Tong, defeated a strong PAP candidate. Furthermore, a new constitutional amendment allotting three permanent seats to the Opposition will require the government to add a "best loser" MP with limited voting powers bringing the total membership of the Parliament to 80.

Aware of the need to know about the cause of its relatively poor showing after being at the helm for 25 years, the government is allowing a liberal run to anti-PAP views in the letters to the editor column of the local Press. Some of the letters complained about the brushing aside of bread-and-butter issues by the PAP during the campaign. Others accused it of being too authoritarian and unwilling to listen to popular grievances. Yet others wanted a genuine Opposition. However, one major reason was that Lee announced the election one year before it was due. This gave the Opposition ample time to prepare.

In a post-election news conference, PM Lee indicated that the "one man, one vote" system may lead to national disintegration and many concluded that he was aiming at a constitutional amendment. However, the First Deputy PM Goh Chok Tong said later in the month that the present system worked well and ultimately the people should decide through a referendum whether any change was necessary or not. Goh appears to be the next in the line of succession to Lee.

Singapore also created headlines when it announced recently that it would quit UNESCO. It is the first Third World country to make such an announcement. The US and Britain have already opted out of the UN body. While Singapore said that its limited resources had prompted it to leave, others felt that it had other motives. The timing of the move led to some speculation—its statement, so soon after the US pull out, led many analysts to conclude that Lee was out to please Washington.

ECONOMY

STERLING SLIDE

From its peak in 1981 to end 1983, sterling fell by 39% against the dollar and by 18.7% against major currencies in the world. In mid-January the pound dropped to \$1.111 and it seemed that the previously unthinkable level of parity with the dollar was fast approaching. The government, however, intervened and forced up interest rates and the pound steadied somewhat by January end at \$1.121. However, the confidence in PM Margaret Thatcher's Government's management of the economy was badly shaken. Britain's Chancellor of the Exchequer Nigel Lawson, had forecast a \$1.7b in tax cuts in the next budget, but there were indications that he would not be able to keep his word. His aides said that the budget deficit would probably run more than \$2b higher than expected in the present fiscal year. There was fear of increased inflation and if this is added to the unemployment rate, which, at nearly 13% is among the highest in West Europe, the state of the economy certainly does not

and in 1984, there was a total deficit of over \$3b, and excluding oil, the deficit was around \$9b. Britain's share of the world exports dropped from 8.5% in '81 to only 7.9% in '83 and is still heading down.

One of the reasons for the slide of the pound has been the strong dollar, which by the end of December had hit an all-time high against the French franc and a 12-year record against the Deutsche mark. Lawson recently visited Washington and met with outgoing US Secretary of Treasury, Donald Regan and the finance ministers of West Germany, France and Japan. This was the so-called "Group of Five" which had pledged to undertake coordinated intervention in the currency markets "as necessary," at the Williamsburg Summit of 1983. At the present meeting, however, no specific action was suggested to bring down the dollar.

Another major cause for the sterling's decline has been the weakness in oil prices. Britain's North Sea oil accounts for only 6% of the country's total output, but generates one-tenth of the Chancellor's tax revenues. There has been a downward trend in oil prices. Recently Norway's Statoil declared that it would fix its price not by reference to the British National Oil Corporation's price, but by lower spot market prices. This would mean that Britain too, would have to cut its oil prices further.

The one bright sign for the government was the state of the long miners' strike. In the last week of January another 2,870 miners went back to work. Altogether, 40% of the 1,87,800 members of the National Union of Mineworkers (NUM) were back on their jobs. NUM's also showing definite signs of splitting. The Nottinghamshire and South Derbyshire branches of the union have decided to subordinate the union's national rules to their own local ones. The union boss, Arthur Scargill, however, remains a die hard.

POLISH PRIEST'S MURDER

OFFICIAL COVER UP?

Hundred miles northwest of Warsaw, in the city of Torun, the trial of the four Secret Policemen indicted for the murder of Father Jerzy Popieluszko, a Roman Catholic priest who was an outspoken supporter of the banned Solidarity trade union, and whose bound and beaten body was recovered from a reservoir near Moscow last October, began. According to the indictment Secret Police Capt Grzegorz Piotrowski, the alleged ring leader, recruited two lieutenants from the security forces, Leszek Pekela and Waldemar Chmielewski, to kill the priest. The prosecution also named Secret Police Col Adam Pietruszka as the man who gave the order. All of these have been reduced to the rank of privates now. Many had expected the ex-captain to confirm the prosecution's original claim that the killing was carried out with the support and knowledge of high ranking Internal Affairs Ministry, which oversees the Secret Police. But none of the indicted persons allowed the blame to go any higher, although earlier the ex-captain had said that the orders to abduct Popieluszko had come from the top. Piotrowski confessed that he had murdered the priest and added that it was Pietruszka who had decided to take action against Popieluszko in September, and had told him that the decision came from the highest level.

Pietruszka, however, claimed not guilty to the accusations of the ex-captain and said that the latter had misunderstood instructions and taken matters into his own hand. What is more interesting is that he took the opportunity on the stand to vent his feelings against the Roman Catholic Church. He accused the priests of fomenting hatred towards Marxism and of even being licentious. He spoke with venom of the fact that import duties of about \$2.31,000 were waived for priests, mostly for luxury goods and cars. He added that they disregarded the law and

ONE-DAY SOVIET STYLE

In the USSR, the number of gainfully employed has closely approached 130m. They daily produce more than 3,300m roubles worth of various goods and more than 6,000 new flats are turned over for occupancy by Soviet builders. Every day nearly 15,000 babies are born. More than 12.5m barrels of oil and 1,500m cubic metres of gas are produced every day. Over 2m pairs of leather shoes, more than 24,000 TV sets and 16,000 refrigerators and freezers are dispatched by the industrial enterprises to Soviet shops and other countries daily. Every day nearly 1.5m people travel by rail, 3,00,000 by air and 1,40,000 by sea-going ships. More than 15m people go to cinemas daily and nearly 90m go in for physical culture and sports, having at their disposal 74,000 gyms, 95,000 gridirons, 3,50,000 tennis, volleyball and basketball courts.

Whatever the outcome of the trial, the government is embarrassed. There is suspicion of a possible official cover up. To squelch such suspicions, the authorities have allowed two priests, representing the episcopate of the Roman Catholic Church to "observe" the case.

ETHIOPIA

THE FAMINE AND AFTER

The hunger in Ethiopia continues, and with it a mass exodus into neighbouring Sudan has begun. This creates a new threat because starvation also haunts Sudan's 21m population. About 6,00,000 Ethiopians have already crossed into Sudan and about an estimated 3,50,000 more are expected to arrive in the next two months. The refugees are being helped by two anti-government guerilla groups, the Eritrean People's Liberation Front (EPLF) and the Tigre People's Liberation Front (TPLF). The Ethiopian Government retaliated by strafing refugee lines and bombing villages.

Besides famine, the government action shows another aspect of Ethiopia's disaster: civil war. Many of the refugees are not only fleeing starvation but the policies of the communist government of Col Mengistu Haile Mariam. Two insurgencies have long been festering in Ethiopia's northern provinces. The Eritrean guerillas have been battling for the control of their 45,400 sq mile homeland, which was absorbed by Ethiopia in 1962 for 23 years. In the mid-1970s, the insurgents were joined by the Tigrean guerillas who demand greater autonomy for their 25,000 sq mile province. The Eritreans control about 85% of the Eritrean countryside while the Tigrean autonomists control 90% of Tigre

villages and adjoining agricultural land. The guerillas feel that this has aggravated famine conditions. They also claim that Western food aid is being used as a tool by the government in its "pacification" programme. They maintain that little of the aid reaches the badly affected provinces of Eritrea and Tigre. Further, only those who show identity cards of state-controlled peasant organisations and neighbourhood associations are given food in the food centres.

The Ethiopian Government has also been following a resettlement programme involving the sending of 2.5m northerners to government — controlled areas in the southwest. So far about 70,000 people, mostly from Tigre and Welo have been moved. The guerillas are very critical of this scheme for the northerners find the southwest uncongenial and families are broken in the process.

Meanwhile, the Israelis were recently involved in airlifting thousands of starving Ethiopian Jews—Falashas—to Israel. Codenamed Operation Moses, the airlift resulted in the transfer of about 7,000 Falashas in the past few months from Sudanese refugee camps. The operation came to an abrupt halt when it became public knowledge. Airline officials acknowledged later that the Sudanese Government had ordered the halt. Sudan probably did not want to alienate other Arab states, none (except Egypt) of which have diplomatic relations with Israel. The operation has led to a lot of controversy and many Arab states have condemned Sudan. However, the rescued Falashas are none too happy to be in the promised land: their families are divided and about 7,000 Falashas are still in Sudan, while another 10,000 wait in Ethiopia.

SANJUKTA BANERJEE & ANITA BISWAS

CURRENT EVENTS : NATIONAL

(Continued from page 19)

tained at last year's level while rabi crops may perhaps show a marginal rise. Therefore, overall foodgrains output is expected to reach the targeted level of 153.6m tonnes in 1984-85. Cash crops are however not expected to do as well as foodgrains. The target for oilseeds for 1984-85 has been fixed at 13m tonnes compared to 12.8m tonnes in 1983-84. Of the other major cash crops sugarcane and cotton will fare marginally better than last year while jute crop production, owing to prolonged floods in West Bengal and Assam, will be badly affected.

The external sector has also shown marked improvement in 1984-85. Total exports expanded by 12.7% during April-August, 1984, against 8.3% in 1983. Non-oil exports expanded by 20.4% over the corresponding period last year. The foreign currency assets of RBI have increased by Rs 850 crores so far and stood at Rs 6,348 crores at the end of October 1984.

Monetary expansion during the fiscal year 1984-85 (Mar 30-Nov 15, 1984) has been Rs 8,490 crores compared to Rs 8,189 crores during the same period in the last fiscal year. The net credit of the government in the current financial year is Rs 5,956 crores compared to Rs 4,700 crores last year. Non-food credit has shown an increase of 8% compared to 5% in the preceding year. The country can therefore look forward to a relatively inexpensive year on the basis of this RBI report.

SEVENTH PLAN PROSPECTS

SETTING THE LIMITS

The Planning Commission, chaired by the PM has decided to maintain the public sector outlay of Rs 1,80,000 crores for the Seventh Plan (1985-90) envisaged in the approach paper despite the serious resources gap. In its inaugural meeting on Feb 8, the commission categorically ruled out any cut in the Plan size even though the resource position is undoubtedly very tight. While reviewing the progress of the draft Seventh Plan, which has already been delayed by at least six months as it had earlier been scheduled for December-end, it reiterated the basic objectives of Indian planning as removal of poverty, modernisation and attainment of self-reliance and stressed on specific policies and programmes in the light of contemporary realities. The PM also laid emphasis on long-range vision and perspective in planning.

The suggested solution for combating the tight resource position, according to the PM, is more stringent financial discipline, cutting down wasteful expenditure, efficient collection of taxes coupled with a tighter system of priorities by concentrating on a few basic and essential things and curbing the tendency to spread resources too thinly.

The Governor of the Planning Commission Dr Manmohan Singh was hopeful about finding the requisite resources of Rs 1,80,000 crores but

did not rule out deficit planning "within manageable limits". Commercial borrowing, depending on the export situation, was also recommended for ensuring that the country was not burdened with heavy debt. Finally, the Planning Commission underlined the major task of the Seventh Plan—rendering assistance in the harnessing of all available resources to accelerate the tempo of social and economic progress. The draft Plan which will be finalised by the commission by July-end this year will then be put up for approval by the Cabinet and the National Development Council before it is implemented.

CSO ESTIMATES

IMPRESSIVE PERFORMANCE

The Central Statistical Organisation (CSO) presented its estimate of India's economic performance during 1983-84. An impressive increase in national income by 7.6%, in real terms, as against a meagre 1.6% during the preceding year, was the highlight of the past year. At constant prices (1930-71 base) the estimated national income in 1983-84 was Rs 54,276 crores compared to Rs 50,437 crores in 1982-83, while at current prices it works out to Rs 1,59,598 crores and Rs 1,32,470 crores respectively.

India did reasonably well in most sectors. Production of foodgrains increased from 129.5m tonnes in 1982-83 to 151.5m tonnes and oilseeds from 9.9m tonnes to 12.8m tonnes. Forestry picked up from a negative growth of 7.2% during 1982-83 to 4.9%, mining showed 10.4% growth, the manufacturing sector 5% and electricity, gas and water supply registered further growth of 7.4%. However, production of sugarcane, cotton and tobacco declined by 6.6%, 12.6% and 14.8% respectively.

The per capita income in real terms increased by 5.2% and is estimated at Rs 749 for 1983-84 as against Rs 711 in the preceding year. At current prices this works out to be Rs 2,201 and Rs 1,868 respectively. In 1983-84 the private final consumption expenditure constituted 68.3% of the gross domestic product at market prices while the per capita income increased by 5.9%.

The net domestic saving during the year was Rs 31,031 crores as compared to Rs 26,080 crores in 1982-83 forming 17% of the net domestic product at market prices, primarily due to increase in savings of the household sector, household physical assets and financial savings. Savings both in the private and public corporate sectors fell from Rs 1,303 crores to Rs 1,255 crores for the former and from Rs 4,929 crores to Rs 3,900 crores for the latter. The rate of capital formation had an edge over the rate of savings during the year. The inflow of capital from abroad remained at almost the same level as 1982-83. The gross domestic capital formation at current prices increased from Rs 39,859 crores in 1982-83 to Rs 46,738 crores in 1983-84.

JYOTSNA SHARMA

Down The Ages

Through the corridors of time. And what have we? The Golden Ages when our ancestors achieved glory in every branch of human endeavour. Their majesties who reigned supreme. And those who would be king. The 'men' of God and the 'message' they spread. The reformers and the freedom fighters. The changing fabric of Indian society, economy, politics and the struggle for independence. Such a rich historical past has ensured it a major share in all the major exams. To ensure the exam-takers are not caught on the wrong foot, our special on History.

BY SANJUKTA BANERJEE & INDUMATHI

THE GOLDEN AGES

The Mauryas

The important kings were Chandragupta Maurya (322-298 B.C.) and Ashoka (273-232 B.C.)

Main sources of history: Megasthenes' *Indica* and Kautilya's *Arthashastra*. Both give a vivid account of the extent of social and political development of the Mauryas.

Extent of Ashoka's empire: From the Brahmaputra in the east to the Hindukush in the north-west and the Arabian Sea in the west and from the Himalayas in the north to River Pennar in the south. Some portions of Nepal and Kashmir and the provinces of Kabul, Herat and Qandahar were also part of his empire.

Ashoka's dharma: It included certain principles like respect of elders, ahimsa, religious tolerance, truthfulness, charity and leading a pure life, all of which can be practised in any religion. The adoption of this sort of universal religion brought about a radical change in his imperial policy: a change from the policy of *dig vijay* (conquest of the world) to one of *dharma vijay* (conquest through religion). He appointed dharma mahamatras to improve the general life of the people.

Architecture: The buildings were mostly of wood and so have not survived. But Greek writers have left accounts of the grandeur of the royal palaces. Stupas were built throughout the empire to enshrine the relics of Buddha.

According to Buddhist tradition, Ashoka built 84,000 stupas; of these the most famous which have survived are at Sanchi and Bharhut. According to Kalhana, Ashoka laid the foundation of Srinagar. He also probably built the town of Devapattan in Nepal.

Sculpture: Reached a high-water mark. Ashoka's pillars are the best examples of this art. They are hewn out of single rocks, and surmounted by exquisite lion, bull, elephant or horse capitals. The art of polishing, as can be seen from the pillar now installed at Feroze Shah Kotla, Delhi, reached perfection. It is also evident that the art of engineering was developed since cutting these pillars out of hard stones and taking them hundreds of miles away needed engineering skills.

Education: Ashoka engraved his edicts on rocks, pillars and cave walls and placed them on highways for his subjects to read. This indicates a high literacy rate. The *gurukulas* of the Buddhist monasteries which the Mauryan rulers built played an important role in spreading education. The University of Taxila was important for Buddhist learning, while that of Benaras was an important seat of Sanskrit and Brahmin learning.

Literature: Kautilya's *Arthashastra*, Bhadrabahu's *Kalpa Sutra* and many of the *Griha-Sutras* were composed in Sanskrit. The Buddhist text *Katha Vattu* and the Jain texts,

Bhagwati-Sutra, *Acheranga-Sutra* and *Das Vekalik* were also composed in this period.

The Kushans

Important kings: Kadaphises I, Kadaphises II, Kanishka (78-102 A.D.), Huvishka.

Extent of Kanishka's empire: From Bokhara in the north to Ujjain in the south and from Benaras in the east to Afghanistan in the west.

Kanishka's religion: Buddhism. Active propaganda was practised especially through statues of Buddha. A special council of Buddhist scholars and monks was called at Kundalavana in Kashmir and a commentary on the sacred texts, known as *Mahavibhase*, was compiled. The Buddhist faith was reformed so that it could have mass appeal and the reformed faith, Mahayana Buddhism, began to spread outside India as well. The old faith, Hinayana Buddhism, was given up.

Art and literature: Asvaghosa's *Buddha-Charita* has been compared with Valmiki's *Ramayana*; Vasumitra contributed to the compilation of *Mahavibhase*. The scientist-philosopher Nagarjuna and the Ayurvedic physician Charaka also lived in Kanishka's court. The Gandhara school of art made great progress under the Kushans. It was more refined and polished than the earlier school.

The Guptas

Important kings: Chandragupta-I (320-335 A.D.), Samudragupta (335-380 A.D.), Chan-

King Krishna Deva Raya.

dragupta Vikramaditya (380-413 A.D.).
Kumaragupta (414-455 A.D.). Skandagupta (456-487 A.D.).

Sources of information: Fahein's account; the Allahabad pillar inscription written by Samudragupta's court poet, Harishena; the iron pillar of Chandra at Mehrauli (Qutb Minar), important for Chandragupta Vikramaditya; other inscriptions at Basarh, Udaygiri and Sanchi; the Puranas, especially the Vayu Purana; coins.

Extent of Samudragupta's empire: From the Brahmaputra in the east to the Jumna and the Chambal in the west; from the Himalayas in the north to the Narmada in the south. The Deccan and other neighbouring states accepted his suzerainty. He is called the 'Indian Napoleon'. Chandragupta-II (Vikramaditya) defeated the Saka satraps of Malwa, Gujarat and Saurashtra and annexed their territories.

The period is known as a golden age because after the Mauryas there was unity in the country for the first time, the character of the government was enlightened, and there was a revival of Hinduism. At the same time there was broad religious toleration and peace and prosperity as both inland and foreign trade flourished.

Literature: Kalidasa—*Melvikagnimitra*, *Vikramorvasi*, *Shakuntala*, *Maghdoot*, *Ritu Samhara*, *Raghuvansa* and *Kumar Sambhava*. Visakhadatta—*Mudrarakshasha*, *Devi Chandragupta*; Amarasimha—*Amarkosa*; Bharavi—*Kirttarjuniya*, Sudraka—*Mrichhakatikam*. The panchatantra was also written in this age and the Puranas, the Mahabharata and the Manusmriti were recast.

Science: Progress in Astronomy, Astrology and Mathematics. Scientists and mathematicians: Aryabhata, Varahamihira, Brahmagupta, Vridh-Vagbhata, Dharmavanti, etc.

Fine arts: The Gupta sculpture is characterised by symmetry, natural proportions, spiritual calmness and transparency of apparel. The Ajanta caves belonged to this period. In architecture, the *stupa* in temple architecture came into vogue.

Education: There were universities at

lavish use of pietra dura inlay work; perfection of Persian double dome; beautiful garden complexes. Important buildings: Taj Mahal, Moti Masjid and Jami Masjid at Agra; Diwan-i-

Amir and Diwan-i-Khas at Delhi; Jahangir's mausoleum at Shahdara (Lahore) and Jami Masjid, Delhi. Another famous work of art: Peacock throne, removed by Nadir Shah to Persia in 1739, no longer exists.

Babur (1519-1530): He was the founder of the Mughal Empire in India. By defeating Ibrahim Lodi at the historic Battle of Panipat in 1526, he became the master of Hindustan. Babur possessed an indomitable spirit and remarkable military powers and laid the first stone of the splendid dynasty which his son Humayun inherited. His victories led to the rapid popularisation of gun powder and artillery in India.

Bairam Khan: Acted as a regent to Akbar after his succession; he possessed superior culture, literary gifts and shrewdness combined with high diplomatic skill and administrative experience.

Balaji Vishwanath: Appointed Peshwa to the Maratha ruler Shahu in 1713; by virtue of his superior talents and abilities he made 'the Peshwa' the real head of the Maratha Empire. His son **Baji Rao I** was an able soldier and a wise statesman, he formulated a policy of Maratha imperialism, launched a policy of expansion, struck at the roots of Mughal power and preached the ideal of Hindu *pad-padshahi* or a Hindu Empire.

Bal Gangadhar Tilak (1856-1920): Known as Lokmanya, he was the father of Indian unrest and was one of the founders of the Deccan Education Society. He began to preach patriotic feelings through his papers *Kasari* and *Mahratta*. He was considered a radical in political affairs and a conservative in social reforms. He wanted to build a militant mass movement and his concepts of *Swadeshi* and national education gave a new turn to the National Movement in 1905. Tilak revived the Shivaji and Ganesh festivals to create an awakening among the masses; he uttered the famous words "Swaraaj is my birthright and I will have it" as early as 1897.

Bankim Chandra Chatterjee (1838-1894): An eminent Bengali novelist and journalist, he wrote the national song *Bande Matram*; enunciated the concept of Indian Nationalism, was a social philosopher and the builder of modern Indian literature.

Bhimrao Ramji, Ambedkar (1891-1956): A Maharashtra scheduled caste leader and

HISTORY MAKERS

Abul Fazl: The most famous of the nine gems of Akbar's court, he was a great scholar and wrote *Ain-i-Akbari* and *Akbarnama*—the two immortal works which throw light on Akbar's conquests and his religious, administrative, social, economic, and revenue reforms.

Akbar (1556-1605): Only 13 when he came to the throne he defeated Hemu, the Afghan chief in the II Battle of Panipat thus bringing to a close the Mughal-Afghan contest for supremacy. He followed a policy of conquest, achieved the political unification of the whole of northern and central India, and followed a policy of conciliation with the Rajputs and the Hindus. In 1575, he constructed the Ibadat Khana. The discussions and discoveries here led to the promulgation of Din-i-Ilahi or Divine faith. He emphasised the concept of Sulh-i-kul or universal peace.

The mansabdari system was the main essence of his government (see page 27). Land revenue was modified, demand of the state being fixed at one-third of the actual produce. His reign saw a remarkable development in architecture. Some of the edifices erected by him were Humayun's Tomb at Delhi, the city of Fatehpur Sikri and forts at Lahore, Agra and Allahabad.

Alauddin Khalji (1296-1314): His reign witnessed the rapid expansion of Muslim dominion in different parts of India. He challenged the authority of the *ulama* (Muslim clergy), acted according to his own convictions and laid down rules and regulations designed to help in the establishment of a strong government at the Centre. He assailed the institution of private property, issued a series of economic reforms regulating the prices of all articles. Alauddin Khalji was fond of architecture and in the 13th century undertook the construction of Alai Darwaza, one of the intricately designed gates of the Qutb Minar.

Alexander (326-323 B.C.): He invaded India in the 4th century B.C. In 326 B.C. he crossed the Khyber Pass and came to India and at River Jhelum defeated King Porus. Thereafter he decided to retreat and on his way back, died in Babylon in 323 B.C. His conquest of

India proved shortlived. However, the invasion opened different areas of communication between India and the West. India learnt much about Astronomy and coinage from the Greeks, while the latter were influenced by Indian religion and philosophy. The Gandhara school of sculpture which developed later in India was affected by the Greek-Hellenic art of sculpture.

A.O. Hume (1829-1912): A Scottish ICS officer, who sympathised with Indian peasants and in 1883 organised the Indian National Union, later called the Indian National Congress.

Amir Khusrau: The most notable Persian writer of the Mughal period, he wrote a large number of political works including historical romances. He created a new style of Persian literature which came to be known as *Sabaq-i-Hind* or Style of India.

Annie Besant: The real pioneer and leader of the Theosophical Society in India, her aim was to revive ancient ideals and institutions in the country. To achieve this she started the Central Hindu School in Benares.

Aryabhata (476-500 A.D.): A celebrated Indian astronomer and mathematician of Chandragupta Vikramaditya's reign, he formulated the rule for calculating the area of a triangle, which eventually, led to the origin of Trigonometry. He calculated the position of the planets and discovered the cause of the lunar and solar eclipses. He was the author of the book *Aryabhatiya*.

Ashoka (273-232 B.C.): One of the greatest rulers of the Mauryan Empire, he extended his kingdom by ceaseless conquests to embrace the whole of the Indian sub-continent. However, the sight of misery and bloodshed in the Kalinga war awakened in him feelings of repentance and sorrow and he gave up military conquests. Thereafter he evolved a policy of *dharma-vijaya*—conquest by piety. He was influenced by Buddhist teachings and did much for spreading Buddhism, inculcated virtues of compassion, liberality, and tolerance and abolished animal slaughter. He also erected pillars of morality (*dharma-sthambas*).

Aurangzeb (1659-1707): He successfully carried on a policy of territorial expansion, through ceaseless wars fought against the Rajputs and the Marathas. Aurangzeb was a zealous Sunni Muslim and observed the injunctions of the holy Quran. Undaunted bravery, and a grim tenacity of purpose were among his prominent qualities. However, in the intensity of his religious zeal, he ignored the feelings of his subjects—this ultimately led to the disintegration of the Mughal Empire.

Aurobindo Ghose (1872-1905): An extremist leader of the Congress during the anti-partition struggle, he was involved in politics between 1902-1910, after which he devoted himself to philosophical, spiritual and literary activities. His books include *Savitri* and *Life Divine*.

an Economics and Law expert, he was a social worker who fought continuously for the rights of untouchables, formed the Scheduled Caste Federation in 1942, was nominated Chairman of the Drafting Committee of the Constituent Assembly and appointed Law Minister in Nehru's Cabinet.

Bipin Chandra Pal (1858-1932): A great educationist and journalist who threw himself into politics as an extremist, he believed in wresting freedom and not begging for it and came into conflict with Gandhi on the policy of non-cooperation. He consequently left the Congress Party.

Chaitanya (1485): A famous Vaishnava saint, he displayed wonderful literary acumen in his early life, renounced the world at the age of 24 and spent his life preaching messages of love and devotion. He was opposed to priestly ritualism and believed that through love and devotion and song and dance a sense of ecstasy could be produced.

Chanakya or Kautilya: He was the Prime Minister of Chandragupta Maurya who founded the Maurya dynasty. He wrote *Arthashastra* which is an authentic account on statecraft.

Chandragupta Maurya (322-298 B.C.): He was the chief architect of the greatest of India's ancient empires.

Chandragupta-I: He started the Gupta era in 319-20 A.D. and was the first important king of the Gupta dynasty.

Chandragupta-II (380-413 A.D.): One of the greatest rulers of the Gupta dynasty, he extended his empire by marriage alliances and conquests. His reign marked the high-water mark of ancient Indian culture. He assumed the title of Vikramaditya and his court was adorned by numerous scholars like Kalidasa and Amarasimha.

Charaka: A famous physician of the 2nd century A.D., he wrote *Chakrasamhita*—an encyclopaedia of Indian medicine.

Lord Cornwallis: Governor-General from 1786-1793, his place in history rests on his reforms: **Administrative**—Directors of the company were paid handsome salaries to prevent them from accepting bribes; superfluous posts were abolished. **Judiciary**—judicial work was separated from tax collection and four provincial courts were set up. **Police**—Zamindars were deprived of police power and a police department was organised. His greatest achievement was the introduction of Permanent Settlement in Bengal.

Dadabhai Naoroji (1825-1917): Known as the Grand Old Man of India, he was one of the founder members of the Congress and was President of the party thrice. He focussed attention on the drain of wealth from India due to the British Government's economic policies; stressed the importance of women's education and also primary education; was called the father of Indian politics and economics and was the author of *Poverty And Un-British Rule In India*.

Firuz Shah Tughlaq: He succeeded Muhammad-Bin-Tughlaq as the ruler of the Delhi Sultanate. When faced with the problem of preventing the break-up of the Delhi Sultanate, he adopted the policy of appeasing the nobles, army and theologians and of asserting his authority only over areas which could be easily administered. He took steps to have Hindu religious works translated from Sanskrit

into Persian and adopted a number of humanitarian measures. Firuz Tughlaq was keenly interested in the economic improvement of the country and set up departments of public works.

Gautama Buddha (563-483 B.C.): Siddhartha grew up in luxurious surroundings till the questions of birth, old age, sickness and death led him to renounce the world and lead the life of a homeless ascetic. He attained supreme knowledge and insight at Bodhi-Gaya and came to be known as Buddha or the 'Enlightened One'. He taught his followers the Four Noble Truths—concerning suffering, its cause and destruction of sorrow, and the Eightfold path—right views, speech, aspirations, conduct, livelihood, effort, mindfulness and contemplation.

Gautamiputra Satakarni (106-130 A.D.): One of the important rulers of the Satavahanas, who were the successors of the Mauryas in the Deccan. His empire extended from Malwa in the north to Karnataka in the south.

Mughal coin embossed with Jahangir's face.

Ghiyasuddin Balban (1266-87): A ruler of the Slave dynasty, he was an experienced administrator who reorganised the armed forces, restored peace and order in the kingdom, curbed all rebellions, adopted a policy of sternness and severity and thus not only saved the Sultanate from impending destruction but also raised its prestige and majesty. Under him the Delhi Court acquired celebrity for its magnificence and housed many famous people like Amir Khusrau.

Gopal Krishna Gokhale (1866-1915): A national leader from Maharashtra and a reformer and spiritual leader, he advocated many social reforms and pleaded for mass education and higher scientific and technical education. He founded the Servants of India Society in 1905 to train men to be national missionaries.

Guru Nanak (1469-1538): He founded the Sikh religion which laid emphasis on one God. According to his philosophy one could attain salvation with love and devotion. He laid great emphasis on purity of character and conduct, denounced idol worship and pilgrimages and advocated a middle path. He aimed at bridging the gap between the Hindus and the Muslims.

Harsha Vardhana (606-647 A.D.): His accession marks the starting point of the Harsha Era—he waged incessant wars for six years and marched southwards as far as Nalanda. His empire included Kanauj, Rohilkhand, Oudh and Prayaga. One of the greatest kings of

ancient India, he restored respect for his authority in northern India in times of turmoil. He was a just and benevolent ruler, showed a taste for literature, possessed tolerance, liberality and benevolence, was a great general, a just administrator and a patron of religion and learning. He gathered around him great sages and fine intellectuals like Banu, Mayura, Divakara and Hsien Tsang.

Hemu: One of the most remarkable personalities of the 16th century, he rose from an insignificant position in life, as a small revenue officer to become a military officer and finally the commander of the army of Adil Shah. He had thrown into shade all the Afghan commanders and won every one of the 22 battles he fought from Chunar to Delhi, for his master till he was finally killed in the II Battle of Panipat.

Hsien Tsang: A Chinese pilgrim who visited the court of Harsha Vardhana. His accounts shed light on Harsha's court and life and on the economic, social and religious norms of the period.

Humayun (1530-1540): He succeeded Babar in 1530 and inherited from him a large number of problems of administration and consolidation and also had to deal with the growing power of the Afghans in the east. In the Battle of Kanauj (1540), he was defeated by Sher Shah Suri; he failed to understand the nature of Afghan power and lacked the ability to weave into a compact fabric, his rapid territorial acquisitions.

His life was a romantic one. He went from riches to rags and again from rags to riches when he recovered Delhi in 1555.

Ibrahim Lodi: The Lodi ruler succeeded Sikander Lodi in 1517. He dealt sternly with the disloyal and defiant nobles and established his authority firmly at the centre of the empire. He had to match his strength against that of Babar in the I Battle of Panipat (1526) in which he was decisively defeated. The battle broke his power and established the Mughal rule in India.

Ibn Batuta: A South African scholar and traveller who visited India during 1333 A.D. He has written about Muhammad-Bin-Tughlaq's reign in the country.

Iltutmish (1210-1236): One of the most outstanding rulers of medieval India, he was a shrewd, cautious and far-reaching statesman and an architect of medieval Delhi. He gave the country a capital, an independent state and a governing class, gave form and content to the administrative structure and reorganised the *iqta*, the army and currency, and transformed the loosely patched up territories of Ghurid acquisition in Hindustan into a well-knit and compact state—the Delhi Sultanate.

Jahangir (1605-1627): He brought to an end the conflict with Mewar and the Deccan and successfully broke the Afghan resistance. He was endowed with fine literary and artistic tastes and had great love for justice. In his religious views he was not narrow and took delight in conversing with men of other faiths; was a patron of arts and literature. During his reign the art of painting reached its high-water mark. New elements were added to architectural decoration and literature maintained its vitality.

Kanishka: The famous king to whom scholars have attributed the founding of the Saka Era of 78 A.D. He ruled over a vast empire from Gandhara to Oudh and Benares. He was a

THE VICTOR AND THE VANQUISHED

326 B.C.: Battle of Karri between Alexander and Porus. Victor : Alexander.

262 B.C.: Battle of Kalinga was fought by Ashoka. After this, he gave up battles and became a Buddhist monk.

1008: Ghazni invaded India, defeated combined army of Indian rulers under Anandpal.

1025: Ghazni led an expedition against Somnath temple. The temple was destroyed and idols broken. Laden with gold, Mahmud returned to Ghazni.

1191: I Battle of Tarain between Muhammad Ghori and Prithviraj Chauhan. Victor: Ghori.

1192: II Battle of Tarain between Ghori and Prithviraj. Victor: Ghori. After this, Delhi came under Turkish rule.

1398: Timur invaded India. It resulted in the drain of a large amount of wealth, gold and silver from India and marked the beginning of the disintegration of the Delhi Sultanate.

1526: I Battle of Panipat between Babar and Ibrahim Lodi. Victor: Babar. The battle established Mughal rule in India.

1527: Battle of Khanwah between Babar and Rana Sanga. Victor: Babar. It secured Babar's position in the Delhi-Agra region.

1539: Battle of Chausa between Humayun and Sher Shah Suri. Victor: Sher Shah.

1540: Battle of Kanauj between Humayun and Sher Shah. Victor: Sher Shah. The battle established Afghan rule in north India.

1556: II Battle of Panipat between Akbar and Hemu. Victor: Akbar.

1565: Battle of Talikota between the Vijaynagar and Bahmani kingdoms. It marked the end of the great age of Vijaynagar.

1576: Battle of Haldighati between Akbar and Rana Pratap of Mewar. Victor: Akbar.

1658 (May): Battle of Samugarh between Dara and Aurangzeb.

Raghunath Rao was pensioned off. This treaty established the dominance of the British as a controlling factor in Indian politics.

1780-84: II Mysore War between the English under Warren Hastings and Heider and his son Tipu Sultan. By the Treaty of Mangalore in 1784, both sides restored all conquests and agreed to release prisoners of war.

1780-82: III Mysore War between the English under Lord Cornwallis and Tipu Sultan. Victor: The English. By the Treaty of Srirangapatnam, Tipu ceded half of his territories and paid 30 lakhs as indemnity.

1799: IV Mysore War between the English under Lord Wellesley and Tipu. Victor: The English. Tipu was killed and his territories annexed by the English.

1802: Treaty of Bassein. By this treaty the Peshwa Baji Rao II entered into a Subsidiary Alliance with the English. The treaty was a great achievement for the English because it brought the Marathas under their control.

1803: II Maratha War between the English under Lord Wellesley and Maratha powers Scindia and Bhonsle. Victor: The British. By the treaty of Deogson Scindia accepted the Subsidiary system and Bhonsle and Scindia surrendered the territories of Cuttack, Ahmednagar and Broach.

1804-05: III Maratha War between the English under Lord Wellesley and Holkar, one of the Maratha Chiefs. After this, the Maratha chiefs existed at the mercy of British power.

1806: Treaty of Lahore between Ranjit Singh, the ruler of Punjab and the British. By this treaty, both sides agreed not to give shelter to each other's enemies.

1809: Treaty of Amritsar between Ranjit Singh and the British by which the River Sutlej was regarded as the boundary line between the

A siege (from a relief at Sanchi, beginning of the Christian era).

Victor: Aurangzeb.

1659: Battle of Deorai between Dara and Aurangzeb. Victor: Aurangzeb. He defeated Dara and succeeded to the throne.

1761: III Battle of Panipat between Ahmad Shah Abdali and the Marathas. The Marathas were routed, the defeat gave the English East India Company the opportunity to consolidate its power in India.

1745: I Carnatic War between the British and French. The English captured Pondicherry, the French occupied Madras. In 1748, peace was made and Madras was restored to the English.

1748-55: II Carnatic War between the British (Robert Clive) and the French (Dupleix). The English were successful and by the Treaty of Pondicherry in 1755, both sides returned each other's territories.

1756-63: III Carnatic War. In the Battle of Wandiwash in 1760, the French were defeated and this battle sealed the fate of French power in India.

1767: Battle of Plassey between the English and the Nawab of Bengal, Siraj-ud-Daulah. Victor: The English. Plassey paved the way for British mastery of Bengal and eventually the whole of India.

1764: Battle of Buxar between the English and Mir Qasim (Nawab of Bengal), Shuja-ud-Daulah (Nawab of Oudh) and Shah Alam (Mughal Emperor). Victor: The English. The battle demonstrated superiority of British arms and established them as masters of Bengal, Bihar and Orissa.

1767-69: I Anglo-Mysore War between the English in alliance with the Nizam of Hyderabad and Haider Ali of Mysore. Haider repulsed British attack, and threatened Madras. The Madras Government agreed to his terms and by the Treaty of Madras both sides restored conquered territories.

1775-82: II Maratha War was fought between the English and the Marathas under Nana Phurnavis. The treaty of Salbai was signed by which Marathas and British was recognised as Peshwa and

two powers, and, both sides agreed not to interfere in the internal affairs of each other.

1814-15: War with Nepal under Lord Hastings. Victor: The English. By the Treaty of Sagauli, Nepal accepted a British resident and ceded the districts of Garhwal and Kumaon.

1817-18: IV Maratha War between the English under Lord Hastings and Peshwa Baji Rao II. Victor: The English. The treaty of Poona was signed by which the Peshwa accepted the dissolution of Maratha confederacy, agreed to the stationing of British troops in his country and transferred rights over Bundelkhand and Malwa to the company.

1824-26: I Burmese War under Lord Amherst. Victor: The English. Treaty of Yandaboo was signed.

1839-42: I Afghan War between England under Lord Auckland and Dost Muhammad, the Afghan ruler. The war proved disastrous for the English.

1844-48: I Sikh War. Victor: The British under Lord Hardinge. By the Treaty of Lahore, the Sikhs had to pay a War indemnity of one and the half crores, and their power was reduced.

1848-49: II Sikh War under Lord Dalhousie. Victor: The English. Punjab was made a part of the British Empire.

1852: II Burmese War under Lord Dalhousie. Victor: The English.

1878-80: II Afghan War under Lord Lytton. Victor: The English. By the Treaty of Gandamak, Yakub Khan, the Afghan ruler accepted the districts of Kurram, Peshawar and Sibi.

1886: III Burmese War under Lord Dufferin. Victor: The English. the whole of Burma became a part of the British Empire.

1919: III Afghan War under Lord Chelmsford. Victor: The English. By the Treaty of Rawalpindi, the annual subsidy that was paid to the Amir by the British was stopped but he was given the freedom to pursue an independent foreign policy.

for his monuments and for the patronage he extended to the religion of Sakya-muni. During his time a great Buddhist council was held at Kashmir in which Buddhist scriptures were examined and commentaries were prepared on them. The most eminent of the poets of his court was Asvaghosha who wrote the *Buddha Charita*.

Krishna Deva Raya (1509-1530): A gallant and active warrior, always successful in the wars that he waged throughout his reign. He extended his empire upto south Konkani in western India, Vishakapatnam in the east and the extreme border of the peninsula in the south. His reign was remarkable for the encouragement and development of art and letters. His kindness to the fallen enemy, acts of mercy and charity, great military prowess, imposing personal appearance, polite conversation and solicitude for the welfare of his people mark him out as one of the greatest of the monarchs of south India.

Lala Lajpat Rai (1865-1928): Known as Lion of Punjab he was an Arya Samaj leader who worked for social and educational reforms. He organised Swadeshi movements on a large scale and established the Indian Home Rule League in the US; was brutally beaten up while leading a protest procession against the Simon Commission in Lahore and died of injuries. His most famous work is *Unhappy India*. He also brought out a journal *Young India*.

Mahavira (540-468 B.C.): His early life is shrouded in obscurity. Mahavira led the life of a householder till the age of 30, after which he renounced the world and attained highest spiritual knowledge called *keval gnan* at Rijupalika. He was not the founder of a new religious sect but the last of a long succession of 24 Tirthankars. He emphasised the need for discarding all material desires to attain complete freedom from bondage and to follow the three-fold path of Right Belief, Right Knowledge and Right Conduct.

Mahmud Ghazni (988-1030): Considered a hero of Islam by medieval Muslim historians because of his stout defence against the Central Asian Turkish invaders. In India he is remembered as a plunderer and a destroyer of temples (Somnath Temple).

Malik Ambar: The Peshwa of the Ahmednagar ruler Nizam Shah II and one of the important personalities of south India, he successfully fought against the Mughal entry into the Deccan, tried to improve the administration of Ahmednagar by introducing Todar Mal's system of land revenue and adopting the *zabti* system.

Megasthenes: A Greek ambassador at the court of Chandragupta Maurya, he lived in the Mauryan capital Pataliputra and wrote an account of the Mauryan Empire as a whole. His works throw valuable light on the administration, society and economy of the times.

Mohammed Ali Jinnah (1875-1948): A Karachi-born lawyer, till 1920 he was non-communal, opposed separate electorate for the Muslims and was associated with the Congress party and the Home Rule League. At the London Round Table Conference, he genuinely tried to solve the communal problem. In 1934-35 he became the undisputed leader of the Muslim League and worked for a separate Pakistan.

Muhammad-Bin-Tughlaq (1324-1351): Endowed with a keen intellect, a wonderful memory and a brilliant capacity of assimilating

Lajpat Rai : Lion of Punjab.

knowledge, he is best remembered as a ruler who undertook a number of bold experiments (transfer of capital from Delhi to Devagiri, introduction of token currency and a scheme to extend and improve cultivation in Doab) most of which proved impracticable and brought disaster to his kingdom. Popular discontent found expression in open revolts against his authority and the whole of his reign was distracted by repeated rebellions. It was the beginning of the process of disintegration of the Delhi Sultanate.

Nizamuddin Auliya: The most respected of the Sufi saints, he left an everlasting impact on society. At the age of 16, he left Badayun, his birth place and came to Delhi and settled in Ghyaspur, lived a simple life and kept himself away from the politics of the Delhi court. He attained spiritual enlightenment at the age of 19. According to his philosophy, "The ultimate objective for which man is created is to love God. Allah bestowed this upon whomsoever he chose. It could not be acquired by training or toil."

Pulakesin-II (609-642): The most famous Chalukya King, he compelled the neighbouring areas of Mysore and Kadambas to acknowledge his suzerainty, defeated Harsha's army on the Nerbada and checked his advance into the Deccan. He was killed in a fight against the Pallavas in 642 A.D.

Prithviraj Chauhan: Ascended the throne of Ajmer around 1190, embarked upon a career of conquest and came into conflict with Muhammad Ghori. He was defeated by him in the II Battle of Tarain in 1192.

Robindranath Tagore (1861-1941): A poet of high distinction, his first play *Rudra Chandra* was published in 1881, first novel *Bowthakurania* in 1883 and *Gitanjali* in 1910. His *Gora* portrayed the National Freedom movement. His works *Mashi*, *Hungry Stones*, *Post Master*, *Gardener*—reflect his artistic talents, spiritual evolution, and loftiness of thought. In 1921, he founded the Viswa Bharati and started Santiniketan. Tagore's *Jana Gana Mana* portrays patriotism. He got the Nobel Prize for Literature in 1930 for his collection of poems *Gitanjali*.

Raja Ram Mohan Roy: A true representative of the spirit of modern India, he began his reforming activities by preaching unity of God. He ridiculed blind faith, costly sacrifices and superstitions—his greatest achievement was the foundation of Brahmo Samaj in 1828; was a great pioneer of English education, directed his reforming activities against the abuses of Hinduism especially sati; was a champion of the liberty of the Press. In short he presented a most instructive and inspiring study for the new India which he personified and embodied the new spirit of freedom of enquiry.

Rajaraja Chola (985-1014): The greatest of the Chola rulers who followed a policy of expansion. This was carried forward by his son **Rajendra-I (1012-1044)** who brought the Pandyan and Chera countries under his sway. Both marked their victories by erecting a number of Siva and Vishnu temples at various places. During their period there was political integration and cultural development in south India, trade and commerce flourished, and temple architecture reached its climax.

Ramanuja: A great religious thinker of the 12th century, he gave a philosophical basis to the teachings of Vaishnavism; believed in the existence of only one God but did not exempt him from form and qualities. So his doctrine is called the Visishtadvaita or Qualified Monism.

Rana Pratap (1572): The greatest ruler of Mewar, he put up a very determined stand against Akbar at a time when most of the Rajput states had surrendered. He was, however, defeated in the Battle of Haldighati in 1576.

Ranjit Singh: Called Sher-e-Punjab, he is regarded as the founder of Sikh rule in Punjab. A born ruler of men he transformed the warring Sikh states into a compact national monarchy and conquered one country after another by his cautious and careful military policy. He was a successful administrator, and organised the Central and provincial administration, reformed the revenue and judicial systems and organised his army on new lines.

Robert Clive: He proved a great success as a soldier giving the first example of his military talents in the II Carnatic War (1749-55) when he defeated Duplex, the French statesman, and saved English prestige in the Deccan. In 1757 he defeated Siraj-ud-Daula, Nawab of Bengal in the Battle of Plassey which paved the way for British conquest of India. During the first governorship (1757-60), he consolidated British power in Bengal and Deccan; during the second (1765-67), he devoted himself to the task of reforming the company's civil and military services and introduced dual government in Bengal by which the administration of Bengal was carried on by two powers—the British and the Nawab of Bengal.

Raziya (1236-39): Belonging to the Slave dynasty she was the first woman to sit on the throne of Delhi. Raziya was endowed with all admirable attributes and qualities necessary for a Queen, exhibited great courage in dealing with the Turkish nobles who opposed her authority and with the provincial governors. Her rule lasted for nearly three years.

Samudragupta (355-380 A.D.): The greatest of the Gupta rulers, he made an onslaught on the neighbouring regions—Ganga Yamuna doab, eastern Himalayan states, Nepal, Assam and Bengal.

Sardar Vallabhbhai Patel (1875-1950): A leading barrister of Gujarat, he led the Bardoli Satyagraha in 1928 and presided over the Congress session in 1931. He is remembered for his efforts to integrate princely states into one India. Popularly known as Sardar and 'Iron Man of India', he was an efficient administrator who reorganised the ICS.

Sarojini Naidu (1879-1948): Known as the Nightingale of India, she was a gifted poetess of the English language. She took part in India's freedom struggle and became the President of the Indian National Congress in 1925. She was the first woman to become the Governor of an Indian state (UP).

Sayyid Ahmed Khan: The most important reformer among the Muslims, he was impressed by modern scientific thought and worked all his life to introduce it in Islam. He interpreted the Quran, which he considered as the only authoritative work on Islam, in the light of contemporary rationalism and science; urged people to develop a critical approach in life and practise freedom of thought; was against fanaticism, narrow mindedness and exclusiveness; and was a great believer in religious tolerance. His reformist zeal also embraced the social sphere.

Shah Jahan (1627-1659): Mainly involved with the suppression of the Portuguese, the Bundelas, and Rajputs, the annexation of Ahmednagar, the defeat of Golconda and Bijapur, his reign is considered to be the golden age of Mughal rule in India. There was uninterrupted peace, better financial condition, pomp and splendour attested by brilliant architectural feats like the Taj Mahal, Pearl Mosque and Jami Masjid. He was a great scholar—during his period *Badshahnama* of Abdul Hamid Lahin and *Muntakhabut Lubal* of Khafi Khan were written.

Sher Shah Suri (1540-1545): He deserves the credit of overthrowing the Mughal dynasty. He became the undisputed ruler when he defeated Humayun in the Battle of Chausa in 1539 and then in the Battle of Kanauj in 1540. His empire extended from Brahmaputra in the east, to Jhelum in the west, from Himalayas in the north to Narbada in the south; he was an industrious man, and the architect of a brilliant administrative system. Wise and salutary changes were effected in every branch of administration. His revenue reforms served as a model for the future agrarian system. His military character was marked by a rare combination of caution and enterprise, his political conduct was just and humane, and religious attitude free from medieval bigotry. He had an excellent taste for building work as is attested by his mausoleum at Sasaram.

Shivaji: Crowned ruler of the Marathas in 1674. His mother Jija Bai and his teacher Dadaji Khondave's influences made him bold and enterprising. He captured the hill fort of Torna in 1648 and within the next few years the forts of Raigarh, Kandaha and Purandhar. He waged successful wars against the sultans of Bijapur, and Golconda and also against the Mughals. He was a constructive genius, a brave soldier, a born leader who elevated himself by the dint of unusual bravery and diplomacy, from the position of a *jagirdar* to that of a *Chattrapati*. The most brilliant of his achievements was the weaving together of the Maratha race into a mighty nation.

Subhas Chandra Bose (1897-1945): Selected for the ICS but resigned in 1920. A prominent left wing leader of the Congress, he was elected its President in 1938 and 1939. He later founded the Forward Bloc and went to Germany and Japan to organise armed liberation of India. In 1941 he founded the Indian National Army and gave the well-known slogans *Jai Hind* and *Dilli Chalo*.

Subramania Bharati (1882-1921): Closely associated with the extremist movement in the Congress, he was first and foremost a poet who wrote fine poems and devotional songs and gave spiritual dimensions to India's thirst for freedom. His major works include *Panchali*, *Sevatham* and *Kuyil Pattu*.

Surendranath Banerjee (1848-1925): A member of the ICS, he later became the pioneer of the nationalist agitation in India. In 1876 he founded the Indian Association aiming to make it the centre of the Indian National Congress.

Swami Dayanand Saraswati: The founder of the most vigorous, lasting and effective social and religious organisation set up in the 19th century in India, viz. the Arya Samaj. His motto was 'Go back to the Vedas'. He propagated Vedic religion and reform of the Hindu society; raised his voice against polytheism, and child marriage, encouraged female education and remarriage of widows; began the Suddhi movement which was meant to realise the ideal of unifying India nationally, socially and religiously; published his views through printed books, his most famous work being *Satyarta Prakesh*.

Timur: He invaded India in 1398. It was a plundering raid, the motive being to seize the wealth accumulated by the Sultans of Delhi. The invasion resulted in the drain of a large amount of wealth from India and marked the end of the Delhi Sultanate.

Tipu Sultan: An able and industrious ruler of Mysore, he is a remarkable personality in Indian history. He was a valiant soldier and a tactful general who placed independence above everything else and lost his life in trying to preserve it.

Todar Mal: One of the nine gems of Akbar's court, he was the Finance Minister during his reign. He reformed the revenue system, i.e., introduced the *zabti* system, according to which he got the total land measured,

divided it into four classes according to the fertility of the soil and fixed the state's share at one-third of the actual produce. He was also a general and a statesman who helped Akbar in annexing Bengal and the north-west frontier.

Tulsidas: Belonged to the 16th century and was known for his high poetic vision and fervent devotion. He believed in the theory of karma and captured the imagination of people by claiming that God lived and moved on earth. He did not preach any new doctrine or found a new sect, yet the magic of his poetry did much for the spread of Bhakti Movement. Most noteworthy among his compositions are *Gitavali*, *Vinaypatrika* and *Ramacharitmanas*.

Vinoba Bhave (1895-1982): Closely associated with the National Movement under Gandhiji's leadership he was the first Individual *satyagrahi* selected by Gandhi. His Bhoodan Movement, started in 1951, was quite successful. He was a multi-linguist who advocated universal brotherhood transcending national barriers.

Warren Hastings (1774): He preserved the British empire in India and made it secure overcoming problems like the complete breakdown of administrative machinery, financial bankruptcy and the hostility of the Marathas and Haider Ali, with great courage and determination. He introduced several reforms: **Administrative**—Brought an end to the dual system in Bengal, relieved the Nawab of Bengal of his administrative work and forbade the servants of the company to carry on private trade. **Revenue**: Set up a Board of Revenue in Calcutta to facilitate revenue collection. **Commercial**: Set up a Board of Trade and ordered a reduction of 2.5% on all goods. **Judicial**: Established civil and criminal courts in each district.

Lord Wellesley (1798): Credited with having consolidated the British empire, he was mainly remembered for his policy of Subsidiary Alliance (i.e., the states which entered into the alliance were to make no wars and carry on no negotiations with any other state without the knowledge and consent of the British Government. He defeated the enemies of the company—the Marathas and Tipu Sultan—one by one and annexed the Carnatic, Tanjore and Surat. In short, by his extensive conquests and annexations, he changed a commercial company into a great political power.

POLITICS & ECONOMY

Mauryan times: Source: Kautilya's *Arthashastra*. Administration of towns: the big towns were administered systematically. Pataliputra was divided into four zones, each zone under a *sthanik* who was assisted by *gopas*, junior officers, each of whom looked after the well-being of 10 to 40 families. Espionage system: spies at home and abroad. Shipping: a special officer at each port to control movements of ships and boats and charge taxes from merchants, travellers and fishermen.

Ashoka: He gave up an imperialistic policy and adopted a policy of service and welfare. He appointed *dharma mahamatras* to improve the morals of the people. He ordered his officers to serve humanity, tour over their areas to come into close contact with the people and

help solve their problems.

Balban: Built a strong and centralised army and for this he reorganised the *diwan-i-arz* (military department) and pensioned off many old soldiers. He raised kingship above commonality and introduced *sijda* and *paibos* (prostration and kissing the monarch's feet) which were considered un-Islamic. Followed a policy of "blood and iron" ruthlessness.

Alauddin Khilji: Land revenue, military and market reforms. He demanded half the produce as land revenue and took stern action against the village headmen (*muqaddams*) and smaller landlords (*khuts*). He decided to do away with the *iqta* system and to pay his soldiers in cash. Since the treasury had limited resources, he reorganised the market and fixed

the prices of goods so that necessities were available cheap. To cut down the power of the nobles, they were forbidden to hold banquets or festivities, or to form marriage alliances without the permission of the Sultan.

Muhammad Tughlaq: Transferred the capital from Delhi to Devagiri, renamed Daulatabad and back again. Introduced token copper currency but failed to take precautions so that it could not be minted anywhere but at the royal mint. There was galloping inflation and the measure failed. Launched a scheme to extend and improve cultivation in the doab, set up a department called *diwani-i-kohi*; attempts were made to induce the peasants to produce superior crops. The scheme failed because he demanded half the produce for the state and there was a famine. He gave high offices to Muslims who did not belong to noble birth, but the older families resented this.

Firuz Shah Tughlaq: He revived the *iqta* system and made it hereditary. He extended this principle to the army as well. He tried to win over the *ulama* by stating that he was a Muslim King and his was an Islamic state. However, he banned inhuman punishment like maiming and set up a department of public works to look after his building projects.

Sher Shah: Currency reforms; struck fine coins of gold, silver and copper of uniform standard, attempted to fix standard weights and measures. Land revenue: land was measured, schedules of rates drawn up, laying down the state's share of the different types of crops. This was converted into cash on the basis of prevailing market rates. The land was divided into good, bad and middling and the state share was one-third. Administration: divided his empire into provinces, *sarkars*, *parganas* and villages, the village being the unit of administration. Each had specific offices with specific duties. Army: Every soldier had his descriptive roll (*chahra*) recorded and his horse branded (*dagh*).

Akbar: Mansabdari system: organised the civil and military establishments into one unit with each officer being given a rank (*mansab*), which was divided into *zat* and *sawar*, the *zat* being the personal rank, which entitled him to a personal pay and the *sawar* being the obligation to keep a specified number of horsemen. Land Revenue: Dahsala system, under which the average produce of different crops and their average prices prevailing over the last 10 years were calculated and one-third of the average produce was demanded as the state share. The state demand was fixed in rupees per *bigha*. The system was known as the *zabti* system. Army: Every noble had to keep mixed contingents. Administration: division of power on the basis of checks and balances, for instance the *wakil* and the *diwan (wazir)*.

Jahangir: Introduction of the *du-aspa-sih-asp (a mansabdar* holding this rank had to maintain and was paid for double the quota of troopers indicated by his *sawar* rank) rank in the mansabdari *sawar* rank.

Shah Jahan: Introduction of a system by which a *mansabdar* could only keep 1/3, 1/4 or 1/5 of the number mentioned in his *sawar* rank. Also introduction of month scales in the payment of the *mansabdars*.

Aurangzeb: Re-introduction of *jizya*.

BRITISH INDIA

Regulating Act 1773: Made changes in

Constitution of the Court of Directors of the East India Company and subjected their actions to the supervision of the British Government.

Pitt's India Act 1784: Gave the British Government supreme control over the company's affairs and its administration in India.

Permanent Settlement 1793: The *zamindars* and revenue collectors were converted into landlords and their right to ownership was made hereditary; the *zamindars* were to give 10/11 of the rental they received from the peasantry to the state, but the land revenue was fixed in perpetuity.

Lord Cornwallis: Reorganised the company's civil service. Also known for the Cornwallis Code—an elaborate new code of regulations for the guidance of the officers of his new judicial system.

SOCIETY & RELIGION

From the early times, India has predominantly been an agricultural society, with a majority of its population involved in cultivation. This, however, did not foreclose urban life and the very first examples of cities can be found in the earliest civilisations of which we have concrete evidence in the country. The Mohenjodaro and Harappan civilisations appear to have been centred round cities and the people of the time seemingly enjoyed a high level of urban culture. Different hair-styles, the use of face paints, collyrium, perfumes and lip-colouring were not unknown. The discovery of a large variety of dice, figures of dancers and toys indicate the different sources of amusement prevalent in those times.

However, apart from concluding that India was primarily an agricultural society with several highly developed urban centres, it is difficult to explain the nature of social conditions in India, in exact historical terms, until quite late in the medieval times—the reason being lack of actual evidence. Most historians and chroniclers concentrated on the situations in the courts and the conditions of the upper classes; and almost ignored the position of the majority. However, a number of foreigners visited India in different periods of time and their accounts have proved very useful from the social point of view. Among these visitors, the names of Megasthenes (Mauryan times), Fa-hien (399-414 A.D.), Hsien Tsang (629-45 A.D.), I-tsing (673-95 A.D.), Alberuni (who accompanied Mahmud Ghazni to India), Athenasius Nikitin (1475), Verthema (1503-8),

Charter Act 1813: The trade monopoly of the company in India was ended and trade with India was thrown open to all British subjects.

Charter Act 1853: Decided that all recruits to the civil service were to be selected through a competitive exam.

Act of 1858: Transferred power of government from the East India Company to the British Crown.

Indian Councils Act 1861: Enlarged the Governor-General's Council for the purpose of making laws in which capacity it was known as the Imperial Legislative Council. It also created Provincial Legislative Councils.

Indian Councils Act 1909: Morley-Minto Reforms: increased the number of elected members to the Imperial Legislative Council and the Provincial Councils, but most of the members were elected indirectly. Also introduced the system of separate electorates under which Muslims were grouped in separate constituencies.

Government of India Act 1919: Clarified the function of the Central and provincial governments. The Central Legislature was made bicameral with the Council of State and the Legislative Assembly as the two chambers.

Government of India Act 1935: Provided for the establishment of an All India Federation and a new system of government for the provinces on the basis of provincial autonomy. The federation was to be based on a union of the provinces of British India and the princely states.

Barbosa (1518), Monserrate (1590-91), Ralph Fitch (1583-91), Thomas Roe (1615-19), de Laet (1613), Bernier (1656-68), Tavernier (1640-67) and Manucci (1699-1709) are worth mentioning.

Facts on social life in India can also be gathered from epics like the Ramayana and the Mahabharata, religious books like the Vedas, the Brahmanas, the Aranyakas and the Upanishads, traditional literature as represented in the Puranas and the treatises and Smritis of later times.

From the early Vedas we learn that the foundation of social life in the Rigvedic times was the family, with the *grihapati* exercising his full authority over all members of the family. Religion was based on the concept of one God, though many gods prevailed. These, in fact, were mostly manifestations of that one God, though people were also partly influenced by nature worship. An important religious practice was the performance of sacrifices (*yajnas*) and recital of daily prayers.

Caste System

Though the caste system has an early origin, it is not definite as to when and how it originated. The basis was probably 'colour' and caste may have come into the picture while differentiating between the fairer Aryans and the darker non-Aryans who were called *dasys*, *dasas*, etc. The use of the word *varna* (colour) for caste, lends credence to this theory. Later, however, there was a division of labour among the Aryans and some historians trace back

caste to this very fact. The four classes (*varnas*) mentioned in early Indian literature are the Brahmens, whose main duties were to perform *yajnas* and acquire and impart knowledge; the Kshatriyas, whose main duties were to fight wars and carry on the work of the government; the Veishyas, who carried on the work of trade, industry and agriculture, and lastly the Sudras, who were aborigines and offsprings of inter-marriages between Aryans and the aborigines. The Sudras were meant to serve the other three classes. Initially, the caste system was not rigid and a change in occupation went side by side with a change in the person's caste. For instance, Parshu Ram, a Brahmen, became a Kshatriya because of the change in his vocation. In due course, however, birth became more important than occupation in determining caste and the system assumed rigidity. The Brahmins also played an important role in furthering caste rigidity by selfishly maintaining their own superiority. They specialised in individual crafts and were unwilling to impart their acquired skills to outside groups. In the *Sutras*, definite rules were laid down that ensured birth as the determining factor in the caste system. Foreign elements, inter-marriages, the rise of new sects like the *Satanamis*, *Kabir Panthis* and *Vaishnavites* led to the formation of new castes; and at present, there are over 3,000 castes and sub-castes in India. During the medieval times the caste system became even more rigid. This can be partly explained as a self-defence measure. The *Smritis* of the time assigned a high place to the Brahmins, although they laid down that in the *Kali Yug*, Brahmins could not live just by performing their priestly duties and therefore, they could indulge in agriculture and other trades. The severest restrictions were placed on mingling with the *chandals* and other outcasts.

It was only during the British times that the caste system showed signs of break-down. The British rule released many forces like the introduction of modern industries and railways and buses which gradually undermined the caste system. Also the rigidity of caste could not put up a barrier against modern urbanisation. Free sale of land also upset the caste balance in many villages. The close connections between caste and vocation could hardly continue in a modern industrial society where the profit motive was increasingly becoming dominant. Further, the Britishers introduced the law of equality and gradually opened the doors of administration to all castes. Moreover, the new educational system was wholly secular and strictly opposed to caste distinctions. Independent India finally sealed caste distinctions by making untouchability illegal.

Reform Movements

Within the Hindu society, however, there were religious reform movements time and again, which had partly been motivated by the aim to abolish caste. Among the earliest was Jainism, which primarily revolted against the caste system, the complications of Hindu ritualism, and the predominance of the Hindu religion. Jainism spread in the 6th century B.C. and Mahavira is generally accepted as the founder, though, according to the Jains, he was the 24th and the last Tirthankara (saint possessing the divine power of granting salvation to his disciples). Jainism later separated

into two sects—the *Digambaras* and the *Swetambaras*. Buddha also tried to reform Hinduism in the 6th century B.C. by emphasising *ahimsa* setting a simple code of conduct for those who wished to achieve *nirvana* (freedom from the cycle of birth and death), and denouncing the caste system. Buddhism was more organised than Jainism and missionary organisations (*sanghas*) were set up to spread Buddha's teachings. However, Buddhism, too, later split into two sects: Mahayana Buddhism, followers of which began to worship Buddha as God, adopted Sanskrit and began to emphasise worship, prayer and ritualism; and Hinayana Buddhism, which was the old sect, the followers of which never indulged in idol worship. Four Buddhist councils were held (in 487 B.C., 387 B.C., 251 B.C., and in 1st century A.D.) under Kanishka when important policy matters were discussed. In this period the popularity of Buddhism in India was partly due to royal patronage. Some of the most important rulers of ancient India like Ashoka, Harsa and Kanishka had converted themselves to Buddhism.

A Chakravarti or Universal Emperor: Conqueror of all the four quarters and exalted to semi-divine status. Sketch shows on his right, the wheel (symbolising universal empire) and his chief queen. On his left, the chief minister and the crown prince. At his feet the imperial elephant and horse.

In the medieval times, the rise of the Sufi and Bhakti movements helped to somewhat loosen the bonds of caste. The important *Sufi silsilahs* (mystic orders) in India were the *Chistia* and *Surhwardi silsilahs*. They were both *baishara* orders and followed the Islamic law (*shara*). There were in addition, *be-shara* saints (those not bound by the *shara*) who became figures of popular veneration. The ideas of the Sufi saints regarding the nature and relationship of God, soul and matter were similar to those of the Hindu *yogis* and they found easy acceptance in India. Their ideas were humane, encompassing Hindus and Muslims alike. They were responsible, together with the Bhakti saints, for cleansing the polluted atmosphere in the caste system. The seeds of the Bhakti movement lay in the *Vedas*—the adoration and worship of a personal God—but the movement spread all over India, mainly in the medieval period. The Bhakti saints disregarded the rigidities of caste system and carried their message of love and personal devotion to God, to all classes of society. Among the best known Bhakti saints are Naredava, Ramenanda, Ravidas (a cobbler by

class), Kabir (a weaver), Guru Nanak (a barber), Sadhna (a butcher), Nanak (the founder of the Sikh religion), Chaitanya (who even converted Muslims into the Vaishnava faith), Tukaram, Eknath and Mira Bai.

In modern times, a religious reform movement spread in all parts of India. The outcome was the creation of a number of organisations aimed at reforming Hinduism and also denouncing caste: the Brahmo Samaj, the Prarthana Samaj, the Arya Samaj, the Ramakrishna Mission, the Theosophists, and the Social Conference. The religious reform movements of modern times were based on reason and humanity. They appealed mainly to the rising middle class, that tried to rid itself from anti-intellectual religious dogmas and blind faith. They opposed rituals, superstitions, irrationalities and obscurantism in Indian religions. The humanist aspect of religious reform was expressed in the general attack on priesthood and rituals and emphasised on the individual's right to interpret religious scriptures in the light of reason and human welfare.

Social Classes

To study social classes in India, it is necessary, to divide Indian history into three different periods: ancient, medieval and modern. Initially, the Brahmins were the most respected class in the country, but in the later Vedic period, they lost much of their state power, which was now concentrated in the hands of the Kshatriyas and the centre of gravity shifted to the King. Megasthenes, writing on the Mauryan times, mentions seven classes—the philosophers; the King's councillors; the soldiers (who were Kshatriyas) the minor officers; the cultivators (who constituted the bulk of the population); the merchants, traders, artisans and boatmen (who controlled the trade and commerce of the country); and the hunters (who made their living by hunting and rearing cattle). This kind of classification probably existed right through the ancient period, with the number of classes increasing with time. The accounts of foreigners show that the people were, in general, rich and prosperous as well as simple, honest and trustworthy.

In the medieval period, two broad classes can be identified—the rulers and the ruled. In the first class were the sultans and the nobility, who enjoyed a standard of living which was comparable to the highest standard in the world at that time and who enjoyed luxuries at the expense of the ruled. At the other end was the exploited class, which contained the masses—the cultivators. The land revenue varied from one-third to half the produce. All this combined to make the cultivators extremely poor, although the land continued to be very fertile, as Ibn Betute testifies. All the peasants, however, did not live at the level of subsistence. The village headmen (*muqaddams*) and smaller landlords (*khuts*) enjoyed a higher standard of living for the most part. The Hindu *rais* or autonomous *rajas*, too, for the most part, continued to hold their previous estates. A class apart was the trading and merchant class, which catered to the luxuries of the courts of the Sultans and the nobles. According to the historian Zia-ud-din-Barani, some of them became so rich that the nobles borrowed money from them. A fourth class consisted of the slaves and domestics. The favoured slaves enjoyed a reasonably good status in life and some of them even rose to be kings and nobles. The position of the domestic servant was

Mansabdari System

In the later medieval period, the condition of the peasantry continued to be poor, while that of the nobility was, perhaps even better. The entire civil and military official class was organised in the *mansabdari* system, with the *mansab* signifying the rank of an officer. Thus, the higher nobility, the lesser nobility and the lesser officials were all classified *mansabدار*. In lieu of cash payment, the *mansabdar* was often given the right to levy revenue of a certain area called *jagir*. Thus the *mansabdar (jagirdar)* belonged to the ruling class and it was partly as a result of his exploitation of the peasantry that an economic crisis developed in the late 17th and early 18th centuries. This was one of the major causes of the downfall of the Mughal Empire.

The British Period

Social classes underwent a radical change in the British times. It was in the interest of the British to curb the ruling class of the medieval times. As a result the former ruling class became impoverished. At the same time, the condition of the peasantry did not improve because of increased exploitation of the British who drained the India's wealth out of the country. There was the growth, however, of a number of new classes, viz. the *zamindars*. This class had existed in earlier times as intermediaries, but now they were given ownership rights over the land which they controlled. As a result of partial industrialisation, growth of education and urbanisation, two new classes developed—the middle class and the working class. The middle class consisted mainly of small industrialists and professionals while the working class was made up of factory workers, construction workers, railway workers, etc.

Position Of Women

In this context, it is worth mentioning the changing position of women in India. In the early Vedic period, the Indian women enjoyed a very respectable position in society, was considered the mistress of the house and took part in all religious ceremonies. She began to lose her position in the epic age, when women were excluded from political life as well as from the right to inheritance. Although higher education was imparted to women, the institution of polygamy became more prevalent leading to a loss of status in the religious and social spheres. Throughout the ancient period, the decline continued, although they continued to be respected. The Rajputs gave them a high place of honour and there was no *purdah* system for the major part. However, the institution of sati and female infanticide gradually crept in. Thus, despite the honour given to women, it was obvious that they were considered a burden and were totally dependent on men. This dependence increased with the advent of Muslims and the large-scale use of *purdah*, which prevented women from being self-sufficient. *Purdah* was widespread in the upper classes, both among the Hindus and the Muslims. Neither did Hindu women have a right to inherit property nor did they enjoy the right to dissolve an undesirable marriage.

right to divorce, if only theoretically, and could inherit half the property that a man could. Education was denied to women.

However, during British times, moved by the humanitarian and egalitarian impulses of the 19th century, the social reformers started a powerful movement to improve the position of women. The British administrators made sati and child infanticide illegal and reform societies and religious organisations worked hard to spread education, encourage widow remarriage, prevent child marriage, enforce monogamy and enable middle class women to adopt different professions or take up public employment. The national movement gave a further stimulus to the movement for the liberation of women. Women took an active role in the freedom struggle, marched in political processions, went to jail for non-cooperation.

Legislatures and even took part in terroristic activities. In the 1920s, a women's movement led by the All India Women's Conference founded in 1927, developed in the country. The aim was to enlighten women.

After independence, Articles 14 and 15 of the Indian Constitution (1950) guaranteed complete equality for men and women. The Hindu Succession Act of 1956 made daughters and sons co-equal heirs to property and the Hindu Marriage Act of 1955 permitted dissolution of marriage on special grounds.

To summarise, it can be seen that there has been an increase in the number of classes and castes through the ages, together with an increase in the number of religions which have left their mark on society. No wonder the Indian society is a unique blend of caste, class and religions.

THE FREEDOM MOVEMENT

The second half of the 19th century witnessed the flowering of national political consciousness and the growth of an organised national movement in India. The revolt of 1857 has been claimed by many historians as the first war of Indian independence. It may be more appropriate to describe the revolt as the precursor of the Indian National Movement.

Factors which contributed to the growth of National Movement: British interests in India clashed with the interests of the Indian people. The various classes—peasants, artisans, factory workers—had their grievances against British economic policies. The economic and administrative unification of the country and the new modes of communication created a feeling of unity and nationalist sentiments grew. Modern Western education was instrumental in enabling a large number of Indians to develop a modern, rational, secular and democratic outlook. The Press played a crucial role in spreading the message of patriotism and modern economic, social and political ideas. Moreover, the religious and social reformers tried to arouse the self-confidence and self-respect of the people by exhorting them to take pride in the rich cultural heritage of India. The racial arrogance of the European officials and special treatment given to Europeans hurt the sentiments of the people.

By the 1870s, nationalist feelings were simmering below the surface and Lord Lytton's reactionary policies provided the stimulus for them to develop into an organised national movement. During his viceroyalty from 1876-80, most of the import duties on British textile imports were removed, criticism of the government in the newspapers was prohibited through the Vernacular Press Act of 1878, use of arms was prohibited through the Arms Act in the same year, and the age limit for the ICS exam was reduced to 19, thereby virtually barring the Indians from entering the ICS. In 1883 Lord Ripon passed the notorious Ilbert Bill which declared that even the most highly educated among the Indians were unfit to try a European.

These Acts by Lord Lytton and Ripon brought home to the Indians the important realisation that the acceptance of their demands by the government was contingent upon their

success in organising themselves on a national scale. A concrete step in this direction was taken by Allen Octavian Hume whose initiative made it possible for the Indian National Congress to hold its first session at Bombay in 1885 presided over by Womesh Chandra Bonnerjee and attended by 72 delegates. The basic aims of the Congress were to promote friendly relations among nationalist workers, create a feeling of national unity, present popular demands to the government and organise public opinion in the country. Some of the illustrious presidents of the Congress during its early years were Dadabhai Naoroji, Badruddin Tyabji, Ferozeshah Mehta, Surendrenath Banerjee, Ramesh Chandra Dutt and Gopal Krishna Gokhale.

Working of the Congress (1885-1905) moderates: Between 1885 and 1905, the Congress was dominated by moderates who adopted the constitutional method of agitation, characterised by the presentation of petitions to the government. The Indian Councils Act of 1892 provided for indirect election of some members to the Councils. In its early phase the National Congress did not achieve much success.

Growth of militant nationalism (1905-1918): Militant nationalism grew under the leadership of men like Rajnarain Bose and Ashwini Kumer Dutt in Bengal. The most outstanding militant nationalists were Bal Gengadhai Tilak, Bipin Chandra Pal, Aurobindo Ghose and Lejpat Rai. They believed that Indians must work out their own salvation.

In 1905, Lord Curzon partitioned Bengal on administrative grounds. The nationalists saw in this act a sinister attempt to weaken Indian nationalism and therefore launched an anti-partition movement on Aug 17, 1905. The idea of 'swadeshi' and 'boycott' acquired instant popularity. The prominent leaders were arrested in 1908; the movement, however, succeeded as can be seen from the fact that the partition was annulled in 1911.

Moderate-Extremist split: The differences between the two became clear during the anti-partition struggle. The moderates wanted the movement to be confined to Bengal, while the extremists sought its extension to the whole of India. At the Surat Congress session in 1907,

Leadership. Morley-Minto Reforms were introduced by the British in 1909 to placate the moderates; they increased the number of elected members in the Imperial Legislative Council and the Provincial Councils. Meanwhile, communalism reared its ugly head. Sayyid Ahmed Khan played an important role in the emergence of a separatist tendency along communal lines. In 1906, the All India Muslim League was founded under the leadership of Aga Khan.

The outbreak of World War I in 1914 increased the misery of the poorer sections of Indians for whom the war meant heavy taxation. The extremists took advantage of the ineffectiveness of the moderates and two Home Rule Leagues were started in 1915-16, under the leadership of Tilak and Annie Besant. The two leagues demanded self-government for India after the war. Meanwhile, at the Lucknow session of the Congress in 1916, the moderates and extremists united; the Congress and the Muslim League signed the historic Lucknow pact by which they sank their differences and put up a joint political front.

This unity between the various parties aroused political enthusiasm in the country and the British Government, to pacify the nationalists, passed the Montague-Chelmsford Reforms in 1918, by which it promised to give the Indian people a share in the administration. The Congress, however, rejected this.

Gandhi assumes leadership: It was during the agitation against the Rowlatt Act (1919), which authorised the government to imprison any person without trial and conviction in a court of law, that Mahatma Gandhi entered the National Movement. In February 1919, he founded the Satyagraha Sabha and its members had to take a pledge to disobey the Rowlatt Act and court arrest. Thus Gandhiji gave a new turn to politics and the National Movement entered its next phase. There were strikes and demonstrations all over the country. The government tried to suppress the popular movement and in 1919, the Jallianwala Bagh massacre took place. As a result, there was uproar in the country and the Muslim League gave full support to the Congress. The nationalist trend among the Muslims took the form of the Khilafat agitation.

Non-cooperation Movement: In 1920 the Khilafat committee, under the leadership of Maulana Azad, Hakim Ajmal Khan and Hasrat Mohani, launched a non-cooperation movement on Aug 31, 1920. Gandhiji joined it. People were asked to boycott government-run educational institutions, law courts and legislatures. Membership of the Congress was thrown open to the masses. The government took stern action and arrested all leaders except Gandhi. The Chauri Chaura incident (1922), in which without provocation 22 policemen were killed, prompted Gandhiji to suspend the Non-cooperation Movement.

Swaraj Party: There was general dissatisfaction in the country after the suspension of the movement and it was in this atmosphere of disillusionment that Chittaranjan Das and Motilal Nehru formed the Swaraj Party. The party accepted Congress programmes but it decided to participate in the Council elections.

A new left wing appeared in the Congress under the leadership of Jawaharlal Nehru and Subhas Chandra Bose. The year 1928 saw the

Subhas Chandra Bose: Jai Hind.

famous Bardoli Satyagraha under the leadership of Sardar Vallabhbhai Patel, when the peasants organised a 'No Tax Campaign' and won their demands.

Revolutionary terrorism: The terrorists came under the leadership of Chandra Shekhar Azad in 1928 and called their organisation Hindustan Socialist Republican Association. In 1929 Bhagat Singh and B.K. Dutt threw a bomb in the Central Legislative Assembly; they were arrested and Bhagat Singh, Sukhdev and Rajguru were executed.

Simon Commission: In 1927, the government appointed the Indian Statutory Commission, known after the name of its chairman as the Simon Commission, to go into the question of constitutional reforms. Since all its members were Englishmen, it was boycotted. At Lahore a huge procession was organised under the leadership of Lala Lajpat Rai. Police resorted to lathi charge and Lajpat Rai was killed. An important result of the commission was that it united the various parties and in 1928 an All Parties Conference was convened where the Motilal Nehru Committee was appointed to prepare a Constitution for India. However, nothing much was achieved because there was disagreement on the reports of the committee.

Poorna Swaraj: Gandhiji returned to active politics in 1928 and began to consolidate the nationalist ranks. In the Lahore session in 1929, Jawaharlal was elected President, and a resolution was passed declaring Poorna Swaraj as the Congress objective. Jan 26, 1930 was celebrated as the first independence day.

Second Civil Disobedience Movement (1930) was started by Gandhiji on Mar 12, 1930 with the famous Dandi march (salt satyagraha). He was arrested. There were protests and agitations all over the country and in the North-west Frontier Province the 'Red Shirts' movement was organised by Abdul Ghaffar Khan.

Round Table Conferences: The First Round Table Conference, held in London in 1930, was boycotted by the Congress. The government negotiated with Gandhiji and the Gandhi-Irwin pact was signed. Gandhiji went to London as the sole representative of the Congress to attend the Second Round Table Conference which ended in failure. On his return, he was arrested and civil disobedience was resumed. The Third Round Table Conference was held in 1932. The British PM Ramsay MacDonald announced the Communal Award (i.e., separate electorates for Hindus and Muslims). As a protest Gandhiji undertook a fast unto death; consequently, the pro-

Act of 1935 and Congress ministries: The discussions in the Third Round Table Conference led to the passing of the Government of India Act of 1935 (for details see page 33). Though the Congress opposed the Act, it decided to contest the elections and Congress ministries were formed in seven provinces.

Socialist ideas: The 1930s witnessed the growth of socialist ideas. The left wing in the Congress also grew and this was reflected in the election of Jawaharlal as President for 1936 and 1937 and Bose for 1938 and 1939. In 1939, though he was re-elected President of the Congress, opposition by Gandhiji and other leaders compelled Bose to resign. He then founded the Forward Bloc.

In 1939, Congress ministries resigned as a protest against Britain's involvement of India in World War II without consulting the Congress.

Growth of communalism: The Muslim League, led by Mohammed Ali Jinnah, began to spread the cry that the Muslim minority was in danger of being engulfed by the Hindu majority. In 1944, it passed a resolution demanding partition of the country and creation of a state to be called Pakistan after independence.

Cripps Mission and Quit India Resolution:

The British Government desperately wanted the active cooperation of Indians in the war effort. To secure this cooperation it sent a mission to India in March 1942, headed by Sir Stafford Cripps. The mission was a failure and the All India Congress Committee, at its meeting in Bombay on Aug 8, 1942, passed the famous Quit India Resolution and proposed to launch a non-violent mass struggle under Gandhiji's leadership to achieve its aim. On Aug 9, Gandhiji and other leaders were arrested, the Congress was declared illegal, there were protest movements everywhere, the government took stern measures and succeeded in crushing the movements. After the suppression of this revolt, there was a lull in the political activity till 1945. Bose formed the Indian National Army (INA) to conduct a military campaign for the liberation of India.

Last phase of the Freedom Movement (1945-47): The resistance by the INA collapsed by the end of World War II. There were massive movements against the trial of the soldiers and officers of the INA and the people succeeded in getting the prisoners released. During 1945-46, there were numerous agitations and demonstrations all over the country. In March 1946 the Cabinet Mission came to India to negotiate with the Congress leaders about transfer of power. In July, when elections for the Constituent Assembly were held, the Congress bagged most of the seats; the Muslim League boycotted the Constituent Assembly and on Aug 16, 1946, observed Direct Action Day to achieve Pakistan. In September 1946, an interim government, headed by Jawaharlal was formed. The Muslim League joined it later.

Lord Mountbatten, who came to India as Viceroy in 1947, formulated a plan for India's freedom. The country was partitioned and the new state of Pakistan was created along with a free India. On Jun 3, 1947, the British Parliament passed the Indian Independence Act of 1947. It proposed the establishment of two dominions of India and Pakistan. Thus on Aug 15, 1947, the British authority in India came to an end, and India achieved independence. ■

The Quarterly Review

(October–December '84)

INDIA

PEOPLE

Antulay, A.R.: Former Maharashtra CM, expelled from Congress(I) for his anti-party activities and for forming a regional party, Indravadi Maharashtra Congress Party. He contested the VII Lok Sabha poll as an independent from the Kulaba constituency and lost.

Bachchan, Amitabh: Elected to the Lok Sabha from Allahabad, defeating H.N. Bahuguna of DMKP. This is Bahuguna's first election defeat.

Bali, Vyjanthimala: The star-turned-politician, elected from the south Madras constituency, defeating the Janata candidate, Era Chezhyan.

Bedi, Rajinder Singh: Noted Urdu author and Hindi film-maker, died of cancer on Nov 11. He won the Padma Shri for his contribution to Indian literature.

Berari, H.A.: Additional Director in Intelligence Bureau (IB), appointed Director IB, succeeding R.K. Kapoor who was in charge of the late PM's security.

Bhargava, Dr Sneha: Head of the Department of Radio-diagnosis at the AIIMS, took over from Prof H.D. Tandon as Director of the institute.

Borker, Vasant Pandurang: Prominent freedom fighter and social worker, died on Oct 31 in Bangalore.

Captain, Ayesha: India's first woman jockey, she comes from a family of riders.

Chandrasekhar: President of Janata Party, defeated in the Lok Sabha poll from the Ballia constituency in UP by the Congress(I) candidate Jegannath Chaudhary.

Chavan, Y.B.: Veteran freedom fighter and former Dy PM, died on Nov 26 in New Delhi. A former CM of Maharashtra and Defence Minister in the Nehru Cabinet, he also held important portfolios in the Cabinets of Lal Bahadur Shastri and Mrs Gandhi.

Chellaney, Brahma: AP correspondent against whom the Punjab Government filed an affidavit in the Supreme Court (SC) seeking his arrest for his failure to disclose the various military, police and medical sources that gave him information on the army action in the Golden Temple complex.

Chowdhury, A.B.A. Ghani Khan: Congress (I) candidate elected from West Bengal's Malda constituency, dropped from Rajiv Gandhi's

Cabinet.

Dharamvir: Former Union Minister of State for Labour and Rehabilitation, died on Dec 22 in New Delhi's AIIMS where he lay in coma for 10 days following cerebral haemorrhage. He was a veteran Congressman and a social worker.

Dhote, J.L.: Better known as the 'toothless lion of Vidarbha', expelled from the Congress(I) for his anti-party activities. He has floated a new party, Krantikari Congress.

Dutt, Sunil: The Congress(I) actor-turned-politician defeated Ram Jethmalani, a high profile lawyer and Vice-President of the BJP in the Lok Sabha poll from north-west Bombay.

Fernandes, Oscar: The aggressive Congress (I) MP, re-elected from the Udupi constituency in Karnataka after defeating his nearest rival K.S. Hegde (BJP). He was inducted as one of the joint secretaries to Rajiv when the latter became AICC (I) General Secretary.

Forman, Carl Gustaf: Transport and Equipment Management Officer in the UNICEF regional office, Delhi, died in an accident near Almora on Oct 30 while taking part in the Himalayan Car Rally.

Fotedar, Makhn Lal: Political secretary to Rajiv in the latter's capacity as AICC(I) President.

Gandhi, Menaka: President of Rashtriya Sanjay Manch (RSM), lost her deposit after she was defeated by Rajiv at Amethi, in the elections.

Ganesan, Sivaji: Veteran Tamil film star-turned-politician who had resigned from the Congress(I), withdrew his resignation.

Gupta, Satyendra Kumar: Chief editor of

Aaj, a Hindi daily, died on Nov 6.

Gupta, Capt S.K.: A fighter pilot, took over the command of INS Vikrant from Capt K.A.S.Z. Raju, on Nov 20.

Hegde, Ramakrishna: Resigned from chief-ministership of Karnataka following Janata Party's near-total rout in the Lok Sabha elections. But continues to head a caretaker government on the insistence of Governor A.N. Banerjee till the commencement of Assembly elections in early March.

Hillary, Sir Edmund: The Everest hero has been made New Zealand's High Commissioner to India. He will be concurrently accredited to Bangladesh, Bhutan and Nepal.

Iyengar, Rajagopala: A former SC judge and Chairman of the Press Council of India, died on Nov 8.

Iyer, V.S. Krishna: Won the south Bangalore seat as a Janata Party candidate.

Jog, Suryakant S.: Special IGP (administration), Maharashtra, who earned high commendation for organising security during Asiad '82, appointed Commissioner of Delhi Police succeeding Subhash Tandon.

Kao, Ram Nath: Former Security Advisor to late PM Mrs Gandhi and Director of the Research and Analysis Wing (RAW), appointed Member of the Policy Planning Committee of the External Affairs Ministry.

Kapur, Air Vice Marshal H.L.: Nominated to the Rajya Sabha through a presidential notification issued on Dec 30. For the first time a retired service officer has been nominated to the Rajya Sabha.

Kaul, M.N.: A veteran parliamentarian and former Secretary Lok Sabha, died on Nov 20.

Khan, Aslam Sher: Former Olympian and hockey player, elected from Betul, MP.

Khan, F.M.: Karnataka Congress(I) leader, who was sacked from the party recently, demanded a referendum be held among the people of India, Pakistan and Bangladesh for amalgamation of their countries into one sovereign nation.

Kidwai, Mohsina: Congress (I) candidate, elected from Meerut constituency.

Kumar, Prem: Special Secretary in the Union Home Ministry and a former Secretary in the Cabinet Secretariat, appointed Union Home Secretary succeeding M.M.K. Wadia who replaces P.S. Gawai as Lt Governor of Delhi.

Lal, Bansi: Former Defence Minister and Haryana CM, elected from Bhiwani. He is now Union Minister for Railways.

Laldenga: Self-styled leader of the underground Mizo National Front (MNF), arrived in India in late October for negotiations with the

Laldenga: Exhilaration in anticipation.

political statement in Mizoram for over two decades.

Mahindra, Keshub: Chairman of the Union Carbide pesticide plant in India and V.P. Goldwala, Managing Director, were both arrested along with Warren Anderson, Chairman of the Corporation in the US, as soon as they reached Bhopal on Dec 7 after the deadly gas-leak from their Bhopal plant which killed over 2,000 people and rendered over 20,000 sick from the after-effects of gas inhalation.

Mani, K.M.: Kerala's Finance Minister, who has the distinction of presenting no less than six budgets over a period of eight years, recently presented a white paper on the economic problems of the state and ways of solving them. Mani blamed the Centre for Kerala's deficits and called for structural changes in the division of financial resources between the Centre and the states.

Mahta, Ashok: I-sted economist and former Union Minister, died on Dec 10. He was an active trade unionist and the first General Secretary of the Hind Mazdoor Sabha.

Mukherjee, Pranab: Finance Minister in Mrs Gandhi's government, dropped from the Rajiv Cabinet.

Nair, Govindan: Veteran CPI leader, died in Trivandrum on Nov 27 following a heart attack.

Narayanan, K.R.: Former Ambassador to the US, successfully contested from the Ottapalem constituency. He is now Minister of State for Planning.

Nazareth, Daniel: Bombay-born conductor of the famous Berlin Symphony Orchestra, was in India to conduct Rossini's 'Barber Of Seville' in Italian opera.

Nehru, Arun: AICC(I) General Secretary, elected from Rae Bareilly, by a margin of 2,57,553 votes, in a multi-cornered contest. He is now Minister of State for Power.

Nerla, Percy: British Deputy High Commissioner in Bombay, killed by a hail of bullets in November en route to his office in Flora Fountain. A group calling itself Revolutionary Organisation of Socialist Muslims claimed responsibility for this heinous act.

Pandey, Ramchandra: Leader of the Sikdim Congress (Revolutionary) Party merges his party with Congress(I).

Pant, K.C.: Former Lok Sabha MP, elected from the New Delhi constituency defeating Kanwar Lal Gupta of the BJP. He is now Union Minister of Education.

Patel, Ahmed Mohammed: Congress(I) MP, appointed Parliamentary secretary.

Patidar, Shyam Sunder: MP Labour Minister, resigned on Dec 28, accepting moral responsibility for the Bhopal gas tragedy.

Patnaik, Biju: Janata Party leader and former Union Minister, elected from the prestigious Kendrapara constituency, Orissa, defeating his nearest Congress(I) rival, Bhagbat Prasad Mohanty, by a margin of 16,776 votes.

Pawar, Sharad: Former Congress(S) CM of Maharashtra, captured two seats breaking new ground in Marathwada and Vidarbha regions. He polled the highest number of votes (361,618) in the state wresting the Baramati seat from sitting Congress(I) member, S.B. Patil.

Pitroda, Satyan: A Gujarati American, who is developing a modern electronic switching system (the hardware inside a telephone exchange) at the newly formed Centre for Development of Telematics (CDOT). This is expected to come up

MGR: Healthy homecoming?

in three years time with the promise of a better telephone service in India.

Ram, Jagjivan: Former Union Defence Minister and leader of Congress(J) Party, elected from Sasaram, Bihar by a narrow margin.

Ramachandran, M.G.: Re-elected CM of Tamil Nadu in the Assembly elections held along with the general elections.

Ramanathan, Prof R.K.: World renowned scientist and one of the founders of the reputed Physical Research Laboratory, died in Ahmedabad on Dec 31.

Rao, Prof U.R.: Appointed Secretary, Space Department and Chairman, Space Commission, succeeding Prof Satish Dhawan.

Rawat, Lt Gen G.S.: Vice Chief of the Army Staff, retired on Dec 30 after 37 years of service in the Indian Army.

Rehman: Veteran character actor on the Hindi screen, died on Nov 5 of throat cancer.

Scindia, Madhavrao: Ex-Maharaja of Gwalior and Congress(I) candidate, defeated Atal Behari Vajpayee (BJP) in Gwalior by a majority of 1.75 lakh votes, the highest in the state. He is now the Minister of State for Railways.

Shukla, Madan Lal: Former MP and senior BJP leader, died in Bilaspur on Dec 30.

Shukla, Vidya Charan: Congress(I) MP and Chairman of Society of National Physical Education and Sports, elected President of the Indian Olympics Association on Oct 28.

Sikarwar, Ramesh: Most dreaded and wanted dacoit of MP, surrendered voluntarily.

Singh, Arun: Rajiv's Doon School friend and political secretary, appointed Parliamentary Secretary.

Singh, Charan: DMK leader elected from Baghat constituency, defeating his nearest rival Mahesh Chand of Congress(I).

Singh, Kanwar Nathar: Former Foreign Secretary, elected from Bharatpur, Rajasthan. He is now Minister of State for Steel.

Swaminathan, Sriata: A firebrand Delhi stage actress-turned-social worker. Sriata had a job with the National School of Drama but took to freelancing. She was gradually involved as a

ing their minimum wages. Today she lives in Gantoli in the Banewara district of Rajasthan and organises the tribals to fight for their rights.

Talbot, Admiral R.H.: Took over as Chief of the Naval Staff from Admiral O.S. Dawson on Nov 30.

Tajmud Islam, Sheikh: Militant leader of the radical Islami Jamiat-e-Tulba (IJT) of J & K, wanted in a number of sedition cases, escaped from the country with a forged passport. He is believed to have fled to a 'Muslim' country in mid-October.

Tata, J.R.D.: Chairman of the Jamshedpur TISCO, succeeded by TISCO Vice-Chairman and Managing Director, **Russi Mody.**

Thakkar, M.P.: A senior SC judge, appointed to head the judicial commission to probe the assassination of the late PM, Indira Gandhi. The one-man commission was appointed under the 1956 Commission of Inquiry Act. A special investigating team has also been appointed under S. Anand Ram, Director-General of the Central Industrial Security Force (CISF). The team will include a senior superintendent of police of the CBI and a number of top sleuths in the country.

Thurawana, Lal: Mizoram Pradesh Congress(I) President, declared elected uncontested from the Union territory of Mizoram.

Tehra G.S.: Elected President of the Shiromani Gurdwara Prabhandak Committee for the 14th time in succession.

Verma, Prem: Veteran journalist and a former Congress MP, battered to death by intruders in his house in Delhi.

Viswanathan, S.: Chairman and Managing Director, Enfield India, is confident that the Madras-based company would benefit from an industrial closure of the collaborating firm Zundapp Werke Ltd in Munich.

PLACES

Andhra Pradesh, Telangan: The festival of flowers to be held on Oct 2 to worship the Goddess of Life was marred by the fact that Andhra Pradesh was trapped by an unrelenting drought.

Bihar: North Bihar, stretching from Champaran district on the Indo-Nepal border to Katihar on the state border with West Bengal, was extensively damaged by floods. A population of 15m were affected.

Chandigarh: Punjab Government and the administration of the Union territory of Chandigarh imposed Press censorship on Nov 1, following reports of large-scale disturbances in Delhi and other parts of India, after the assassination of Mrs Gandhi.

Gujarat, Baroda: One of the two units of the Tarapur Atomic Power Station (TAPS) was shut down on Nov 10 following technical snags in the reactor. **Magadh:** The town was the scene of murder and lawlessness in the first week of October. The cause was the bitter relationship between the Kshatriyas and Patels. The Kshatriyas, earlier rulers of 200 and odd princely states, were showing their resentment after they lost their land with the implementation of land reforms in the state. They became drivers and constables whereas the Patels, the present victims who constitute 22% of the population, had branched out as businessmen. **Boda**

district. It has come under a unique rural electrification scheme with the installation of 13 solar-powered electric streetlights. The special lamp posts have photo-voltaic cells which catch the sunlight and convert the solar energy into electrical energy.

Haryana, Sirsa: Cotton crops in the district standing in hundreds of acres of land have been hit by a mysterious disease.

Karnataka, Bangalore: The first seminar of the Mahila Congress, the largest gathering ever of women (2,50,000 delegates) in Bangalore, proved to be a big farce. Burning problems facing women were ignored in favour of seminars on 'unity, integration and world peace'. • An agitated mob of loan seekers in the city thronged many of the 464 banks threatening and abusing bank officials, damaging vehicles and even forcing the officials to pull down their shutters, because the then Union Deputy Finance Minister, Janardhan Poojary's controversial bank loan scheme for the economically weak had misfired, leaving the genuine loan-seekers in the lurch.

• 'Vidharaj', the world's most priceless gem, is now with a Bangalore advocate G. Vidyaraj. He claims that the star ruby is bigger than the 138.72-carat gem—till now considered the biggest.

Madhya Pradesh, Bhopal: The night of Dec 2, was fatal for over 2,000 people in the state capital, when they were choked to death by leakage of MIC from the Union Carbide pesticide plant. **Mandu:** One of the prime tourist spots in the country, has turned into a killing ground. A man-eater strolls the area killing villagers. **Talcher:** The Talcher Heavy Water Plant of the Department of Atomic Energy, produced heavy water for the first time on Oct 24 after engineers had modified its earlier design which was defective.

Maharashtra, Amravati district: The 37-year-old rehabilitation complex for leprosy patients in Tapovan, one of the finest and most comprehensive of its kind, was closed down in October. Dr Shivaji Ganesh Patwardhan, its 92-year-old founder, went on a hunger strike because of lack of money to finance the institution. **Bombay:** In a unique scheme to resettle 6,000 families, the CM, Vasantdada Patil, handed over 64 acres of government land to the Nagree Nivara Parishad (NNP) in October. The parishad was prompted by fiery opposition leader Mrinalini Gore and her colleagues P.B. Samant and Kamal Desai, to ask for the land.

• BEST (Bombay Electric Supply and Transport), considered the lifeline of the metropolis, went on an indefinite strike on Oct 19, over 30,000 workers have struck work. The strike came close on the heels of the savage fare hike (twice in less than a year).

New Delhi: Mrs Gandhi was assassinated on Oct 31 by two of her own security guards, Satwant Singh and Beant Singh. The army was called out on Nov 2 in the Union territory of Delhi as the wave of violence triggered off by the assassination continued, unabated. Over 759 were reported killed. Shoot-at-sight orders were issued to maintain law and order and curfew was also imposed. • Appu Ghar, a children's amusement park, built on the Disneyland pattern, was inaugurated by Rajiv on Nov 19. • The capital's Wellington Crescent was renamed Indira Gandhi Marg as a tribute to late Mrs Gandhi.

Punjab, Amritsar: President Zail Singh visited the Golden Temple after the repair work

wreckage and debris caused by the army action.

• The Centre finally restored the keys of all buildings in the Golden Temple complex to the SGPC on Oct 9. • About 300 persons from various parts of the country converged here on Nov 11 to attend a joint meeting to study the situation in the country following Mrs Gandhi's assassination.

Rajasthan, Jaipur: Two more power projects which will generate 473 lakh units annually were approved by the Central electricity authority.

Sikkim: Congress(I) was defeated in the VIII general elections. Former CM, Nav Bahadur Bhendari wrested the lone Lok Sabha seat from the Congress(I).

Tamil Nadu, Chengleput district: It was heavily devastated by a cyclone which hit the Pondicherry coast in the first week of November.

Kalpakkam: The Centre has yielded to the state's long-standing demand for exclusive rights to the power from the Madras Atomic Power Projects first stage plant (MAPP-1) at Kalpakkam which went commercial this year. **Madhurantakam:**

This constituency had the highest number of 90 candidates contesting elections to the Lok Sabha. **Madras:** A four-year old bank loan scandal involving city branches of no less than 14 nationalised banks was finally exposed when an official complaint was lodged with SP (Special branch) that two of its city branches had been duped into giving Rs 12 lakhs by way of loans for purchase of eight second-hand lorries. • The Readymoney Shopper's Club in the city—the middle-class answer to the credit card schemes for the affluent, like the Diner's Club—has apparently fared very well in its first year of operation. At the club's board meeting on Oct 26 it was revealed that the total turnover from its 15,000 members, had crossed Rs 1 crore. **Neyveli:** The Neyveli Lignite Corporation (NLC) is likely to double production of lignite and power, now that the work on the second mine-cut of the corporation is complete. Unusually the project has been completed long before schedule.

UP, Ayodhya: A 'liberation march' or *dharma yatra* from Sitamarhi (Bihar) to Lucknow (UP), organised by the Shri Ram Janambhumi Mukti Samiti, reached Ayodhya on Oct 7 where about 60,000 devotees gathered to take an oath to 'liberate' the disputed shrine called Babri Masjid, which the Hindus believe to be the birth-place of Lord Rama. **Dehra Dun:** Dec 21 was unique for the Generals who passed out from the IMA, Dehra Dun on Dec 21, 1947, as young commissioned officers—the first batch in independent India. The occasion was the second get together of the 'Second Course' officers commissioned from the IMA. Twelve of the second course officers have risen to the high rank of Lieutenant Generals. Eight of them are still serving the army. **Dev Prayag:** A 14-day white water expedition over Uttar Ganga was organised from Dec 1 by a group of 90 adventurers led by the Indian adventure sports promoter Avinash Kohli and the world famous river runner Ken Warren. For the first time women mountaineers, Chandra Prabha Artwal and Alike, also went on the expedition over the roaring currents of the Alikekanda and the Bhagirathi starting from Dev Prayag.

West Bengal, Calcutta: A unique 14-year-old institution called the Beggars Research Bureau in Calcutta has been collecting data on beggars in the city. The bureau reveals that 70% of the beggars researched are workers retrenched

who were driven to begging when they lost their jobs. **Jaldapara:** The Wildlife sanctuary here, the only major preserve of the great Indian rhinoceros, is left with just 22 rhinos. Rhino horn hunters and encroachers are responsible for reducing the number which was 72 only two decades ago. **Jalpaiguri district:** A quiet revolution is taking place here with the formation of the Singherita Adivasi Jantha Khaman Society (SAJKS), the country's first tribal commune. With the help of the society, the 20-odd Santhal families of the village are beginning life anew.

AWARDS

Ananda Puraskhar, the prestigious award for literary excellence to the noted Bengali litterateur, Dibyendu Palit. The award carries a cash prize of Rs 10,000.

Meghnad Saha Medal for 1984 to Dr Raja Ramanna for literary excellence to the noted Bengali litterateur, Dibyendu Palit. The award carries a cash prize of Rs 10,000.

Indira Priyadarshini Award to Hindi poet and critic Shrikant Verma for promoting the programmes and ideals of late Mrs Gandhi.

UP Lalit Kala Akademi Awards of Rs 10,000, to Rameshwar Singh of Udaipur, Sharad Pande of Lucknow and Vidya Sagar of Jaipur for printing; Srihande of Lucknow for sculpture; and Vijai Singh of Varanasi for drawing.

Jawaharlal Nehru Award for International Understanding posthumously to Indira Gandhi. The Rs 2.5 lakh annual prize, instituted in 1964 by the Indian Council of Cultural Relations (ICCR), is given for outstanding contribution to international understanding, goodwill and friendship among the peoples of the world.

National Family Welfare Awards of 1983-84 to Maharashtra, Punjab, Assam, HP and Pondicherry. The prizes were awarded for excellence in performance in the field of family planning.

Krishnan Gold Medal for 1984 to B.H. Briz Kishore, visiting scientist at the Jawaharlal Nehru Technological University, for his contribution in the field of geo-hydrological modelling. The award was instituted by the Indian Geophysical Union (IGU) in 1964, to be awarded to eminent scientists in the field of earth sciences.

EVENTS

ELECTIONS '84

The untimely death of Mrs Gandhi generated controversy over the holding of elections—initially expected to be held in January '85. And quite contrary to expectations her successor Rajiv Gandhi preponed the elections; the dates announced were Dec 24, 27 and 28, 1984. This upholding of democratic values by Rajiv, a young, relatively inexperienced entrant into the political arena, laid to rest the people's fear of a dictatorial or dynastic rule.

What followed the announcement of the polls was almost a month of public wooing by the political parties. Election manifestos were released, promises were made, pressure was exerted. An electorate of 378m was once again going to the polls to exercise its

—chaotic as never before. Mrs Gandhi's assassination and its violent aftermath coupled with the Bhopal gas tragedy—an avertable mammoth catastrophe—had left the people reeling from their destructive effects. But in the midst of the troubled atmosphere too, Indian democracy exhibited remarkable strength to weather all storms.

The elections were held and went off smoothly despite aberrations caused by booth-rigging, boothcapturing and sporadic violence. They resulted in the Congress(I) win never before witnessed in the history of independent India. Bagging 401 of the 508 seats contested the ruling party surpassed its earlier best of 371 seats in the Nehru regime. The few exceptions of the Congress(I) rule were the states of Andhra Pradesh, West Bengal, and J & K where regional opposition parties namely the Telugu Desam, Communist Party of India (Marxist) and the National Conference(F) stemmed the countrywide sweep made by the ruling party. In fact the Telugu Desam emerged as a major Opposition force which is surprising in the light of the fact that there are quite a few national opposition parties on the scene as well. And thanks to the internal bickering in the Opposition ranks, the country has a virtually unopposed Congress(I) rule at the helm.

The state-wise break up of the contested seats is as follows. The Congress(I) swept through the states of Rajasthan, Haryana and Madhya Pradesh winning all 25, 10 and 39 seats respectively. In Maharashtra it secured 43 of the 48 seats contested while the remaining 5 were divided between Congress(S)—2, Janata—1, Peasants and Workers Party (PWP)—1 and Independents—1. In Karnataka the once popular Janata Party could retain only 4 of the 28 seats while the Congress(I) secured 24. In Kerala there was a CPM ouster—the party could manage only 1 of the 20 seats. The ruling party bagged 13 and the remaining 6 were shared among the Indian Union Muslim League (IUM)—2, Congress(S)—1, Janata—1 and Kerala Congress(J)—2. In Tamil Nadu, the Congress(I) won 25 of the 38 seats contested while the AIADMK and DMK won 12 and 1 respectively.

In the Hindi belt comprising UP and Bihar the Congress(I) tide continued unabated with 82 of the 84 seats contested in UP and 48 of the 52 seats contested in Bihar going in its favour. The remaining 2 seats in UP went to the DMKP while in Bihar the CPI won 2, and the DMKP, Janata, Congress(J) and Independents 1 each. In Himachal the Congress(I) won 3 out of 4 contested seats. The eastern belt also displayed the Congress(I) swing with Meghalaya, Arunachal, Nagaland, Manipur and Mizoram handing it over the 2, 2, 1, 2 and 1 seats contested. Twenty of the 21 seats contested in Orissa went in favour of the ruling party. However, in Andhra Pradesh the NTR led Telugu Desam won convincingly by winning 28 of the 40 seats contested with the Congress(I) bagging only 6 and Janata, Congress(S), CPM, CPI and Independents securing one each. In West Bengal the Congress(I) lost to the CPM where the former won 16 and the latter 18 of the 42 seats. CPI and RSP obtained 3 each and Forward Bloc 2. The Farooq Abdullah-led National Conference(F) beat the Congress(I) winning 3 of the 5 contested seats with Con-

Give us a hand: Rajiv and his jubilant colleagues in a victory line-up.

gress(I) bagging the remaining 2. Sikkim and Tripura were also unaffected by the Congress(I) wave, the lone seat in Sikkim going to SGSP and the two contested seats in Tripura going to CPM. But except for Dadra and Nagar Haveli where Independents won the 1 contested seat, the Union territories went for the ruling party in a big way too. In Delhi the Congress(I) achieved a grand slam of all 7 seats, while it won the sole contested seats in Pondicherry, Lakshadweep, Chandigarh, Andaman and Nicobar Islands and the 2 seats from Goa as well.

The new PM, Rajiv Gandhi, polled 83.6% of the votes polled in Amethi—by far the highest by any prime minister. And he, along with his new Cabinet, will steer the country on.

CATASTROPHES '84

Nineteen eighty-four did prove to be an Orwellian year. The traumatic events that swept the nation, particularly in the last quarter, were catastrophic, and the country was engulfed by a strong sense of insecurity.

Mrs Gandhi's Assassination

On Oct 31, Indian history took a turn when Mrs Gandhi the country's PM for 16 years was brutally assassinated by two of her own security guards. Infuriated by her violent death, the people set the nation on a blitz wrath. Violence on an unprecedented scale was unleashed throughout the country. Caught in the grip of this unreasoning frenzied madness the masses vent their anger primarily on the Sikh community. It was the partition days of 1947—action replayed!

The riots continued for over three days. The northern belt, particularly Delhi's resettlement colonies were the worst affected. The death toll in the entire country went up to around 1,500 with Delhi alone accounting for above 500 deaths. To control the mammoth orgy of violence CRPF and army troops had to be deployed. Shoot-at-sight orders were issued and curfew imposed in riot affected areas.

Rescue operations were carried out and the affected and homeless brought to relief camps.

All communities and groups actively helped the Centre in relief work. Compensation was announced to those affected. Insurance companies were asked to settle claims and also process those claims which covered riot risk. But, unfortunately, only few could benefit from the compensatory measures as the amount offered was far too less and bureaucratic procedures delayed implementation of the financial relief measures. The magnitude of losses in these riots is likely to run into crores.

The Centre appointed a senior judge of the Supreme Court M.P. Thakkar to investigate the events and circumstances of the assassination. S. Anand Ram, Director-General of the Central Industrial Security Force was also appointed to lead an investigation into the assassination. It was clarified that there would be no duplication in their work.

Bhopal Gas Tragedy

Bhopal witnessed the worst ever industrial accident in world history when the mild winter evening of Dec 2-3 was converted into a nightmare of misery, pain, panic and death for thousands who inhaled methyl-isocyanate (MIC), a poisonous liquid gas that leaked out from a storage tank in the Union Carbide's pesticide plant.

The tragedy occurred soon after 1 a.m. when pressure built up in a 45 tonne capacity gas chamber causing the leakage of MIC choking and nauseating thousands of hapless individuals who were in deep slumber. Woken up by a burning sensation in their eyes and an uncontrollable fit of coughing and dizziness they fled in desperation to unpolluted neighbouring towns. The unlucky ones were suffocated to death even as they slept while others fell unconscious on roads as the gas, haste and cold took its toll. Hospitals overflowed with people clamouring for medical attention. The Hamidia hospital compound was littered with hundreds of bodies. The actual magnitude of the tragedy unfolded the next morning when all hospitals and private clinics were overflowing with patients and the number of victims was alarmingly on the increase.

Madhya Pradesh CM, Arjun Singh immediately ordered a judicial inquiry to ascertain the causes of the tragedy and five officials of the Union Carbide including the works manager

management. The PM issued a grant of Rs 40 lakhs from the Prime Minister's Relief Fund and announced a decision to reconsider the policy of allowing factories producing such dangerous items to be located in the midst of a vast populace. Though relief operations were undertaken on a mass scale, there was a steady exodus from the city.

The immediate closure of the factory was ordered and as a precautionary measure its counterpart in West Virginia was also closed down.

Union Carbide top brass including Warren Anderson, Chairman of Union Carbide in the US, Keshub Mahindra, Chairman of the Corporation in India and V.P. Gokhale, Managing Director were arrested. Anderson was however bailed out the same day. He later revealed at a Press conference that an expert team, which had visited the Bhopal plant in June 1982, had reported that the plant was unsafe because of lack of implementation of safety measures. Yet, despite being warned about this both by the experts' report and the accidents which had occurred over the past few years, the Union Carbide turned a deaf ear to these and let things continue as they were. Numerous law suits worth several billions of dollars have been filed against Union Carbide. To ensure the future safety of the people all the remaining gas from MIC tanks was neutralised by a process termed 'Operation Faith'. Elaborate precautionary and safety measures were taken to prevent any further catastrophe, but death and disease had so shattered the confidence of the people that the mere announcement of launching 'Operation Faith' had them fleeing the town. The operation was set in motion on Dec 16 and was completed within three to four days.

Cyclonic Ravages

In November '84 nature went berserk, and one of the most furious cyclones of recent times, blazed a trail of destruction in coastal areas of Tamil Nadu and Andhra Pradesh. Moving from Chingleput and South Arcot in Tamil Nadu the storm moved towards Nellore in Andhra Pradesh ripping through the small towns of Sullurpet, Tada, and Sriharikota. The affected areas were cut off from other parts of the country and almost all channels of communication snapped. Large areas were submerged under sheets of water.

The magnitude of damage was estimated to be very high. Even in Madras city, where people had been forewarned, thousands were rendered homeless. Port operations in the state capital were suspended and transformers and low tension feeders damaged, thus badly hitting the power supply.

In Andhra Pradesh this was the worst disaster after the 1977 cyclone. Around 800 villages were marooned and Nellore and talukas of Chittoor District badly affected by torrential rains. The space station at Sriharikota was also damaged.

The Andhra CM promised to implement relief measures on a war footing and to provide ex-gratia compensation of Rs 2,000 to the relatives of those killed. The PM also announced a relief of Rs 15 lakhs from the Prime Minister's Relief Fund and sanctioned Rs 7

crores to Andhra and Rs 5 crores to Tamil Nadu as 'ways and means advance' for relief operations.

SOUTHERN STATES Tamil Nadu

The Tamil Nadu Government faced an uncertain future following M.G. Ramchandran's illness. The charismatic AIADMK CM was in a critical state suffering from kidney and heart trouble, and asthma. He later lapsed into a coma following a paralytic stroke. Till as long as possible, his health report was kept a closely guarded secret mainly on his own insistence. It was only a fortnight after his admission to the Apollo Hospital in Madras that doctors held out hope of his recovery. Later, he was shifted to the Downtown University hospital in Brooklyn, USA.

Meanwhile, the AIADMK was riven with dissensions, throwing the party cadre into confusion. With the Lok Sabha polls round the corner the AIADMK, jittery in the absence of its popular leader, was relying heavily on the sympathy factor. Its electoral ally, the Congress(I), was hoping to make a dent in Tamil Nadu after a long time, in the wake of Mrs Gandhi's assassination. The state Finance Minister, V.R. Nedunchezhyyan, after a lot of wrangling, installed himself as the de facto CM in a fierce succession battle. A calculated risk was taken when the state government recommended the Governor, S.L. Khurana, to dissolve the state Assembly. This was said to be in keeping with MGR's wish to have simultaneous elections to the Parliament and the state Assembly 'to save time, cost and effort'. Despite the internal power struggle and AIADMK's inability to throw up a strong personality, the AIADMK-Congress(I) combine swept the polls, wiping out the Opposition completely. The AIADMK won 133 seats in the 232-member state Assembly and the Congress(I) won 62 of the 72 seats it contested.

The massive mandate, ironically, led to greater instability and discord in the state. The issue of the formation of government has become vexatious adding to the people's anxiety. Since none of the contenders—Nedunchezhyyan, Jayalalitha, Veerappan—were acceptable to all the party members, to prevent internal split, it was decided to elect

Ashes to ashes: Nature's fury on coastal Andhra in the form of a severe cyclone.

unanimously the ailing MGR as the leader. It was suggested that the Governor could fly to Brooklyn to administer the oath of office to MGR. However, Khurana made known his disinclination to make the trip—mainly to avoid setting a bad precedent. He instead suggested that an interim CM be elected by the AIADMK so that MGR could take over when he is in a position to do so. The situation is ticklish, with the political party desperately trying to keep itself intact by clinging to the apron strings of an ailing leader, and in the process destroying the established convention of a new government taking over immediately after Assembly polls. Now everything depends on the Governor—whether he waits for the ailing MGR to give Tamil Nadu a government or swears in another AIADMK functionary as CM.

Andhra Pradesh

It became imperative for N.T. Rama Rao to regain legitimacy after the Bhaskara Rao episode. Riding on the crest of the sympathy wave NTR, on Nov 22, recommended the Governor to dissolve the state Assembly on grounds of 'cleaning public life and strengthening democratic principles to protect the interests of the people. This was the first instance of a CM recommending dissolution with more than half his term remaining. His caretaker government, however, pressed that the elections be held in the first week of March '85, following the Lok Sabha polls. After much dilly dallying the Centre agreed. Then came the general elections with the verdict going strongly in favour of the Telugu Desam. Indeed, Andhra remains the only Opposition bastion and Telugu Desam the single largest opposition party in the Congress(I)-dominated Parliament. So strong was the pro-NTR wave that it successfully submerged the charisma of Rajiv Gandhi and routed some Congress(I) stalwarts and former ministers like Health Minister Shiv Shankar and Home Minister Narasimha Rao.

Karnataka

The announcement of Lok Sabha elections after Mrs Gandhi's assassination witnessed a flurry of activity in the Janata camp in Kar-

ment in the country depended on its success in capturing a majority of the 28 parliamentary seats. In an attempt to consolidate its hold the Janata Party threw into the election fray some of its state ministers. The party could, however, win just 4 seats while the Congress(I) captured 24. Following this drubbing at the polls state CM, Ramakrishna Hegde decided to make a dignified exit and sent in his resignation on Dec 29 to the Governor recommending immediate dissolution of the state Assembly. Instead of imposing President's rule Hegde was asked to continue as head of the caretaker government till March '85. Though initially reluctant the Karnataka stalwart accepted the responsibility. The elections for the state Assembly have been announced for Mar 2 and 5.

TROUBLED STATES

Punjab

For Punjab the last quarter of '84 has been one of fluctuating fortunes. On Oct 9 the government removed the last overt signs of the battle that had been waged in the precincts of the Golden Temple complex by withdrawing troops from the Guru Nanak Niwas, Guru Ram Das Sarai, Teja Singh Samundri Hall and the *langar* building. The entire Golden Temple complex was thus formally restored to the SGPC. This overture by the Centre was promptly followed by miscreant misbehaviour in the freed buildings. Sporadic violence too continued to hamper restoration of peace and keeping these factors in mind the government decided against restoring popular government rule in the state and the Punjab Government decided to extend the National Security Act within the state for another three months with effect from Nov 4. So far at least 450 people have been apprehended under this Act.

Meanwhile in the top echelons of the Sikh leadership there appeared signs of discontent. The five Sikh head priests dissolved the Akali Dal ad hoc committee headed by Prakash Singh Majitha and replaced it with a new one headed by Surjan Singh Thekadar. The SGPC then proceeded to hold elections for its office bearers re-electing Gurcharan Singh Tohra as President for the thirteenth consecutive time.

And even as a solution to the Punjab problem continued to elude the Centre, events took a drastic turn for the worse. The assassination of Mrs Gandhi proved to be the final straw. The masses unleashed their fury on the Sikhs and hundreds became victims of a furious, senseless violence. But what was heartening even in the ensuing moments of calamity was the fact that Punjab emerged unscathed, thanks mainly to the prompt safety measures implemented by the government. The army vigilance was intensified and Press censorship imposed on all papers published from Punjab so that no inciting news could reach the masses.

The new PM Rajiv Gandhi took over the task of sorting the Punjab tangle with a firm hand. During his election campaigning he unequivocally ruled out the acceptance of the Anandpur Sahib Resolution, perhaps the most important basis of the present Sikh agitation. However, to stifle the immediate protests by the Sikh high command, he offered to hand it over to the

move welcomed by the Sikhs too.

And now that the elections have established the Congress(I) and Rajiv as undisputed winners, Rajiv has, as one of his first prime ministerial moves, constituted a high level ministerial panel to find ways to resolve the Punjab problem. For the time being though, Assembly elections for Punjab have been postponed while Lok Sabha elections too were not held in the state. At the moment, the government is giving serious consideration to the Akali demands in an attempt to provide an already much-delayed solution.

Mizoram

The developments in Mizoram were encouraging towards the fourth quarter of '84. The government's negotiations with the Mizo National Front chief Laldenga kindled hopes that the 20-year-old insurgency problem may end soon. The government, however, had agreed to have discussions with Laldenga on the conditions that settlement was to be reached within the framework of the Constitution, that MNF would eschew violence and, finally that action against the rebels would not be stopped during the period. After several rounds of discussions, the government reached an agreement with the MNF chief on the broad outlines of a solution to the Mizo tangle. The government is considering the issue of granting statehood to Mizoram and rehabilitate the rebels who wish to lead a normal life. It must be admitted that this time the MNF chief gave up his stand on a Kashmir-like special status to Mizoram, which helped considerably in the negotiations. Still a few issues like granting special powers to the government of Mizoram, regularisation of trans-border trade between the Mizo tribals and neighbouring areas, remain unsolved. But what the future holds for Mizoram, will only be known after another round of discussions.

Tripura

In Tripura the situation became explosive towards the end of '84. The state was reeling under the onslaught of terrorist activities by the Tripura National Volunteers (TNV) who were demanding a separate state for the tribals of Tripura. The loot and mayhem let loose by the terrorists threatened to destabilise the entire north-eastern region. In order to press their claims for a 'free state for free tribals' a bandh was organised on Oct 15, which took a violent turn. The TNV freely circulated pamphlets condemning India's 'annexation' of Tripura and acclaimed the activities of other extremist groups in the country. In fact the date for the bandh was carefully chosen to coincide with the merger of erstwhile princely states with the Indian Union, in 1949. The objective was to strike an emotional chord in the hearts of tribals, reminding them that they are refugees in their own homeland. This time Bengalis were singled out for attack and over 70 people were killed. The list of casualties was alarmingly more than last year's figures. Despite such a serious situation, the state government was resisting the Centre's suggestions for deployment of the army in the entire state. There have been differences between the Centre, keen on

finding a political solution to current insurgency in Tripura. The Centre had been stressing that the state be declared a disturbed area. But the CPM Government strongly objected to this approach and the Tripura CM Nripen Chakravarty viewed this stand as the Centre's design to topple the only non-Congress(I) state in the north-eastern region. The Centre appointed a high-level team to solve the Tripura problem, which suggested strengthening of security forces and sealing of Tripura's eastern border with Bangladesh along Chittagong. The suggestions were more in line with the state government's stand. The insurgent activities abated towards the year end, when discussions with the MNF chief Laldenga, were underway. The strong link between TNV and MNF is probably the reason for the restraint in terrorist activities in Tripura. Nevertheless it is imperative that a comprehensive plan, combining political and security measures, be devised to ensure political stability in Tripura.

Manipur

Rough weather continued to prevail in Manipur in the past quarter. The pre-election preparations in the state took the form of defections and increased terrorist activities. In November an exodus of 14 Congress MLAs from the Manipur Ministry resulted in the Congress(I) losing its majority. Discontentment over the denial of party nominations resulted in the organisation of this mass defection. The ministry headed by CM Rishang Keishing which initially had 43 MLAs in the 60 member state Assembly was left with only 29. This had the Opposition clamouring for the dissolution of the ministry since it had no moral or constitutional right to continue. The crisis, however, ended a few days later with one of the defectors withdrawing his resignation when allotted a party ticket to contest the elections.

But this was not the end of the troubles for Keishing. On Dec 8, 1984 an abortive bid was made on the CM's life. While heading towards his constituency Phungyar to address an election meeting, his car was attacked by terrorists and although Keishing escaped unhurt, four of his security guards were killed and seven others injured. The Nationalist Socialist Council of Nagaland (NSCN) had engineered the attack.

This underground organisation is responsible for killing more than 90 people in the last few years, as a way of expressing its hostility against the Congress(I) rule. But despite these terror tactics and defections the Congress(I) emerged triumphant in Manipur capturing both the contested seats.

ECONOMY

Paul vs Escorts

The Swraj Paul vs Escorts case may well assume crucial importance for financial institutions as well as the corporate sector. And the decisions of both the High Court and Supreme Court during the last quarter of 1984 have given it an added significance. The High Court judgment on Nov 6 lent new dimensions to this case which had generated controversy since Sep 19, 1983 upon the release of certain circulars by the RBI conferring eligibility on

...Resident Indian firms' companies to purchase shares in Indian companies in which the NRIs held 80% shares under the portfolio investment scheme. The Managing Director of Escorts Ltd. H.P. Nanda, had filed a petition earlier in the year challenging the legal and constitutional validity of these circulars in connection with the purchase of Escorts' shares by the Caparo group of companies controlled by the London-based Indian industrialist Swraj Paul.

The High Court verdict declared these purchases illegal and invalid because the NRI holding in the Caparo group was not the stipulated 60% at the time Paul made the purchases and neither had he obtained prior permission from the RBI before making the purchases through Punjab National Banks.

The participation of the Life Insurance Corporation (LIC) also ignited debate. This public sector institution owns 53% shares in Escorts along with other government owned financial institutions. On Feb 11, 1984 the LIC had acted arbitrarily when it called an extraordinary general meeting (EGM) in an attempt to replace nine of the 15 directors of the company with its own nominees. This was done when, having linked proposals to accept pre-payment of loan and merger of Escorts and Goetze with issue of registration of transfer of Caparo shares, the LIC failed to force Escorts to register the shares. The High Court annulled the EGM and the resolutions it passed.

Soon after the High Court verdict the Supreme Court, on Dec 10, 1984, stayed the judgment and fixed Feb 26, 1985 for the final hearing of the LIC appeal challenging the decision. Paul's Caparo group has made purchases amounting to nearly Rs13 crores in Indian companies. The fate of these purchases as well as the role of financial institutions and the corporate sector will be settled only then.

Resilience In Economy

Significant and sustained growth in the Gross National Product (GNP), a marked slowing down of the inflation rate and a surge in the level of foreign exchange reserves were the salient features of the Indian economy during 1984. The overall growth rate has been estimated at around 4.5-5.5%.

This growth can be attributed mainly to the record foodgrain production of 151m tonnes during 1983-84. At the end of the first week of December the annual rate of inflation based on the wholesale price index stood at 6.3% as compared to the 10% last year.

Pulses, sugar and edible oils, to some extent, accounted for the rise in wholesale price index. An 8.3% increase in manufactured products was also registered in the 12 months which ended on Dec 8, 1984.

The estimated 7% industrial growth rate was also significantly higher than last year's due to increased output of major industries including steel, cement, coal, electricity generation, fertilisers and crude petroleum. Also, an appreciable increase in approvals for capital issues, imports of capital goods and significant mobilisation of deposits by companies contributed to this. In the first nine months (Jan-Sep) of the fiscal year, 546 foreign collaborations and several non-resident Indian collaboration proposals were approved.

In the current fiscal year the government is

optimistic about effectively checking the rising trend in sugar prices, thanks to the larger increases of sugar in the market. With a comfortable stock of 20m tonnes of foodgrains for emergencies, the government is also hopeful about stable price behaviour.

Trade Deficit

The high trade deficit of about Rs 6,000 crores has become a major cause of concern for the commerce industry. And the likelihood of its succeeding in pegging this gap to around Rs5,000 crores in the current fiscal year is bleak.

The government's efforts to relieve this pressure on the country's balance of payments position by stepping up exports, adopting a selective approach and the simultaneous undertaking of a detailed exercise on import substitution in key sectors at least, in consultation with other concerned ministries have not been entirely successful either.

What is heartening, however, is the 8.6% upswing in overall exports in 1983-84 despite the continued deterioration evident in the international trade environment and the pursuance of protectionist policies by the industrialised countries. But in the same period imports decelerated by 8.6%, in sharp contrast to the high rate of growth of 37.3% in 1980-81.

Compared to the previous two years when exports and imports were provisionally placed at Rs 9,865.30 crores and Rs 15,762.95 crores respectively, India's trade deficit during 1983-84 increased leaving a gap of Rs 5,398.65 crores. This yawning trade deficit has been attributed to unexpected developments during the last quarter of the fiscal year. Also stoppage of export shipments because of the port and dock workers' strike in March coupled with a substantial increase in imports during the three-month period from December '83 to February '84 was responsible for a reversal in the trade balance situation.

While the import of crude oil and petroleum decreased from Rs 4,441 crores in 1982-83 to Rs 3,285 crores in 1983-84, there was a corresponding increase in imports of five major groups of products namely machinery and transport equipment (by 24.4%), cereals and cereal preparations (by 95%), semiprecious and precious stones and unprocessed pearls (by 59.8%), vegetable oils (by 139.1%) and chemicals (by 50%).

During the six month period from April to September '84 the provisional figures for exports and imports were Rs 5,054.3 crores and Rs 7,344.8 crores respectively and compared to Rs 2,425.2 crores in the corresponding period in 1983 the trade gap was less this year at Rs 2,290.5 crores.

In 1984 there was considerable diversification of India's product exports to the Socialist Bloc and emphasis was on engineering and manufactured goods. The USSR emerged as India's largest trade partner. However, owing to higher levels of imports, the trade gap with the EEC, the West Asian, North American and ESCAP countries remained considerably large.

Indo-Soviet Trade

Trade with the USSR, India's largest trade partner at present, is expected to increase by leaps and bounds this year. The protocol,

signed between the two countries in December 1984, envisages a trade turnover of Rs 4,000 crores in 1985. Of this total turnover, exports to the USSR are placed at Rs 2,500 crores—a rise of 25% over the 1984 exports. The imports from the Soviet Union are estimated to be Rs 2,120 crores this year as against the targetted level of Rs 1,840 crores in 1984—a nearly 15% rise.

Under this plan, a number of new items have been identified. For the first time Indian exports which already cover a wide range of products, will now include veterinary preparations, medical equipment and instruments and high quality wool products. Also envisaged is a significant breakthrough in many sectors of export including chemicals and allied products, textiles and engineering goods.

On its part, the Soviet Union too will, for the first time, supply synthetic rubber and a number of chemicals. It will also continue importing, as before, a large number of India's essential requirements of machinery and equipment, raw materials, non-ferrous metals, crude oil, petroleum products, fertilisers and newsprint. The USSR has also agreed to import 5 lakh tonnes of wheat from India on a non-returnable basis. India's coffee exports are expected to be about 30,000 tonnes in 1985.

If this envisaged turnover is achieved the targets laid down in the long-term programme of Economic Trade, Scientific and Technical cooperation will not only have been achieved but exceeded considerably. According to this programme, it was agreed by both countries that the growth in bilateral trade in 1981-85 should be 1.5 to 2 times that of 1976-80. And with the targetted level for 1985 being Rs 4,620 crores total trade for 1981-85 would have increased by more than 2.5 times of what it was in the preceding 1976-80 period.

ADB Loan

In November 1984 India decided to withdraw its application for a loan of \$ 2b from the Asian Development Bank (ADB). The decision came in the wake of the ADB move restricting the amount to a paltry \$ 200m only. Third among the top contributors to the ADB after the US and Japan with a contribution of \$ 115m to the Bank's capital India holds a 6% share. For the first time in 18 years India had approached the ADB for a loan on hard commercial terms and the rejection came as a surprise. The move was calculated and conducted step-by-step. The initial demand for \$ 2 b by India was first slashed down to \$ 1b. Then some member industrialised countries reduced their own contributions to the Bank. This was followed by the announcement that a loan of \$ 200m would be made available to India over the next three years once India had accepted the \$ 1b loan. In fact the US supported by Japan and the ASEAN felt that India could make do without such a big loan, particularly after the IMF loan and, describing it as better-off than other countries, felt that it should not borrow at the expense of the existing needy borrowers. Rightly offended by this slighting attitude of the ADB India has decided not to press the loan issue further specially in the light of the fact that developed countries go all out to discourage developing countries by erecting protectionist walls.

WORLD

PEOPLE

Alliluyeva, Svetlana: Daughter of the late Soviet leader Josef V. Stalin, returned to Moscow on Nov 1. Her return ended 17 years of self-imposed exile as a defector.

Anderson, Hans Christian: A book meant for a little girl named Christine, has brought fame to the storyteller almost 110 years after his death. Published for the first time, *Christine's Picture Book* was reproduced in facsimile on Oct 25, to mark the heroine's 125th birthday.

Arufat, Yasser: PLO leader, escaped an assassination attempt by opponents who sabotaged a plane taking him from North Yemen to Iraq. Luckily, the plane developed serious problems shortly after take-off and was forced to make an emergency landing on Oct 19.

Azmi, al-Mufti: Jordan's Ambassador to Romania, assassinated in Bucharest on Dec 4. The killer was arrested.

Barfield, Velma: First woman to be put to death in the US, when she was executed by injection on Nov 2; she had killed her boyfriend by feeding him ant poison.

Blaize, Herbert: Leader of the US-backed New National Party, sworn PM of Grenada on Dec 4.

Fae, Baby: Month-old infant who received a baboon's heart to replace her own congenitally deformed one, died on Nov 15.

Donovan, Raymond: US Secretary of Labour, indicted by a grand jury in New York on criminal charges in connection with his past business dealings as a construction executive.

Faiz Ahmed Faiz: The revolutionary Urdu poet and scholar and editor of *Pakistan Times*, died of cardiac arrest in Lahore on Nov 2. He was an influential force in both Pakistani and Indian literature, in Urdu.

Fonda, Jane: Won her first Emmy Award as Best Actress in ABC's *The Dollmaker*.

Haq, Zia-ul: Pakistan President, was given a fresh mandate of five years, receiving more than 60% votes in his favour in the countrywide referendum conducted on Dec 19.

Herrera Astrid: Miss Venezuela, crowned Miss World 1984 at London's Royal Albert Hall on Nov 15.

Khan, Air Marshal (Retd) Asghar: Chief of the i'ehrio-e-istiqlal Party, of Pakistan who spear-headed the Opposition movement against the imposition of martial law in 1977, pledged support to the Movement for Restoration of Democracy immediately after his release on Oct 2 from a five-year detention.

Kikoin, K. Isaan: A physicist who pioneered semi-conductor research and the development of Soviet nuclear science, died on Dec 27. He was 76.

Mahmood Sultan Iskandar: Crowned the VIII King of Malaysia on Nov 14. The 52-year-old King took over from Apr 26, following the expiry of the seventh King.

Mannin, Ethel: One of the most contemporary British writers from the 1920s to 1970s, died on Dec 5 in London at the age of 84. She had written fiction, biographies, memoirs and travelogues that included sympathetic accounts

Mathews, Cyril St Jankin: Minister of Industries and Scientific Affairs, sacked in Colombo on Dec 24. He was replaced by the Deputy Minister of Industries Denail Fernando.

Miller, W. Richard: A Federal Bureau of Investigation (FBI) veteran, arrested in Los Angeles on Oct 4, on espionage charges, was accused of selling secrets to a female Soviet agent and her estranged husband. Miller is the first FBI agent ever charged with espionage, and the case marked the first known foreign infiltration of the US agency.

Mondale, Walter: The dignified loser in the US presidential race, announced on Nov 7 that he would not stand for any public office again. He added that one of the reasons he lost was that he had not mastered the television as his opponent had.

Montagu, Ivor: Prominent British Communist Party leader, founder of the World Peace Council and Lenin Prize-winner, died in London on Nov 7. He was 79.

Murphy, Richard: US Assistant Secretary of State, arrived in New Delhi on Oct 20, on a three-day visit during which the two countries hoped to renew bilateral ties, particularly in the context of American arms supply to Pakistan.

Pekingsah, Sam: Director of violent and controversial films like *The Wild Bunch* and *The Dirty Dozen*, died on Dec 28 in California.

Popieluszko, Jerzy: Prominent supporter of the outlawed Polish Solidarity trade union, murdered on Oct 29. The murder has infuriated Solidarity members and other Poles who shared his religious convictions and his dedication to non-violent change.

Reagan, Ronald: 73-year-old American President, won a second term in the White House as the Americans handed him an overwhelming victory in 49 of the 50 states on Nov 7.

Sokolov, Valentin: Soviet dissident poet, died in early November in a psychiatric clinic. He won the French Pen Club's Freedom Prize and was proposed for the Nobel Prize for Literature.

Stanfield, Agnes Von Kurowsky: Whose brief romance with Ernest Hemingway in Italy in 1918 became the central element in his novel *A Farewell To Arms*, died on Nov 25 at the age of 92.

Thatcher, Margaret: British PM, escaped assassination attempt in Brighton (England) on Oct 12, for which the Irish Republican Army claimed responsibility. She called it "an inhuman, indiscriminate attempt to massacre innocent men and women".

Truffaut, Francois: France's "irreplaceable film-maker" died on Oct 21 in Paris. He established the Auteur theory—director as author of his work. His best-known movies include, *The Last Metro*, *Jules And Jim*; his final film *Confidentially Yours* was a commercial success.

Ustinov, Marshal Fedorovich Dmitri: Soviet Defence Minister, died on Dec 20. He was 76. Ustinov graduated as a military engineer and, prior to World War II, was engaged in designing work in military establishments.

Valery, Paphov: Soviet scientist, died on Dec 12. He made an essential contribution to the development of electron technology, represented the USSR at the International Electrotechnical Commission serving as its Vice-President and President.

Vatchenko, F. Alexia: President of the

Presidents of the Soviet Union, died on Nov 22. He was 70.

Warner, Oskar: Austrian film actor who played Jules in Truffaut's *Jules And Jim*, died in Marburg (West Germany) on Oct 24, two days after the death of the French director.

Xiaoping, Deng: Chinese Communist Party leader called upon Japanese businessmen on Oct 23 to invest in North Korea, which is in need of capital and advanced technology and had begun pursuing an open-door policy like China.

Yamani, Zaki Ahmed: Saudi Arabia's Oil Minister met with Egypt's President Hosni Mubarak in a highest-level official contact between Riyadh and Cairo since the 1979 Arab League boycott of Egypt after it had signed the peace treaty with Israel.

Yen, Walters Vemon: US President's Ambassador-at-large, one of the trouble-shooters of the Reagan Administration, arrived in New Delhi on Dec 12, after a two-day visit to Colombo for talks on the Tamil problem in Sri Lanka.

PLACES

Bahrain: A Kuwait Airlines Airbus, on a routine flight from Kuwait to Karachi was commandeered into Iranian airspace between Bombay and Bahrain, where an Iranian fighter plane, challenged it on Dec 4. ● In another instance of destruction, a Cypriot supertanker was set ablaze by Iraqi airborne Exocet missiles on Dec 3, while it was going to take oil from Iran's Kharg Island.

Chile, Santiago: A Chilean woman has given birth to the first Antarctic baby in the last week of November, on the icy, uninhabited continent. Six Chilean families with 18 members emigrated in February '84 for two years; they will be replaced by another six families.

China: celebrated its 35th anniversary under Communist rule on Oct 1, with a strong endorsement of its open-door policy and a call for reunification with Taiwan.

Grenada, St George: US-favoured New National Party (NNP), won a landslide victory in this Caribbean nation's first general elections in eight years, which saw a leftist coup in 1979 and an American-led invasion in 1983.

Kuwait: Gulf countries have initiated steps to protect their oil tankers from attack. A rapid deployment force (RDF) is being set up to coordinate defences of the six Gulf Cooperation Council (GCC) countries.

Lebanon, Beirut: Syrian officials met in Damascus with leaders of the other Arab nations on Sep 30, opposing Jordan's renewed ties with Egypt.

Mexico, Mexico City: A series of explosions in a natural gas processing complex rocked the capital on Nov 19. Lower parts of the old Mexican capital are sinking at the rate of 9 cm a year, due to the high increase in the extraction of underground water.

Nicaragua, Managua: Sandinistas won the first presidential and national Assembly elections in Nicaragua on Nov 9, since they overthrew the four-decade-old Somoza dynastic dictatorship in 1979.

Norway, Oslo: A bomb threat interrupted the presentation of the Nobel Prize on Dec 10 for the first time in its 83-year history. The ceremony was resumed after a thorough check-

Rich Tress

Karachi: Abdul Oudeer Khan, a top nuclear scientist, claims that the country could manufacture a hydrogen bomb, but would not do so for "we believe in the peaceful uses of nuclear capability". He said India was ahead of Pakistan in several sectors of nuclear technology and Islamabad was trying to catch up at the earliest.

South Africa, Sobokeng: About 2,300 people were arrested in the black township of Sobokeng, 64 km south of Johannesburg on Nov 14, in what is believed to be South Africa's biggest raid against blacks living in work hostels. Contract workers living in the township's squalid barracks were tried in special courts, many pleaded guilty and paid fines on charges of non-payment of rent.

Sri Lanka, Colombo: A Japanese monk accused by Tamil militants of being a CIA agent, was shot dead in northern Jaffna on Oct 28.

Switzerland, Geneva: Poland withdrew from the International Labour Organisation (ILO) after an investigation committee of the ILO accused the Warsaw Government of violating trade union rights.

US, Alabama: America's first space traveller, a 27-year-old squirrel monkey named Miss Baker, died of a serious kidney ailment. She went into space on May 28, 1959 with another monkey Able, aboard a Jupiter rocket. Able died shortly after the orbital flight.

Cape Canaveral: Ground engineers repaired the space shuttle Challenger's radio relay satellite on Oct 9. The satellite is used to send some of the spacecraft's communications and all of its radar pictures to earth. On Oct 12, Challenger soared into orbit exactly one month after sister ship Discovery returned to earth from its maiden journey. It was a mission of firsts—first seven-person crew; first time two women were on the same spacecraft; first American woman, Sally Ride, to take a second space trip; first astronaut to make four shuttle flights, Commander Robert Crippen; first flight of Canadian astronaut, Marc Garneau and the first demonstration of a satellite refuelling technique in space.

New York: Scientists at the Cornell University have gathered experimental evidence for the first time to show that diamond, the toughest material, can be melted with the help of a laser beam. ● A law firm filed an all-time record damage suit for \$80b on Dec 28 against the Union Carbide Corporation for the gas leak that killed more than 2,000 people in Bhopal.

Washington: The Reagan Administration has eased rules on nuclear cooperation with South Africa by arranging sale of nuclear fuel and uranium. ● The US withdrew formally from UNESCO on Dec 20 because of complaints about its Third World policies and budget.

USSR, Dushanbe: Soviet cosmonauts have photographed Halley's Comet; this celestial wonder comes close to the sun once in 76 years.

AWARDS

The 1984 Nobel Prize for Literature to Czech dissident poet Jaroslav Seifert, 83, for his poetry, which is endowed with freshness, sensuality and inventiveness against a backdrop which portrays the indomitable spirit of man. **For Medicine**, jointly to three immunologists—

London-born Nial V. Jane, West German Georges F. Koehler and Argentine Cesar Milstein—for their theories on the control and development of the immune system and discovery of the principle for production of "monoclonal antibodies". **For Peace** to Bishop Tutu, 53, the anti-apartheid leader of the South African Council of Churches. The Norwegian Nobel Committee called him "a unifying leader figure in the campaign to resolve the problem of apartheid in South Africa". **For Economics** to Sir Richard Stone, 71, of Britain's Cambridge University, for fundamental research on national accountancy systems that had radically improved the basis for empirical economic analysis. **For Physics**, jointly to nuclear physicists, Carlo Rubbia (Italy) and Simon Van Der Meer (Netherlands) respectively, for their work at the European Nuclear Research Organisation (CERN) in Geneva, which has led to the discovery of "field particles W and Z" communicators of weak interaction". **For Chemistry** to Prof R. Bruce Merrifield, of the Rockefeller University in the US, for developing a simple and ingenious method for obtaining peptides and proteins".

The Booker McConnell Prize, Britain's richest literary award, to art historian Anita Brookner for her novel *Hotel Du Lac*.

The Goncourt Prize, one of France's highest literary awards, to Marguerite Duras, 70, for her novel *L'Amant* (The Lover).

EVENTS SOUTH ASIA Pakistan

Pakistan opened this quarter with a spate of Shia-Sunni riots which rendered at least five dead, 200 wounded and property worth several millions lost or damaged. Trouble broke out on the day of Ashura, when the Shias commemorate the martyrdom of Prophet Muhammad's grandson Hussein. Sunnis in Karachi objected to a Shia procession entering a street outside its traditional route. There were rumours that the Sunnis had burnt down a Shia mosque. The Shias retaliated by leading their procession towards a central Sunni mosque and burning down shops adjacent to it. There was trouble in several towns in Punjab and Sindh, but violence was contained. Parts of Karachi were put under curfew and several religious leaders as well as 300 rioters were rounded up by the police. Shia-Sunni problems have increased since Islamisation became a major constitutional issue. Earlier the differences had been merely academic but now they have become constitutional.

In the political field, major developments took place in December. In a surprise TV broadcast, President Zia-ul-Haq announced that he would hold a referendum on Islamisation on Dec 19. The Pakistanis would be asked to endorse a lengthy Islamisation programme with a simple "yes" or "no". It was a dual plan: if the majority voted yes, then not only would the programme be implemented but Zia would be elected for five years to carry out the programme and amend the constitution to make it thoroughly Islamic. The Opposition, calling the referendum a great hoax, called on the people to boycott it. The government retaliated

with a complete blackout of the nation's media of boycott appeals. Zia also announced new laws which made it a crime to call for a boycott of all referenda and elections, punishable by three-years' imprisonment. The law also debarred anyone convicted for organising a boycott, from membership of any legislative body for seven years.

In spite of all this, when the election was duly held, the voter turnout was very low. Zia received a majority of the votes cast and is, therefore, President for the next five years. He has promised elections by March 1985.

Bangladesh

Parliamentary elections were due in Bangladesh on Dec 8. On Oct 11, President Ershad announced that he would lift martial law, in phases, if the major opposition parties agreed to participate in the elections. On Nov 1, the day after the filing of nomination papers, he would abolish the offices of district martial law administrators; after a fortnight, he would wind up the offices of sub-zonal martial law administrators and on Dec 1 the posts of deputy chief martial law administrators would be ended. Fundamental rights would also be restored and martial law would end with the beginning of the new Parliamentary session.

The seven party alliance, led by the leader of the Bangladesh National Party (BNP), Begum Khaleda Zia and the 15-party alliance led by the Awami League leader, Sheikh Hasina waded, both decided at rallies held on Oct 14 that Ershad's proposals were unacceptable. They stated that they would not participate in the elections unless martial law was lifted immediately and a neutral government was formed for holding "free and fair elections". Former President Abdus Sattar, who was ousted by Ershad in a military coup in March 1982 also addressed the seven-party alliance and said, in a major statement, that he had been ousted by force and that he would be "compelled to summon the Parliament that has been dissolved" unless the two main opposition groups' five-point demand was met immediately. While Ershad has met most of the demands, he has not heeded its two important points—the immediate lifting of the martial law and restoration of fundamental rights. The opposition parties also proposed to hold a 24-hour strike on Dec 8 and a civil disobedience movement from Dec 9.

Under such pressure, Ershad postponed the elections. He also promised not to campaign for his own party, the Jana Dal, and to make his ministers resign from the Cabinet before filing in their nominations. Although the opposition leaders, particularly Begum Zia, showed some flexibility, there were a number of incidents of violence in these three months.

Sri Lanka

A fresh wave of violence began on Nov 20 with an attack on a police station at Chauakcheri, in northern Sri Lanka, in which a group of 35 guerrillas stormed the police station, made off with arms and ammunition and left 24 policemen dead. Two organisations, the Tamil Eelam Liberation Organisation and the Liberation Tigers of Tamil Eelam claimed responsibility. In the following weeks the guerrillas stepped

up their activities and at least 180 people died. The government imposed emergency regulations and the air force and navy were brought in to combat the guerrillas. On Nov 30, the guerrillas killed about 150 Sinhalese in two separate attacks on farm settlements in the Mullaitivu and Vavuniya districts. The government forces retaliated at Mannar where 102 Tamil civilians were killed between Dec 2 and 4. According to government sources, the Tamil terrorists are trying to provoke a repetition of the arson and murder launched in July 1983 by the Sinhalese, to attract world sympathy.

To diffuse the situation, President Junius Jayewardene called another meeting of the All Party Conference on Dec 14, and put up a proposal to reorganise the local government and create a "council of state" which would have 75 members, one-third of whom would be appointed by the president while the remainder would represent district councils. The response however, was lukewarm and Jayewardene dropped the proposals.

Meanwhile, President Reagan's ambassador-at-large, Gen Vernon Walters visited Colombo and New Delhi in December in a bid to diffuse the situation. Shortly before Walter's visit to Colombo, Washington had issued a statement deploring the guerrilla attacks as a serious and unwarranted challenge to the government of a practising democracy. Walters' visit raised hopes of US military support or supply of much-needed military hardware. However, Reagan's envoy's message was that the solution to the problem should be political and not military. Gen Walters said that if Jayewardene were to sell a devolution package to the Tamils who may be willing to compromise, the US may think again about military aid for suppressing the guerrillas. In New Delhi, too, Walters reiterated that the solution to the problem should be political and not military.

Meanwhile, relations between Sri Lanka and India took a turn for the worse as several attacks were made by the Sri Lankan navy on Indian fishing boats in Indian waters. Sri Lanka alleged that Tamil guerrillas were being trained on Indian soil. While India denied all such allegations as ridiculous, the PM, Rajiv Gandhi, accused the troops of indiscriminate killings. Colombo took exception to this statement and stated that such language and tone could only encourage terrorists and their supporters, both in India and in Sri Lanka.

South-East Asia Singapore

It was a foregone conclusion that P.M. Lee Kuan Yew's People's Action Party (PAP) would return to Parliament with flying colours in the general elections which were held on Dec 22. On the nomination day itself it came out that the PAP had been returned, unopposed, to 30 of the 79 seats in the House. Among these were Lee Kuan Yew and his six Cabinet ministers. The opposition parties fielded 51 candidates for the remaining seats. Among the important opposition parties were the Workers' Party (WP), the Singapore United Front (SUF) and the United People's Front (UPF). The PAP, however, has been in power for the last 25 years and has exercised great control over the life of Singaporeans. The Opposition, on the

other hand, suffers from lack of financial funds and manpower.

Before the elections, the PAP published a document titled 'Agenda for Action in the Year 1999' which was virtually its election manifesto. It said that by 1999 Singapore will be a developed city-state with a per capita income equal to that of Switzerland today. It also stated that a virtually new city, Marina Bay, would be constructed by the end of the century. Further, all Singaporeans would own their own houses and there would be a cultivated society which would be caring and compassionate. It now remains for the PAP to carry out its programme.

Indonesia

There was general discontent in Indonesia starting with the Tanjungpriok incident in September, when Muslim rioters clashed with the police and the troops. Although the government said that 18 people had been killed, unofficial estimates put it around 100. Shortly afterwards, 22 members of the Oppositionist Petition of 50 group, which had been formed in 1980 and has since been demanding a more open government, greater economic equity and political participation and the eradication of corruption, signed a document challenging armed forces commander Gen Benny Mardani's account of the incident and calling for further investigation by an independent commission. Mardani condemned the document as an example of subversive literature and called in several of the signatories for questioning. Some members of the Petition of 50 group were arrested including retired Lt Gen H.R. Dharsono and the leader of the reformist Islamic group, Muhammadiyah, H.M. Sanusi. Dharsono was accused of attending a meeting in September in which bomb explosions which took place at branches of Bank Central Asia, owned by a business associate of President Suharto, were planned.

There have also been cases of arson in Jakarta and there appears to be a growing opposition to Suharto's 19-year rule over Indonesia. Many Muslims resent Suharto's insistence that his philosophical political ideology of Pancasila should be adopted by every organisation. The government, however, has responded with a mixture of toughness and conciliation. Gen Mardani made several trips to Java to meet Islamic scholars and assured them that the Armed Forces Republic of Indonesia (Abri) would never restrict legitimate religious activities. Muslims account for 90% of the population and for 99% of the Abri. The government, therefore, cannot afford to dis-satisfy the Muslims.

Kampuchea-Vietnam

Prince Norodom Sihanouk visited the US in November but met with demonstrations at Minneapolis led by supporters of former Kampuchean PM Son Sann, who called themselves Americans for a free Cambodia. They blamed the Prince for bringing the Khmer Rouge disaster to Kampuchea and criticised him for continuing his cooperation with China. Sihanouk thereafter froze his relations with Son Sann and his group. The Khmer People's National Liberation Front (KPNLF) He also stated that he had

visited the anti-Vietnamese coalition government of Democratic Kampuchea, but had been prevented from doing so by the ASEAN, China and the coalition partners.

The first fighting of the year on the Thai-Kampuchean border also broke out between the Vietnamese and the Kampuchean resistance forces in November. Although it did not go too well for the Vietnamese, sources close to Hanoi say that they are planning a much larger offensive on the Thai border.

Meanwhile, the anti-Vietnamese, Democratic Kampuchea's three coalition components had a secret meeting in New York during the 39th UN General Assembly session. A plan was presented according to which the coalition government proposed to delink itself from the genocidal Pol Pot regime which held power in 1975-78. It also suggested that the name Democratic Kampuchea would be changed, the national flag and anthem would also be changed and new passports issued. The leaders would also agree to activate a concept of equality among the coalition's three factions. It is now dominated by the Khmer Rouge, both at the military and diplomatic levels. While the two non-communist components appeared agreeable to the plan, the Khmer Rouge representative, Vice-President for Foreign Affairs, Khieu Samphan, rejected it outright.

Far East & Australia Philippines

After months of evidence collection, the Agrava Commission, which had been set up to investigate the Aug 21, 1983 airport murder of opposition leader Benigno Aquino, submitted two reports on Oct 23 and 24. Both the reports said that Rolando Galman, who the government claimed had been hired by the Communist Party of the Philippines (CPP) to shoot Aquino, was not responsible for the murder. One of the five military escorts bringing Aquino down from the aeroplane, to a waiting van on the tarmac, was the culprit. Both the reports also stated that there was a military conspiracy to kill Aquino. Where the reports differed was that while the Agrava Commission in its 121-page report limited the alleged conspiracy to seven military men—Aquino's escorts and the Aviation Security Command (Avsecom) Chief Brig Gen Custodio, the 454-page majority report of Dante Santos, Luciano Saizarr, Amado Dizon and Ernesto Herrera, recommended the prosecution of 25 military personnel, including Chief of Staff, Gen Fabian Ver, and one civilian.

Gen Ver voluntarily asked for indefinite leave pending his trial and also demanded an immediate and separate trial, waiving his right to a preliminary investigation. His place was taken over by his deputy Lt Gen Fidel Ramos. Shortly afterwards, in a show of unity, 68 of the 83 generals in the armed forces issued a "manifesto" declaring "unwavering loyalty and support" for Ver. The Opposition criticised this statement saying that the military should be loyal to the country, Constitution and civilian government and not to any individual. The charges on Ver are important, because of its implications of involvement of people other than those immediately concerned with the murder. In fact, indirectly the charges could lead to President Marcos himself, because as the Opposition

have come from the highest level. The investigations and indictments have now moved to the courts, specifically the anti-graft and corruption court, the Sandiganbayan, which was set up by the 1973 Constitution.

At another level, there was an increase in communist violence, specially in the southern island of Mindanao, in this quarter. Early in December, Marcos met senior commanders of the Armed Forces of the Philippines (AFP) to chalk out policies to end the shooting and ambushes directed against both military and civilian targets. According to Lt Gen Ramos, more than 100 people were killed in recent violence in Mindanao. Marcos and his generals began a "no compromise" military campaign to deal with the problem.

Marcos himself became the centre of much speculation in this period as reports came in that he had either undergone exploratory surgery, a kidney transplant or a tracheotomy. He disappeared from public view on Nov 13, although the Malacanang Palace showed photos of Marcos reading a current newspaper. A videotape was also shown to prove that he was still alive. Under the circumstances, Philippine analysts conjectured about the future of the islands after Marcos.

The Koreans

It seemed as though the two Koreas would finally come together at least on major issues. Non-governmental talks, on forming a single team for the Los Angeles Olympics (which succeeded), had been held earlier in the year. On Nov 15, however, Pyongyang finally decided to talk to representatives of the South Korean President Chun Doo Hwan. The talks were aimed at exchanging ideas and settling upon an agenda for later talks, at a ministerial level, regarding possible economic relations between the two Koreas. Both sides decided to hold higher-level talks on Dec 5, to discuss trade and cooperation.

However, on Nov 23, ill-timed defection by Soviet diplomat Vasily Yakovlevich Matuzok, cooled matters between the two countries all over again. Matuzok crossed the Joint Security Area at Panmunjon and defected to South Korea. The problem was that North Korean troops chased him and entered the UN Command controlled side of the Joint Security Area, where they are strictly banned. During an exchange of gunfire, one South Korean soldier and three North Korean guards were killed. While the South Korean Government issued a strong statement condemning the intrusion as a "criminal provocation threatening peace" Pyongyang announced that it was postponing trade talks till 1985.

Beijing, however, is keen that North Korea should mend fences. Just three days after the Panmunjon incident, North Korean President Kim Il Sung paid an unheralded visit to China. According to reports, the shooting and its effect on the dialogue between the Koreans was on the agenda of talks between the North Korean and Chinese leaders. Only a day after the shooting, Chinese leader Deng Xiaoping told a Japanese visitor that China supported the current series of talks between the two Koreas.

On the home front, South Korean President Chun decided on Nov 30, to allow all but one

opponent of his adversaries to resume political activities following a four-year ban. This included the right to vote and stand for public office—even for the National Assembly. Political ban was thus lifted on 84 politicians who had been prominent in the Opposition during the previous regime of the assassinated President Park Cheng Hee. However, 15 opposition leaders are still under the ban. These include powerful Opposition figures like Kim Dae Jung, the former Opposition presidential candidate now in exile in the US, Kim Young Sam, President of the outlawed New Democratic Party and Kim Jong Pil, a former PM. The other politicians who got back their civil rights are determined to run in the parliamentary elections and at present they are negotiating to launch a single, unified opposition party to challenge the Democratic Korea Party (DKP) which is already in existence and is the second largest group in the 276-member National Assembly.

China

China made significant strides towards a new kind of socialism in this period. A document entitled 'A Decision of the Central Committee of the Communist Party of China on Reform of the Economic Structure' was unanimously adopted by the XII Central Committee of the Chinese Communist Party in its third plenary session on Oct 20. The document focussed on urban industrial and commercial reforms without describing the new policies in detail. Most of the document was devoted to explaining why the reforms were necessary and how they were to be reconciled with the concept of China as a socialist country. It stated that the major defects of the socialist system were lack of distinction between the functions of the government and enterprises, bureaucratic and geographical barriers, excessive and rigid state control of enterprises, failure to attach adequate importance to the law of value and the regulatory role of the market, and egalitarianism in distribution which sapped the initiative of enterprises and workers. China, it said had a "rigid economic structure" which could not meet the needs of the growing forces of production. To stimulate the forces of production, it was necessary even to "draw upon the world's advanced methods of management, including those of developed capitalist countries, that conform to the laws of modern socialised production".

The document stated that while the principle of ownerships of the means of production by the people was to be upheld, ownership would be "separated from the power of operation". Enterprises would thus be independent entities responsible for their own profits and losses. Furthermore, while the leadership of the Communist Party was to continue, its role would be to formulate strategy and not to manage or operate enterprises. Although the principle of planned economy would be continued, mandatory planning would be reduced in favour of guidance planning and regulation by free-market forces.

This document was a victory for Deng Xiaoping and other reformists who wish to overthrow the Soviet model of a centralised socialist economy. In the political field too, reforms are afoot. On Nov 13, Shaanxi province became the first province in China to hold a secret ballot for the election of a senior party official. So far,

party officials have been selected by their higher-ups. In Shaanxi, however, 300 county and provincials elected their party secretary. However, the higher-ups still retain their veto power.

In the diplomatic field, China has been playing a well-balanced game. In preparation for a visit by the Chairman of the US Joint Chiefs of Staff, Gen John Vessey, in January which is to be followed by the first US Navy visit to China since 1949, a Chinese Navy delegation led by Deputy Chief of Navy Staff, Admiral Chen Youming paid a month-long visit to America in November-December. The delegation comprised experts on navy projects proposed for future Sino-American military technical cooperation. The USSR, too, was not ignored and the Soviet first Deputy Premier Fyev Arkhipov paid a visit to Beijing on Dec 21. He was the highest Soviet leader to visit China since 1969. Despite the fact that the three obstacles between Beijing and Moscow—the presence of Soviet troops on the Chinese border, the Soviet occupation of Afghanistan and the Vietnamese occupation of Kampuchea—have not been removed, business was separated from politics and accord was reached in areas of trade, student exchange, tourism and culture.

Hong Kong

On Dec 14, the Sino-British joint declaration on the future of Hong Kong was signed by British PM, Margaret Thatcher and the Chinese Premier, Zhao Ziyang at Beijing, and Britain began the official process of handing over Hong Kong back to China. The joint declaration will come into force before June 30, 1985, after ratification by both the countries.

Although Hong Kong was represented at the signing ceremony by 101 invitees, the people of Hong Kong were by no means euphoric. An Assessment Office set up on Sep 1, to test the acceptability of the draft agreement, reported on Nov 29 that it was acceptable to "most of the people of Hong Kong". However, the Office was highly criticised in Hong Kong as a farce, since the joint declaration could not be changed by the people of Hong Kong. During its assessment period the office made a sample survey of 679 organisations and 1,815 individuals of which 33 organisations and 364 individuals rejected the agreement outright and challenged the right of Britain and China to determine the future of Hong Kong. They wanted either a status quo or for Hong Kong to have the right of self-determination. Of those who accepted the declaration, many did so with reservations and expressed their doubt about the concept of "one country, two systems". They also wanted the Hong Kong people's participation in the drafting of the Basic Law (the Constitution of the future Hong Kong Special Administrative Region), and in the joint liaison group and the Land Commission, which will be set up soon to deal with problems arising during the transition period.

Japan

Yasuhiro Nakasone was reappointed President of his Liberal Democratic Party (LDP) for a further two-year term (his second and last under party rules). This job carries with it the prime ministership. However, all was not smooth sail-

up their activities and at least 1,000 people were injured. Not only was he opposed by the anti-mainstreamists within the party, but Susumo Nikaïdo, a member of the Tanaka faction to which Nakasone belongs, made personal attacks on him and decided to stand as a candidate for the party leadership. He was asked to do so by Zenko Suzuki a former PM and till then, a pro-Nakasone man. Although Nikaïdo was forced to step down by Tanaka 'loyalists', it is significant to note that the Tanaka faction—the LDP's largest factional grouping—is highly divided. It has also emerged that many of the party leaders do not favour Nakasone's "charismatic" style of leadership and consider him "arrogant".

Australia and New Zealand

A landslide victory had been forecast for Australian PM Bob Hawke in the Dec 1 election. But something went wrong and although the Labour Party won, its majority was halved in the House of Representatives and the conservative Opposition coalition of the Liberal Party and the rural based National Party increased their seats. Hawke attributed his failure to certain electoral reforms that had been introduced recently with which the electorate was not familiar. Some analysts, however, felt that certain sections of the electorate like the retired people who have been hit by new restrictions on eligibility for government pensions, voted against his party.

On the diplomatic front, Australia and Indonesia studied a proposal to set aside a long-standing deadlock over where to draw a boundary line south of East Timor. According to Indonesia Foreign Minister, Mochtar Kusumaatmadja, the two countries are considering a jointly administered zone in the disputed areas to look for oil and minerals. A three day meeting was held in Jakarta in November to discuss the issue of boundary differences. Meanwhile, in New Zealand, an 11-day military exercise began on Oct 5 which included the forces of its ANZUS allies, Australia and the US. American warships were not involved because the Labour Government is pledged not to let any nuclear-powered or nuclear-armed ship enter the country's ports.

EUROPE

Britain

Fortune proved kind to the British PM Margaret Thatcher, in October, when an IRA bomb demolished four floors of Brighton Hotel, where she was staying for the annual party conference of Britain's Conservative Party. The explosives had apparently been planted under the floorboards weeks earlier and detonated by a microchip timer. Other Tory members were not so lucky: Eric Taylor, Sir Anthony Berry and Jean Shattock were among those who died, while the Tory's chief whip, John Wakeham, and Thatcher's probable heir apparent in the party, Norman Tebbit, were seriously injured. After the attack the IRA issued a statement claiming responsibility.

What the IRA wants is independence for North Ireland. But, in late November, Thatcher made it clear that "North Ireland is part of the United Kingdom", rejecting Irish unification in the firmest statement ever uttered by a British PM. She rejected strategies proposed by the

Irish Forum, a nationalist group, which suggested three options for changing the way the North is ruled—unification, confederation, or joint authority over the North between Dublin and London.

Meanwhile, the coal strike went through some rough times. In November, there was violence in south Yorkshire, when hundreds of British mine workers and their supporters descended on coal-belt communities, roughed up local managers, plundered shops and damaged 25 collieries. Fifty-four people were injured and 45 persons arrested. The raiders had hoped to discourage miners from crossing the picket lines. However, a large number of miners did return to work. By the third week of November, 59,000 of Britain's 1,89,000 miners had defied Arthur Scargill, the leader of the National Union of Mineworkers (NUM), and had returned to their jobs. To induce more to return, the Coal Board extended its offer of a bonus package to those willing to work during the Christmas season, which would provide each miner with \$ 1,230 in wages and benefits through the end of the year. However, Scargill gave no signs of giving up and the strike continued. In a surprising move, the Archbishop of Canterbury, Dr Robert Runcie, publicly criticised the Tory Government's handling of the long miner's strike, saying that its economic policies were leading to long-term unemployment, party violence and despair.

On the diplomatic front, the French President Francois Mitterrand visited Britain. Matters were slightly strained when a French bomb disposal expert placed two four-ounce packets of plastic explosives on the grounds of the French embassy and asked the British police to make a

For whom does the bell toll: Anti-British posters.

security check. Although the bombs were immediately located and the French police spokesman said that they were testing the ability of the British police to protect Mitterrand, the Parliament considered it a "sick joke" and asked for the recall of the French ambassador to Britain. The second in command in the Kremlin and the probable heir apparent of Konstantin Chernenko, Mikhail Gorbachov, also visited Britain in late December and held arms control talks with Thatcher. The visit was considered to be very successful.

Relations with Spain appeared to take an upward swing as the Spanish and British governments announced on Nov 27 that they had agreed to normalise relations between Spain and Gibraltar. If carried through, as planned, this agreement will mean freedom of communication between Spain and the British dependency. The two countries also agreed to hold talks on other matters, including the sovereignty issue in a way that would "respect the wishes" of Gibraltar's inhabitants.

Spain

Spain itself faced a major problem on the ninth death anniversary of the fascist ultra-rightist Francisco Franco. In the Basque country, a prominent separatist leader, Dr Santiago Brouard, was killed by unknown assassins, but many of his supporters felt that he was shot with the sanction of the government. The assassination triggered off massive rioting and a retaliatory strike on Gen Luis Roa. Later, the ETA (the Basque terrorist group) also killed a policeman and injured another.

In Madrid, around the same time, the conservatives staged the largest demonstration ever held against the PM, Felipe Gonzalez's socialist government, to protest against its proposals for educational reforms; the government wants to have its control over private schools, most of which are run by the Roman Catholic Church. In late December, some liberals and moderate conservatives also inaugurated a Reformist Party, whose intention is to wedge itself between Gonzalez and the far right. All this goes to show that Spain's attachment to Gonzalez and his youthful Cabinet may be waning.

France

The French Communist Party (PCF) showed signs of grave internal dissensions in this quarter. In October a draft resolution of the party blasted the socialists for following "capitalist" policies.

The PCF also announced that it will abstain from the first reading of Mitterrand's 1985 budget. The party leaders had also proposed dropping the so-called union of the left, which had allied the communists with French socialists on and off over the last 25 years. The moderate wing protested against this and six top party officials abstained from a crucial vote on party strategy.

West Germany

The "Flick" affair, the biggest political scandal in West German history, spread further when Chancellor Helmut Kohl admitted before a special parliamentary committee that from 1977 to 1979, as leader of the then Opposition the Christain Democratic Union (CDU), he had received \$ 53,000 from an executive of the Flick industrial group, although Kohl refuted charges that he had accepted payments in exchange for favours done to the group. The scandal has been spreading for over two years and over 2,000 people and corporations are under investigation for tax evasion, laundering money and influence buying. It has already led to the resignation of two high ranking politicians, the Economics Minister, Otto Lambsdorff and Bundestag Speaker, Rainer Barzel. After the Chancellor's recent testimony, there was speculation as to how long he and his party could hold out.

To divert attention, Kohl focussed attention on foreign policy. He met his Italian counterpart Bettino Craxi and later visited Washington—the first allied leader to do so after the re-election of President Reagan. In the US, the two leaders reviewed NATO defences, US-Soviet relations and other issues. Kohl's "good friend in the White House" probably wanted to give a boost

...adding, political fortunes. The favour of Kohl's CDU, and according to US officials, if the Flick scandal does topple Kohl, it would give its backing to a CDU Government under a new Chancellor.

Italy

A large-scale operation to clear the country of the Mafia began in October. In one night some 66 suspected Mafiosi in Palermo were arrested, while warrants for the arrest of 140 others were issued. A large number of them were subsequently caught in the police dragnet. The investigators also made inroads into the third level of Mafia, the underworld's top rung where political and business leaders are also involved. Top businessmen like Nino and Ignazio Salvo were implicated, as were Vito Ciancimino, a former Mayor of Palermo and Alessandro Vanni Calvello, the Prince of San Vincenzo.

This major operation followed the detailed testimony of an embittered Mafioso, Tommaso Buscetta, who in recent mob wars had lost most of his family. Yet another member of the Mafia, Salvatore Contorno, also broke the code of omerta, the Mafia's traditional vow of silence. Through them details of the Mafia's internal structure, criminal activities and drug dealing, have been revealed.

However, there were a number of mysterious killings following these revelations. In October, eight young men were killed in a stable at Palermo, one of the largest mass slayings in Sicily's history. Investigators related it to Buscetta's testimony. Families of the magistrates involved in the current investigations have also been threatened and a known Mafia figure was killed in Palermo in mid-November. The killings are apparently done to scare any other mafiosi who may plan to talk.

In another investigation, Judge Ilario Martella revealed that besides the Turkish gunman, Mehmet Ali Agca, who had been convicted for an attempt on the life of Pope John Paul II in St Peter's Square on May 13, 1981, there was a second gunman, a Turk named Oral Celik. The magistrate is a firm believer in the Bulgarian connection as his list of indictments include not only Sergei Antonov, a Bulgarian airlines official who is under house arrest in Rome, but also Todor Aivazov, a Bulgarian embassy cashier and Mej Zhelya Vassilev, an aide to the military attache. It is not surprising, therefore, that there is a chill in Italian-Bulgarian relations.

Cyprus

Another attempt was made to bring the Greek and Turkish Cypriots together on a second round of "proximity talks" held in New York in October. The UN Secretary General Javier Perez de Cuellar tried to mediate between the two leaders who sat in two different rooms. The talks got off to a bad start because President Evren of Turkey published a statement before the meeting saying that northern Cyprus belonged to Turkey, and not "one stone" of this would be given up.

In an earlier round of talks the Turkish Cypriots had proposed that the President's post should alternate between the two communities; that the two lots of Cypriots should

have equal representation in both Houses of Parliament; and that all legislative and administrative measures should require separate communal majority votes. On the question of the size of the Turkish zone, they had offered only a few territorial concessions. The Greek Cypriots had rejected the proposals and both sides came for the second round of talks with more rigid stances. Some US Senators wished to put pressure on Turkey by cutting \$ 270m from its aid package to Turkey, but the US Administration persuaded it to cut only \$ 55m. The Americans are said to be working out a new compromise formula by which the 38% of the island, which the Turks now hold, would be reduced to 30%. The Greek Cypriots will probably not accept it.

European Defence

In late October, the Defence and Foreign Ministers of seven NATO countries met in Rome to convert an outmoded organisation called the Western European Union (WEU), which was set up in 1948 to limit West German rearmament, into a way of stiffening the European half of NATO. The main promoter of the move is France who left NATO's military wing in 1967, but has since been wanting to link its defence industry to the main European market. The West Germans, too, see the WEU as a means of getting rid of the last of the post-1945 controls on their armed forces. Britain, Italy and the three Benelux countries, too, are in favour of the WEU. The US has recently been grumbling that Europe was not doing enough for its own defence and should, therefore, have nothing against the WEU.

Meanwhile, the NATO defence planning committee, made up of the permanent representatives of all its members except France and Iceland, approved a planning document calling on member nations to include a new generation of conventional weapons in their future defence procurement programmes. NATO's present conventional weapons could stop the first wave of the Warsaw Pact attacks. The newly sanctioned weapons have the capability of locating and attacking enemy forces or installations behind the front lines and therefore pre-empt attack.

Poland

The second half of November was a period of tense suspense for Poland. Father Jerzy Popieluszko, an outspoken supporter of the banned Solidarity trade union and once the butt of the official propaganda machine was kidnapped and murdered. Three members of the security police, a captain and two lieutenants and an accomplice were rounded up for the murder and a public trial began in late December. It is believed that somebody in the upper strata of the official hierarchy was behind the murder.

Gen Jaruzelski has been planning an opening-up with the West for sometime and the priest's murder, despite the government's quick crackdown, upset his plans.

The Greek PM, Andreas Papandreu, visited Poland around the time of the kidnapping and the visit was, therefore, blighted. A junior minister from Britain, Malcolm Rifkind, who visited Poland shortly afterwards, gave an outspoken news conference after laying a

wreath at the priest's grave. Next, the German Foreign Minister Hans-Dietrich Genscher cancelled his much-awaited trip to Warsaw. The Reagan Administration, however, withdrew its opposition to Polish membership of the International Monetary Fund, and this too a day after Andrzej Gwiazda, a former deputy leader of Solidarity, was unfairly rearrested for participating in a demonstration along with 3,000 others on Dec 18. At the same time, the US has not lifted its ban on new government credits to Poland or its suspension of a most-favoured-nation treatment for Poland's trade with America. Jaruzelski would, perhaps, like to show less rigidity but his problem is that he feels it is necessary to mollify his hardline critics within the Communist Party.

US, CENTRAL & LATIN AMERICA USA

The major news from the US this quarter is that President Reagan was re-elected to the top executive office with a thumping majority in which he carried all states except one and the District of Columbia. At a Press conference he said that he had won because "voters approved of the fact that the economy is expanding". Cutting taxes and reducing the size of the government is obviously popular with the Americans.

Shortly after his election victory, however, the deficit issue re-emerged as the pre-eminent cause for alarm. The government's economic data for the third quarter of 1984 was none too good either. The Commerce Department reported that the nation's economic output grew by only 1.9% which is sharply below an earlier estimate. Corporate profits and housing stats were down, and some retailers were nervous about a stall in the consumers' Christmas spending. The foreign trade deficit, on the other hand, rose. There is some speculation that the federal deficit for 1985 may be even higher than the \$210b, predicted in late November by Budget Director, David Stockman.

In another field, however, the US scored yet another high. In an eight-day salvage mission, American astronauts captured two errant satellites, Pelapa and Westar II and deployed two new ones. This is a significant step forward because it has now been proved that costly communication equipment can be retrieved and space workers can handle unwieldy loads with little trouble. This will help NASA when it embarks on its programme of setting up permanent stations in space.

US - Central America

Last April, the Sandinista Government of Nicaragua filed charges in the International Court of Justice at the Hague against the US that the latter was "directing military and paramilitary actions", designed to overthrow or destabilise the Sandinista Government. In December, the World Court overruled arguments that it had no jurisdiction over cases involving armed conflict and voted to hear Nicaragua's complaint. The ruling raised the possibility that Nicaragua could win a favourable decision on its demand for hundreds of millions of dollars in damage.

In another embarrassing episode, a handbook

for guerrilla warfare — courtesy CIA — solicited in Washington, in October. It was a clear violation of presidential orders and a federal law against US-sponsored terrorism. Reagan's aides announced two investigations of the manual, one by the President's Intelligence Oversight Board and the other by the CIA Inspector General John Stein. Several middle-level officials in the CIA refused to take the blame for the manual which urged "selective use of violence" to neutralise leftist Sandinista officials in Nicaragua. They said that they refused to be scapegoats for higher CIA officials. The CIA Inspector General reported that no violation of law had occurred: it was only "poor judgment and lapses in oversight at lower levels".

War jitters were felt in Central America when the Soviet ship Bakuriani neared its destination of the Nicaraguan port of Corinto. The US officials felt that the ship was carrying sophisticated MiG aircraft to Nicaragua. One senior official warned that the Reagan Administration was prepared to use military force to prevent Nicaragua from "tipping the military balance" in America.

The Sandinista Government put Nicaragua on full alert against possible US invasion. The crisis, however, subsided shortly as reporters who had observed the unloading in Corinto were unable to spot any container large enough to hold a MiG fuselage and Stevedores reported that the Bakuriani had brought in only a number of high-speed patrol boats.

Belize

Belize, formerly British Honduras, became independent in 1981 and Britain hoped to withdraw its troops by the end of 1982. But they are still there, and with Belizian sanction. At the general elections held on Dec 14, George Price's People's Party was beaten by Manuel Esquivel's United Democratic Party which secured 21 of the 28 seats in the Parliament. Esquivel believes that Belize has more in common, culturally and democratically, with the Commonwealth countries of the Caribbean and is against cultivating relations with Belize's violence prone Central American neighbours. Price, who had been PM since 1964, had been on close terms with the US, but Esquivel is in favour of distancing himself from the US, except for economic purposes.

Belize's greatest problem is Guatemala, which says that Spain and not Britain used to own Belize and therefore it inherited the country from Spain. Guatemala says that it would call off its threats to invade and recognise the independence of Belize, if it is given one-third of its territory. Belize, which is only 170 miles long, and has a population of 128,000, is not likely to comply. Therefore, the 1,700 British soldiers who are quartered there can stay.

Mexico

In late November, the Petroleos Mexicanas (Pemex), the liquid gas storage and distribution site in Mexico City suburb of San Juan Ixhuatpec, exploded in the city's worst ever disaster. Shortly after the incident, rescue workers estimated that over 400 had died, 2,000 had been injured and 1,000 others were missing. Hardly a family had been untouched and at least 600 orphans had been created in the poverty-

stricken working class neighbourhood. Residents of the area reported that the ever-present smell had increased in the last few days, but the actual cause of the blast was uncertain.

Grenada

Just 13 months after the Americans invaded Grenada, the country held its elections. The centrist New National Party (NNP) which has the support of the US, swamped both the right and the left-wing Opposition and captured 14 of the 15 parliamentary seats, securing 57% of the vote. The new PM is Herbert Blaize who defeated his chief rival, the former PM, Sir Eric Gairy, whose dictatorial rule had led to a Marxist coup which had ultimately sparked off the American invasion. Gairy claimed that the election was a fraud and the Americans had used disappearing ink, so that the marks vanished from the ballot paper and new marks against the names of NNP candidates appeared mysteriously. The sole winner from the right wing Opposition threatened to resign.

Blaize's victory does not mean the end of American control over the island. Immediately after taking office, Blaize wrote to Reagan asking that the 250 American troops still there should remain indefinitely. He also wrote to the heads of seven other Caribbean nations, requesting that the 400-men Caribbean Peace Keeping Force should stay on at least till March. Grenada faces a shattered economy, unemployment rate is at 30%, and many of the unemployed are still sympathetic to leftist ideas. Under the circumstances, Blaize feels that Grenada can ill afford political trouble.

El Salvador

On Oct 8, President Jose Napoleon Duarte had proposed at the UN that the El Salvadoran Government should meet for talks with the guerrilla Opposition. Accordingly, the two groups met at the La Palma parish church on Oct 15. They agreed to humanise the civil war and form a commission to explore ways of ending it. However, the two have a long way to go. Duarte made it clear that he would not budge from his previously stated view that the guerrillas would have to lay down their arms and take their chance in the elections. The guerrillas, on their part presented 29 proposals, which included punishment for those responsible for political murders, the restoration of the land reform programme, a pay cut for army officers and an increase for those they command.

In the second round of talks held on Oct 30, in a church in Ayaguado, the hopes of a compromise settlement receded further. The guerrillas headed by Puben Zamorra, proposed a three-stage trek towards peace: a national forum would be set up to discuss the future of El Salvador, human rights would be guaranteed and the far-right death squads would be dismantled; then, an agreement would be worked out in a government which would include representatives of "all political and social forces", and which would recognise the guerrillas' hold on areas they control — only then, would the guerrillas agree to a ceasefire; and finally, the new government would be installed and the armed forces "reorganised", after which an election would be called, presumably to rubber-stamp the new government. Duarte

himself stepped into the past. The time was, however, gone.

In between the two talks, one of the best combat officers of the El Salvadoran Army was killed while directing operations near the Honduran border. While the government claimed that he had died in a helicopter crash, the guerrillas declared that he had been shot down by the Opposition machine-gunners.

Nicaragua

General elections were held in Nicaragua on Nov 4, which confirmed the Sandinistas in office. Censorship of the only Opposition newspaper, *La Prensa*, which was relaxed before the elections, was reimposed shortly afterwards. In the post-election period, church-state relations too suffered when the Jesuits expelled Father Ernesto Cardenal from their order. He was one of the four senior priests who had rejected Article 285 of the church's new Canon Law, which rules that no priest may hold a high state office. Further, restrictions on travel were clamped down after the elections; about 30 people, mainly Opposition members, were refused permission to leave the country. These included Mario Rappacoli, the leader of the Conservative Party, Alvin Guthrie, the main non-Sandinista trade union chief and Enrique Bolanos, the head of the private enterprise association.

The 'dialogue' between Sandinistas and some non-Sandinistas also collapsed in early December, because the two sides failed to agree on an agenda. Outside the country, the Contadora group's (Colombia, Venezuela, Mexico and Panama) peace process is also stagnating. The Sandinistas had accepted their draft treaty of September which had presented proposals on free elections, economic co-operation and arms reductions, but so far nothing has come of it.

Uruguay

After 11 years of military rule, the generals held an election in which Julio Maria Sanguinetti's centrist Colorado Party won a 39% plurality. It was the fifth military ruled country to elect a civilian government in the region since 1979. However, Sanguinetti assured the military that they would have an advisory role in national security matters. The military also retains emergency powers in the event of a resurgence of guerrilla activity. Although his opponents complain that Sanguinetti is an accommodationist, he has a reputation for pragmatism and independence. After his election he said that he hoped to restore diplomatic relations with Cuba and added that he would make Uruguay non-aligned. Provided the military does not break its promises, he will take over as President in March.

Chile

Chile, on the other hand, retreated to repression. In the most sweeping crackdown since the 1973 coup, that brought Gen Augusto Pinochet and his military junta to power, more than 5,000 people were detained and neighbourhoods like Ra Victoria and Raul Silva Henriquez were sealed off and houses

searched. In early November, Gen Pinochet placed Chile under a state of siege in order to safeguard liberty. He insisted that the new crackdown was necessary to combat a Marxist insurgency in Chile. He muzzled the Opposition Press and banned unauthorised public meetings. The government was given the legal power to tap telephones, open mail and hold prisoners indefinitely, without charges.

The actual trouble is that the people have been pressuring the government to return to civilian rule soon. Chile's controversial four-year-old Constitution, endorsed by Pinochet's Government, calls for a limited return to civilian rule by 1989 when it proposes to hold presidential elections. But in early November, there was an unsuccessful, nationwide strike, a series of bombings and dozens of stores were looted. Pinochet responded with the declaration of a siege. The people retaliated with defiant protest demonstrations which were fired upon. Washington has called on Chile to speed up a return to civilian rule, but so far there has been no response.

On the diplomatic front, however, matters were somewhat better. Argentina and Chile agreed to end their quarrel over three islands, Picton, Lennox and Nueva, in the Beagle Channel at the tip of Tierra Del Fuego. While the Chileans will get the islands, the Argentinians will have oil and mineral rights on part of the continental shelf to the south and east. The Argentinians backed the treaty massively in a referendum and it was duly signed in Rome on Nov 29.

USSR & EAST-WEST

USSR

At a special meeting of the Soviet Communist Party's Central Committee, the party leader Chernenko revealed that the Soviet Union had suffered its fifth calamitous harvest in a row. According to Western analysts the grain harvest amounted to only 170m tonnes, 70m tonnes less than the goal and 20m tonnes below last year's production. Chernenko put the blame on bad weather and, as a remedy, outlined a scheme to add about 40m acres to the Soviet Union's supply of arable land by draining swamps and irrigating desert areas. Khrushchev had tried such a plan earlier in the 1950s and 1960s, but it had failed.

Chernenko's heir apparent, Mikhail Gorbachev who has supposedly supervised the farms on the party's behalf for the last four years, is perhaps not in favour of Chernenko's plan. He stated in last March that bad weather and shortage of land were not Russia's problem; it was poor management, bad storage and bad distribution. He advocated such reforms as organising farm workers into brigades whose pay would depend partly on how much they produced.

However, the bad agricultural front and the apparent overruling of his plans did not affect Gorbachev's position in the party. His visit to Britain in December was extensively covered in the Soviet Press and the Soviet TV gave more air time to him than is given to Politburo members travelling abroad. Western analysts also feel that he has taken over the Politburo's ideology portfolio, a position that both Andropov and Chernenko held before taking over the top

job in the Kremlin, because recently he delivered the main address at a Communist Party conference on ideology.

Among other important events, the Soviet Defence Minister, Marshal Dmitri Ustinov, the first civilian to head the Soviet war machine, died in late December. He was succeeded by Marshal Sergei Sokolov, a First Deputy Defence Minister. In another development, Svetlana Alliluyeva, Joseph Stalin's daughter, who had defected to the US in 1967 returned to Russia and was granted Soviet citizenship. She was accompanied by her daughter, Olga, born of a marriage with an American architect, William Wesley Peters. In Russia, she held a Press conference in which she stated her disillusionment with the Western world.

East-West

After a meeting between Soviet Foreign Minister, Andrei Gromyko and President Reagan, in Washington, in late September, in which Reagan sounded very temperate and Gromyko looked impassive, the two world powers decided to resume talks in Geneva on Jan 7 and 8. Gromyko and the US Secretary of State, George Shultz settled to meet to revive the nuclear arms talks which had been stalled as a result of a Soviet walkout over the Geneva talks on Strategic Arms (START) and on Intermediate-range Nuclear Forces in Europe (INF). One important field for negotiation was likely to be space weapons. In December, Politburo member Gorbachev, on a tour of Great Britain, traded rhetorical salvos with US officials over Washington's plan to develop space-based anti-missile systems and anti-satellite weapons. In the US, the Press leaked news of a secret spy satellite which was to be launched by the next US space shuttle (launched in Jan '85). And the Soviet Union too staged a test of its own space shuttle. Gorbachev said that it would be unreal to think of a limitation of the arms race without a ban on space weapons. He added that if the US goes ahead with its 'Star Wars' programme, the Soviet Union would match those efforts.

AFRICA

Kenya

President Daniel Arap Moi pardoned a former adviser, Charles Njonjo, just after the publication

Beating retreat: France withdrawing its troops from Chad.

of a 95-page catalogue of Njonjo's alleged misdeeds as revealed during a judicial inquiry. Among these were an allegation that he had dealings with South Africa and that he had lent support to an abortive coup attempt led by South African mercenaries against President Albert Rene of the Seychelles. He also allegedly misused funds belonging to the Association of the Physically Disabled of Kenya and diverted donations towards development projects, in his Kikuyu constituency, into his personal account.

Moi also released four of Kenya's seven political detainees and raised the minimum wage after a gap of two years. He appears to be courting the Kikuyu peasant farmers who supported the Mau Mau guerillas during colonial times. Moi probably regards the Kikuyu middle-class, with whom Jomo Kenyatta built Kenya, as his political challengers and is now building up the Kikuyu grassroots.

Zimbabwe

PM Robert Mugabe has repeated often enough that he wants to set up a one-party Marxist state by merging the Opposition ZAPU, led by Joshua Nkomo with his ruling ZANU. But in early November he broke up the coalition he had formed at the time of independence in 1980, by sacking the last two ZAPU ministers still in his Cabinet. He still has one ZAPU member as a deputy minister.

The sacking was the fallout of the assassination of a ZAPU Senator, Mwenemutema, on Nov 9. Rebels who claim to support Nkomo, but are publicly disavowed by him, have been blamed for the killing. Mugabe may have dismissed his ZAPU ministers in order to appease hardliners in his party who wish to ban ZAPU outright. However, by doing this he has put the ZAPU's back up.

OAU

The 20th summit conference of the Organisation of African Unity (OAU) was held in Addis Ababa in November. The only point of agreement was the matter of denouncing the racist regime in South Africa. But the presence of delegates from the Algeria-based government-in-exile, of the former Spanish Sahara, the

to major dissensions and Morocco and Zaïre withdrew from the organisation. The Polisario guerillas of SADR have been resisting Morocco's occupation of the territory for nine years and Morocco on its part has been keeping it out of the OAU. The issue had led to the cancellation of the 1982 summit and the 1983 one could be held only because the Polisario had agreed to stay away.

South Africa

The success of the general boycott called by the black labour unions of the South African elections, held in August, led to a heavy handed response from the government. On Oct 23, 7,000 troops sealed off three black townships south of Johannesburg and searched the houses of 2,25,000 people. The purpose was to get rid of revolutionary elements in the townships of Sebokeng, Sharpeville and Boipatong. Later in December President Botha set free 27 of the 49 trade union leaders that he had arrested over the past year. But shortly afterwards, he charged 11 of the newly released leaders with subversion or treason, which can lead to death penalty.

This kind of repression has led to a politicisation of the black trade unions, and the white businessmen fear the creation of a kind of black solidarity movement in South Africa. Union membership is still less than 7% of the total black workforce, although in some industries it includes most of the skilled workers. There are also some new political movements, which, in the government's view, are trying to create a "revolutionary climate". Two new political alliances—the United Democratic Front (UDF) and the National Forum—express black nationalist sentiment of a type not expressed since the main black parties were outlawed in early 1960s and mid 1970s.

The news on the diplomatic front was both good and bad. According to an agreement signed in Pretoria on Oct 3, the South Africans and Angolan governments agreed to keep the peace together in southern Angola. As a result, the border provinces used by guerillas of the South-West Africa People's Organisation (SWAPO) have been sealed off from Namibia which SWAPO seeks to wrench from South Africa. With the guerillas subdued, South Africa has been given a chance to show whether it is serious about giving independence to Namibia.

Meanwhile, Bishop Desmond Tutu was selected for and received the Nobel Peace Prize in Oslo. He visited Washington before going to Oslo and said that the Reagan Administration's friendly relations with Pretoria have worsened the situation of blacks in South Africa. He set off a round of pickets and demonstrations against South African embassies and consulates over the country. Although Reagan said that he "disagreed with the Bishop", later during a speech on the International Human Rights Day, he conceded that sometimes his own preference for quiet diplomacy is "not enough". Tutu had asked the US to follow a tougher economic line against Pretoria.

Libya, France and Chad

It was *faux pas* time for Libya, but France too lost some face over Chad. In November, the Tripoli radio announced that Gaddafi's hit

team had abducted former Libyan PM, Abdul Hakim Bakouche in Cairo for having sold his conscience to the enemies of the Libyan people. But the Egyptian Government let out immediately afterwards that its security forces had cleverly foiled the plot and Bakouche was alive and well at Aswan. The lesson was that the world knew that Libya's hit teams were very much active, but that they were not so efficient that the Egyptians could not score over them.

France, on the other hand, lost face when it pulled out its troops from Chad after a mutual Franco-Libyan troop withdrawal agreement signed in September. US reconnaissance planes, however, showed that the Libyan troops were still there. The embarrassing disclosure came just when President Mitterrand and Gaddafi were meeting at the first Franco-Libyan Summit in 11 years, in Crete.

Later, however, France tried to save face during the annual French-African summit held in late December, in Bujumbura, the capital of Burundi. Libya and France informally agreed to roughly divide Chad into two parts at the 16th parallel although talks about a Libyan evacuation would continue. If Libyans cross the 16th parallel, Paris says that it is ready to send its troops back to Chad.

Many of the African leaders, including Chad's President, Hissene Habre, were not happy with the new arrangement. Five leaders from the 20 French speaking African countries chose to stay away and the Presidents of Ivory Coast and Niger decided instead to go to Washington to talk to President Reagan about a wider US role in French west Africa. Mitterrand, however believes in a carrot and stick policy—the carrot being a resumption of arms sales to Gaddafi once all Libyan troops leave Chad. On the stick side is a statement that "the military option has not been excluded".

African Famine

Nearly 30 countries including Mozambique, Mauritania, Sudan, Niger, Kenya, Mali, Chad, Zambia, Zimbabwe, Botswana, Angola, the Central African Republic, Tanzania, Senegal, Morocco and Burkinafaso, have been listed as officially hungry. The worst hit state is Ethiopia, where 3,00,000 people have died of starvation and a million more may follow suit before the end of the crisis. This time the international agencies and Western governments were slow to respond to the cries of famine in Ethiopia and the Soviet Union, too, has responded so far with only 70,000 tons of rice. But the Ethiopian Government itself played down the impending tragedy and spent \$200m on sprucing up the country for the 10th anniversary of its rise to power. However, the Ethiopian leaders blamed the extent of starvation on the slow response of the Western nations during a conference with food donors at Addis Ababa.

According to a recent World Bank report on 24 African countries which have not had enough food in 1984, food production per person is now in long-term decline, drought or no drought. As such, even if there is a good harvest, say in 1988, no more food will be grown per person than in this year's famine. The spectre of famine will, therefore, haunt Africans for a long time. As a result of famine in certain areas, refugees have moved into other African countries. Many countries like Nigeria have, therefore, officially closed their borders to them.

WEST ASIA

Israel

PM Shimon Peres visited the US early October. The US Congress had already decreed that Israel should be given \$2.6b in the fiscal year which began in October as a straight grant. During his visit, the Reagan Administration agreed to give him \$1.2b of economic aid at once, instead of in the usual quarterly disbursements. However, more money was necessary, and an Israeli economic delegation went to Washington in December to ask for more. The Reagan Administration made it clear that Israel would not be given more aid unless it imposes a much more drastic austerity programme than it so far has.

The Labour Party of Peres also ran into trouble at home. The row was over two small religious parties: the National Religious Party which is a protegee of the Labour Party and the Shas Group, which has the backing of the Likud. When the Labour-Likud coalition was created in September both parties had given assurances to their proteges that they would be given the Interior and Religious Affairs ministries. Nothing was done and on Dec 16 the Shas announced their resignation, only to call it off two days later saying that it would settle for the Interior Ministry, if the budgets of local religious councils could be agreed upon by the Interior and Religious ministries acting together. While Labour protested, the Likud leader, Yitzhak Shamir said that if Shas resigned, the Likud would follow. This would leave Peres at the head of a minority government which would probably not last long.

Egypt

President Hosni Mubarak, on a visit to France in October, said that peace talks between the Arabs and Israelis could start again soon. Perhaps as a follow up, Israel's ambassador to Cairo met the Egyptian PM in early November.

The Jordanians are, however, pessimistic about a settlement with Israel because they feel that there is no common ground among the Arabs about the terms of a peace deal, let alone between the Arabs and Israel. Notwithstanding such sentiments, the Jordanians resumed diplomatic links with Egypt in October, ending a five year breach between the two countries. Saudi Arabia's Oil Minister, Sheikh Yamari, also visited Cairo in October. The significance of all this is that Egypt is gradually returning to the Arab fold, which had rejected it after the Camp David agreement which was worked out between Egypt, Israel and the Carter Administration in 1978-79.

Despite these diplomatic victories, Mubarak faced the worst outbreak of violence since he came to power. What triggered it off was an increase in the price of bread and other government subsidised items. In the riots that followed one person was killed and 25 injured. Under such pressure, Cairo backed down and rolled back bread, macaroni and cooking fat prices in all working class neighbourhoods. Egypt has chronic economic problems, increased by a rapidly growing population. It now imports 65% of its food. It has a galloping inflation of more than 20% and has a \$19b foreign debt. It appears, however, that the people are not ready

(Continued on page 59)

Quantitative Aptitude

BY KAVITA KAPOOR AND B.L. ARORA

FOR PO, CDS, NDA EXAMS

This section is designed to help those appearing in the forthcoming BSRB (PO) exam. For the NDA and CDS exam-takers, it forms an important part of their Mathematics paper.

DIRECTIONS: For each question, tick mark the choice that best answers the question. Answers with explanations appear at the end of this test.

- The average of the first 20 even numbers, starting from 2, is
(a) 20 (b) 21
(c) 19 (d) 20.5
- The least number, which when increased by 5, is divisible by 6, 7, 8 and 9, is
(a) 499 (b) 509
(c) 504 (d) 512
- There are _____ numbers between 100 and 400 which are divisible by 11.
(a) 36 (b) 33
(c) 27 (d) 26
- _____ cubes of length 0.5 cm are contained in a cube of length 2 cm.
(a) 8 (b) 16
(c) 32 (d) 64
- 18.2% of $\frac{3}{7}$ is
(a) .546 (b) .78
(c) 5.46 (d) .078

Statement for questions 6 to 8:

Odd numbers from 1 to 9 are represented by the vowels a, e, i, o, u respectively; even numbers by the letters following these in the alphabet; and z represents zero.

- 14^2 will be represented as
(a) aup (b) aoj
(c) auj (d) baj
- $bji + eup$ equals
(a) ije (b) jje
(c) jef (d) ioe
- _____ is a prime number.
(a) aae (b) uaz
(c) pae (d) alib
- A man purchased a radio listed at Rs 750 at two successive discounts of 20% and x%. If he paid Rs 528 for it, x's value is
(a) 10 (b) 12
(c) 14 (d) 15.5
- _____ set of fractions is in ascending order.
(a) $\frac{5}{12}, \frac{7}{15}, \frac{3}{5}, \frac{4}{7}$
(b) $\frac{7}{15}, \frac{5}{12}, \frac{4}{7}, \frac{3}{5}$
(c) $\frac{5}{12}, \frac{7}{15}, \frac{4}{7}, \frac{3}{5}$
(d) None of the above
- $(-27)^9$ equals
(a) $(3)^{-27}$ (b) $(-3)^{27}$
(c) $(-3)^{18}$ (d) 3^9

- $(-4)^4 \times (-16)^2$ equals
(a) 4^{10} (b) $(-4)^{24}$
(c) 16^{10} (d) $(-4)^{10}$
 - The value of $(315)^2$ is
(a) 98,225 (b) 99,125
(c) 99,225 (d) 99,725
 - The compound interest on Rs 4,500 for $1\frac{1}{2}$ years at 15% per annum will be
(a) Rs 1,012.50
(b) Rs 1,063.12
(c) Rs 1,088.25
(d) Rs 1,113.30
 - A person has to pay 25% income-tax on his taxable salary and 10% surcharge on the income-tax so calculated. If the total amount he pays is Rs 1,980, his taxable salary is:
(a) Rs 7,200 (b) Rs 7,600
(c) Rs 8,000 (d) Rs 8,200
 - Rs 850 invested at 12% per annum compound interest would yield an interest of Rs 216.24 after _____ years.
(a) $1\frac{1}{2}$ (b) $1\frac{1}{4}$
(c) 2 (d) $2\frac{1}{4}$
 - The value of $\sqrt{\frac{65.32 \times 36.47}{24.95}}$ is
(a) Less than 9.5
(b) Slightly more than 10.7
(c) Nearly 10.3
(d) Slightly more than 9.6
 - 73.25×0.152 nearly equals
(a) 0.036 (b) 309
(c) 3.07 (d) 3057
 - In 24 minutes, the hour hand of a clock moves through
(a) 60° (b) 24°
(c) 12° (d) 5°
 - If 2 boys do $\frac{1}{3}$ of a work in 3 days and another boy does $\frac{1}{4}$ of the work in 4 days, all 3 can finish the work in _____ days.
(a) 1.8 (b) 2.4
(c) 2.8 (d) 3
- Note:** Questions 21 to 24 are based on the following diagram.
- A family's expenditure on various items is shown in the diagram. The family's annual

savings would be

- (a) Rs 10,800 (b) Rs 8,400
(c) Rs 10,400 (d) Rs 7,650
 - Angle BOC is equal to approximately
(a) 45° (b) 56.25°
(c) 60° (d) 66.25°
 - The expenditure on clothes is _____ % more than that on education.
(a) 2.5 (b) 16
(c) 20 (d) 22.5
 - Money spent on other items is _____ less than that spent on groceries.
(a) Rs 287.50
(b) Rs 317.50
(c) Rs 337.50
(d) Rs 343.50
- The crime situation in Delhi during the period 1980-81 to 1983-84 is given in the chart below. Answer questions 25 to 27 by carefully studying the chart.
- During 1981-82, the maximum percentage change as com-

- occurred in
(a) Dacoity (b) Murder
(c) Robbery (d) Total crime
26. As compared to 1980-81, the total crime in 1983-84 was nearly — % less.
(a) 30% (b) 24%
(c) 22.5% (d) 20%
27. The maximum percentage change in robbery took place during
(a) 1981-82
(b) 1982-83
(c) 1983-84
(d) 1981-82 and 1983-84
28. A worker gets twice his monthly salary every June and December. The fraction of the yearly income he gets in June is
(a) $\frac{2}{13}$ (b) $\frac{1}{14}$
(c) $\frac{1}{7}$ (d) $\frac{2}{12}$
29. The area of a square is $4X$. The length of a diagonal of the square would be
(a) $2\sqrt{2X}$ (b) $2\sqrt{2} X$
(c) $\sqrt{2X}$ (d) $\sqrt{2} X$
30. The ratio of the lengths of the largest rods that can be kept in a cube of length 2m and on a square of side 2m is nearly
(a) 2 (b) 1.6
(c) 1.2 (d) 1.1
31. After 11 years, a man, now 28, will be three times his son's age. The son's present age is — years.
(a) 4 (b) 3
(c) 2.5 (d) 2
32. $\frac{\sqrt{24}}{3}$ equals

- (a) $\frac{2\sqrt{2}}{3}$ (b) $2\sqrt{2}$
(c) $4\sqrt{3}$ (d) $2\sqrt{3}$
33. The average age of 4 members of a family is 25 years. The average age increases by 20% if the age of the head of the family is included. The age of the head of the family is — years.
(a) 30 (b) 40
(c) 45 (d) 50
34. The minimum value of the function $x^2 + 5x + 8$ is
(a) 8 (b) $\frac{1}{4}$
(c) $\frac{1}{4}$ (d) Zero
35. The value of the above function is minimum for $x =$
(a) $-\frac{5}{2}$ (b) $-\frac{5}{4}$
(c) $\frac{5}{2}$ (d) $\frac{5}{4}$
36. A housewife purchased 8 eggs @ Rs 6.60 a dozen and 2.5 kg of sugar @ Rs 5.50 per kg. If she gives Rs 50 to the shopkeeper, she would get back
(a) Rs 31.85 (b) Rs 33.15
(c) Rs 32.25 (d) Rs 30.70
37. $\frac{\sqrt{3}}{7}$ is equal to approximately
(a) .217 (b) .241
(c) .247 (d) .263
38. If $\sqrt{5}$ is approximately 0.707, the value of $2\sqrt{45}$ nearly equals
(a) 4.242 (b) 4.248
(c) 6.308 (d) 5.832
39. The length of a rectangle is increased by 50%. To keep its area constant, its width must be decreased by
(a) 50% (b) 33 $\frac{1}{3}$ % (c) 25%

- on the rectangle's length
40. If the side of a square is increased by 25%, the length of its diagonal will nearly increase by
(a) 25% (b) 35%
(c) 18% (d) An amount which depends on the length of the square
41. $\frac{1}{2}$ cm is used to represent 1.5 km on a map drawn to scale. Then, the actual distance between two cities $\frac{1}{10}$ m apart on a map is
(a) 15 km (b) 30 km
(c) 0.15 km (d) 300 km
42. Four litres of milk A (80% milk + 20% water) and 6 litres of milk B (75% milk + 25% water) are mixed together. The resultant product would be a — % mixture of milk and the rest water.
(a) 77.5 (b) 77
(c) 78 (d) 76.5
43. A 20% solution of sugar in water contains 20 gm of sugar in 100 cc solution. From 20 cc of this solution a 10% sugar solution can be obtained by adding — of water to it.
(a) 12 cc (b) 16 cc
(c) 20 cc (d) 40 cc
44. An investor gets 12 $\frac{1}{2}$ % interest on his investment per annum. If the amount (investment and interest) he receives after a year is Rs 8,000, his investment was approximately
(a) Rs 6,000 (b) Rs 6,750
(c) Rs 7,200 (d) Rs 7,111

PRICELESS NONSENSE

Johannes Wirtl, a young German, has earned the dubious distinction of inventing the most perfect piece of technical nonsense. He designed and built what he called PWM (Paper Wadding Machine) which types a letter, stamps it, postmarks the stamp and after wadding the letter up, throws it straight into a waste-paper basket. This technical wonder measuring 3m in length and weighing 800 lbs, took two years and a considerable amount of technical creativity to be made. Mercifully not many can afford a priceless trash like this—for it is valued at around 50,000 marks.

ANSWER KEY

1. (b). The average is $\frac{2+4+6+\dots+40}{20} = \frac{2(1+2+\dots+20)}{20} = \frac{2 \times 20 \times 21}{2} \times \frac{1}{20} = 21$.
2. (a). The LCM of 6, 7, 8, 9 is 504. The required number is, therefore, $504 - 5 = 499$.
3. (c). The smallest number between 100 and 400 divisible by 11 is 110 and the largest is 396. $\frac{111}{11} = 10$ and $\frac{411}{11} = 36$. The quotients obtained would thus lie between 10 and 36 and would be 27 in number.
4. (d). Volume of bigger cube $\frac{8}{8} = 1$. Volume of smaller cube $\frac{1}{8} = \frac{1}{8}$. $\frac{1}{8} = 0.125$.
5. (d). $\frac{18.2}{100} \times \frac{3}{7} = \frac{7.8}{100} = 0.078$.
6. (c). $14^2 = 196$ will be represented by auj .
7. (b). $bji + eup = 265 + 398 = 663$, which will be represented by jje .
8. (a). $aaa = 113$ is the only prime number.
9. (b). The first discount of 20% = Rs 150. This brings the price to Rs 600. $x\%$ of Rs 600 = Rs 72 ($=$ Rs 600 - Rs 528) $= x = 12$.
10. (c). $(-27)^3 = (-)^3 \cdot (3^3)^3 = (-3)^{3^2}$.
11. (b). $(-27)^3 = (-)^3 \cdot (3^3)^3 = (-3)^{3^2}$.
12. (d). $(-4)^4 (-16)^3 = (4)^4 (-4^3)^3 = -(4)^4 \times (4)^9 = -(4)^{13}$.
13. (c). The square of numbers ending in 5 are obtained by writing 25 at the extreme right and $n(n+1)$ to its left, where n is the remaining part of the original number. Thus, in $(315)^2$, $n = 31$ and $n(n+1) = 992$. The answer is 99,225.
14. (b). The interest for the first year is $4,500 \times \frac{1}{100} = 675$, making the amount 5,175. The interest for the next six months is $\frac{5,175 \times 15}{2 \times 100} =$ Rs 388.12. Total interest = Rs $(675 + 388.12) =$ Rs 1,063.12.
15. (a). The amount he has to pay is $25\% + 2.5\% = 27.5\%$ which is equal to Rs 1,980. Thus, his salary is $\frac{1,980 \times 2 \times 100}{55} =$ Rs 7,200.
16. (c).
17. (d). $\sqrt{65} \approx 8$, $\sqrt{36.47} \approx 6$ and $\sqrt{24.95} \approx 5$. The expression is, therefore, slightly more than 9.6.
18. (b). Eliminating the decimals, the expression is equal to $\frac{7,325 \times 152}{3,600}$ which is slightly more than 300. The other figures are much larger or smaller than this.
19. (c). In 60 minutes, it moves through $\frac{360^\circ}{12} = 30^\circ$. Therefore, in 24 minutes, it will move through 12° .
20. (b). Two boy's work in one day $= \frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$. The 3rd boy's work in one day $= \frac{1}{3} \times \frac{1}{2} = \frac{1}{6}$. Their combined work for one day $= \frac{1}{4} + \frac{1}{6} = \frac{5}{12}$. They will complete the work in $\frac{12}{5} = 2.4$ days.
21. (a). Total monthly savings = 20% of Rs 4,500 = Rs 900. Therefore, annual savings = Rs 10,800.
22. (a). $\angle BOC = \frac{12}{100} \times 360^\circ = 43.2^\circ$.
23. (c). The expenditure on clothes is $2\frac{1}{2}\%$ of total income more than the expenditure on education, which is $12\frac{1}{2}\%$ of income. Therefore, required percentage $= (2\frac{1}{2}/12\frac{1}{2}) \times 100 = 20\%$.
24. (c). Amount spent on other items is $22\frac{1}{2}\%$ while on groceries is 30%. The difference is $7\frac{1}{2}\%$ of 4,500 $= \frac{15}{2} \times 4,500 =$ Rs 337.50.
25. (c).
26. (c).
27. (c).
28. (c). The total salary he earns during the year = 14M, where M is the monthly salary. The amount he gets in June = 2M. The required fraction is $\frac{2M}{14M} = \frac{1}{7}$.
29. (a). Each side $= 2\sqrt{X}$. Therefore, diagonal $= \sqrt{2} \times (\text{side}) = 2\sqrt{2X}$.
30. (c). It is the largest diagonal in each case. The ratio is therefore, $\sqrt{2} = 1.2$.
31. (d). If the son's age is x , then $28 + 11 = 3(x + 11)$. Thus $39 = 33 + 3x$ or $x = \frac{39 - 33}{3} = 2$.
32. (b). $\frac{\sqrt{24}}{3} = \frac{\sqrt{4 \times 2 \times 3}}{3} = \frac{2\sqrt{2}}{\sqrt{3}} = 2\sqrt{\frac{2}{3}}$.
33. (d). Total age of 4 members = $25 \times 4 = 100$ years. Total age of 5 members = $5x (25 + \frac{1}{5} \text{ of } 25) = 5 \times 30 = 150$. Therefore, age of the head of the family = 50 years.
34. (c). $x^2 + 5x + 8 = x^2 + 5x + \frac{25}{4} + 8 - \frac{25}{4} = (x + \frac{5}{2})^2 - \frac{9}{4}$ whose minimum value is $\frac{9}{4}$, because the minimum value of the first term is zero.
35. (a). See answer (34). The value of the function is minimum when $(x + \frac{5}{2}) = 0$ or $x = -\frac{5}{2}$.
36. (a). (Rs $6.60 \times \frac{1}{10} +$ Rs 5.50×2.5) = Rs 18.15. Balance = Rs $50 - 18.15 =$ Rs 31.85.
37. (c). $\frac{\sqrt{3}}{7} \cdot \frac{1.73}{7} = .247$.
38. (a). $2\sqrt{45} = 2\sqrt{9 \times 5} = 2 \times 3\sqrt{5} = 6 \times 0.707 = 4.242$.
39. (b). If $(L + \frac{L}{2})(B - x) = LB$ or $LB + \frac{LB}{2} - Lx - \frac{Lx}{2} = LB$; we must have $\frac{LB}{2} = 3\frac{Lx}{2}$ or $x = \frac{B}{3}$.
40. (a). Diagonal $= \sqrt{2}L$ where L is the side of a square. Increased diagonal $= \sqrt{2}(1.25L)$. Percentage Increase $= \frac{0.25\sqrt{2}L}{\sqrt{2}L} \times 100 = 25\%$.
41. (b). $\frac{1}{15}m = 10$ cm which will correspond to $1.5 \times 2 \times 10$ km = 30 km.
42. (b). Total amount of milk in the mixture will be $4 \times \frac{80}{100} + \frac{6 \times 75}{100} = \frac{770}{100} = 7.7$ litre.
43. (c). 20 cc of the solution will contain 4 gm of sugar. A 10% sugar solution containing 4 gm of sugar should have a total volume of 40 cc. Therefore, 20 cc of water must be added to it.
44. (d). If the amount is x , then we must have $\frac{9x}{8} = 8,000$. Therefore, $x = \frac{64,000}{9} =$ Rs 7,111 approximately.

ENGLISH

BY THE AARBEEES

FOR POS, CLERKS' GDE, IIT...

This section will be helpful for those appearing in the forthcoming Probationary Officers, Clerks' Grade, SSC Stenographers and IIT (BHU) Entrance exams.

DIRECTIONS: For each of the following questions tick mark the choice that best answers the question. Answers are given at the end of this test.

READING COMPREHENSION

I Read the following passage and answer the questions that follow:

Our whole life is built about a certain number—not a very small number—of primary instincts and impulses. Only what is in some way connected with these instincts and impulses appears to us desirable or important, there is no faculty, whether "reason" or "virtue" or whatever it may be called, that can take our active life and our hopes and fears outside the region controlled by these first movers of all desire. Each of them is like a queen-bee, aided by a hive of workers gathering honey; but when the queen is gone the workers languish and die, and the cells remain empty of their expected sweetness. So with each primary impulse in civilised man; it is surrounded and protected by a busy swarm of attendant derivative desires, which store up in its service whatever honey the surrounding world affords. But if the queen impulse dies, the death-dealing influence, though retarded a little by habit, spreads slowly through all the subsidiary impulses, and a whole tract of life becomes inexplicably colourless. What was formerly full of zest, and so obviously worth doing that it raised no questions, has now grown dreary and purposeless; with a sense of disillusion we inquire the meaning of life, and decide, perhaps that all is vanity. The search for an outside meaning that can compel an inner response must always be disappointing; all "meaning" must be at the bottom, related to our primary desires, and when they are extinct no miracle can restore to the world the value which they reflected upon it.

1. According to the author the number of 'first movers of all desire' is
 - (a) fairly large
 - (b) not large
 - (c) very small
 - (d) small
2. In regard to hopes and fears reason and virtue are
 - (a) not as strong as primary instincts and impulses
 - (b) more important than primary instincts and impulses
 - (c) as important as primary instincts and impulses

- (d) nearly as important "as primary instincts and impulses"
3. 'Each of them is like a queen-bee...' Here the pronoun *them* refers to
 - (a) things that are desirable or important
 - (b) the faculties of reason and virtue
 - (c) our hopes and fears
 - (d) primary instincts and impulses
4. The word *colourless* in the statement 'a whole tract of life becomes inexplicably colourless' means
 - (a) lacking zeal
 - (b) lacking beauty
 - (c) lacking variety
 - (d) lacking emotion
5. The author suggests that all things have value and meaning only when
 - (a) people are full of zest
 - (b) people are civilised
 - (c) people are free from illusions
 - (d) people are moved by related primary desires

PRECIS WRITING

II Make a precis of the following passage in about 105 words:

One thing, however, which has made modern architecture different in kind from the architecture of the past is also connected with modern industry, particularly with its dependence on power production: namely, the factory system. The actual labour producing the parts of a building is now centred in the factories instead of being left in the hands of the individual workman. At one time the workmen arrived on the site of a proposed building with all their raw materials and the tools to shape them with: stone or timber for the walls, more timber for floors, doors and windows, lime for plastering the walls; and they constructed the building on the spot, manufacturing as they went along whatever was needed in the way of doors and windows, sometimes even quarrying stone, clay or sand on the site. Later, for convenience, the doors and window-frames were made in the builder's joinery-shops, and hinges, bolts and other ironwork made at the local blacksmith's, but even then they were made as needed especially for the occasion. The first important example of what we now call "pre-fabrication"—that is, the manufacture of ready-made building

parts—was the brick industry. The earliest bricks may have been moulded from clay dug up on the site, but as soon as bricks were in common use (in this country by the end of the 15th century) brick-fields were started to fulfil a permanent demand, and these were the first building-material factories. Since then, factories having become the normal way of making things, the process has been tremendously accelerated. Today a large proportion of building jobs are done in the factory: the windows—probably the metal windows—arrive ready made, so do steel beams and columns, and so do doors and sinks, baths, and all equipment.

From J.M. Richards'

Introduction To Modern Architecture

LETTER-WRITING

III Write a letter on any one of the following topics:

Your father has advised you to take the Indian Civil Services Examination. Write a letter telling him that you would prefer the banking services, giving reasons for your preference.

Or

Write a letter to a friend abroad telling him that India will continue to have stability and progress despite recent happenings.

COMPOSITION

IV Write an essay (in about 300 words) on any one of the following:

1. Violent agitations have no place in a democracy
2. Universal literacy is at best a beautiful dream
3. Pollution as a threat to humanity
4. Post-Indira India

SPOTTING ERRORS

V Spot the errors if any:

1. Many of the teachers ^aavailed the ^bopportunity to take part in the seminar ^con national integration. ^dNo error ^e
2. The danger ^ais great, in proportion ^bwith the mischief ^cthat may happen ^dthrough our ^etoo great credulity. ^fNo error
3. At first ^arocks ^bwere only exposed and ^cnot the plants, and the people travelled ^don the rocky places that produced the ^eplants. ^fNo error
4. What ^aterms ^bwe shall find which have ^cnot been ^dalready exhausted and ^e

a man paid to keep a matter secret
from the public

5. One of the first important men of letters in the United States was undoubtedly Washington Irving. No error
6. Beware of thinking that you own all you possess, and of living accordingly. No error
7. It is indisputable that there must be equal justice for all men, no matter what their religious or political opinions are. No error
8. Let us work in every way possible to provide everybody with the basic necessities in life without which a man cannot be a full human being. No error
9. It is impossible that the allied powers should extend their political system to any portion of either continent without endangering peace and happiness. No error
10. Asked later whether he profited by his dreams the old man showed signs of nervousness and began speaking incoherently. No error

IDIOMS AND PHRASES

VI Mark the correct explanation:

- A dark horse
 - a person who works in a secret manner
 - a little known person who competes successfully against another
 - something which brings disaster to a person
 - a person who keeps his aims and objectives hidden from others
- A false alarm
 - a warning of something bad that does not happen
 - anything which happens before its proper time
 - a misdirection
 - an exaggerated fear
- Hush money
 - money paid to silence an opponent
 - a secret payment
 - money earned illegally

- To keep a stiff upper lip
 - to behave in an arrogant manner
 - to remain courageous and calm
 - to have a threatening expression
 - to refuse to speak
- To be on the rocks
 - to earn great fame
 - to have a clear view of things
 - to be in danger of failing
 - to face acute danger

SYNONYMS

VII Choose the word which is nearly the same in meaning to the given word:

- ARDOUR
 - happiness
 - enthusiasm
 - interest
 - passion
- DISSIPATE
 - disperse
 - distribute
 - divide
 - waste
- INSOLENT
 - insulting
 - wasteful
 - hard
 - difficult
- REMORSE
 - rebuke
 - punishment
 - regret
 - repetition
- WITHER
 - spoil
 - shrink
 - fall
 - pale

ANTONYMS

VIII Select the word which is nearly the opposite in meaning to the given word:

- ABSTINENCE
 - satisfaction
 - self-indulgence
 - excitement
 - passion
- APPARENT
 - cloudy
 - complex
 - uncertain
 - factual
- BIGOTED
 - tolerant
 - democratic
 - flexible
 - open
- DEBASE
 - create
 - generate
 - steady
 - improve
- ECSTASY
 - unhappiness
 - regret
 - grief

VOCABULARY

IX Spot the correct meaning of the italicised word:

- She *expended* all her energy on the new project.
 - wasted
 - spent
 - devoted
 - dissipated
- The children *grinned* as the photographer took their photograph.
 - smiled broadly
 - looked grim
 - showed indifference
 - talked in whispers
- I read his *obituary* in one of the English newspapers.
 - announcement of state award
 - acceptance of military honour
 - notice of death
 - notice of retirement
- She starts feeling *squeamish* as soon as she gets on a bus.
 - extremely excited
 - very nervous
 - terribly afraid
 - slightly sick
- Any relationship between them is bound to be *tenuous*.
 - thin or weak
 - full of tension
 - insincere
 - lasting

DID YOU KNOW THAT...

- India had 229.1 lakh installed spindles in January 1984?
 - in 1951, there were only 110 lakh installed spindles?
 - India is the leading country in spindles, followed by China (180 lakhs), USA (178.8 lakhs) and USSR (160 lakhs)?
 - these spindles supply yarn to the cotton textile industry, to handlooms, to the silk industry, to the woollen products industry, the coir manufacturing industry and the man-made fibre industry?
 - total cloth production in 1983-84 was estimated at 1,240 crore metres?
 - in 1983-84, India produced 11,140 lakh kg of cotton yarn, 1,500 lakh kg of blended yarn and 960 lakh kg of non-cotton yarn?
- ★ ★ ★
- milk production in the country in 1983-84 was 360 lakh tonnes and that it is expected to go up by another 20 lakh tonnes in 1984-85?
 - Seventh Plan aims to raise milk production to 520 lakh tonnes?
 - wool production in 1983-84 was 379 lakh kg and that it is expected to go up to 390 lakh kg in 1984-85?
 - egg production in the country was 1,248 crores in 1983-84 and is expected to touch 1,300 crores in 1984-85?
 - utilisation of funds for various sectors of animal husbandry in the Sixth Plan till today was between 85 and 99%?

ANSWERS

I 1. (d) 2. (a) 3. (d) 4. (a) 5. (d)

II Dependence on mass production in factories has resulted in a qualitative difference between old and new architecture. Most production now takes place in factories and not at the site of the building. The individual workman has thus no longer the important role of carrying raw material to the actual site and building on the spot. The above difference has come about gradually. Doors, window-frames, hinges, bolts etc came to be made away from the building site in course of time, but bricks were the first item to be prefabricated. Now most building jobs are done in the factory and ready-made building parts are extensively used.

III Letter-writing:

222 Tagore Street,
Civil Lines,
Kanpur.

December 20, 1984

Dear Bob,

Many thanks for your letter of Nov 5. It is true that we have passed through very difficult circumstances during the past months. First the events in Punjab. A few misguided people exploited religion and resorted to terrorism in order to achieve their nefarious ends. The result was widespread violence in which scores of innocent lives were lost. Government had to take stern measures which unfortunately created a psychological and emotional chasm between people who had, for centuries, lived as kith and kin. Even as normalcy was returning and all people of goodwill were hoping to forget the ugly past and start a new era of friendship and amity, insanity once again struck a mortal blow and the late Prime Minister Mrs Indira Gandhi fell a victim to the bullets fired by two of her own security men. What followed was a mass orgy bringing into play the worst savagery in the form of largescale arson, loot and slaughter. Many people thought that India would not be able to survive this crisis and that a period of civil strife and secession was inevitable. Little did these prophets of gloom realise that Indian democracy is both resilient and strong and therefore capable of withstanding any shock. The smooth succession of political power and quick restoration of peace and order has once again proved the soundness of the political institutions in India. The great upsurge of emotion throughout the nation is most likely to be channelled in constructive activities and we are looking forward to a better and brighter future.

I am sure that when you visit India in April you will find a healthy and vibrant nation engaged in vigorous developmental activity.

Loving regards,

Yours sincerely,
Dinesh

and in place of signature merely 'X' may be written.)

IV 1. Violent agitations have no place in a democracy

Language by definition is a meaningful mode of communication. Words being the basic raw material of language have naturally their own meanings. However, there are times when they acquire a new or added meaning in the sense that people become more acutely aware of the potentiality and significance of their connotations. Violence has always stood for an unpleasant—even pemicious—concept. But it has acquired a much more sinister meaning in the light of what has been happening in our country for some time past. For what is at stake now is our very existence as a united, stable and peaceful nation.

Very often political analysts and sociologists attribute violent

agitations to the absence of necessary channels and safety valves which can let popular unrest and discontent vent itself without causing any injury to the political system or social fabric of a country. It is for this reason that a democratic set-up is assumed to be relatively immune from any sudden and uncontrolled outbursts of an emotional nature. Since we are witnessing in our country repeated acts of communal and sectarian violence, the question naturally arises whether we are a democratic country or not. A moment's thought will convince us that it is not for lack of proper avenues and constitutional procedures that some of the misguided elements are resorting to violence here. It is not unreasonable to infer that there is a conspiracy against the nation by people both inside and outside the country—people who have a vested interest in destabilising and dismembering India.

It should thus be obvious that ideally speaking no violent agitation can be justified in a democracy. From a conceptual point of view democracy and violence are antithetical. One might then wonder how to tackle violent agitations under a democratic regime. There is no easy answer to it. However, it must be maintained that by and large even these agitations have to be responded to in a democratic manner. In a world which is not ideal, use of the coercive power of the state cannot be altogether ruled out for dealing with violence. Care has, however, to be taken that the force used is minimum and that it is treated at best as an evil necessity.

WHEELS WITHIN WHEELS

Courtesy German Features

Here's some good news for senior citizens and the handicapped—in FRG. M.A.N., a West German transport organisation, has developed a system designed to make it easier for people in wheel chairs to get on and off buses. The simple principle calls for bus-stops with raised platforms on level with the floors of special buses. A device fitted to both the bus and the stop ensures that wheel chairs move in and out smoothly and easily.

to cooperate in Mubarak's attempts at an economic recovery through cutbacks in government spending.

Syria

President Hafiz Assad's visit to Russia in mid-October was a bit of a diplomatic setback. Although Russia promised Syria more arms and economic assistance, and had cordial talks with President Chernenko, all this had little political significance to the USSR, which did not publish Assad's speeches in its official Press. The communique published at the visit promised "all round assistance" not only to Syria but "to the other Arab people" — and this, after Syria's claim that it is Russia's chief friend in the Middle East. The communique also spoke of the necessity for unity in the PLO. This may have hurt Syrian sentiments because Syria has been behind the recent blood letting within the PLO. The Russians have not reflected Syrians' invec-tive against Yasser Arafat or Jordan's decision to resume relations with Egypt. Syria, on its part has not supported the Russian demand for an international conference in the Middle East, which is also what Jordan and Egypt want. To make matters worse, on the day Assad left Moscow, the foreign minister of Iraq, Syria's worst enemy, arrived there for talks on Soviet-Iraqi "cooperation and friendship".

PLO

On Oct 15, after a meeting at the Tunis headquarters of the PLO, Yasser Arafat and his supporters in Fatah, the biggest single group in the PLO, called for a meeting of the Palestine National Council, the PLO's "Parliament-in-exile". The Council's meeting had repeatedly been postponed in the past nine months, because of objections by the Syrian Government and by the mainly pro-Syrian groups within the PLO which are against Arafat's leadership.

The meeting began duly in Amman, Jordan on Nov 22, and 257 of the Council's 379 members attended. Arafat got together enough of his scattered irregulars to give him a vote of confidence. Analysts feel that this has made him strong enough to work more closely with Jordan and it counterweights both Syria and Libya, which seek to dominate the PLO.

Iraq

It was a time of quiet diplomacy for Iraq. The Foreign Minister, Tariq Aziz, first visited Moscow and then Washington, in November. Iraq's bettering of relations with the US marked the end of the rift which began in 1967 when Iraq had broken off diplomatic relations with Washington because of its support for Israel in the six-day war. After that, Iraq had placed itself in the radical Arab camp and had improved relations with the Soviet Union. However, with the outbreak of the war between Iran and Iraq, which is still continuing, Iraq began to look for other friends while Saudi Arabia, which is backing Iraq, urged the US to support their ally. The Americans themselves are more worried about an Iranian victory in the region. The Americans

for buying American food and other goods. America's Exim bank has agreed to guarantee a \$570m pipeline to carry Iraq's oil through Jordan to the Red Sea. The US now feels that if Iraq is on their side, then an anti-Syrian axis could be developed along with Jordan and Egypt. The recent visit of King Hussein to Iraq added credence to the speculation that Iraq and Jordan would resume diplomatic relations soon.

Hijacking

One of the worst instances of skyjacking occurred in December when flight 221 of the Kuwait Airways took off for Dubai en route to Karachi. The plane was diverted to Teheran. Although the terrorists gradually released most of the 161 passengers on board, two American passengers were killed and several were tortured. The hijackers demanded the release of 17 Shi'ite Muslims jailed in Kuwait for the bombing of the American embassy and other targets a year ago, and at the end of the sixth day said that they would blow up the aircraft. Iranians, however, recaptured the aircraft and freed the survivors.

The fact that Iran had waited for six days before launching the rescue operation, prompted some to think of Iranian collusions. Kuwait has hardened its resolve not to release the 17 convicted Shias and Iraq, Saudi Arabia and the Gulf states have congratulated Kuwait on its firm stand. The US is worried about the Iranian attitude, specially the fact that Iran has shown no wish to extradite the hijackers to Kuwait.

Economic Slowdown

A collective assessment made on the basis of the outlook reports of international agencies in December '84 predicts an overall slowdown of the world economy both in output and trade in the new year. And on the external front non-oil developing countries will continue to face uncertainties although some of them, like India, showed a rather creditable growth performance in 1984. This is because, as a group, these countries face structural imbalances.

The marginal reduction of external imbalance in the developing countries can be attributed primarily to compression of imports and not expansion of exports. In fact, while the current account deficit of non-oil developing countries was \$39b, a decrease of \$2b, it is expected to increase to \$43b in 1985.

Meanwhile, during the past year the International Monetary Fund (IMF) further tightened its conditionality regarding assistance to deficit countries. To top it all the colossal budget deficit of the US is keeping the interest rates at unacceptable levels which is making sustained recovery increasingly difficult.

Viewing all this, the major financial institutions of the world—the IMF, World Bank, GATT and OECD—have stressed the need and importance of significant new initiatives by the industrial powers. And these initiatives could be in the form of enlargement of capital flow to developing countries, unlocking resources for developing countries by broadening the framework for tackling the debt question.

INDRAJAL COMICS

AWARDED

The Shikar Samman for 1984-85, carrying a cash prize of Rs 21,000 and a citation to Habib Tanvir, noted theatre personality, for "getting theatre traditions of his mother region, Chattisgarh, recognition... at the international level"; Naresh Mehta, a writer, for his "boldness of experimentation and attachment to tradition". The awards are presented annually by the MP Government.

The Padma Vibhushan, the nation's second highest award, to Prof M.G.K. Menon, Physicist, and Prof N.R. Rao, Director of the Bangalore-based Indian Institute of Science. **The Padma Bhushan** to Bhimsen Joshi, musician, S. Varadarajan, noted scientist and Director of the New Delhi-based Council for Scientific and Industrial Research, and Prof Gurbaksh Singh, Vice-Chancellor of the Delhi University, and 18 others. **The Padma Shri** to film personalities Naseeruddin Shah and Smita Patil, mridangam expert Palghat R. Raghu, Olympian P.T. Usha, World Snooker Champion Om Agarwal, sports commentator Jasdev Singh, trade unionist Ela Ramesh Bhatt and leader of the Maharashtra cooperative movement, R.B. Kumbhar and 36 others. **The Bharat Ratna**, the nation's highest award, has not been awarded for the second successive year.

At the **10 International Film Festival of India (IFFI)** held in New Delhi, Jan 3-17, the **Golden Peacock** for the best feature film jointly to *Ruthless Romance* (USSR) and *The Bostonians* (UK); for the best actor to Carlos Vereza in Brazil's *Memoirs Of Prison*; for the best actress jointly to Vanessa Redgrave and Madeleine Potter in UK's *The Bostonians*; for the best short film to Canada's *Narcissus*; the **Silver Peacock** for the best director to Japan's Sadao Nakajima for his *Appassionata*; for the best direction of a short to Bangladesh's Moshedul Islam for his *Agami*; the **Special Jury Prize** to Hungary's *Passing Fancy* by Gyula Mear.

The 1984 Time magazine Man of the Year Award to Peter Ueberroth, the chief organiser of the 1984 Los Angeles Olympics, for "masterminding a triumph that involved four-fifths of the nations of the globe".

The 1983 UNESCO prize for the teaching of human rights to Prof Felix Armacora of Austria's Vienna University. Armacora, an MP, represented his country in the UN human rights commission, acting as its reporter, vice-chairman and chairman in 1974-75.

The Kalidas Samman Award for 1985, carrying a cash prize of Rs 1 lakh to Kumar Gandharva for his "excellence in musical performance by synthesising tradition with innovation".

APPOINTED

James Baker, the White House Chief of Staff, as the US Secretary of the Treasury, replacing **Donald Regan**, who takes over

Baker's post.

Dr M.S. Sanjeevi Rao, former Deputy Minister for Electronics, as the Chairman of the Electronics Commission. Rao, a defence scientist before entering politics, lost the Lok Sabha elections from Andhra Pradesh.

R.D. Pradhan, Maharashtra Chief Secretary, as the new Union Home Secretary.

R.N. Malhotra, India's Executive Director at the IMF, as the new RBI Governor, replacing Man Mohan Singh, who takes over as Deputy Chairman of the reconstituted Planning Commission.

A.B.A. Ghani Khan Chowdhury, Dalbir Singh and Shrikant Verma, as AICC(I) General Secretaries. Chowdhury, former Railway Minister, is expected to look after the party's front organisations like the Youth Congress(I), the women's wing and the Seva Dal. Dalbir Singh replaces Chand Ram who has resigned while Shrikant Verma, a Rajya Sabha member, was the party's spokesman.

ELECTED

M. Thambi Durai, of the AIADMK, as the Deputy Speaker of the eighth Lok Sabha. Durai, 38, is the youngest to be elected to the post.

Najma Heptulla, of the Congress(I), as the Deputy Chairman of the Rajya Sabha. The Opposition, which wanted the post to go to one of them, boycotted her election and walked out.

Balram Jakhar, speaker of the seventh Lok Sabha, re-elected unanimously to the office by the eighth Lok Sabha. Jakhar is the first to be re-elected to the post.

Kamlapati Tripathi, Congress(I) working President and **Narain Dutt Tiwari**, UP CM, to the Rajya Sabha and the UP Legislative Council respectively, unopposed.

RESIGNED

Dr P.C. Alexander, the Principal Secretary to the PM, on moral grounds following the arrest of three of his personal aides for their

connection with a spy ring.

William Clark, a key and controversial figure during President Ronald Reagan's first term, as Secretary of the Interior. A conservative hardliner, Clark had generated considerable controversy, frequently running foul of moderates in the White House and the State Department.

EDUCATION

The UGC committee on Central universities has recommended a common entrance exam for admission to these universities. Other recommendations of the committee include: constitution of a Planning Board for planning and monitoring the development of the Central universities, steps to enforce greater discipline, participation of meritorious students in departmental, faculty and academic committees and a change in the structure of student unions.

Review of education policy: The Centre has initiated a comprehensive and in-depth review of the existing education policy. This follows PM Rajiv Gandhi's Jan 6 broadcast in which he made suggestions to transform the educational system. Education Minister K.C. Pant told the Lok Sabha on Jan 24 that the new policy would be considered by the Central Advisory Board of Education. The state governments will be consulted and the exercise is expected to be completed by June.

Periodic review of Central universities: The UGC has decided to set up a machinery to periodically review the academic, administrative and financial activities of the seven Central universities in the country. Initially, such a review will be limited to the Central universities, but later extended to cover all universities. According to UGC Chairman Madhuri Shah, the objective of the review, to be undertaken every five years, is to monitor the use of development grants and the results they were yielding. The academic programmes will be evaluated to measure the standards of various departments and efforts made to ensure the maintenance standards. The UGC is undertaking

CONGRATULATIONS...

To Col Prithvi Nath, Joint Director, Public Relations in the Ministry of Defence, and a regular contributor to the *Career & Competition Times* for being awarded the Vishist Sewa Medal for distinguished service this year. Belonging to the Sikh Regiment, Col Nath participated actively in the 1965 and '71 Indo-Pak wars and also carried out successful anti-terrorist operations in Nagaland and Manipur. Apart from being an army man Col Nath is a writer too. He has authored the bi-annual publication of the Defence Ministry, *Perspective—An Insight Into National And International Affairs*, and is also a short story writer.

Delinking degrees from jobs: Education Minister K.C. Pant, in the first meeting with officers of his ministry on Jan 8, called for immediate attention to the question of delinking degrees from jobs. Pant stressed the importance of boosting vocationalisation of education and bringing about educational reforms. He has asked for the preparation of a blueprint setting out the feasibility and methodology of holding a national exam. Also dealt with was the role of the mass media, especially the radio and the TV, in spreading education. On Jan 10, Pant told reporters that G. Parthasarthy, Chairman of the Policy Planning Committee in the External Affairs Ministry, had prepared a report on the proposed delinking of jobs from degrees. The report was expected to be submitted soon.

HEALTH

Tuberculosis (TB) is still the major killer disease in India, according to a report presented to the 39th National Conference on Tuberculosis and Chest Diseases held in Cuttack recently. The report estimates that there are about 10m TB cases in the country of which 2.5m are infectious. About 2.5m new cases are reported every year but only a third of them are detected and treated. According to WHO, there are 20m TB cases in the world today which infect 50-100m people, of whom, 3m die annually.

States' slipshod ways obstruct Centre's programme for malarial eradication: There has been a 12% rise in malaria incidence in 1984, mainly due to the state governments not helping in the implementation of the Centre's programme for malarial eradication. The states were expected to provide matching grants for the programme, to buy insecticides and meet the cost of spraying operations but failed to do so. Union Health Minister Mohsina Kidwai told a conference of malaria and filaria workers in New Delhi on Jan 29. In Bihar, Haryana, Delhi, Rajasthan, Punjab and UP, there was a rise in the number of malaria cases, mainly due to lack of interest by local bodies in carrying out anti-larval operations, she said.

SCIENCE

Drugs from the sea: The Department of Ocean Development (DOD) has drawn up plans to extract drugs from the sea. Some toxins from marine organisms, the DOD says, will yield compounds with pharmacological properties, while several other compounds have inhibitory effects on a variety of disease-producing micro-organisms. Seaweeds can be used to treat maladies such as dropsy, menstrual irregularities, abscesses and even cancer. Hormones derived from corals and jellyfish stimulate muscles, depress blood pressure and act as tranquilisers. Seven national laboratories, including the National Institute of Oceanography in Goa, are engaged in research in the field.

The elusive magnetic North Pole rediscovered: Canadian scientists recently located the magnetic North Pole, which had not been pinpointed since 1973, and whose rediscovery will be a boon to flight navigation. The compasses in planes travelling over the North Pole go wild. As a result, the angle between the

geographic and magnetic calculations. A team from the Canadian Ministry of Energy, Mines and Resources had found that the magnetic pole is now some 1,500 km south of the geographic North Pole, meaning it has moved 100 km north between 1973 and 1984.

Sky satellites and Star Wars: Astronauts of the US space shuttle Discovery on Jan 25 launched a \$300m spy satellite designed to eavesdrop on Soviet military and diplomatic communications. Discovery had blasted off on Jan 24 on the first US fully classified manned space flight. The Soviet Union called it the first step in President Ronald Reagan's Star Wars plan.

DEFENCE

US-Iraq defence deal: The US will supply 45 jet fighters, radar and anti-aircraft missile networks to Iraq under a deal signed in November, when Iraqi Foreign Minister Tariq Aziz visited Washington. Thirty of the planes will be of the F-15 type and the rest F-16 type. The US will also sell thousands of bullet-proof tents to Iraq. The deal also symbolises Baghdad's displeasure with the Soviet Union for continued supply of weapons to Syria, which reportedly find their way to Iran under an oil-for-weapons agreement between Damascus and Teheran.

China buys defence equipment worth \$56.3m from a British company. The purchase involves a message-processing system with sophisticated radio communications. The deal was struck during an exhibition, Electronics for National Security Asia '85, held in Singapore from Jan 17-19.

The parliamentary committee on the welfare of SC and ST, which submitted its 59th report to the Lok Sabha on Jan 22, has recommended the government to open more recruitment centres for the defence services in areas dominated by scheduled castes and tribes.

Report recommends military role for Commonwealth: A study group of the Commonwealth Parliamentary Association has issued a report calling for the creation of a Commonwealth Defence Force composed of regional rapid deployment units. Commonwealth countries in each region should contribute troops to a small, well-armed ready reaction unit which could be deployed at short notice to meet an external threat, the report recommends. The proposal is likely to be controversial because the Commonwealth mainly serves as a forum for political and economic talks but has no military role. The report will be discussed at the next Commonwealth summit, to be held in the Bahamas in October.

NEIGHBOURS

Gen Ershad's plans for a democratic Bangladesh: Bangladesh President H.M. Ershad on Dec 31 abolished the posts and offices of district martial law administrators and sub-zonal martial law administrators, and two special martial law tribunals, two weeks after promising a gradual transition to democracy. On Jan 15, General Ershad dissolved his Cabinet as the first step in his plan to restore democracy in Bangladesh. He also ordered the restoration of fundamental rights and the juria-

Important role for a broadcast by Chief Election Commissioner A.K.M. Nurul Islam that elections to the 300 Parliament seats will be held on Apr 6. However, on Jan 16, Ershad appointed a 7-member Cabinet comprising entirely of military officers. Those sworn in included air force and navy chiefs Sultan Mahmud and Sultan Ahmed.

Satisfactory progress in Indo-Nepalese relations: A Nepalese Government report says that Kathmandu's relations with New Delhi during 1973-83 grew satisfactorily despite occasional setbacks. There had been some "positive developments" in the Indo-Nepalese water resources development talks and India had committed itself to long-term purchase of the whole or a major portion of power generated from the Kamali hydro-electric project. The 3,600-Mw project is to be built on river Kamali to supply energy to Uttar Pradesh, besides controlling floods in India and Nepal. Nepal, however, expressed its displeasure over the "unilateral" construction of embankments by India in areas close to the border on rivers which submerge large areas of agricultural land in Nepal. Susta in Nal Parasi district in Nepal Terai and Kalapani in Darchula in west Nepal are disputed territories, the report said. At the same time, the report lauded India's contribution to Nepal's economic development and expressed satisfaction over the progress made in commercial and industrial relations.

Pakistan to go to polls on a non-party basis: Pakistan President Zia-ul-Haq on Jan 16 opened the arena for almost all politicians to contest the national polls on a non-party basis. The move came two days before the 11-party Movement for Restoration of Democracy (MRD) was to meet. The MRD has announced it will boycott the party-less elections. Though the disqualification clause has been dropped, it'll continue to apply in the case of those charged with rigging in the 1977 polls. The disqualification clause had been announced by Zia in a speech on Jan 12. The MRD, however, stuck to its decision to boycott the poll, describing Zia's waiving of the disqualification clause as a farce aimed at creating dissension within its ranks.

Islamisation of Pakistan's economy: President Zia-ul-Haq on Dec 31 promulgated two Ordinances for the switch-over of the national economy to an "interest-free system". The new system is described as "a synthesis in the process of Islamisation and stability". The mechanism for the switch-over is expected to bring about change without disturbing economic stability. Islam prohibits the charging or paying of interest. Under the new plan, all financing to private firms and individuals by Apr 1 will switch to the Islamic system. By July, banks would not accept any interest-bearing deposits, and all savings and term deposits would be made on a profit-and-loss sharing basis.

ECONOMY—National

Technology parks that will take India into the high-tech era will be set up soon by the Indo-American Capital and Technology Corporation. The parks, resembling an IIT campus and linked to industrial corporations in the US via satellite, will receive high technology

paper money, the party will deal with computer software and provide fresh ideas and marketing sources to Indian companies located in them. An export revenue potential of \$1b has been predicted by 1990 if all goes well. Right now, India exports software worth \$30m—50% of the total potential.

Food aid likely to benefit 11.6m Indians will be supplied by the United States Agency for International Development (USAID) between October 1984 and September 1985. The aid package includes 3.14 lakh tonnes of oil seeds and vegetable oils, worth \$105m. The USAID also proposes to institute a maternal and child health education programme aimed at benefiting 5.1m Indians. This programme will receive 1.46 lakh tonnes of food, worth \$56.8m.

India's trade deficit during the first seven months of the current financial year has narrowed by Rs 135.9 crores over that during the corresponding period last year. The deficit now is Rs 2,607.8 crores. The decrease is attributed to a 20.9% increase in exports, from Rs 5,023.6 crores in the first seven months of 1984-85 to Rs 6,071.7 crores in the same period of the previous year. Imports grew by 11.7% to Rs 8,679.5 crores from Rs 7,767.3 crores in the first seven months of 1983-84.

Wide policy changes to improve the performance of the farm sector have been suggested by a 33-member working group appointed by the Union Agriculture Ministry. The suggestions include a switch-over from the present subsidy-oriented approach to a service-oriented one; strengthening of key services like power, irrigation, research and extension; discontinuance of the present practice of preparing uniform schemes for the entire country with the Centre announcing only broad programmes and the states having the freedom to prepare their own projects.

Recommending a foodgrain production target of 185m tonnes for the last year of the Seventh Plan, the group identified the following key issues for the Seventh Plan: rain-fed farming, agriculture in the eastern region, increasing productivity of wheat, increasing cropping intensity and irrigation efficiency, toning up of agricultural administration, and agricultural development of tribal areas.

BHEL ranks first among the 100 top engineering companies in the country, according to a survey by the Association of Indian Engineering Industries (AIEE). The company had a sales turnover of Rs 1,193.53 crores in 1982-83 which accounted for nearly 9.2% of the total aggregate sales of the top 100 companies in the same year.

The states' annual total deficit is estimated at Rs 2,000 crores and the revenue shortfall by the end of 1984-85 at about Rs 3,000 crores. Among the states which have overspent are UP, at Rs 300 crores, followed by Punjab, Kerala, West Bengal, Karnataka and Andhra Pradesh. These figures were reached at annual plan discussions between the Centre and the states. Not more than Rs 11,000 crores is expected to be mobilised by the states during 1985-86 and taking the deficit into account, the net additional resources are not expected to exceed Rs 8,000 crores for plan expenditure. Plan expenditure of the states in 1984-85 was projected at Rs 13,000 crores. The Centre's situation is no better: The

3,748 crores against the projected Rs 1,702 crores. The reason for the deficit's lack of impact on prices is said to be the bumper harvest and the 7.2% industrial growth rate recorded during the current year.

The purchasing power of the rupee in November 1984 stood at 16.81 paise with 1960 as the base year, and 12.11 paise with 1947 as the base, Finance Minister V.P. Singh told the Rajya Sabha on Jan 22.

ECONOMY—International

The World Bank will undertake a study of the energy resources and demands of 70 countries. This follows a request by the committee on energy problems of developing countries of the World Energy Conference (WEC) which opened in Bangalore on Jan 21. The World Bank study will examine the growth rates of developing countries, the future demands of energy and the resources needed

REVALUATING BRETTON WOODS

The Bretton Woods system was evolved at a time when the World War II had ravaged the economies of Europe and the US was the only country that could still boast an active, highly productive industry. The nations of Europe, Africa and Asia desperately needed the capital that America could supply. But capital transactions had to be made secure, and in order to do this, the leading nations of the world met at Bretton Woods in 1944 to form the International Bank for Reconstruction and Development (World Bank) and the International Monetary Fund (IMF). The World Bank was to provide long-term loans to countries who could not get private loans at sufficiently low rates of interest. The loans were tied up with developmental projects. The bank floated bonds and used the proceeds to make loans. These bonds are backed by the credit of the member nations.

The IMF, on the other hand, was concerned with short-term credit and cooperative management of foreign exchange rates. It hoped to make the gold standard work, by maintaining stable exchange rates. It would, thus, involve itself with balance of payments (BOP), financing and the necessary adjustments required by a country to solve its BOP problem. The earlier distinction between the World Bank and IMF, has, to a large extent, become blurred. The IMF deals with developing countries as much as the bank does, while the Bank now gives loans, which come with policy conditions as stringent as those of the IMF.

This is due to the changing economic environment. The Bretton Woods system is no longer totally valid today. The system of pegged exchange rates has broken down, giving way to a system of floating exchange rates and the dollar is being increasingly overvalued, as it was in the late sixties. The US is running chronic and rising BOP deficits, while countries like Japan are running surpluses. And the BOP problem is being faced by every developing country. Thus, a revaluation of the Bretton Woods system, would be warranted.

available by 1988 when the WEC meets in France.

ILO report on occupational deaths: Every three minutes, a worker somewhere in the world dies of occupational injury or illness, says an ILO report. Fatal accidents at work have fallen by as much as 30% to 50%, but fatality rates are rising steadily in the Third World, the report says. Reasons: import of new equipment and technology without adequate safety standards, poor maintenance and ignorance of hazards involved. Some 33,000 deaths and 8m injuries, the report estimates, occur in agriculture alone every year, the source of the trouble very often being the tractor. Also, greater use of chemicals as pesticides, herbicides and insecticides has brought additional danger to the Third World.

A majority of OPEC ministers on Jan 30 agreed to cut their oil prices after three days of emergency talks in Geneva. Libya, Algeria, Iran and Gabon were not part of the agreement which levels the price of OPEC's cheapest crudes at \$26.50 a barrel. The highest priced crude will be \$28.90 a barrel from the current \$30.50.

A fall in World Bank's lending activity: World Bank President A.W. Clausen, on Jan 16 told bank directors that he is postponing his earlier plan to expand the bank's lending potential. Reason: a sharp and unexpected drop in Third World loan demands. Clausen expects the bank's loan commitments to fall by at least \$2b in 1985. This is the first time that there has been a reversal in the bank's year-to-year growth in lending activity. Clausen's plans to increase the bank's lending capability had been opposed by the Reagan Administration which feels the current levels, reinforced by free enterprise, will be adequate.

Poland's debts rescheduled: Poland has reached an agreement with 17 Western creditor nations on the rescheduling of about \$15b in public debts. Poland, which is Eastern Europe's most indebted nation, owes about \$28b to the West.

Paper pounds to be replaced by coins: The Bank of England, on Dec 31, stopped distribution of one-pound notes to the clearing banks and, by next Christmas, most of the 560m paper pounds in circulation, will have been replaced by coins. The first pound note was introduced in 1879 during the Napoleonic wars. The British treasury argues the nation can no longer afford the luxury of the pound note which has an average street life of nine months against the 40-year life span of the coin. The coins cost 2½ pence to make compared to 1½ pence for a bank note.

The African food emergency will continue in 1985 with a number of countries picking up poor 1984 harvests, says a special FAO report. The report has identified 21 countries which will face exceptional food supply problems during 1984-85. They are: Angola, Botswana, Burkina Faso, Cape Verde, Chad, Ethiopia, Lesotho, Mali, Mauritania, Mozambique, Senegal, Somalia, Tanzania, Zambia and Zimbabwe, Burundi, Kenya, Morocco, Niger, Rwanda and Sudan. Their aggregate 1984 production of cereals is estimated at 22.9m tonnes, 3.2m tonnes below their drought-reduced output the previous year. Their import requirements are estimated at 10.2m tonnes and food aid requirements at 5.2m tonnes.

would on consumption will fall from 2.4% in 1984 to about 1% in 1985, and OPEC's market share will fall slightly, according to a forecast by the Paris-based International Energy Agency (IEA). Demand for oil in 1985 will reach 46.7m barrels a day, an increase of 400,000 over 1984. Production in non-OPEC countries, which rose by 1.3m barrels a day in 1984, will rise by 500,000 barrels to 28m in 1985. Developing countries outside OPEC, like Mexico, Egypt, India, Brazil, Argentina and Oman, will continue to increase by a small amount their share of the world oil market with a production of 83m barrels a day, 200,000 more than last year. OPEC's share is expected to fall to 39.9% compared with 40.6% in 1984, from 18.8 barrels a day to 18.6m barrels.

The world's population is 4.8b now and will reach 6.1b by 2000 A.D., according to the UN's biennial report. Eighty per cent of the population will be living in developing countries "but the gradual slowdown of the global population growth is still continuing", the report says. The rate of growth decreased from 2% in 1960s to 1.65%. China has experienced the most dramatic decrease, from 2.4% to 1.2%. Africa's growth rate is 3% and rising while that of West Asia is 2.9% and showing no change.

STATES

Decentralised district plan in Gujarat: The Gujarat Government plans to spend Rs 520 crores during 1985-90 for decentralisation of planning to the district level. In 1980, the state drew up and launched a decentralised district plan, to facilitate the autonomous functioning of the specially constituted district planning boards. This is with the objective of making the boards efficient and active instruments of micro-level planning in the state.

Bihar's controversial tax-free budget for 1985-86: Bihar CM Chandrashekhar Singh on Jan 23 presented a tax-free budget for 1985-86 to the state Assembly, despite a Rs 30.25 crore deficit in the estimates. The deficit actually works out to Rs 133.72 crores but has been reduced by clubbing the consolidated fund and public account together. The entire Opposition boycotted the budget presentation in protest against this "financial jugglery".

Manipur Cabinet expanded: Manipur CM Rishang Keishing on Jan 14 expanded his 11-day old ministry by taking in eight Cabinet ministers and three ministers of state; the strength of the ministry is now 13.

West Bengal's development and employment problems: West Bengal CM Jyoti Basu on Jan 15 presented a note to Union Law Minister Ashoke Sen, outlining problems of development and employment facing the state. Sen himself felt that unemployment was the state's biggest problem. To tackle the problem, sick industrial units had to be reopened and several industrial projects had to be set up. Said Sen rhetorically, "We will see how best we can plead for the legitimate claims of West Bengal and safeguard its interests."

Haryana's Seventh Plan outlay: The Haryana Cabinet on Jan 9 approved a demand for a Rs 3,200 crore Seventh Plan outlay, against the previous five-year plan outlay of Rs 1,800 crores. The proposed new outlay envisages Rs 1,633 crores for irrigation, and power, including Rs 100 crores for flood con-

trol. **Farooq Abdullah's industry and education:** Rs 41 crore industry and 68 crores and education Rs 135 crores. The demand, said CM Bhajan Lal, will be placed before the Centre shortly.

President's rule in Pondicherry has been extended by another six months from Dec 24, 1984. The Union territory's Assembly was dissolved in June 1983 and President's rule imposed after the ruling DMK-Congress(I) alliance broke up.

Indictment of Farooq Abdullah: A Cabinet committee constituted by the G.M. Shah Government in J & K has held that former CM Farooq Abdullah had ignored warnings by the intelligence agencies about activities of anti-national forces and connived with them. Communications received from the Union Home Ministry were ignored by the Abdullah Government which did not act even against the banned AISSF which held several camps in the state, the report says. The 113-page report, which was made public on Jan 10, documents several instances to prove its charges. According to deputy CM D.D. Thakur, the report, "not a white paper", was being released to enable the public make up its mind on how Abdullah tackled various issues concerning the state and the country. Abdullah, a day later, described the charges as "totally false and absurd".

EVENTS—National

Regulations for recruitment of Indian workers abroad: The government on Jan 27 issued guidelines on publication of advertisements for employment of Indian workers in foreign countries. Only registered recruiting agencies and employers granted permits for recruitment of Indian workers can advertise such vacancies. Newspapers and advertising agencies have to secure a certificate from the Labour Ministry or the Indian embassies before accepting advertisements.

Law Commission recommended division of Supreme Court: The Law Commission, in its 95th report to the Lok Sabha, has recommended that the Supreme Court be divided into a constitutional division and a legal division. Such a division would help maintain a certain level of equality, coherence and consistency in constitutional adjudication, it said. The creation of a new institution was not necessary as the existing institution could be utilised with modifications, it felt. The jurisdiction of the constitutional division should cover: 1. every case involving a substantial question of law as to the interpretation of the Constitution; 2. every case involving a question of constitutional law not falling within 1. Other matters would be assigned to the legal division. A case should be regarded as involving a constitutional issue "only when the decision of that issue is absolutely necessary for the disposal of that particular case."

Indo-Mexican accord: India and Mexico on Jan 30 signed agreements for cooperation in heavy industry, biotechnology and cultural activities. The agreements were signed during talks between visiting Mexican President Miguel De La Madrid and PM Rajiv Gandhi.

The national capital region planning board Bill, 1985: The Rajya Sabha on Jan 23 passed the national capital region (NCR) planning board Bill, 1985, which seeks to set up a

body. The proposed authority will look after the development of about 30,000 sq km area around Delhi, covering certain areas of Haryana, Rajasthan, UP and the entire Delhi. The Lok Sabha passed the Bill on Jan 25.

Commenting of Indo-Argentinian ties: India and Argentina on Jan 24 decided to set up a joint commission on economic cooperation, and committees on science and technology. The joint commission is expected to meet at least once a year while the committees will meet every two years. The decision to set up the bodies came after talks between the two sides in New Delhi on Jan 24, covering a wide range of subjects. The talks took place during a six-day visit to India by the Argentine President Raul Alfonsin.

A two-day national forum on youth for unity and integration, consisting of Nehru Yuvek Kendra, NCC and NSS, concluded in New Delhi on Jan 14 with a call for abolishing reservation in education and services; such reservation should be on a strictly economic basis. The forum deliberated on cultural, social, economic and developmental aspects of youth in general. The forum also called for abolition of dowry, the purdah system, and sought a common civil code for all religions and sects. Other demands included delinking of jobs from degrees, co-education, inter-caste and inter-religion marriages, elimination of sex and violence from the cinema, and larger youth representation in Parliament.

CMs to take steps to avoid strikes and lockouts: Union Labour Minister T. Anjiah has written to CMs to try and effect a voluntary moratorium on strikes and lockouts in industries for the next four or five years. Preventive conciliation and voluntary arbitration should be considered to avoid strikes and lockouts, and workers persuaded not to go on strike while grievances were being sorted out, the letter said. Employers should be asked not to declare a lockout but approach the government for intervention. To achieve these objectives, Anjiah said the amended provisions of the Industrial Disputes Act should be freely used.

Report suggests ways and means of achieving peace in Punjab: The institute of socio-economic studies, in a report submitted to PM Rajiv Gandhi, and the 3-member ministerial committee on Punjab, has called for demolition of the base of all "sedition and anti-national activities" to achieve peace in Punjab. The massive mandate given to the Congress(I) means that Pakistan cannot dare to interfere in India's internal affairs, the report says, adding that secessionist Sikhs based abroad were also not receiving the same "indulgence, encouragement and facilities" from foreign sources. Some of the steps it suggested were to provide employment to the 2,00,000 educated unemployed rural youth in Punjab, implement land reforms to still the landed aristocracy which backed separatist forces, and devise means to plug the inflow of unaccounted foreign money from Sikhs abroad.

Determination of retirement age through legislation constitutionally valid: The Supreme Court on Jan 18 upheld the government's right to determine the age of retirement through legislation. In the process, the court dismissed writ petitions of Andhra Pradesh Government employees challenging a govern-

Transfer of legislative powers by the government. The Telugu Desam Government issued two notifications amending the relevant fundamental rules, and the corresponding rules of the Hyderabad Civil Services in exercise of powers conferred by the Constitution.

Upper age limit for Civil Services Examination raised: The Centre has decided to raise the upper age limit for admission to the Civil Services Examination from 26 to 28 years in 1985. The limit will stand reduced to 26 years from the examination to be held in 1986.

Kudal Commission submits interim report: Justice P.O. Kudal on Jan 4 submitted an interim report to Union Home Minister S.B. Chavan on the Gandhi Peace Foundation (GPF) and allied organisations. The Kudal Commission, constituted on Feb 17, 1982, was initially asked to submit its report in six months. But since then the commission has been given six-monthly extensions to enable it to complete its work. The main charge against the GPF is misuse of funds.

A new ministry created: PM Rajiv Gandhi has carved out a separate Ministry of Personnel and Administrative Reforms and Culture under his direct charge with K.P. Singh Deo as the Minister of State. The ministry will deal with various aspects of Central services, like promotions, transfers, career management, training, discipline and service conditions.

The Planning Commission has been reconstituted; with RBI Governor Man Mohan Singh as its Deputy Chairman, Union Finance Minister V.P. Singh and Defence Minister P.V. Narasimha Rao are among new members of the commission. Dropped are Prof A.M. Khusro and Mohammed Fazal. Retained are M.G.K. Menon and C.H. Hanumantha Rao. The reconstituted commission comprises technocrats, economists and management experts. Among them are Raja Chelliah, public finance expert, Hiten Barja, a technocrat, and Abid Hussain, Commerce Secretary.

The decision-making process in the Union ministries was decentralised on Jan 8 following a directive from PM Rajiv Gandhi. The step is expected to quicken the pace of work in ministries. The reorganisation of the working of the ministries will mean that the secretary of each of them will be able to devote himself to more important policy matters and initiate steps for new projects which could yield fast results.

Reorganisation of ministries and departments: The President on Jan 4 issued an omnibus notification amending the Government of India (allocation of business) Rules, 1961, to reorganise several ministries and departments. Accordingly, the Ministry of Agriculture has been renamed Ministry of Agriculture and Rural Development; the Ministry of Commerce as the Ministry of Commerce and Supply, the Ministry of Education and Culture as the Ministry of Education, the Ministry of Irrigation as the Ministry of Irrigation and Power. The Ministry of Energy has lost its identity, yielding room to the newly created Ministry of Environment and Forests; the Ministry of Labour and Rehabilitation has been divested of the latter department while the Ministry of Steel and Mines enlarged to include coal. The department of sports will be known as the department of youth affairs and sports. Several

National youth day and youth week every year: PM Rajiv Gandhi on Jan 12 opened the National Youth Forum on youth for unity and national integration to launch the year of the youth. Jan 12, the birthday of Swami Vivekananda, will be observed as the National Youth Day and the following week as the National Youth Week every year. The PM called on the youth to rise above narrow considerations and help build a strong and united India.

EVENTS—International

Civilian President for Brazil: The Brazilian Parliament on Jan 15 chose Tancredo Neves as the country's first civilian President in 20 years. Neves, who gained an absolute majority in the electoral college, replaces Gen Joao Figueiredo.

Universe is only 12b years old: Two American astronomers say the universe is not 20b years old, as many scientists believe, but a relatively youthful 12b years. Marc Aaronson of the University of Arizona and Jeremy Mould of the California Institute of Technology made the discovery by detecting and taking into account movements of the cluster of galaxies to which our solar system belongs. The discovery also means the universe is also smaller than earlier supposed, with the most distant observable object being 12b light years away rather than 20b. The size and age of the universe is determined by measuring shift in the spectrum of light from stars and galaxies. The shift, called the red shift because light from more distant objects is shifted to the red end of the spectrum, is used to calculate the distance from the earth to the celestial object.

Israeli withdrawal from southern Lebanon runs into rough weather: The Israeli Cabinet on Jan 14 decided to withdraw the nation's army from southern Lebanon in phases over the next nine months; the first phase will be completed in five weeks. The 2½ year occupation of southern Lebanon has cost Tel Aviv the lives of 600 soldiers and over \$100m. Israel has created a Christian militia called the army of southern Lebanon under Antoine Lahad, a renegade Lebanese officer, to guard its northern borders. However, on Jan 24 Lebanon and Israel broke off their talks on coordinating the first stage of Israel's withdrawal from south Lebanon. No new date was set for another meeting. The announcement came in a joint communique after Israel had accused Lebanon of taking a "totally unrealistic" attitude at the 14th round of the talks.

Second oath-taking by Reagan: US President Ronald Reagan on Jan 20 took the presidential oath for a second term, shortly after Vice-President George Bush took his. It was the nation's 50th presidential oath-taking. Administering it was Chief Justice Warren Burger.

Soviet moves in Afghanistan: The Soviets have cut their military force in Afghanistan to 76,000 men from the 100,000 who occupied the land-locked state in 1980, according to *Jane's Defence Weekly*. The reason for the reduction: the Soviets have adapted their forces to fighting the hit-and-run tactics of the rebels and sent back a lot of hardware unsuitable

for many more Afghan winters, confronting an estimated 90,000 guerillas divided among some 15 groups.

US high technology exports to non-communist countries to be reviewed: US President Ronald Reagan, overruling objections by his state and commerce secretaries, has authorised the defence department to review high technology exports to non-communist countries. The Pentagon already enjoys that privilege with respect to communist countries. Exports that will come under the Pentagon's jurisdiction will include computer parts, scientific instruments and other equipment that the Pentagon believes can have military application. The US fears that such equipment can be diverted to the Soviet Union by its friendly non-communist nations. Included in this category are at least 15 countries.

US-China package deal: China and the US have agreed on a package of US military sales designed to modernise China's navy and on a port call by three US destroyers to Shanghai in April. The agreement came at the end of a six-week visit to the US by Chinese officials. The US will sell to Beijing sonars, torpedoes, gas turbine engines and a sophisticated shipboard gun to shoot down anti-ship missiles. It is believed the package deal is worth several hundred million dollars, representing the most significant US military transaction with China after the communist revolution.

MISCELLANY

Australia has the world's safest airline, says a British weekly *Flight International*, in a study on airlines safety. Second comes Scandinavia, third Japan, fourth the US, and at the bottom of the table are Columbia, Turkey, Egypt, Indonesia and the Soviet Union. The study covered 1973-84 during which the world's major airlines made more than 100m landings with a fatal accident rate of 1.8 per million landings.

Computer culture in France: France has launched a \$200m programme aimed at making it one of the most computer-literate countries in the world. Thousands of micro-computers will be installed in schools and universities, and pupils and teachers will undergo special training. A total of 1,20,000 desk-top computers will be installed for the use of 11m French students, in addition to 35,000 computers already in use.

DIED

Sir Arthur Bryant, 85, a historian who broke new ground with his biography of Samuel Pepys and whose wartime writings bolstered British morale, on Jan 23, of cancer. Credited with taking history to a wider audience than any historian in the century, Bryant's major success was the discovery of two new diaries and other manuscripts of Pepys, a 17th century diarist.

James Cameron, 73, British journalist and friend of the Nehru family, on Jan 26 after a spell of ill-health, Cameron made his name as a foreign correspondent covering major international events, and later became renowned as a broadcaster.

A.P.

Azharuddin: A runaway triple centurion.

ATHLETICS

Mary Decker (USA) established a new indoor world best in the 2,000 m, by running the distance in 5:34.52, at the Los Angeles sports arena on Jan 18.

★ ★ ★

Asha Agarwal strode into international limelight when she won the 8th International Marathon in Hong Kong on Jan 27. She ran in a personal best time of 2:44:34.0 to finish less than a minute ahead of Kuko Gordon of Hong Kong and Judith Hine of New Zealand. The men's race was won by Alain Lazare of France in 2:18:34.0.

BASKETBALL

Two new champions emerged at the 35th National Championships which ended at the Barabati Stadium Courts in Cuttack on Jan 6. In the men's section, Punjab won the **Todd Memorial Trophy** defeating Rajasthan 70-59 in the final. The defending champions Services lost to Rajasthan in the semis.

The **Prince Basalath Jha Trophy** for women was annexed by the Kerala girls who beat five-time (consecutive) champs Punjab 64-45.

BADMINTON

The 1985 grand prix tournaments began with the Hong Kong Open Championships, which concluded on Jan 13. Morten Frost Hansen (Denmark), who had emerged as the No. 1 last year by winning six of the 14 tournaments, is under great pressure this year to maintain his position. He was defeated 10-15, 11-15 by Yang Yang of China in the finals.

SPORTS

The \$25,000 Masters Invitational Tournament ended in Taipei (Taiwan) on Jan 21 with luck eluding India's Prakash Padukone in the final. He beat Hastomo Arbi (Indonesia's Thomas Cup hero) 18-13, 19-4 in the quarter-finals and then his old adversary Liem Swie King 15-10, 6-15, 18-14 in the semis. But lost to Liis Pongoh 15-5, 9-15, 2-15. In the women's section, Helen Troke scored over Denmark's Kirsten Larsen 11-5, 1-2 in the finals.

BILLIARDS

At the 51st National Championships, which were held in Hyderabad and concluded on Jan 20, Geet Sethi of Gujarat regained the title by beating reigning champion and world amateur No. 2 Subhash Agarwal of Railways 1996-1549.

CRICKET

One-all and the Third Test began at Calcutta. Who would be the winner? India or England? None, decided Mr Rain as he washed out the game. At the end of the fifth day of January, the score still stood at one-all. The only highlights: 22-year-old Mohammed Azharuddin became the eighth Indian to score a century (110) on his debut and Ravi Shastri his third hundred (111) in four Tests.

The seven others who have scored a ton on debut are: Lala Amarnath 118 v Eng at Bombay in 1933-34; Deepak Shodhan 110 v Pak at Calcutta in 1952-53; A.G. Kripal Singh 100 n.o. v NZL at Hyderabad in 1955-56; Abbas Ali Baig 112 v Eng at Manchester in 1959; Hamumant Singh 105 v Eng at Delhi in 1963-64; G.R. Viswanath 137 v Aus at Kanpur in 1969-70; Surinder Amamath 124 v NZL at Auckland in 1975-76.

There was no rain to save the day for India in the Fourth Test at Madras (Jan 13-18) when England crushed it by nine wickets. Neil Foster claimed six wickets for 104. Mike Gatting and Graeme Fowler's double centuries left India trailing by 380 runs. The last-wicket stand of 51 between Syed Kirmani and Chetan Sharma in the second innings managed to save India from the ignominy of an innings defeat. The only silver lining was Azharuddin's second successive Test century (105). Kapil celebrated his return to Test cricket with a subdued but responsible 53 and 49.

With the Fifth Test ending in a tame draw in Kanpur on Feb 5, England won the series 2-1. The highlights: Azharuddin set a world record by scoring a hat-trick—his third successive hundred (122) in Tests. The other centurion in this Test was Dilip Vengsarkar (137). India built up a massive total of 553 for 8 decl in the first innings.

★ ★ ★

One-dayers are not our forte any more. England beat us 4-1, winning the matches at Pune, Cuttack, Bangalore and Chandigarh. Though India's lone victory at Nagpur had some tense moments for the home team, there was good hitting from Azharuddin (52), Sunil Gavaskar (52) and Kapil Dev (54).

On Jan 10, at Bombay's Wankhede Stadium, in a Ranji Trophy clash against Baroda, Shastri blasted six sixes in a six-ball over bowled by the left-arm spinner Tilak Raj. This equalled the world record of maximum runs in a six-ball over in first class cricket, achieved only by Sir Garfield Sobers in 1968, while playing for Nottinghamshire in an English county championship match, against the bowling of Glamorgan's Malcolm Nash, at Swansea.

★ ★ ★

The First Test between New Zealand and Pakistan at Basin Reserve in Wellington, New Zealand, ended in a draw on Jan 22 due to rain.

★ ★ ★

The National Zonal Championship for limited-overs cricket, the **Doodhar Trophy**, was won for the third year in a row by West Zone (and on each occasion they beat North Zone), this time by six wickets.

FOOTBALL

For the second successive year, Michel Platini, the 29-year-old captain of France, and mid-field player of the top Italian club Juventus, was overwhelmingly elected 'European Footballer of the Year' by the French weekly magazine *France Football*.

★ ★ ★

At the IX Women's National Football Championship in Trivandrum, West Bengal and Kerala emerged joint winners of **Begum Bazarat Mahal Trophy**. Bengal have won it for the seventh time.

SNOOKER

Unseeded Geet Sethi recorded a unique double when he added the National snooker title to the billiards title, at the 51st Nationals at Hyderabad on Jan 23. In the semi-final league he finished undefeated, beating the World Amateur Champion Om Agarwal on the way. In his last match, he got the better of Sanjay Sawant of Maharashtra.

GYMNASTICS

The 28th National Championships were held in Bangalore (ended Jan 15) and a teenaged school-girl of Haryana emerged as the best in the land. The women's events were totally dominated by two Haryana girls with Maharashtra's Sanjivini Karandikar giving a good performance here and there. In the women's section Haryana easily won the team championship and Nirmala Gulia (Haryana) emerged the All-Round Individual Champion with 63.45 pts, and she won three more golds to take her tally to five by winning the vaulting horse, balance beam and the asymmetrical bars. The only other individual title, floor exercises, was won by her team-mate Sunita Sharma.

In the men's section, Railways (483.5 pts) took the team title, but its gymnasts did not figure in the medals for the All-Round Individual Champion, which was won by D.D. Choudhary of Tripura (100.525 pts). He also won the horizontal bar in the individual apparatus.

HOCKEY

The Railways lifted the K.D. Singh 'Babu' Trophy at Lucknow on Jan 3, when they beat Indian Airlines 2-1. Though the score does not suggest so, it was a great match. The spotlight was on the Railways forwards Mohd. Shahid and Mohd. Naim. They had the defence rattled, and the huge crowd in raptures with the kind of game they dished out. It was vintage hockey.

Defending champions Railways also won the National Women's Championship at Bangalore on Jan 14, for the fifth consecutive time, as they defeated Air India 8-7 on penalties, through a tie-breaker. They were scoreless at full time.

HOCKEY: WHAT'S OUR GOAL?

Our hockey players did the best they could... at the Olympics. But their best was not good enough.

Our readers did the best they could... in penning their impressions on Indian hockey. But their best was not good enough either. Did the match-losing performance of the team rub off on them? However, two entries have been selected for the first and second prizes. Excerpts from the prize-winning entries:

First Prize

The story of Indian hockey reads like a fairy tale in reverse. Once upon a time, we used to revel in the glorious exploits of our hockey players. Then along came the monsters—Pakistan... European hockey... astroturf. All the people who could have rescued Indian hockey—Dhyan Chand, Baldev Singh, Ajit Pal Singh—are in the past. So we follow the famous dictum, "If at first you don't succeed, blame somebody." And the most common scapegoat are the officials.

Quite right too. They are a set of incompetent, corrupt and undedicated people. They are there today in the Indian Hockey Federation (IHF) solely to earn the odd foreign trip, to make the odd buck by dabbling their hands in the money sanctioned for players' equipment, allowances, etc. That is why we hear unsavoury stories of managers and coaches of Indian teams abroad going shopping rather than arranging a workout, stories of players having to sign receipts for double the amount of money paid to them.

But all this does not detract from the fact that we—the fans of the game—are also responsible for this deplorable state of affairs. To begin with, I'd like to point out that it is not fair to expect anyone to work for nothing. We should, therefore, press for paid officials. After all, why should we have honorary posts, especially since we don't, and can't, honour them anymore? Paid officials are likely to be more dedicated...

And it's time we stopped yelling for gold. Why must we think of defeat as a calamity, and blow it out of all proportion? The result of this not-too-constructive attitude is that our officials concentrate on short-term objectives rather than building a team. Their only obsession is to win the Asiad or Olympic gold. As if that could be achieved overnight.

Our players' stamina does not put them at a disadvantage anymore. The astroturf is not all

TENNIS

The National Championships ended in New Delhi on Dec 30, without any fanfare. None of the Davis Cup stars put in an appearance. Just for the record, Nandan Bal defeated Enrico Piperno 6-3, 7-5 to retain his men's title, while a new girl on the horizon, Nandini Rangarajan captured the women's title by ousting Bela Pandit 6-4, 6-3. The match of the championships was undoubtedly the men's doubles, in which the junior's pair of Mark Ferreira and Zeeshan Ali pounded out top-seeded, singles finalists, Nandan Bal and E. Piperno 6-1, 6-4.

SANJEEV K. GUPTA

that bad. And it is not essential to change over to the 4-2-4-1 combination. All that is necessary is to change the attitude of the IHF officials.

Suman Srivastava, Delhi

Second Prize

We always participated in hockey with one and only one goal, i.e., to win a gold medal. We won the 1980 Moscow Olympics gold not because we played well but because many good hockey playing nations boycotted that Olympics. Our players did play well at Los Angeles but not too well to win the gold. Where did we go wrong?...

We should learn from past experience that artistic hockey is out now, rough and tough hockey (the kind Europeans and the Australians play) is in. But can we blame our hockey players for our declining standards? I think it would be unfair if we did so. It is the officials of the game who are responsible for our decline. Some suggestions for improvement:

A man is capable of doing anything if his morale is high. Our team lacks this vital quality which can be boosted by providing good accommodation, food, monetary benefits, etc to the players. It is a well-known fact that our hockey players are very poorly paid and if we compare them with our cricketers they are nowhere. The cricketers, as we know, are paid Rs 10,000-15,000 per Test match, get five-star accommodation.... Zafar Iqbal, after the 1982 Asiad, in an interview, disclosed the shameful fact that before the Asiad, our hockey players were given Rs 2 per day for kit maintenance and when they lost in the finals, even that was denied to them. If hockey stars are given the same treatment as our cricketers, they would be able to live up to our expectations.

The training programme is always poorly planned and shabbily executed. The officials address themselves to the business of training only when one or two months are left for the major event. There is barely any time in which to correct our weak points. Various new tournaments can be started to keep the players in touch with their game...

Surinder Pal Singh, New Delhi

ELECTIONS

THE DEBATE THAT NEVER WAS

Jan 20, 1985 was to either sound the death knell for the Congress(I) or perhaps reincarnate the party. The choice was left to the peoples of India. But would Mrs Gandhi give them the opportunity by going to the

polls; may be both propositions?

CCTimes announced a debate on the subject which tickled every enlightened mind in August 1984. But the country's tryst with destiny made for a total transformation in the political arena after Mrs Gandhi's death. Nevertheless, we do not wish to discourage the young enthusiasts who have sent in their opinions on the subject of debate. The winners have been selected from a wide range of interesting entries but we had to restrict ourselves to choosing the best three.

Congratulations from CCTimes.

Now Or Never

The shrewd politician that she is, Mrs Gandhi will hold the elections on time. Nobody will forget for a long time to come, the violence and bloodbath in Punjab and how the army brought the situation under control within hours of take over. Almost everybody agrees that Mrs Gandhi had taken a bold but wise and just decision.

Another point in Mrs Gandhi's favour is her promise of putting 80% of India on the television map. The PM has kept her word and distant dreams have now become distinct realities.

However, Mrs Gandhi is going to have a tough time collecting her votes in south India. The Tamilians are sore with her for not having taken any action regarding the Sri Lanka-Tamils issue. Karnataka and Andhra Pradesh hold better prospects for Mrs Gandhi. The stability of the Karnataka Government is being threatened due to infighting, alleged defections and petty squabbles within the ruling party leaving the CM helpless. NTR's charisma is still too strong in Andhra Pradesh for him to be wiped out, but here again, there are people dissatisfied with him. If Mrs Gandhi capitalises on this situation, as she surely will and holds the elections as scheduled, her party might perhaps come back to power in Karnataka and emerge as a powerful opposition party in Andhra Pradesh.

J & K is another thorn in Mrs Gandhi's side. The people there have not taken the dramatic ouster of Farooq Abdullah's government lightly.

Indira Gandhi has failed to find a solution to the problem of Assam and the Congress(I) will probably suffer a major setback in this state.

Mrs Gandhi is aware that even if she is declared unfit to rule India, there can never be a suitable replacement. The Janata Party came to power in '77 only to lose out to the Congress(I) in '80. The opposition is primarily interested in bringing Mrs Gandhi down, rather than offering a positive viable alternative. So Mrs Gandhi will hold the polls as scheduled and will have the last laugh.

Meara Ramamurthy, Chandrapur (Maharashtra)

First Prize: Rs 150

Preponed Election Alarm

A close look at the general political atmosphere in the country shows that the poll alarm might ring very soon. Operation Bluestar set the election-ball rolling for her. The army action is certainly seen by many people as a reflection of Mrs Gandhi's

(Continued on page 74)

ECONOMY THE OVERDRAFTS OBSESSION

BY BFCO

The failure of most modern governments, as witnessed during the last decade, lies in their inability to live within their financial means. In large countries like India having a federal structure, the states are more prone to financial indiscipline than the Centre. This indiscipline in Indian states is very much reflected in the phenomenon of overdrafts which has been recurring for years now. Until June 1984 the amount of overdrafts in the states was reported to be 'nil', but it has reached about Rs 1,515 crores by January, 1985.

The majority of states are afflicted by this malady. UP tops the list with an overdraft of about Rs 297 crores followed by Karnataka (Rs 223 crores), West Bengal (Rs 220 crores), Andhra Pradesh (Rs 213 crores) and Kerala (Rs 212 crores). In the second category, Punjab carries an overdraft of Rs 92 crores followed by Gujarat (Rs 75 crores), Haryana (Rs 47 crores), Orissa (Rs 45 crores) and Assam (Rs 26 crores). Tamil Nadu, Maharashtra, MP, Rajasthan and Nagaland are lower in the ladder with overdrafts ranging between Rs 9 to Rs 22 crores.

How does overdrafting arise?

It would be interesting to know how these unauthorised overdrafts, as they are called, arise. The financial transactions of the state governments are carried on simultaneously in a large number of disbursing offices, including those of the Reserve Bank, State Bank and other banks, treasuries etc. The government transactions conducted at all such places are allowed to proceed without any reference to the actual position of the cash balance of the state governments, the accounts of which are maintained at the Central Accounts Section of the Reserve Bank in Nagpur. Moreover, state governments do not receive funds from various sources regularly each day, while expenditure has to be incurred almost daily. This naturally causes imbalance between receipts and expenditure and the Centre has to provide temporary facilities.

This is normally done by providing the states with (a) normal ways and means advances and (b) special advances. Under an agreement with the states, the Central government sets up limits for such advances. These limits have been progressively increased. The fundamental principle is that these limits are not to be regarded as a supplementary resource for states to

finance their budgetary deficits, but are intended only to cover day-to-day budget fluctuations and any unanticipated shortfall in receipts for meeting the disbursement of the state governments. When on compilation of accounts it is observed that the state government has drawn beyond the limits permitted, an unauthorised overdraft emerges.

Constraints

State governments contend that they have been forced to take recourse to unauthorised overdrafts because of the difficulties they have to face. They claim that the limits set by the Central government in respect of Ways and Means advances are inadequate to meet the temporary difficulties arising out of uneven flow of receipts and expenditure. States also contended that the Centre was not helping the states adequately with regard to provision of funds in the form of plan and other assistance as well as in meeting unforeseen calamities like drought, floods, etc. Further, such grounds as heavy incidence of payment of loans to the Indian Government, escalation in costs of projects etc, have also been cited by the states in defence of making overdrafts.

The Centre, on the other hand, has pointed its accusing finger at the states by claiming that the latter do not observe the extent of financial discipline expected of them. Over the years it has been observed that the main reasons for overdrafts were the uncovered budgetary deficits of states, expenditure on Plan outlays at levels higher than those approved by the Planning Commission, non-fulfilment of the commitments made by the states regarding additional resource mobilisation, revisions in the salaries and allowances of government employees without making a suitable provision in state budgets.

It is pertinent at this stage to find out whether the states resort to overdrafts solely to cover necessary and unavoidable expenditure. There is little evidence to show that overdrafts emerge after the states have done their best to economise expenditure and maximise resource mobilisation. After 1978-79 all states combined have been incurring deficits, which progressively increased from Rs 222 crores in 1979-80 to Rs 890 crores in 1980-81 and Rs 1,135 crores in 1981-82. In 1982-83, the combined deficit was reduced to Rs 696 crores, but this deficit would have been much higher

to the states

1982. Again, non-development expenditure of states is increasing fast. In proportion to the total aggregate receipts it was 19.5% in 1980-81. According to revised estimates of 1981-82, it rose to 21% and the budgetary estimates for 1982-83 put it at 22.5%. Lastly, the states do not match their effort to cover the deficit. A study of 1984-85 state budgets reveals that many states, including Andhra, Assam, Haryana, MP, Maharashtra, Orissa, Punjab, Rajasthan and UP did not show any additional taxation, despite deficits in their budgets.

This rather uncontrolled spending goes on. Out of about Rs 500b spent annually by the Union and state governments in India, about one-fourth is spent by the latter. Though parliamentary committees such as the Public Accounts Committee (PAC), Estimates Committee and Committee on Public Undertakings exist both at the Centre as well as in the state, it has been found that on the whole the work of these committees at the Centre, is much better than that of the state committees, generally. It has been remarked that "Public Accounts Committees in India have, by and large, failed to control public spending in their states; neither by qualification nor by inclination are most of them suited to do the job." PAC discussions are often superficial and perfunctory on the whole. Recommendations go late and the government takes its own time to act on them. Financial discipline has also received a major set back due to creeping political instability in some of the state governments.

Remedies

The evil of continuing state overdrafts may lead to increasing pressures on general price-levels, besides creating friction in Centre-state relations. Hence the issue should not be left to ad-hoc settlements. Deficit financing as well as overdrafting represent, to a large extent, misallocation of resources which should be avoided. The states, particularly, should formulate balanced budgets in advance. A careful and close watch should be maintained on the flow of receipts and expenditure throughout the year. A system of forecasting the 'ways and means' position must be evolved and it should be ensured that non-development expenditure is effectively controlled. Even development expenditure should be phased out, wherever necessary.

The Central government should, in consultation with the states draw up a national plan for financing relief expenditure on natural calamities in states. An overall policy of curbing financial indiscipline has also to be implemented through mutual action. ■

SUCCESS!

OR IT COSTS YOU NOTHING! BULLWORKER-3 gives you measurable improvements, in STRENGTH-POWER-PHYSIQUE.

See how the amazing BULLWORKER-3 PROGRAMME builds you day-by-day a handsome, dynamic body!

Now thanks to an amazing SCIENTIFIC BREAKTHROUGH at one of the world's foremost ISOMETRIC INSTITUTES you can build the body you've always dreamed of in just 70 seconds a day, with a simple but brilliant programme of 7 second exercises and a new Bullworker-3.

24 Key Isometric contraction power builder Movements will build and shape up to 300 of your muscles... See your success! Feel your success! Measure your rapidly growing power and STRENGTH on Bullworker's unique POWERMETER SCALE SYSTEM. Let your mirror show you the handsome, lithe, athletic body emerging from your old one! Notice how your upper body develops the rugged 'V' shape girls admire; your chest deepens, biceps and calves hum with power. Your whole circulation improves.

your whole body is scientifically, dynamically sculptured into a handsome power packed shape.

- Muscle packed body.
- Bulging shoulders and chest.
- Proud up-right posture.
- Stomach-taut muscle.
- Trim flab from your waist.

Each 7 second mini-programme is fantastic! An incredibly powerful muscle and confidence booster, like nothing before! FEEL the sheer exhilaration of muscles radiating zest and power! Suddenly, your tensions and frustrations dissolve and you will feel a new confidence emerging.

Just 5 minutes a day builds up to 4% increase in your strength-yet you use only 60% your power!

POSITIVE PROOF!

in just 8 weeks you can add 30% more strength-and go on to add 50%

Len Self
former Mr Universe
shows you how.

Your measure tape and mirror will tell you-big improvements you can see!

ACTION! You owe it to yourself to give yourself this momentous chance! Return the coupon below without a moment's delay!

OUR CHALLENGE

Use the Bullworker for a few minutes a day for 14 days. If you do not feel and look fitter with results you can measure and see in your mirror then return the Bullworker to us.

BULLWORKER, Mehta Mahal, 15 Mathew Road, Bombay 400 004

14 DAYS FREE HOME TRIAL COUPON

BULLWORKER

Indian Forest Service Exam

The Indian Forest Service Exam will be held by the UPSC on 28-7-85. Age limit: A candidate must have been born not earlier than 2-7-59 and not later than 1-7-64. Educational qualifications: Bachelor's degree with at least one of the subjects—Botany, Chemistry, Geology, Maths, Physics or Zoology, or a bachelor's degree in Agriculture, Engg. or equivalent. Application forms and further details can be obtained from the Secretary, UPSC, Dholpur House, New Delhi-110 011 by remitting Rs 2 either by M.O. or crossed IPO payable to the Secretary, UPSC, at New Delhi General Post Office. Last date for receipt of applications is 1-4-85.

IIFT, PG Dip. Prog. Course

Indian Institute of Foreign Trade (IIFT) announces Postgraduate Diploma Programme in International Trade. Eligibility: A master's or equivalent in any recognised discipline, or a degree in any branch of Engg. Technology or a degree in Arts, Science, Commerce or Law with 55% marks in aggregate. Age: Not more than 28 years as on 30-6-85. Copies of the prospectus and application forms can be obtained by sending a crossed IPO of Rs 10 drawn in favour of the institute to The Programme Officer, Indian Institute of Foreign Trade, Ashok Bhawan, 93, Nehru Place, New Delhi-110 019. Last date for receiving applications is 31-3-85.

Opportunities Abroad

If Middle East is where your heart lies, then the King Saud University (formerly University of Riyadh) in Riyadh, Saudi Arabia has just the right openings for you, **provided:** you hold a Ph.D. and/or academic titles from accredited universities (for posts of Professors, Associate Professors, Assistant Professors), and a bachelor's degree in English (for posts of English language instructors).

The colleges and departments: **Science College** P.O. Box 2455, Riyadh.

Departments: Chemistry, Biochemistry, Physics, Astronomy, Botany, Zoology, Geology, Maths, Statistics, Computer Science.

Administrative Sciences College, P.O. Box 2459, Riyadh.

Department: Hospital Administration.

Pharmacy College, P.O. Box 2457 Riyadh.

Departments: Pharmaceutical Chemistry, Pharmacology, Pharmaceutics, Pharmacognosy, Clinical Pharmacy.

Engineering College, P.O. Box 800, Riyadh.

Departments: Architecture, Civil Engg., Mechanical Engg., Electrical Engg., Chemical Engg., Petroleum Engg., Computer Engg., Nuclear Engg., Industrial Engg.

Medicine, P.O. Box 2925, Riyadh.

Departments: Anatomy, Physiology, Pharmacology, Pathology, Parasitology, Gynaecology and Obstetrics, E.N.T., Forensic Medicine, Community Medicine, Ophthalmology and Eye Surgery, Surgery, Medicine, Paediatrics.

Dentistry College, P.O. Box 5967, Riyadh.

Departments: Operative Dentistry, Oral Diagnosis/Medicine, Oral Surgery, Oral Pathology, Oral Radiology, Oral Biology, Removable Prosthodontics, Fixed Prosthodontics, Endodontics, Periodontics, Pedodontics, Orthodontics, Community Dentistry, Dental Public Health.

Allied Medical Sciences College, P.O. Box 10219, Riyadh.

Departments: Clinical Laboratory Sciences, Radiological Sciences, Rehabilitation Sciences, Community Health Sciences, Biomedical Technology, Dental Health, Nursing, Surgical Technology, Medical Assisting, Anaesthesiology, Emergency Medical Technology.

Computer & Information Sciences College, P.O. Box 2454, Riyadh.

Departments: Computer Engg., Computer Science, Computer Technology, Information Science.

Planning & Urban Designs College, P.O. Box 800, Riyadh.

Departments: Architecture and Building Sciences, Planning, Regional Design, Interior Design.

Medicine & Medical Sciences at Abha College, P.O. Box 641, Abha.

Departments: Anatomy, Physiology, Family and Community Medicine, Biochemistry, Pathology, Microbiology and Parasitology, Pharmacy, Medicine, Paediatrics, Surgery, Medical Education.

And now for the irresistible part: The job includes free return air tickets annually for faculty member and family, furnished accommodation or housing and furnishing allowances, monthly transport allowance,

gratuity, free medical and dental care covering family and contribution by university to tuition fees of non-Arabic speaking children.

Interested? Then mail written applications with non-returnable copies of your academic diplomas and specialised experience certificates together with your resume (including a list of your published articles and references) to the Dean of the college concerned. Do not forget to indicate the position applied for and the subjects you are qualified to teach.

Oil & Natural Gas Commission

Oil and Natural Gas Commission (ONGC) is on the look out for bright, young, talented Indians for appointment as executives in various technical and supporting disciplines. Applicants who have secured 60% marks or equivalent grade in the qualifying exam are eligible to apply. Candidates will have to appear for a written objective-type test on 2-6-85. The test will consist of two parts—one relating to discipline/specialisation and the other to aptitude. For further details see the **Employment News** of 2-2-85. Last date for receipt of applications is 1-3-85.

Staff Selection Commission

Staff Selection Commission will hold a competitive exam on 7-7-85 for recruitment to the post of clerks. Age limit: 18 to 25 years as on 1-8-85. Educational qualification: Matriculation or equivalent. Knowledge of typing either in English or Hindi is essential. The exam consists of two parts: Part I will be a written exam of objective multiple-choice type and Part II will be a typing test.

For the format of application form and other details see **Employment News** of 26-1-85. Last date for receipt of applications is 25-3-85.

BIT Entrance Exam

Birla Institute of Technology (BIT) Mesra, Ranchi, will hold an entrance exam on May 25 and 26, for admission to (1) B.Sc. Engg. four-year degree course in Civil, Electrical, Mechanical, Electronics & Communication, Computer & Production Engineering and (2) B.Pharm. four-year degree course in Pharmaceutical Sciences. Qualifications: For B.Sc. Engg. 10+2 or equivalent with Physics, Chemistry and Maths and for B.Pharm with Physics, Chemistry and Biology. Application forms can be obtained on payment of Rs 10 by IPO, payable to the Registrar, Birla Institute of Technology, Mesra, Ranchi. Last date for receipt of completed application forms is 15-4-85. ■

BETTER ENGLISH

UNDERSTANDING COMPREHENSION-1

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

Comprehension is a multi-dimensional process which involves an analytical understanding of a given subject matter, by grasping the hidden meaning in-between the lines. This article is the first in a series on the subject.

It is perhaps not always realised that being educated in a large measure implies a capacity for acquiring new understanding, through reading and integrating it with the knowledge already acquired. This process is what we broadly call comprehension. On a more technical level, comprehension involves a wide range of skills and interests. As a truly multi-dimensional affair, it encompasses a variety of abilities with respect to vocabulary, grammatical and discursual features, inferential processes and contextual knowledge. According to Carrol some of the factors operating in comprehending a text are: remembering word meanings; following the structure of a passage; finding answers to questions answered explicitly or in paraphrase; recognising a writer's purpose, attitude, tone and mood; and drawing inferences from the context. This last factor needs special notice since even the meaning of a word or a phrase in a stretch of discourse may depend upon what has preceded it (textual or linguistic context), and on the presuppositions as well as personal and cultural considerations, relating to the writer (extra-textual or extra-linguistic context).

For proper comprehension it is also necessary to know what Wayne C. Booth has called 'Rhetorical Stance':

The common ingredient that I find in all of the writing I admire... is something that I shall reluctantly call the rhetorical stance, a stance which depends on discovering and maintaining in any writing situation a proper balance among the three elements that are at work in any communicative effort; the available arguments about the subject itself, the interest and peculiarities

of the audience and the voice, the implied character of the speaker.

The Rhetorical Stance College. Composition and Communication

It needs sustained training to be able to understand this 'Rhetorical Stance'. It should, however, not be forgotten that there is a more basic skill in the absence of which the above stance would be incomprehensible. It lies in the ability to know the writer's purpose which may be all kinds of things—to clarify, to criticise, to defend, to promote, or to warn.

A parallel requirement is the clear perception of a writer's style—the distinctively original and personal way in which a writer expresses himself and thus establishes his unique identity. It is not very different from our recognition of a friend's identity by hearing his voice, on the telephone. Yet another requirement calls for a clear awareness of the tone of what one reads. It is the writer's attitude towards his subject, his reader, or both. As in the case of style, tone in writing is also like the tone of voice in speaking and it also performs the same function—expressing anger, indignation, gentle or exalted feeling, respect, defiance, praise or indifference. All this and much more is achieved through the manipulation of language which includes choice of words, peculiarities of usage and structure and the use of images, figures of speech, rhythm and even punctuation.

Reading is important not merely because it gives access to new knowledge. Being an active process requiring effort, concentration and deliberation, it is an aid to thinking. Not only this, anyone seriously interested in improving his writing cannot ignore good and extensive reading. The reason is not far to seek. Both reading and writing, as indeed also thinking, involve similar problems of organisation, development, logic and expression (the last named quality being not involved in thinking).

Prose discourse usually takes on four forms: narration, description, exposition and argumentation. Each form serves a distinct purpose. Narration tells a story by recounting an incident or event. Description 'paints' or pictures in words an object, a person, a place, a state or a process. Exposition seeks to inform, set forth, explain or clarify. Argumentation is con-

cerned with matters involving differences of opinion and it seeks to persuade for or against a certain point of view.

Just as all writing has a discernible purpose behind it, so also it has a well-defined structure. Ordering, arranging, organising, developing the material in hand according to recognised principles result in patterns of structure which lend formal unity, grammatical cohesion and semantic coherence to the composition.

The search for structure can be at the paragraph level or at a higher-than-paragraph unit level (intra vs inter-paragraph structure). Within the paragraph, sentences should flow smoothly, one into the other. One of the common devices for achieving sentence flow is the use of transitional words or phrases such as *next, besides, then, however, thus, consequently, indeed, in addition, therefore, moreover, nonetheless, on the contrary, as a result, on the other hand, furthermore*. Some of these can also be used for connecting paragraphs. Or, such phrases and clauses as *for example, in conclusion, to sum up, we now see that, at last*, can be used as inter-paragraph transitional devices.

Each paragraph is built around a key idea contained in or expressed by what is usually called a topic sentence. All other sentences in the paragraph generally support the topic sentence. Thought development within a paragraph follows certain recognisable patterns. Prominent among these are *example, time arrangement, space arrangement, general and specific, statistics, comparison-contrast, division or classification, cause and effect and analogy*.

Recent thinking about discourse analysis has led to a meaningful distinction between a sentence and an utterance. The former is a grammatical unit, the latter a communicative unit. There is no one-to-one correspondence between the grammatical status of a sentence and its communicative or utterance value. Thus both 'Have a seat and I'll get you a drink' and 'Move an inch and I'll knock your teeth in' are imperatives but the communicative function of the former is giving a suggestion, while that of the latter is holding out a threat. Intelligent reading requires an awareness of the intonation that links a sentence function with its utterance

LANGUAGES DON'T LIVE IN TEXT BOOKS

Another useful aid to a good reader is to make him aware of two aspects of connected writing. Sentences combine to form texts and the relations between sentences are aspects of grammatical cohesion. On the other hand utterances combine to form discourse and the relations between them are aspects of discursive coherence. Thus both the following examples are coherent as discourse, but only the first one is a cohesive text, with the second sentence linked to the first by ellipsis.

- A: Can you go to Bombay tomorrow?
 B: Yes, I can.
 A: Can you go to Bombay tomorrow?
 B: Indian Airlines pilots are on strike.

Another way of looking at the problem of comprehension is to treat it on the basis of the dichotomy between what is called pure or simple comprehension, on the one hand, and inferential and implicational comprehension, on the other. The former requires a mere understanding of the words in their normal syntax, the latter, besides a literal comprehension of the text, "an apprehension of the total situation described" in the text "and a sensitivity to social relationships and expectations"

merely linked at its end. Thus a text and the following would require mere simple comprehension:

Today, with the rapid spread of all forms of modern communication, ignorance of the major facts about India cannot be excused.

On the other hand the following example from Davis as quoted by Carroll would make any reader proficient only in simple comprehension feel out of his depth:

The delight Tad had felt during his long hours in the glen faded as he drew near the cabin. The sun was nearly gone and Tad's father was at the wood pile. He was wearing the broadcloth suit that he wore to church and to town sometimes. Tad saw his father's hands close around a bundle of wood. He was doing Tad's work—and in his good clothes Tad ran to him. "I'll git it, Pa."

Exercise:

When Tad saw his father, he felt

- A: disappointed
 B: impatient
 C: angry
 D: guilty

It is not easy to say which linguistic skills in what order and combinations would enable the expert reader to infer or deduce D

as the correct answer. However, as pointed out by Carroll, the following two important points seem to be indisputably involved in comprehension:

(1) Language comprehension occurs in situational contexts whose characteristics may influence not only the degree to which comprehension processes operate but also the nature and extent of certain other processes that may accompany comprehension, usually as a consequence of it. The special arrangements that are frequently necessary to test comprehension constitute such situational contexts.

(2) Two processes often co-occurring with comprehension are memory and inference; while they are conceptually distinguishable from comprehension, their occurrence may make it difficult to assess the separate occurrence of the comprehension process itself.

In the next issue we will look into comprehension in practice as part of language in use.

We will take up sample passages and illustrate various kinds of difficulties involved in comprehending them.

(To be continued)

Answers to

TEST YOUR WORD POWER

- adage:** C: old and wise saying that expresses a common observation in a way that gives it the authority and force of a truth. Indian economists confirmed a record 7% growth in the industrial sector for 1984, proving the popular adage that a good agricultural year is good for industry.
- ambidextrous:** D: able to use both hands equally well. Ravi Shastri, the ambidextrous India all-rounder, recently equalled the world record for the maximum number of sixes in one over—six—set by former West Indies captain Sir Garfield Sobers in first class cricket.
- aroma:** A: pleasant or savoury smell; fragrance. Green and plump, packed with enough flavour and aroma to perk up anyone on the gloomiest of mornings, the coffee bean ranks as one of nature's tastiest gifts.
- bulwark:** C: any person or thing giving strong support or encouragement in time of need, danger or doubt; something that defends or protects; rampart. Rajiv Gandhi is expected to maintain India's place as a bulwark of the Non-aligned Movement.
- contentious:** D: quarrelsome. In the complex and contentious world of arms control, the question of the hour, and of some years to come, is about Star Wars.
- gaunt:** A: lean; haggard as from hunger, ill-health or suffering. Gaunt, starving, often dressed in rags, thousands of Ethiopian refugees continue to stagger across the drought-stricken northern wastelands of their country.
- hiatus:** B: gap in a series, making it incomplete; any break or interruption of continuity. The announcement that the US-Soviet arms control talks would resume on Mar 12 ended a 14-month hiatus in the negotiations.
- impunity:** C: freedom, or exemption, from punishment or injurious consequences. Hundreds of Bangladesh nationals with fake travel documents or no documents at all are "bribing their way into India" every day with impunity at the Petrapole checkpoint alone.
- infuse:** A: to fill (somebody with); pour in; instill; inspire; imbue. Nineteenth century Oxford was infused with such colossal controversial energy that the texture of England, even today, bears the imprint of the city's Victorian vigour.
- invest:** A: to put or commit (money) in order to earn a financial return. An increasing number of foreign banks are making a beeline

to invest in India, which they realise has a good track record in debt servicing, a relatively stable political system and economy.

- pristine:** D: unspoiled; untouched; original; primitive. To restore the 2,500-km long Ganga to its pristine purity, a four-tier Ganga authority is being set up with an apex body to be chaired by the PM.
- psephologist:** C: one who makes a scientific study of election trends, e.g., by means of opinion polls. While journalists went hopelessly wrong in predicting the results of the general elections in 1984, psephologist Pranjoy Roy's prediction came eerily close to the final tally.
- refrain:** A: to hold oneself back; abstain from; check. Each super-power refrains from attacking for it fears an equally devastating retaliation from the other.
- rendezvous:** A: meeting place. The district of Gudalur, which contains the lower slopes of the Nilgiris, is a rendezvous point for the three southern states of Kerala, Karnataka and Tamil Nadu.
- resilient:** B: able to recover from trouble, sorrow, misfortunes, etc; buoyant. Rajiv has inherited a nation that has proved remarkably resilient in times of stress and made steady progress toward easing its perennial problems of poverty and overpopulation.
- shun:** A: to avoid; abstain from. Last year, the percentage of coffee drinkers in the US who shun caffeine soared to 31%, up from 17% in 1978.
- throng:** A: to crowd. Women in black veils and fierce-looking men with Yemen daggers throng the dirty streets of Sanaa, the capital of North Yemen.
- upheaval:** B: great and sudden change. After more than a year of political and economic upheaval following the assassination of opposition leader Benigno Aquino, the signs of hardship in the Philippines are everywhere.
- vogue:** D: popular favour, use or acceptance; current fashion. For the past few years, Europe's drug firms have been in vogue with American investors.
- weary:** C: tired; exhausted. Weary joggers and walkers can now treat their feet to a massage practically anytime and anywhere with a pocket-size device called the Footdoctor.

CIVIL SERVICES EXAM

(Continued from page 16)

papers are of the Matriculation or equivalent levels and are qualifying papers. However, the marks obtained in these papers are not counted for ranking; the General Studies paper and optional subjects of only such candidates are evaluated who attain the minimum standard fixed by the UPSC in their discretion for the qualifying papers on Indian language and English. Hence it is advisable that these papers should not be totally neglected while preparing, and full attention must be given at least in the exam hall.

The optional subjects include Agriculture, Botany, Zoology, History, Law, Sociology, Psychology, Maths, Physics, etc. Though the question papers are set in Hindi and English the candidates have an option to answer them in any of the languages specified in the Eighth Schedule of the Indian Constitution.

The standard of the exams is of Honours level. Candidates are expected to give clear, analytical, comprehensive and complete answers. Though the papers offer some choice, introduction of compulsory questions over the past few years has made it essential that the whole course be covered thoroughly. Besides, the trend is more towards general and comparative questions where the candidate is required to mention, in brief, the salient features of the topic and finally make generalisation or comparison. In brief the exam tests your analytical ability, depth of knowledge and the ability to extract any essential information.

It is advisable that the candidate must follow clearly what is being asked and answer only to the point. A well illustrated and documented answer will certainly fetch good marks.

The General Studies paper covers a wide course including Indian culture, national movement, Gandhi, Nehru and Tagore, current affairs (national and international), Statistical Interpretation, Indian Constitution, Polity, Economics, Geography and Science and Technology in India, etc. All the above mentioned topics are asked in the exams. The aim of the General Studies paper is to help the candidate develop a balanced personality, where he gathers information of all types and takes interest in all important matters—Science or Humanities. He is supposed to know the socio-economic milieu of the Indian masses, the government Plans and their impact on the masses, besides having knowledge of current affairs, inventions, discoveries, etc. The emphasis is not only on gathering information but on analysing the facts and forming an independent opinion. The candidate is expected to see things from an

impartial and unbiased angle, make generalisations and come to conclusions of his own.

Speed is very important in the General Studies paper. The paper is divided into several parts and most of the questions asked are specific and to the point. The candidate's answers must be specific and supported by evidence, diagrams and data, wherever required. The UPSC also helps the candidate by specifying the word limit for each answer.

Interview

Candidates who obtain the minimum qualifying marks required in the written part of the Mains as fixed by the UPSC, are summoned for an interview for testing personality.

The number of candidates summoned for the interview is nearly twice the number of vacancies to be filled up. The interview carries 250 marks (with no minimum qualifying marks). Final ranking of candidates is done on the basis of marks obtained in the Mains ($300 \times 6 = 1800$ marks) and interview (250 marks) i.e. the combined marks obtained out of a maximum of 2050.

Interviews are held sometime in March-May, in New Delhi at the office of the UPSC, Dholpur House. Each candidate is examined by a board of interviewers and allotted marks. A candidate is judged in totality at the interview—his turn-out (outward as well as inner), his knowledge, his expression, his capabilities, his views, etc. Candidates are advised to behave as follows for the interview:

- Dress as usual.
- Be at the interview venue in time.
- Relax. Don't be nervous. Number of candidates called for the interview is just double the number to be selected. You have already covered 1,800 marks and are to be judged only for 250 marks.
- Behave nicely and courteously. Present yourself with a pleasant smile and a polite greeting when you face the examiners.
- It is better to talk a lot and get some things wrong than to say nothing and sit silently.
- While your accent and pronunciation should be as accurate as you can make them, the examiners will really be far more interested in your fluency and understanding.
- There is nothing like right or wrong in most of the answers. What is important is that one must be able to justify opinions or answers.
- Most of the time the examiners are there to help you, so don't face an interview with apprehensions and inhibitions.

A candidate taking due care as outlined above is most likely to find his name in the list of selected candidates taking the UPSC Civil Services Exam.

ELECTION DEBATE

(Continued from page 87)

determination to deal firmly with disrupting elements of the country. The dismissal of the Abdullah Government has raised some controversies, mostly academic in nature, and has failed to stir the common people unlike the events in Punjab.

In Assam, Seikra is relatively successful in consolidating the position of the Congress(I). In Tamil Nadu, the Congress(I) and the AIADMK have entered into a 'marriage of convenience' with the elections in mind. In Nagaland and Mizoram, the position of the Congress(I) has vastly improved. In the by-elections in a 'red-state' like West Bengal, the people are electing many Congress(I) candidates in the left dominated constituencies. On the other hand, the half-hearted attempts of the opposition leaders to unite themselves are not going to materialise easily.

If Mrs Gandhi wants to postpone the elections now, she would have to make an amendment to extend the life of the Parliament. But an image-conscious Mrs Gandhi knows that this would not be a practical move on her part. She always likes to have legitimate authority as her base to rule the country according to her wishes and she is not going to waste the opportunity to do so now. She needs one and a half month to alert the Election Commission about her decision to hold the poll. So we have no reason to be surprised if the elections are held before the first dawn of 1985.

Dipankar Sinha, Calcutta

Second Prize: Rs 100

Marking Time

Mrs Gandhi makes no secret about wanting to see her son Rajiv follow in her footsteps as Prime Minister. Her political manipulations in pursuit of this dynastic dream are now so blatant that they threaten to tarnish the country's image of a true democracy. The dismissal of governments in Sikkim, Pondicherry, Goa, Tripura and more recently, the toppling of the Farooq Ministry and the overthrow of the NTR Government, in spite of the latter enjoying a majority, shows clearly Mrs Gandhi's desire to remain in power at any cost.

It is a well-known fact that the AIR and Doordarshan are mouthpieces of the Congress(I). The mushrooming of TV transmitters just in time when the elections are due, can serve only one purpose—a wide canvas for Mrs Gandhi and her party.

On all occasions, Mrs Gandhi's success depended on a disunited Opposition. The NTR episode, however, gave the Opposition a wonderful opportunity to unite again on a political issue. Whatever prestige Mrs Gandhi might have mustered by the Punjab action, has been nullified by her blatant act in Andhra which provoked countryside protests.

In the south, the people of Tamil Nadu are unhappy by the manner in which the Sri Lanka issue is being tackled by the Centre.

Against this background it may be concluded that Congress(I)'s insecurity in several states will compel Mrs Gandhi to postpone the Lok Sabha elections.

P. Ravi Kumar, Hyderabad

A Coffee Break

SAGA OF THE 10 IFFI

The cinematic world was poised for a major "take". Cameras focussed on the enchanting chairperson, Jeanne Moreau to give the jury's verdict on the best feature film of the year. And when she did, it was "lights", "camera", "action" and thundering ovation! The prestigious Golden Peacock had been won, at the 10 International Film Festival of India (IFFI), Delhi.

The award was to be shared by two feature films—the UK entry *The Bostonians* and the Russian film *Ruthless Romance*. *The Bostonians* also walked off with the best actress award which went jointly to Vanessa Redgrave and Madeleine Potter for their memorable portrayals of the characters Olive and Verena Tarrant. The best actor was Carlos Vereza who rendered an outstanding performance in Nelson Pereira Dos Santos' Brazilian film *Memoirs Of Prison*, based on a novel by Graciliano Ramos. (For other awards see *News Capsule*.)

The two award-winning feature films were selected from a spectacular fare of 23 titles, in the competitive section, unspooled before the jury at Vigyan Bhavan from Jan 3-17. As per the organisers' word, the 10 IFFI is the biggest in its "vauegation of sections", its "proximity of seminars" and generally in all dimensions. Yes, one tends to fully agree with the organisers who had reduced the festival inaugural to the biggest *nautanki* ever witnessed.

Bad Start

Film festivals in India are organised by the Directorate of Film Festivals which is controlled by the National Film Development Corporation (NFDC). This year there was an effort to emphasise the film industry's participation and they were asked to partake the major task of managing the inaugural. The result? Utter disaster. All dignity and decorum was thrown to the winds by the Bombay *filmi duniya* (in mind you, the representation from regional films was absent) who conducted the inaugural in their own box-office hit style. Not once did they pause to think that the world's eyes were on them and that it was an international event.

Was it meant to be a national film star festival when the star-spangled pageantry from the world famous Raj Kapoor down to the small fry Anri Gupta, was made to parade on the dais? To make matters worse the stars were lined up in front of the revered nine-member jury seated on the dais. Could there have been a more inept and underorous way of treating the key personalities of an international film festival?

The situation was muffed up further by Rajendar and Robert Naval who, in the garb of reporters, embarrassed many leading directors by not pronouncing their names correctly and rounding off the announcements with their own names have not been

A still from the award-winning Russian film *Ruthless Romance* about a girl in search of genuine love.

called may also come up the stage". At this stage the Executive Director of Film Festivals, A. Viren Luther, ought to have shrunk under his chair. Besides, there was little or no stress on the presence of foreign guests. Was it because the star presence of Michael Caine and Christopher Reeve was conspicuous by its absence?

Who's Responsible

There can be no second opinion that Luther has to take the entire blame for the mismanaged start to the festival. "The star pageant was not part of the inaugural," Luther claims: "The rehearsal was only up to the lighting of the lamp. It erupted in a spontaneous manner."

Puttana Kanagal, the renowned Kannada film-maker, whose retrospectives were screened at the festival, felt that the responsibility for all the hallaballoo must be borne by the person who heads the festival. Adoor Gopalakrishnan, the eminent film-maker from Kerala, walked out in protest, not because he was not called over to the stage but because "the lining up of the stars, with their backs to the jury, was most unbecoming". Incidentally, the jury members were no less renowned than the chairperson Jeanne (French actress/director) Safi Foye (Senegalese director), Istvan Gaal (Hungarian film-maker), the US director Conrad Rooks of *Siddharth* fame, Serge Losique (Canadian Film Festival President), Vladimir Naumov (Soviet director), Nicholas Roeg (English cinematographer), Shabana Azmi and Soumitra Chatterji.

Asked about the bad start to the festival, Jeanne exuded a sense of cine-diplomacy. "I

am not shocked by the confusion...some people are not used to organising sophisticated festivals.... I am not here to judge your organisation, I am responsible for my work here," she said.

Could the future organisers please get 'used' to organising good film festivals by doing some home-work? Perhaps they can be groomed by expert management bodies like the Indian Institute of Management, Ahmedabad.

Rich Forum

Having crawled out of a bad start, 10 IFFI provided a rich forum for the cross-exchange of cinematic cultures of Third World countries. The focus was on Latin American cinema: Austere in form and obstructed by lack of funds, Latin American directors (*Up To A Point*, *Memoirs Of Prison*) have ably utilised the powerful medium in portraying the miserable life in these countries.

The festival also displayed a notable array of the directorial ventures of world movie moghuls, presented through different sections: the information section, three Indian retrospectives, three foreign retrospectives, a competition section, a section of films from Latin America, black American cinema, the Documedia for documentary and short films and the Indian Panorama. Films of Shohei Imamura, the director from Japan (*Diary Of Sueko*), Alexander Korda, the producer-director from UK and Nikita Mikhlov, the director from USSR were screened. The opening film *Jules And Jim* was screened as an apt homage to Francois Truffaut (director, France)

who passed away a few months ago. Unable to get his latest film *The Last Metro* (1981), a on Truffaut's favourite theme—the inter-relationship between life and art—the organisers opted for *Jules And Jim* because Jeanne who stars in the film was the head of the jury. There was a retrospective of the works of Luchino Visconti (*The Damned*). Three of his classics—*The Leopard*, *Conversation Piece* and *Senso*—are renowned. Bernardo Bertolucci's (*Last Tango In Paris*), *La Luna*, was programmed for the information section. Ironically the film was banned by Indian censors some years back as it dealt with incest. Eric Rohmer's *Full Moon In Paris* was reportedly a let down while Mike Nicholas's *Silkwood* was considered outstanding. The film relates the story of a 28-year-old woman, who is mysteriously killed while on her way to a newspaper office, to deliver an expose to the *New York Times* about the violation of safety rules in a nuclear plant. Franco Zeporelli's *La Traviata*, the screen version of Giuseppe Verdi's opera of the same name, was much appreciated by critics. *Marie's Lovers* by the dissident Soviet film-maker Andrei Mikhailov Konchalovsky was a much talked about film because the director, surprisingly, demonstrates a feel for the

American milieu and temperament. The director's 1979 film *Siberiade* brought him world fame.

Selection Not Classy

The information section entries were considered first-rate. *Where The Green Ants Dream*, *Love Is Dead*, *Swan In Love*, *Full Moon In Paris* and *Secret Is The Best Revenge* were handpicked by critics as really worthwhile. *Secret...*, made by the dissident Polish director, is a searing comment on the current Polish political situation.

The mystery of the selection criteria for the films screened in the festival remains to be solved, for most films in the information section had been shown in other festivals, in the sections other than main. One reason attributed was that the Motion Picture Export Association of America was not participating and the package from independent producers was not festival class. Even in the other sections the aim of promoting the newest in world cinema was not achieved.

The competition section had one feather in its cap. It did fare better than the 9 IFFI where the head of the jury, British film-maker Lindsay Anderson, did not consider any film worthy of the Golden Peacock. This year's winner *Ruth-*

less Romance directed by Eldar Ryazanov tells the tale of a pure and exalted girl who strives for a genuine love, but encounters a cold reckoning resulting in her death.

The Bostonians, the co-winner, is the latest Ivory-Merchant-Jhabwala venture. Based on the Henry James novel, the film interweaves the early pangs of the women's movement with a triangular love story of great intensity, in the last two decades of the 19th century.

The Indian entry to the competition section was Govind Nihalani's *Party*. Only one film was entered though each country is entitled to two. Here again the selection group layed the axe on two significant titles. Kumar Shahni's *Terang* and Ketan Mehta's *Holi*.

The Indian Panorama also came in for much criticism: *Andhi Gali*, a film which was rejected by the regional panel in Bombay was cleared by the Central panel for entry into the panorama. However, there were a substantial number of high calibre films: Kumar Sahn's *Terang*, Nihalani's *Party*, Girish Karnad's *Utsav*—a loosely assembled fable about a courtesan, which ends up showcasing Rekha—Adoor Gopalakrishnan's *Mukhamukham* and *Adaminte Variyellu* by K.G. George—a pro-woman film which profiles a working woman, a

SILVER LINING FOR BLACKS

"Cinema becomes an important tool in terms of giving life to the history of blacks," said Pearl Bowser, a pioneer promoter of black American films. Bowser, a guest at the 10 IFFI, spoke at length on the emerging trends in black American cinema, that had gained critical attention only recently.

Black American films exposing the state of the blacks in the US have been produced by a number of black directors. One such director was William Greaves, an actor and dancer of the forties, whose *Ali, The Fighter* (on Muhammad Ali) was screened at the Black American Retrospective Section at the 10 IFFI. Other films like *Illusions* (directed by Julie Dash), *Body And Soul* (directed by Oscar Micheaux), *Passing Through* (directed by Larry Clark), and *Death Of A Dunbar Girl* (directed by Henry Miller) were also screened.

It was not until 1913 that the silver screen provided a forum for exposing the bitter existence of blacks in America. However, with the emergence of Martin Luther King as leader of the Civil Rights Movement in 1963, a number of black directors took to making black films. But pioneers in the field like Noble Johnson and Ralph Cooper were irrelevant till the opening of the first black film festival in New York in 1969. It was a historical breakthrough for the black directors whose message on the dire state of black Americans was actually received on the celluloid by millions.

Gradually black cinema gained world recognition and in December 1979, it was entered in the International Film Festival held in Nantes, France. Today the black directors have achieved their aim to reach a wider audience and black cinema is acknowledged with much interest and enthusiasm the world over.

THE DOCUMEDIA

The documentary film has generally received a step-motherly treatment, both from film officials and the public. Good documentaries and short films invariably get overshadowed by the glamour of feature films. In commercial theatres the documentary is rendered insignificant by the magnificence of advertisement shorts, which more than appeal to the common man's sense of entertainment.

At the 10 IFFI, however, the documentary film had a room at the top. The festival's directorate sprung a surprise by allocating a separate section called Documedia, exclusively for the screening of documentaries and short films. At last, young and independent film-makers were given a chance to display their talent.

Meera Dewan, a young documentary film-maker, was entrusted with the arduous task of organising the Documedia section. Meera had made her mark in her very first venture, *Gift Of Love*, an anti-dowry film which bagged eight international awards. Meera's *Where Are The Woods* was entered in the Documedia.

"Getting the films was no easy job," says Meera. Foreign film-makers were not interested in sending their works for a non-competitive section with very little scope for after sale. Yet, the Documedia turned out to be the bright spot in the festival. The section comprised an interesting cross-section of retrospective documentaries, accenting themes, rather than the work of individual film-makers. Selected animation films from the National Film Board of Canada (*The Boy And The Snow Goose*), Films Division's films on Indian art and artists (*Akbar and Services Of Trees*) and eight packages of films on 'peace', and other Central American films from the Leipzig festival, were included. Films from Latin America and by Black American film-

makers were also juxtaposed.

The purpose was to negate the indifference with which short films were received in international film festivals; the results were appalling as the audience was exposed to the best trends in contemporary documentary cinema—both in terms of thematic relevance and technical excellence.

The Latin American package needs special mention as it was the main focus of the 10 IFFI. Says Richiv Joshi of the *Daily Telegraph*: "A comprehensive selection of films from points south of the Texas border where poverty is naked and the cow boys are all called 'colonel', was one of the high points of this otherwise dismal festival."

Blood Of The Condors and *Three Crowns For A Sailor* were two powerful films which made an attempt to come to terms with reality without clouding over the form and content.

Among the Indian titles was Shyam Benegal's three-hour documentary *Nehru*. "It was very well received," recalls a dynamic Meera who was instrumental in including the film in the Documedia. Surprisingly the film was not taken into account by the Films Division.

At the seminar on the economics and realities of documentary film-making, the problems facing short film-makers in developing countries was debated upon. The Films Division was censured for its obnoxious method of allocating documentary contracts by inviting tenders. A separate film festival for documentaries and shorts was recommended by Meera.

Meera got a pat on the back from Monika Lisicka, a film promoter working with Film Polski, who had this to say: "...your Documedia was as good or even better than many other festivals." Congratulations Documedia!

neglected housewife and a kitchen maid.

Sex And Violence

The Latin American section proved popular in terms of sale of tickets. Clearly the reason was the hot Brazilian film *Dona Flor And Her Husband Not For Publication* an American film on sex orgy and another title *Parahyba Mulner Mucha* (Macho women) which deals with a liberated woman who does not tolerate social constrictions, were hot favourites. Censorship, apparently has no meaning in the film festival diction!

That brings us to the question of who sees festival films. Not the masses—definitely not. The upper-middle-class who can meet the black marketeers' demands, the media person, and of course the VIPs are the real beneficiaries. The technicians and junior staff who can learn much from good foreign films can manage to enter only by begging or borrowing passes. But the majority is left out en masse and the pretentious viewers who take pleasure in raving over the fact that they "attended an international film festival", are the ones who occupy the best seats. That's the Film Directorate's handiwork.

Yet, the trend goes on festival after festival. Good viewing and bad viewing and the usual festival *hنگema* is now part of India's cine-culture.

PAST PERFORMANCES

International film festivals are over half-a-century old. The world's first festival was held as part of biennale in 1932, and remained so till 1934, becoming thereafter an annual event. After World War II the concept spread on an international scale with Cannes taking the lead in 1946. Today, films have become a patent media of communication and entertainment and, most important, are a powerful force to reckon with as instruments of social and political change. That accounts for the enthusiasm with which over 200 festivals are celebrated round the globe.

The major competitive film festivals as recognised by the International Federation of Film Producers Association (IFFPA) are held in Berlin, Cannes, India, Manila, Montreal, Venice and Moscow alternating with Karlovy Vary. In India, the first International Film Festival was held from Jan 24 to Feb 1, 1952 in Bombay. This was a non-competitive festival with 21 participating countries who entered 40 feature films and 100 short films.

The second non-competitive film festival was held in New Delhi from Oct 27 to Nov 9, 1961 and was organised by the Ministry of Information and Broadcasting in close cooperation with the Film Federation of India. About 90 features and 50 short films from 38 countries were entered in this festival.

The third competitive International Film Festival of India (3 IFFI) was held from Jan 8-21, 1965 in New Delhi. It was recognised as an 'A' class festival at par with those held in Cannes, Berlin, Venice, Karlovy Vary and Moscow by IFFPA. About 30 countries participated in the festival entering 19 feature films and 20 short films. A jury headed by Satyajit Ray awarded the top prize, the Golden Peacock, to the Sri Lankan feature film *Gam Peraliye* (A Family Chronicle). The Golden Peacock for the best

An oasis in the desert: Suhesini Mule in *Bhuvan Shome* which was acclaimed by critics at the 4 IFFI.

short film was given to Cuba's *Cyclone*.

The 4 IFFI was held after a span of about five years. The festival was again organised in New Delhi from Dec 5-18, 1969. In the competition section, 20 feature films and 18 short films were entered and 32 countries participated in the festival. The jury headed by Raj Kapoor awarded the Golden Peacock for the best feature film to the US entry *The Damned. Taking Off At 1800 Hours* from Cuba was awarded the Golden Peacock for the best short film. It is notable that India's *Bhuvan Shome* won laudatory remarks from critics. A retrospective of Indian cinema (1913 to 1969) was one of the sidelights of this festival.

The 5 IFFI was held in New Delhi from Dec 30, 1974 to Jan 12, 1975. About 46 countries with 142 feature films and 69 short films participated in the festival. It was decided that the festival be held regularly in alternate years. A permanent insignia, a stylised representation of a peacock, India's national bird and a permanent logo of the festival *Vasudhaiva Kutumbakam* were initially adopted at this festival. The jury, headed by Satyajit Ray, adjudged the *Dreaming Youth* (Hungary) and the *Automatic* (Czechoslovakia) as the best feature and short films respectively which were awarded the Golden Peacock. Apart from the customary awards, the CIDALC award for the Indian feature film *Garam Hawa* and the UNICRIT award for *The Brutalisation Of Franz Blum* (GDR) and *Kaadu* (India) were given away.

Sponsored by the Film Finance Corporation, organised by the Directorate of Film Festivals Information & Broadcasting Ministry in collaboration with Indian Motion Pictures Export Corporation (IMPEC) and Indian film industry, the 6 IFFI was held in New Delhi from Jan 3-17, 1977. About 53 countries with 249 films participated in the competition, information and short film sections. Japan's *Mon And Ino* and India's *After The Silence* won the Golden Peacock for best feature and short films respectively. The festival jury was headed by Satyajit Ray. Silver Peacock for the best actor, actress and director were awarded for the first time.

The 7 IFFI was held in New Delhi from Jan 3-17, 1979. A total of 169 feature and short films from 35 countries were received for screening in four sections, viz. competition, information, tribute and Indian Panorama. In the tribute section films made by three celebrated directors—Claude Chabrol, Andrei Tarkovsky and John

Ford were screened. The Indian festival is the only one to have organised this posthumous tribute to the American veteran Ford. The Indian Panorama consisted of 21 feature films selected from various Indian languages. This time the international jury was headed by Ousmane Sambene of Senegal, the first non-Indian to head the jury. Two women members were also on the jury for the first time. The jury adjudged *Hungarians* (Hungary) as the best feature and *An Encounter With Faces* (India) and *Olympic Games* (Poland) as best short films for the award of Golden Peacock. The best actor, actress and director were also chosen for the award of Silver Peacock. For the first time a Special Jury Prize was given for the Indian film *Gaman*.

The 8 IFFI was held in New Delhi from January 3-17, 1981. A record number of 61 countries with 167 feature and 64 short films participated in the festival. Besides the competition and information sections, there was a foreign retrospective section, Indian panorama and a market section. Out of 24 feature films and 13 short films selected for the competition section, the Golden Peacock for the best feature film was shared by *The Unknown Soldier's Patent Leather Shoes* (Bulgaria) and *Aakrosh* (India), while *A Period Of Transition* (India) received the Golden Peacock for the best short film. Silver Peacock awards for best actor, director (feature and short) and two Special Jury Prizes were conferred by the jury.

The 9 IFFI was organised by the Directorate of Film Festivals under the NFDC in New Delhi from 3-17, 1983. Over the years, Indian festivals have become a major forum for the Third World cinema with as many as 22 Third World countries participating in the festival. About 51 countries participated in the festival with over 200 feature and short films. Apart from competition, information, tribute, Indian Panorama and film market sections, a new section for the screening of 16 mm films was added. In the competition section, 24 feature and 10 short films were screened. However, the festival was dampened by the fact that no film was found upto the mark for winning the Golden Peacock. The Silver Peacock for feature films were given by the jury headed by Lindsay Anderson to the best actor, actress and director. Two feature films were selected for Special Commendation by the jury. In the short film section the Silver Peacock was awarded to the best director. A Special Jury Prize was given in this category.

SPORTS QUIZ-40

BY NAROTTAM PURI

BY RANI P. SOMAN

WIN RS 100 IN BOOKS

WIN RUPA PAPERBACKS

1. How many times has the Himalayan Car Rally been held?
2. Who 'won' the rally this year?
3. With which sport is the Auty Trophy associated?
4. Name the titles of the three books written by Gavaskar.
5. Who wrote *The Fast Men* and *The Slow Men*?
6. Who is the last bowler to take his tally of Test wickets to 250?
7. Who are the holders of the Wightman Cup in Tennis?

PRIZES

SPORTS QUIZ-40:

2 First Prizes

Sports books worth Rs 50 each from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no *all-corrects*) pulled out of the hat.

Plus 5 Consolation Prizes worth Rs 20 each from **Rupa & Co.**

KENWORDS-40:

2 First Prizes

100 Great Books from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no *all-corrects*) pulled out of the hat.

Plus 5 Consolation Prizes—Arthur Hailey's *Strong Medicine* from **Rupa & Co.**

HOW TO ENTER

● Print the answers neatly in capital letters along with your name, age and address. Each crossword must be pasted/clipped to a larger piece of paper.

● You may send in any number of entries, but each must be numbered accordingly and accompanied with its respective **COUPON**.

● Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the two contests: March 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions to this issue's contests will be published in May.

ACROSS

1. This world-renowned statesman received the Jawaharlal Nehru Award for International Understanding for 1983 (7).
4. The American artist who introduced the Boy Scout movement in the US (5).
6. The fifth sign of the zodiac in astrology (3).
7. Mountain pass between the Rhaetian and Lech Alps in Austria which is pierced by one of the longest railway tunnels in the world (7).
9. A heavy-jawed hound (6).
11. A Roman Catholic priest who, as Chancellor of Austria from 1922-24, stabilised currency (6).
14. You say one hundred thousand or one—(4).
16. An Indian term for a wayside inn (5).
17. A result of the rotation of the earth round its axis (3).
18. Better known as Marilyn Monroe (5).
19. *Izvestia* is a—newspaper (7).

DOWN

1. This lake in central Uganda contains the only navigable sections of the Victoria Nile (5).
2. Nickname for male comedian who does feminine impersonations, goes up (5).
3. The first two American astronauts to take a ride in the first US space shuttle Columbia (launched in April 1981), were Robert Crippen and John—(5).
4. Type of French medieval song with verse

5. A unit of the intensity of sound (7).
8. Distinguished British scientist, with many inventions to his credit connected with wireless, television, coal and petrol engines, anti-aircraft and anti-tank rocket apparatus (3).
9. Shakespeare wrote *The Merchant Of Venice* but he wrote *The Stones Of Venice* (1, 6).
10. One of a family of spiny, termite-eating mammals, allied to the platypus, found in New Guinea and Australia (7).
12. Air India is analogous to—of Pakistan (1, 1).
13. Official language of the English Hungarians whose official name is Magyarország (6).
14. This gulf in N.W. Mediterranean, on the coast of S. France lies between Pyrenees and Toulon (5).
15. The fifth of the Abbasid Caliphs of Baghdad immortalised in the stories of the *Thousand And One Nights* as the Caliph presiding over a splendid court (5).

PICK OF THE MONTH

THE FATEFUL NUMBER SIX

Certain numbers are very important in the life or the destiny of a person. The number six, dominated the entire life of Indira Gandhi.

Indira Gandhi's first name, surname, the name of her husband, Feroze, her son, Sanjay, his wife Menaka, Mrs Gandhi's childhood heroine, Jeanne, and her country, France, each consists of six letters. She spoke six languages: English, Hindi, Bengali, Gujarati, French, and German. The name of her father Jawaharlal Nehru, and the house where she stayed with him, Teen Murti Bhavan, each have 15 letters; $1+5=6$. Her blood group is "O", the 15th letter of the alphabet.

Her political career was no different. She became the President of the Congress Party in the year 1959 ($1+9+5+9=24$; $2+4=6$).

The age at which she became the President of the Congress Party was 42 ($4+2=6$).

The year in which she became the Prime Minister of India was 1966. (The last two sixes are

worth noting. This could happen only once in a 100 years).

The date on which she became the Prime Minister was January 24 ($2+4=6$). The year when she won her most sweeping electoral victory was 1971 ($1+9+7+1=18$, i.e. $6+6+6$). 1971 was also the most important period in her whole political career when she stood at the peak, won the war against Pakistan and played a major role in the liberation of Bangladesh.

The only time she lost the elections in her whole political career was 1977 ($1+9+7+7=24$; $2+4=6$).

Her age when she lost these elections was 60 years ($6+0=6$).

($1+9+6+0=18$; $6+6+6$). The number of Lok Sabha seats contested by her party in 1980 was two-thirds which is 66.66%. Her son, Sanjay, died in an air crash in

the month of June, which is the sixth month of the year, and the year in which he died was also 1980. The number of years for which she was Prime Minister of India was 15 ($1+5=6$).

The place where she stayed as the Prime Minister of India, 1, Safdarjung Road consists of one numeral and 14 letters, that is 15 altogether ($1+5=6$).

The state which gave her the toughest challenge of her career was Punjab (6 letters).

The most important person in the Khalistan movement, who got killed in the army action taken by her in the month of June (the sixth month) and the person whose death was stated to have been

Jarnail Singh Bhindranwale whose name is made up of 24 letters ($2+4=6$).

In the assassination, too, we find a most uncanny domination of the number six. The first assassination of an Indian leader was of Mahatma Gandhi in the year 1948. The second assassination of a major Indian leader was that of Mrs Gandhi in 1984 (1948 and 1984 have the same figures only 4 and 8 have changed positions). The difference between the two assassinations is 36 years (which is 6 times 6).

Mrs Gandhi's age at the time of her assassination was 66 years. She is the 15th ($1+5=6$) head of state or government to be assassinated after World War II. The official news of her death was broadcast over AIR at 6 p.m. She was killed by a bullet (6 letters). The number of days of national mourning for her death was 12 ($6+6$).

The last person with whom she was to have an interview was Peter Ustinov (12 letters, that is, $6+6$). The state which she visited last was Orissa (6 letters).

Such a predominance of this number cannot be dismissed as mere coincidence.

FATAL PROPHECIES

People Who Predicted Their Own Deaths

St Malachy, Irish: Ireland's greatest prophet, predicted both the time and place of his death - All Soul's Day at Clairvaux, France

Joan of Arc, French: When she was captured by English soldiers, Bishop Cauchon, one of the judges who presided over her trial, asked Joan when she thought she would be delivered from imprisonment. She told him to return in three months to bid her out. On May 30, 1431, three months later to the day, Joan of Arc was burned at the stake and "delivered" from imprisonment.

Thomas Wolsey, English: When Cardinal Wolsey failed to convince Pope Clement VII to grant Henry VIII of England an annulment of his marriage to Queen Catherine, his fate as a leading statesman was sealed. He was arrested. Down with dysentery, Wolsey had to rest at a monastery in Leicester. He remarked to the Abbot on entering the monastery: "I am come to lay my bones among you." On the morning of the second day of illness, Wolsey asked what time it was. When told it was 8 o'clock, he said: "That cannot be, for at 8 o'clock, you will lose your master." The following day, precisely at 8.00 a.m., Wolsey died.

Spencer Perceval, English: PM of Britain from 1809 to 1812, Perceval foresaw his own death in a dream he had on the night of May 10, 1812. In the dream, he was accosted in the lobby of the House of Commons by a man wearing a dark green coat with brass buttons. The man appeared half-crazy and waved his pistol menacingly towards Perceval. There was a shot

and everything went black. Perceval told his friends and family about the dream, but despite their warnings, left for work as usual. As predicted, he was shot and killed by a man wearing a green coat with brass buttons in the lobby of the House of Commons. Ironically, the assassin had intended to kill another member of the House of Lords, who had ruled against him in an embroiled suit. Perceval's murder was a case of mistaken identity.

Abraham Lincoln, American: On the evening of 1865, the President was in a particularly melancholic and quiet mood. He spoke philosophically about dreams for a short while, then mentioned a recent one that continued to disturb him. He went on to describe the dream.

There seemed to be a death-like stillness about me. Then I suddenly heard subdued sobs as if a number of people were weeping. Determined to find out what was going on, Lincoln wandered from room to room of the White House until he reached the East Room. There, he saw a corpse wrapped in funeral vestments, surrounded by mourners. "Who is dead in the White House?" Lincoln demanded. "The President. He was killed by an assassin," came the reply. This was followed by a loud wailing which woke Lincoln from his dream. Only a few days after Lincoln related his dream, he was shot and killed by John Wilkes Booth while attending a play at Ford's theatre.

Mark Twain, American: America's most beloved humorist was born in 1835 on the same day that Halley's Comet appeared in the sky. Seventy-three years later, in anticipation of the return of the comet, Twain said to his friend and fellow-writer A.B. Paine: "I came in with

Halley's Comet in 1835. It is coming again next year, and I expect to go out with it. It will be the greatest disappointment of my life if I don't go with Halley's Comet. The Almighty has said, no doubt: 'Now here go those two unaccountable frauds; they came in together, they must go out together.'" Twain was not to be disappointed. Halley's Comet lit up the sky on Apr 20, 1910, and Twain left with it the following day.

Arnold Schonberg, Austrian: The famous composer was obsessed with the number 13. Born on Sep 13, he became convinced in later life that he would die during his 76th year, because the numbers 7 and 6 totalled 13. Even worse, Jul 13 of that year fell on Friday, a traditional harbinger of bad luck. That day, Schonberg remained in bed, firmly believing that his end would come soon. The day passed uneventfully, however, and late that night his wife visited his bedroom to reassure him that it was foolish of him to have worried. As she entered the room, Schonberg uttered the word 'harmony' and died—at exactly 13 minutes before midnight.

Grow Hunt, American: A Pennsylvania dairyman, Grow Hunt was known for his antics and his boisterous spirits. When Hunt's wife died in 1923, he ordered two monuments to be built—one for her and one for himself. On his monument, he requested that the year of his anticipated death, 1938, be inscribed. Although the workman protested, Hunt had his way. Just as he predicted, Hunt died 15 years later in 1938. He was buried next to his wife in a cemetery in Austinburg where the markers still stand.

K.V. Ravi Chandra, Vijayawada
Compiled from *The Book Of Predictions*

From The Club Desk

Your response to the renewal of Club Desk has been delightfully overwhelming. Several new clubs have been added to the CCTimes Clubs list which reflects the enthusiasm and initiative you young people possess. But the mere forming of clubs is not enough. So start activating your clubs—and keep us fully informed about the activities your clubs are engaged in.

We have, however, received more letters asking about the rules and regulations to be observed while forming a CCTimes Club. And for those people—a CCTimes Club is a club formed by you exclusively through dint of your efforts and enterprise. If you are desirous of forming one, just look around for others as enthusiastic about improving their personal and career prospects—join together and form a club. No enrolment fee of any sort is required. Give your club a name and inform us so we can register your club. Send us the names of your members too and we'll send you membership cards. And thereafter, organise activities designed to encourage the development of your overall personality in any way, e.g. group discussions, debates, quiz programmes. If you are desirous of more details, refer to our Jan '85 issue.

Some of you have also enquired about your membership cards. Membership cards upto the letter 'M' have already been dispatched. Those who haven't received them yet please inform us so that necessary action can be taken.

Now onto the activities of a few clubs who have sent in their Club News to us. The Thrill Seekers Club in Amritsar organised an on-the-spot creative writing competition including essays, short stories and poetry. The competition was open to all students of their district. Then, the CCTimes Club in Choudhena (Bhojpur) held a quiz contest related with scientific inventions, discoveries and cricket. It also organised a discussion "Importance of forming a CCTimes Club in the context of the present day competitive world of jobs and careers." And the Akhil Bharatiya Vikas Sangathan, a CCTimes Club in Meerut, is engaged in eye-donation campaigns under the Times Eye Research Foundation. Since none of the clubs has really organised novel activities, we don't think any club merits the "Club of the Month" title this time. But don't be disheartened. Keep working and informing us—and please try to send us accompanying photographs. In fact, preference will be given to such letters and so you'll stand a better chance of winning too. Good luck for the month ahead.

THE LETTER 'D'

Delhi

1. Dhanaya Club

HAIR-RAISING REMEDY

Medicated hair tonics for the bald have resulted in sales boom for the tonic priced at 4,800 yen (\$21) per bottle, giving lie to the old adage that there exists no cure for baldness. The market has already grown to 23b yen (\$100m) and is expected to rise at double-digit rates in coming years.

Winning Entry—1984

Ashok Jain Award For National Awareness Advertising

**Your
daughter
will never be
as good
as a son,
unless
you give her
a chance.**

For centuries, the Indian woman has lived up to a pre-ordained image. She has cooked and tended, borne children and adversity with equal patience, suppressed her individuality, frittered away her native intelligence in daily chores. Because that was the role given to her. She had no education, no opportunities and no choice in the matter. She was glorified and then treated like a second-rate citizen. In the context of the 20th century, and an India poised for the future, do your bit to emancipate the Indian woman, and give her the opportunity to gain knowledge and the freedom to use it. Start with your daughter.

**Your country
needs
your conscience.**

Issued in the national interest by Bombay Dyeing

INSTA-MEMORY

The trouble with most memory systems is that they try to train your memory without removing the mental 'road blocks', without activating its inherent power, without giving it a chance to come into its own. The result usually is disaster... no real gain beyond (perhaps) a bag of memory tricks for after-dinner entertainment

INSTA-MEMORY is Permanent Memory. Because Insta-Memory does not give you awkward and troublesome memorization gimmicks. Instead, you'll learn the Extrasensory Instant Recall Technique that literally turns your memory into a power-packed mental magnet... makes forgetting virtually impossible.

INSTA-MEMORY is Automatic Success Power. In just a few hours after you master the simple Insta-Memory secrets, you'll be able to instantly memorize 20-digit numbers like 18765439086543214569 and recall them effortlessly a month later. Remembering telephone numbers and names will be no trouble at all.

INSTA-MEMORY is Effortless Memory. Insta-Memory requires no energy-draining efforts... no memorization... no word associations... no key words... no will power... no positive thinking tricks. In fact, no super-human efforts on your part!

Institute of Human Dynamics is a division of Business Development Associates.

INSTA-MEMORY is Result-oriented Memory. Insta-Memory will help you to master...

- Fool-proof Cure for Forgetting
- Secrets of Extrasensory Instant Automatic Recall
- Techniques of Automatic Mind Search and Memory Scanning
- Art of Controlled Intuition and Mind Storming
- Ways of Strengthening Powers of Observation
- Craft of Instant Speed Reading
- Winning 'Exam Secrets'
- Public Speaking without Nervousness
- Dynamic Personality and Confidence Building
- Secrets of Extrasensory Perception

Plus, a whole wide range of tips on how to gain greater success, prestige, popularity and recognition.

INSTA-MEMORY—U.S. Best Seller at Rs. 120/-... now yours for less than 1/2 the original price! Thanks to our exclusive association with the New York Institute of Personality Development, we are now able to offer you INSTA-MEMORY at 1/2 the original U. S. price (\$15). It will cost you no more than the price of a medium-priced briefcase: only Rs. 54/- (plus Rs. 6/- for postage, packing, handling). And you've our 7-day Full Satisfaction Guarantee—you pay nothing if not absolutely delighted!

Amazing Testimony about Insta-Memory—straight from U.S.A.

"I have had tremendous improvement in my job - my superiors are astounded with my super memory," — Mr. H. D. (New York.)

"After going through your course I am a very different person!" — Miss P.K. (Bombay)

"Insta-Memory has helped me to gain a new type of self-confidence" — Mr. S.P. (Poona)

INSTITUTE OF HUMAN DYNAMICS
(CCT-1) 3/305 Navjivan Society,
Lemington Road, Bombay 400 008

Yes! Please rush me your astounding INSTA-MEMORY Course by V.P.P. I will pay postman Rs. 54/- (Plus Rs. 6/- for packing and postage.)

I understand if I am anyway dissatisfied, I shall return the course within 7 days for a full refund (less packing and postage)

Ashok Jain Award For National Awareness Advertising

**Your
country
needs
your
conscience.**

Ulka Advertising, Bombay (Meera Pillai and Subhash Tendle)

Citizenship is not just being. It is doing. Every action of yours adds up towards the greater welfare of the country. And the country's welfare rests in the unity and singularity of purpose of her people. The expression of is national integration. What does it mean? A good way to start defining it would be to understand what it does not mean. It does not mean prejudice: communal, linguistic or religious. It does not mean stand up against your compatriots, when you should stand up for them. It does not mean putting immediate individual motives above the needs of the nation. It means a little sacrifice and great love. For India and the Indian.

ADMISSION-NOTICE FOR

GOVERNMENT OF INDIA & UNION STATES— RECOGNISED DIPLOMAS & DEGREES.

Applications are invited from employed/unemployed Boys & Girls for the following Engineering & Management Correspondence Courses and eligible students for IIT/ JEE & M.B.B.S. Entrance Exams.

ENGINEERING COURSES

1. GRADUATESHIP (B.E.): A.M.I.E. (INDIA) - Studentship Section A&B in Chemical, Civil, Electrical, Electronics & Communications, Mechanical, Metallurgical & Mining Engineering.
2. GRADUATESHIP (B.E.): A.M.I.E.T.E. (INDIA) Section A&B Tele. Com. & Electronics.
3. GRADUATESHIP (B.E.): SURVEYOR.
4. GRADUATESHIP (B.E.): A.M.Ae.S.I. AERONAUTICAL Studentship Section A&B.
5. GRADUATESHIP (B.E.): A.M.I.M.E. (INDIA) MECHANICAL Studentship Section A&B.
6. GRADUATESHIP (B.E.): C.E. (UK) In Civil, Chemical, Electronics & Radio, Fuel Engineering, Marine, Mechanical, Production, Naval Architectural & Structural Engineering Part I & II.
7. GRADUATESHIP (B.E.): A.M.I.I. CHEM.E (INDIA), Studentship Section A&B.
8. GRADUATESHIP (B.E.): I.I.M. (INDIA) - Metals Engineering Part I & II.
9. GRADUATESHIP (B.E.): INDUSTRIAL ENGINEERING.
(ALL THE ABOVE COURSES ARE RECOGNISED BY THE GOVT. OF INDIA & ALL INDIAN UNION STATES AS EQUIVALENT TO B.E. OR B.Tech. EVEN AFTER PASSING ANY OF THE ABOVE COURSES, STUDENTS ARE ELIGIBLE FOR ADMISSION TO M.E. M.Tech. COURSES OF INDIAN UNIVERSITIES).
10. GRADUATESHIP, AUTOMOBILE: A.M.I.A.E. Studentship Section A&B.
11. DIPLOMA IN REFRIGERATION AND AIRCONDITIONING.
12. GOVERNMENT AGRICULTURE ENGINEERING.
13. STATE BOARD OF TECHNICAL EDUCATION Govt. of Andhra Pradesh, Tamilnadu, Kerala States - Diplomas in Civil, Mechanical & Electrical Engineering.
14. CITY & GUILDS ELECTRICAL DIPLOMA - C.G.I.A. (LONDON).
15. CITY & GUILDS (LONDON) RADIO & T.V. COURSE.
16. GOVT. OF INDIA RADIO OFFICERS COURSE, C.O.P. CLASS I & II.
17. DRAUGHTSMAN - CIVIL & MECHANICAL Engineering.
18. A.M.I.M.I. (India) Motor Industry (Diploma in Automobile Engineering).

MANAGEMENT COURSES

1. GRADUATESHIP COURSES OF A.M.I.B.M. PART A & B.
 2. A.I.B.M. DIPLOMA IN BUSINESS MANAGEMENT.
 3. GOVT. OF INDIA COMPANY SECRETARY EXAMINATION — In Intermediate & Final.
 4. I.C.W.A. (INDIA) — Intermediate & Final.
 5. I.C.M.A. (LONDON) — Part I, II, III & IV.
 6. CHARTERED SECRETARY (LONDON) Part I, II & III.
 7. CHARTERED ACCOUNTANT (C.A.) Entrance, Intermediate & Final.
- ADMISSION QUALIFICATIONS:** Matric/S.S.C./H.S.C./P.U.C./Intermediate/Graduate/ Diploma in any Branch or Graduates in Engineering with any Subject.

IIT/JEE & M.B.B.S. ENTRANCE -1986

Effective, programmed postal instruction designed to get you through at first appearance depending on your own speed of learning and effort.

BENEFIT BY THESE ADVANTAGES: Expert Training by highly qualified and experienced Staff. Career Guidance. Excellent library. Arrangement for Practicals all over India. Supply of lessons and free course material books.

TAKE THE ICS ROAD TO SUCCESS

This is not only one of the oldest and most reputed institutions in India, but the only one to give maximum individual attention to students. Seats limited. Examination Centres all over India & abroad. All subjects are taught from the beginning and instruction is keyed to the pace of your learning. These are all factors which have attracted thousands of Indian & Foreign Students and continue to do so. For detailed prospectus & admission form send Rs. 20/- for Engineering Courses, Rs 15/- for Management Courses & Rs. 5/- for IIT & M.B.B.S Entrance Examination Courses by Money Order to the Principal.

The Useful Ages

Down The Ages (Mar '85) was a useful exercise in Indian history. It is an excellent ready reckoner for objective-type exams.

Bhooshan Shende, Nagpur

Timely Education

Thanks for educating us on the importance of time (*Hello Folks*, Feb '85). In India we have time, material and money, all lying in a chaotic condition. If we design things suitable to our country we could overcome poverty—the main reason why most of us, equipped with the material culture, have not been able to utilise time constructively.

Narottam Kela, Sanawad (MP)

The importance of time management should be taught right from childhood so that when a child grows up, this quality becomes an intrinsic part of his or her personality. Parents can be very helpful in this regard by practising what they should conscientiously be preaching.

Sanjay E. Silas, Agra

It's Great!

Nehru was born great, India achieved greatness and, Rajiv has greatness thrust upon him.

Harshavardhana, Darbhanga

Free For All

Equal opportunities for unequal? Well, that's Sanjay Kumar has a way of helping those excluded from appearing in competitive exams.

Institutions of higher learning in India, and abroad, conducting entrance exams for admitting students into their respective institutions, have set standards of minimum marks essential for being eligible to take the exams.

But according to our reader, as long as the candidate fulfils the basic qualifications necessary, marks should not restrict him from competing with the others.

How would you see his point? May be you have other ways of looking at the problem. Do wake your grey cells a little and send in your views, in about 150 words, to our *Letters* page. We shall publish them in our issue.

Top Secret

Things have come to such a pass (*Net Around Spy Ring*, Mar '85) that TOP secret only means Top Official Purchasable secret.

Vinod Kumar Sinha, Varanasi

(Un)reserved Seats

The advertisements need no longer specify the percentage of reservation for SCs/STs. They can just specify the percentage of left-over seats for the majority.

S. Aruna Chari, Baroda

The anti-reservation stir in Gujarat is nothing but the failure of the state governmental machinery. The government neither remains loyal to backward people nor avoids them completely.

Nilesh Ganatra, Rajkot

The politicians are not thinking of the adverse effects of reservations. Indirectly they are provoking and increasing laziness and illiteracy, which in turn could weaken the educational standards of our country. At least the policy of reservation of seats in professional courses must be reviewed immediately.

O. Seshasai, Kakinada (AP)

Danger! Beware!

Industrialisation and development are ways of slow poisoning; men should be aware of their implications.

Anand Mukherjee, Satna (MP)

The Renaissance

Right now we need a country-wide debate on how to bring about all-round moral and ethical renaissance.

Rajiv Ranjan, Dhanbad

India is passing through a critical phase and all eyes are fixed on her destiny, irrespective of the election results. Patriotism is not the monopoly of a particular sect or community. It is nationalism that creates patriotism which has become outdated due to the growth of internationalism and universalism.

R. Surendranath, Nallore

Honesty Displaced

"A good officer is one who is honest," says the former PNB Chairman and MD, S.L. Baluja (Nov '84). How come he has now been displaced? Is it for showing his brand of honesty?

K.J. Johnny, P.O. Valapad, (Kerala)

Technical Waste

The technical graduates who compete for the IAS are only wasting their hard earned technical skill. They must be advised not to waste their skills by browsing through official files.

Subrat, New Delhi

Super Social Animals?

Despite repeated requests the superpowers are not inclined to stop accumulating nuclear weapons. In an environment, where even a wild animal can smell as petty a thing as a bone, why can't the superpowers smell the destruction of mankind as a result of a nuclear war? Is it

because they are 'social' animals?

Yogesh Kalra, New Delhi

Raising Teachers?

The designers of the new education policy should see that competitive exams are held for the selection of teachers, throughout the country, and the job of teaching is made as lucrative as any other coveted job, because today those who don't get anywhere become teachers. This trend must change.

Rajiv Kumar, Ranchi

The Budget Boomerangs

The sharp increase in the prices of kerosene and gas, envisaged in the budget, would affect the middle and the lower middle classes. Further, the increase in the excise duty on writing paper and printing paper will affect the book trade and also the student community. Besides, the rise in the excise duty of cement will affect house construction and also boost the cost of ongoing projects.

K. Mohan, New Delhi

Victory Of Democracy

The recent state Assembly elections have once again proved the astonishing maturity of Indian voters who have shown that they cannot be taken for granted. And the victory has been that of our cherished democratic norms.

Deepak Kapoor, Rohtak

In the absence of a national alternative to the Congress (I), our Democracy is drifting helplessly towards regionalism. And once regionalism sets in, nationalism will be buried for good. Therefore, only such political parties should be constitutionally recognised as can field candidates for at least 3/4th of the seat in the Assembly and the Parliament. This will also force the opposition parties to unite and form a national alternative to the Congress (I).

Kinshukanand, Netarhat

Errata

Current Events : National (Mar '85) wrongly stated that the Assembly elections in MP were held on Mar 5. They were actually held on Mar 2.

The Quarterly Review (Mar '85) has misspelled the name of the ex-Lt Governor of Delhi. It is P G. Gava and not P. S. Gava.

The value of the Nobel Prize money is \$192,000 and not Rs 1.92.000 as wrongly stated under the columns of G.K. (Apr '85).

The name of D.G. Phalke has been wrongly spelt as P.G. Phalke (Apr '85).

The errors are regretted.—Editor

WIN A PRIZE

Do our articles provoke you to say something? Is there anything else you feel strongly about? Here's your chance to say it and make some money in the bargain. The best letter will win Rs 40, the second Rs 25.

So, why don't you get cracking?

Your letters should be legibly written/typed, not exceed 200 words and include your full name and address. We may edit them for purposes of clarity or space.

Hello folks...

Creativity, the quality of employing a playfully exploratory rather than a mechanical process of problem solving, is very necessary to be a success in life. Unfortunately, many are unaware of this and, therefore, make no efforts to develop creativity. They are, thus, unable to find solutions that are both novel and useful.

Realising the importance of creativity, I searched for some material on the subject. Fortunately, I could lay my hands on *Fourth Eye* by Pradip N. Khandwalla (A.H. Wheeler and Co. (P) Ltd., Allahabad). The book aims at helping people "transcend their limitations and actualise their creative potential". It examines various aspects of creativity and the techniques of finding better solutions to problems.

Creativity is not just one ability; it is a cluster of abilities. The various abilities are: attentional fluency, which measures the ability of a person to come up with a large number of brief solutions to one given problem; flexibility, the ability to provide a large variety of solutions, to respond to a problem from a variety of viewpoints, and to use a variety of approaches in solving problems; originality, the ability to come up with unusual but appropriate responses (a related ability being coming up with novel relationships between ideas); problem sensitivity, the ability to sense problems, to notice the unexplained, the unsatisfactory or the incongruent; the ability to grasp the causes and visualise the consequences; the ability to elaborate on a theme; which is indispensable in putting a creative idea to work; and lastly, the ability to restructure problems, to see beyond the superficial features of problems and identify what the real problem is. These abilities are not all found in equal measure in the same individual.

Creativity in many persons is inborn. However, those who are serious and

diligent can develop this quality. It needs a high degree of motivation, appropriate training and an encouraging environment. High degree of success can be achieved through the creation of a cultural environment. This can be done by taking up some creative hobby or activity, by finding creative friends and, if possible, by getting into a more creative job or occupation.

There are several ways of promoting and planning creative thinking. Certain techniques suggested by the author are:

- Structure the problem so that it is well understood.
- Separate the phase of idea production from idea evaluation. Do not evaluate or criticise ideas, whether one's own or another's, during the time of their articulation.
- Ideate copiously. Churn out a large number of ideas, firstly because this heightens the possibility of coming up with some really good ones and secondly to let one idea lead to another and still another, and so on, like a chain reaction.
- Create constructive psychological strength by continuously moving from the familiar to the unfamiliar situations and back to the familiar.
- Force wide shifts of perspective by asking such questions as what would be the opposite of the current solution; how could we magnify or unify the solution or is there a radically different way of looking at the problem? Having generated a large number of ideas or solutions, identify the ones with the greatest potential by some sort of assessment or selection procedure.

Khandwalla has mentioned a number of techniques of creative thinking. Brainstorming is the most important. It is based on the principle that quantity begets quality; so, to get many ideas it is necessary to suspend evaluation of ideas during the idea generation phase. However, brainstorming is useful as a technique where the problem has a unique solution that can be reached by analysis. Although brainstorming is done in groups, it can also be done by individuals. Brainstorming is not just a technique, it is a culture. It is a clear message that for divergent thinking at least, democratic and collaborative culture works. Brainstorming increases self-confidence.

The significant technique of creative thinking is attribute listing. It is useful for designing and redesigning a specific activity. In attribute listing, the attempt is first made to list the basic attributes or properties or specifications of a particular object or activity. Then an attempt is made to

generate alternatives to the current attributes or specifications.

The third technique is synectics which has been adapted from the Greek word *synecticos*, meaning 'fitting together diverse elements'. It is a remarkable technique of solving problems at the group level, and to a non-initiate, it looks like a mad method of finding solutions.

Creativity can be improved with the help of several tools.

- Effective listening: Listen carefully and patiently to others.
- Empathy: Suspend your critical faculties while the other person is struggling to express himself.
- Clarificatory questions: If the problem being discussed is not very clear, try to bring the problem into sharper focus by asking questions such as what do you see as the problem or what do you see as the consequences of the present situation?
- Feedback: Find out the feelings and opinions of different persons; for this you must be in a receptive frame of mind. Share your feelings and views with others in a factual, non-evaluative manner.
- Evocative questions: Do not ask hostile questions. Ask questions that will make the other person come out with his own ideas and experiences which can lead to creative solutions.
- Analogies: A problem can be seen from a fresh perspective with the help of analogies. For example, if the problem is concerning Engineering, analogies from Biology can be sought. When talking to others for feedback, try to find out parallel situations.
- Converging of a solution or conclusion:

Steps one to four above help the person articulate his problem more clearly. Steps five and six can help the person in handling any divergent and creative thinking. It is often useful to help the other person get a sense of closeness or conclusion by helping him move to a satisfactory choice. Helping with frank feedback and information, helping in the evolving of criteria for evaluating alternatives, applying these criteria, should there be a conflict, planning actions that will increase the probability of successful execution of a chosen alternative, and so on will be very useful in this phase of interpersonal interaction.

R. Khandwalla

TEST YOUR WORD POWER

BY AYCE

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's an eloquent problem.

And so each month we bring you this column, tailor-made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about *our* word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

For the word or phrase you believe is *nearest in meaning* to the key word

1. **abyss:** A. without limits B. very deep pit C. elasticity D. disturbance
2. **animosity:** A. disagreement B. opportunity C. hostility D. revenge
3. **baffle:** A. to puzzle B. deceive C. tease D. behave clumsily
4. **barter:** A. beaten mixture of flour B. short, thick stick C. utensil used for beating D. act of exchanging
5. **dwindle:** A. to become less B. trickle forth C. pine away D. become less active
6. **etiquette:** A. tact or skill B. conventional code of good manners C. a measure or norm D. style
7. **fret:** A. to worry B. waste C. fill with terror D. persist
8. **futile:** A. sick B. useless C. peaceful D. hazy
9. **genocide:** A. the assassination of a king B. the murder of one's child C. the extermination of an entire race D. the murder of one's father
10. **heretic:** A. one who speaks in favour of a cause B. one in favour of violent changes C. one holding opinions contrary to established doctrines D. old-fashioned person
11. **irrelevant:** A. not endowed with reason B. not related to the subject C. not showing respect for sacred things D. that cannot be proved false
12. **lucrative:** A. skilful B. profitable C. resourceful D. smooth
13. **maelstrom:** A. the great world B. strong conviction C. rainproof coat D. great whirlpool
14. **reprieve:** A. a repeated musical phrase B. safety C. respite D. the death penalty
15. **savour:** A. to enjoy with pleasure B. soak with moisture C. satisfy D. keep safe
16. **secede:** A. to withdraw B. throw away C. disagree with D. divide into two
17. **supplement:** A. to make additions to B. restore to good condition C. plead in protest D. ally with
18. **tangible:** A. lasting a short time B. justifiable C. that can be touched D. sharp
19. **vie:** A. to compete with B. consider C. fuss over D. quarrel
20. **vilify:** A. to abuse B. weaken C. irritate D. humiliate

(Answers on page 62)

THOUGHTS

Stimulating thoughts coming from noble minds have the touch of dynamism that can set man's thought processes in motion. Analysing these words and reflecting on their inner meanings can, more often than not, lead to plausible solutions to major problems in life—social, political or economic. Here's to adding mobility to your mind.

It is basically wrong with DESU (for that matter most of our public sector undertakings) is its chronic inefficiency and for every failure, it has ready-made scapegoats.

The Hindustan Times

It should like water on a duck's back.

Khushwant Singh in

With Malice Towards One And All, The Hindustan Times

If the race of modernisation sets wrong priorities, we may ultimately end up in a state of medievalism instead of the 21st century.

M.M. Buch, *Indian Express*

Protocol gestures as a token of respect are valuable when political relations are as inhospitable as they are now.

[On Reagan staying away for the third time from the funeral of a Soviet head of state] *The German Tribune*

It is an achievement... that India still lives under a Constitution and a rule of justice which is truly liberal and value-based.

M.J. Akbar, *Sunday*

There can be no retirement age in politics or in fine arts. It is for the public to decide when a politician or singer or actor will have to quit.

K.R. Sundar Rajan, *Sunday Observer*

Domestic cooking accounts for more than 50% of the country's total energy consumption. And yet, our energy planners recognise only agriculture, industry and transport as the bulk consumers of energy, ignoring domestic cooking.

Business India

Words are extremely malleable weapons; they are gelignite, they can be used for mining and undermining; they can be stored in the chambers of memory and detonated at precisely the moment required. They mean what you want them to mean.

M.J. Akbar, *Sunday*

If there is one thing that it (Union Budget 1985-86) does not lack, it is courage.

Ashok Lahri on Central Budget, *Sunday*

QUOTABLE QUOTES

It (marriage) is like a cage; one sees the birds outside desperate to get in, and those inside equally desperate to get out.

Michel De Montaigne

Ours is a world where people don't know what they want and are willing to go through hell to get it.

Don Marquis

We know no spectacle so ridiculous as the British public in one of its periodical fits of morosity.

Thomas Babington Macaulay

The Lord prefers common-looking people. That is the reason he makes so many of them.

Abraham Lincoln

He uses statistics as a drunken man uses lamp-posts—for support rather than illumination.

Andrew Lang

The life so short, the craft so long to learn.

Hippocrates

What's a man's first duty? The answer's brief: To be himself.

Henrik Ibsen

Let them hate so long as they fear.

Lucius Accius

If I had been present at the creation, I would have given some useful hints for the better arrangement of the universe.

Alfonso The Wise, King of Castile

Feeling a tremendous rakehell, and not liking myself much for it, and feeling rather a good chap for not liking myself much for it and not liking myself at all for feeling rather a good chap.

FOCUS

ANTI-RESERVATION STIR

THE BOMB TICKS AWAY

BY AJAY VERMA

Burning with fury: The masses have finally given vent to their fury against reservations. Gujarat and MP witnessed widespread riots.

The simmering fury against the government's reservation policy is gradually coming to the fore in several pockets of the country. The problem has sparked off incidents of violence in Gujarat towns and led to trouble in MP. Almost everywhere the harsh feeling against reservations in jobs and educational institutions is surfacing in one form or the other. And the policy-makers who were taking matters lying down, have been forced to face the hard realities of this acute problem.

Caste, since the later stages of the Vedic Age, has compartmentalised Indian society and has been the cause of many an evil which befell it in the times thereafter. Caste was also an instrument in the hands of the Brahmins to consolidate their hold over the various facets of social life and to perpetuate their dominance. Caste system was in fact a form of legitimised slavery. Though rebellion against discrimination did surface now and then, it never gained momentum because of the internal divisions and the travails of continued subjugation to foreign rulers. The fear of reprisals and ostracisation by the all-powerful high-castes also dissuaded the dissatisfied lot from protesting.

Furthermore, the Hindu philosophy of *karma* made people accept fate as the result of their past deeds. Some change for the good was, nevertheless, initiated in the 19th century by reformers like Raja

Ram Mohan Roy, Swami Dayanand and Swami Vivekananda. Besides the 'low-castes', millions of Adivasis and tribals were also confined to a life of depravity and utter backwardness due to the exploitation of the *zamindars* and money-lenders. Forests, their main source of livelihood, were increasingly brought under state control, especially during the British rule, and they had to turn to the *zamindars* and the money-lenders to survive. Once caught in the web of these Shylocks, they ended up as bonded labourers, thus mortgaging the destinies of future generations.

These 'low-castes' and backward classes found their champion in Mahatma Gandhi, who made the elimination of caste-system and the upliftment of the weaker sections of the society, one of the main planks of the freedom struggle and tirelessly strove towards this goal. Commitment to the Gandhian ideology weighed on the minds of the Constitution-framers when they adopted Article 46 of the Constitution, which provides:

"The State shall promote with special care the educational and economic interests of the weaker sections of the people, and in particular, of the Scheduled Castes and the Scheduled Tribes, and shall protect them from social injustice and all forms of exploitation."

Thus, the Constitution enjoins upon the State a duty to promote and secure economic and educational interests of the weaker sections of the society, comprising particularly of the scheduled castes, scheduled tribes and other backward classes.

To help the State achieve this noble objective, Article 16(4) empowers the State to make provisions:

"for the reservation of appointments or posts in favour of any backward class of citizens which, in the opinion of the State, is not adequately represented in the services under the State."

Furthermore, the hands of the State were also strengthened by the enactment of Article 15(4) through the Constitution (First Amendment) Act, 1951 which provides:

"Nothing in this article or in clause (2) of article 29 shall prevent the State from making any special provision for

the advancement of any socially and educationally backward classes of citizens or for the Scheduled Castes and the Scheduled Tribes."

With this constitutional mandate, the Central and state governments have been reserving seats in educational institutions and posts in public services for the scheduled castes, scheduled tribes and other backward classes. On its part, nevertheless, the Supreme Court has, through a series of judicial pronouncements, evolved a ceiling of 49% on such reservations.

Reservations, no doubt, have helped the weaker sections in different parts of the country find their feet and compete with their compatriots without caste or social bearings acting as an impediment. These men and women have proved their mettle in diverse fields like the judiciary, legislature, bureaucracy, government, education and so on. They have shown that given a chance, they are second to none. But one question still troubles the right mind. Have we not institutionalised reservations and granted them perpetual existence? When the Constitution was adopted, reservations were to cease after a period of 10 years (Article 334). But this period was extended thrice, 10 years each time, in 1960, 1969 and 1980. This is but a clear instance of prolonging a problem rather than finding a solution.

The aim of the reservation policy was to ensure that caste or social position of a person did not prove to be a liability, and equality of opportunity was afforded to all. But, to continue it for the benefit of one generation after another would be contrary to the avowed intention of the Constitution-framers. Justice Krishna Iyer observed in *N.M. Thomas vs State of Kerala*:

"The success of State action under Article 16(4) consists in speed with which result-oriented reservation withers away as no longer a need, not in the everwidening and everlasting operation of an exception (Article 16(4)) as if it were a super-fundamental right to continue backward for all time. To lend immortality to the reservation policy is to defeat its *raison d'être*."

The absurdity of the whole situation can be understood by the following illustration. A person belonging to a scheduled caste was selected as an officer in the Ministry of Finance, in 1954, from the reserved quota. In 1968 his son got into the Delhi Judicial Service, also because he was a scheduled caste. Still further, in 1984 his grandson was admitted to a renowned medical college, though he had secured comparatively low marks, because he was being selected from the reserved quota. In all propriety the benefit should have been

US MINORITY POLICY

In any country, be it a democracy or a communistic state, if there is a minority which has previously been deprived, the question of ameliorative action for the upliftment of the group arises at some stage. Post-independent India had to face the problems of scheduled castes and tribes, who had faced centuries of deprivation. The most advanced democracy in the world, the US too, had to face a similar problem in the middle of the 20th century. The government's answer to the problem in both cases was somewhat similar, although the US did not set explicit 'quotas' in education and employment for the minority concerned.

The blacks in America had emerged from slavery after the civil war in the last century, and the 13th, 14th and 15th Amendments to the Constitution had been passed to ensure their liberty, make them citizens of the US and give them the right to vote. But they were systematically deprived of their citizenship rights through the last three decades of the 19th century by various

state governments of the US. They had to fight their way up again in the 20th century and it was only in the 1960s that the US Government felt that they had a responsibility towards them and had to take direct action to ensure their upliftment. The government took positive action through various affirmative action programmes which were embedded in the Civil Rights Acts and were enforced through Executive Orders. For instance, Executive Order No. 11246 provided that firms holding federal contracts or sub-contracts are to provide equal employment opportunity to the minorities in living, upgrading, demotion, transfer, etc. Revised Order No. 4 of 1970 stated that these firms had to develop specific action plans which would indicate goals to increase, within a certain time-frame the hiring, and employment of minorities where they were underutilised. Non-adherence to the order could result in partial or total cancellation, termination or suspension of the contract.

In 1972, the Department of Health, Education and Welfare (HEW), followed its own set of affirmative action guidelines for university pro-

grammes. It indicated that efforts should be made to recruit, employ and promote "members of groups formerly excluded." Goals were, however, not to be confused with quotas. It was also clarified that unqualified applicants should not be hired in preference to qualified candidates.

Although these programmes had the immediate result of getting more blacks into colleges, firms, etc., they were soon challenged by the whites who called it "reverse discrimination" to prefer a black candidate to a white one, all things being equal, since the present generation did not discriminate against the blacks. The present generation, they said, should not be made to pay for the sins of their forefathers. A number of cases like the De Funis and Bakke cases, were brought to the Supreme Court, which ruled that while quotas were unacceptable, the race of a candidate may be considered in any university's admission policy. However, with the advent of the Reagan Administration, emphasis on affirmative action was laid off and today even some Republican blacks feel that, in the long run, affirmative action is detrimental to their interests. S.B.

exhausted in 1954, but the law as it is, extended it to two more generations and may well go further.

It would be suicidal in the long run for any government to proceed on the basis that once a class is considered backward, it remains so for ever. Having been treated preferentially in the formative years, if a class reaches the "take-off" stage of development, it is beneficial for it to face competition, as that would help in its progress. Reservation of seats and posts cannot and should not be made a vested interest. Furthermore, there are some areas like Engineering, Medicine and specialised technologies like Space Research and Oceanography to which extension of reserved quota has been self-defeating. If the qualification requirements are so rigorously observed to select the best from among the 'advanced classes', relaxation for any class would compromise merit and efficiency. The arbitrary increase in the reservations, as was done by two state governments recently, in both educational institutions and public services, will lead to frustration among those who seek to qualify on the basis of merit but, through such measures, see their opportunities constantly shrinking. If selection on merit is the criterion applicable to the 'advanced classes', choice should also be made to select the best from among the backward classes and weaker sections.

Help and encouragement for

advancement 'en class' should only be upto a certain stage after which there should be 'survival of the fittest'. The State would in no case be shirking its social responsibility as it would have provided the requisite base. For education the cut-off point can be the secondary school level stage. Only that student who utilises the opportunity given to him right at the initial stage, can make it to the top later on; those who flounder at that stage fail to justify the inducements given to them and make a mockery of the reservation policy. The large numbers of drop-outs, from among these 'protected classes', in the medical and engineering colleges and other specialist institutions testify to this fact. As for the public services, all promotions should be solely made on the basis of merit. Jobs upto reasonable grade may be reserved but not promotions. If two persons are holding the posts of deputy managers in a government undertaking—one a Rajput and the other belonging to the scheduled tribe—it is only their performances which should count when the vacancy for the post of manager arises. Accent on performance and efficiency would, to an extent, avoid dissatisfaction and jealousy in the ranks and help maintain decent standards of working.

One message quite effectively brought home by the anti-reservation stir over the years, is that the socio-moral duty of endeavouring for the upliftment and

advancement of the backward classes should not be used to draw political capital. It may provide short-term gains, but ultimately it is bound to boomerang. As Justice Krishna Iyer noted:

"...to politicise this provision (Article 16(4)) for communal and Party ends is to subvert the solemn undertaking of Article 16(1). To casteify 'reservation' even beyond the dismal groups of backward—most people, euphemistically described as SC and ST—is to run a grave constitutional risk."

Justice Iyer was specifically referring to the ploy of the politicians of increasing the reserved seats by bifurcating these castes and tribes into backward and backward-most, especially before the election, with an eye on votes.

The Gujarat and Madhya Pradesh anti-reservation agitations recently, have confirmed that the reservation time-bomb is ticking away. Conflagration can only be avoided if the 'advanced classes' display restraint and understanding and the backward classes and weaker sections, with the benefit of 35 years of governmental encouragement and support behind them, discard these crutches and try and compete as equals. Political parties on their part should forget about potential vote-banks and concentrate more on keeping this country integrated and not add to the already long list of pending problems. ■

Are reservations a necessity or an evil?

Minorities exist in almost every country; it is upto the government of the country concerned to frame a definite policy towards them. In a democracy, the issue becomes even more problematic because in a democracy the government is of the people, by the people and for the people. Since the people comprise the majority and minorities, and minorities may sometimes face deprivations at the hands of the majority, it becomes necessary for the government to take direct action to safeguard and even promote their interests. After independence, the Indian Government decided to take ameliorative action to promote the interests of its backward castes and tribes. After almost a few decades of reservations in areas like education, employment, etc., there is a slowly emerging outcry against reservations. There are, however, arguments both in favour of and against it.

For

■ The scheduled castes in India were placed in an inferior position in society for centuries. The so-called higher castes considered it a privilege to treat the scheduled castes with utmost scorn. It is, therefore, the duty of the present upper classes to make amends for the sins of their forefathers.

■ Even today, in some parts of the country, the scheduled castes are treated as "untouchables" by other castes and atrocities are committed against them. Having been underprivileged for centuries, the scheduled castes do not have the social power or prestige to fight back. Under such circumstances, the government should try to protect them and safeguard their interests through affirmative action.

■ The weaker sections of society are also economically weaker. Because of their former position in society, they had never been able to build an economic base for themselves. It is necessary for the government to give them a handicap in the fields of education and employment so that they can catch up with the more privileged sections of society.

■ As a result of centuries of deprivation, the backward classes are not able to cope with the modern world, psychologically, without some form of ameliorative action on the part of the government. Hence it is essential to give them a sense of confidence which they have never been able to build up. Unless they do well in life, which they can rarely hope to do without the help of reservations, they will not be able to develop confidence, and the next generation, too, will be mentally unfit to cope with the problems of daily life.

■ Reservations help the weaker sections of society to learn more about their traditional crafts through vocational training. It also gives them the opportunity to learn about the latest technology in their respective fields.

■ The country, at large, can also benefit if outstanding men from the backward classes are given the opportunity to do well. The fact that the potential exists among them can be gauged by the major role played by Dr Ambedkar in framing the Indian Constitution. This potential, however, has to be developed and it can be done through reservations.

Against

■ Almost four decades have passed since independence, and the handicap given to scheduled castes is sufficient enough. Almost two generations have benefited from reservations and they should, by now, have attained better position in society.

■ For the most part, the richer and more privileged sections of the backward classes benefit by reservations. They have the power and influence to fully enjoy the benefits of reservations, to the exclusion of others in their group who are stifled by poverty. For instance, the children of a person like Jagjivan Ram are doing better and better while others who are not so rich or influential still face atrocities and deprivations in their respective villages. In such situations, the government policy becomes useless.

■ The government policy aims at fixing reserved quotas for jobs. Seats in educational institutions are also reserved. These quotas have been growing in number and, today, it is even more than the former privileged classes in society. In some states, reservations go up to 50%, which makes the backward classes the really privileged class.

■ The backward classes are also enjoying better financial benefits. In a democracy, this amounts to reverse discrimination, whereby the upper classes suffer for the "sins" of their forefathers. In the US, affirmative action, which amounts to something like the quota system in India, was highly criticised, and reverse discrimination cases were taken to the US Supreme Court.

■ Reservations make the backward classes lazy. Since everything is offered to them on a platter, the incentive to work for their livelihood is lost.

■ Meritorious students of other classes have opportunities snatched from them, while people from backward classes, with less merit, get the opportunity to reach the highest economic and administrative status. As a result, we sometimes get sub-standard doctors, administrative officers, educationists, etc., whereas the more meritorious students go jobless.

■ Since merit is not the criteria in education and employment, there is an increase in corruption and inefficiency. Jobs being few and merit not being the criterion, people use any means, right or wrong, to grab jobs.

DISABILITY AT THE HELM-1

BY M.S. VENKATARAMANI

The Tamil Nadu controversy, relating to the health of the chief minister and the political confusion that it created, brings to the fore the issue of how our polity should deal in future with a situation of physical and or mental incapacity of a chief minister, a prime minister, or a president. It will be unwise to push the matter under the rug. We must now begin to give thought to the formulation of measures so that if ever a problem of disability at the top occurs, established procedures will be available to deal with the situation in an orderly fashion.

The American people have confronted the problem of 'presidential disability' on three occasions. But, till recently, their legislators did not succeed in putting together a measure that could command broad acceptance. Presidents were understandably not too enthusiastic to promote such a legislation. President Dwight J. Eisenhower, however, possessed the necessary integrity to face the issue. Having suffered partial incapacitation in two of his three bouts of illness, in successive years, he concluded that the problem of disability could only be met through a constitutional amendment. Since the amending process would take considerable time, he set forth specific instructions on the procedure to be followed in the event of his becoming incapacitated during the remaining period of his tenure.

Public Concern

Public and Congressional concern over presidential disability increased sharply in the aftermath of the assassination of President John F. Kennedy. Even as they mourned the slain leader, thoughtful Americans reflected on the problems that their country would have confronted if the assassin's bullet had, instead of taking President Kennedy's life, left him incapacitated. Public sentiment resulted in the initiation of the process of constitutional amendment and in 1967 the 25th Amendment to the Constitution of the US was put in place.

The issue of 'disability at the top' bristles with many difficulties. What level of physical and mental incapacity in a chief executive is acceptable and tolerable in our system? Who is to investigate the level of incapacity and to make the determination that an ailing chief executive does or does not possess the physical and mental capacity to perform the duties of his office? Can such a responsibility be solely entrusted to the personal doctors, friends and family members of the sick man?

What is the duration of chief executive disability that the system can safely tolerate through some such device as giving the sick man medical leave for treatment and recuperation? Can a unilateral statement by the patient, at some point during the period of such leave or at the end of it, to the effect that he is quite fit, suffice to restore him to his office? Or, should he have to submit himself to some prescribed investigation process and receive a certificate of medical fitness before he can take back the reins?

An elected leader, if he were to be fair to his constituents, should voluntarily step down if his health is poorer than the level that is essential to carry the load of essential work. All too often however, the ailing great man, like other lesser mortals, cannot bring himself to accept the reality. The problem gets aggravated if the stricken leader is kept in-communicado by loyal members of his personal staff and his immediate family who generally have a vested interest in putting out optimistic reports concerning his health. His personal doctors can become partners in that, exercise.

No Qualms

That was exactly what Dr Moran did when PM Winston Churchill suffered a heart attack in December 1941, while on a visit to Washington, shortly after Pearl Harbour. Churchill had no doubt in his mind that, stricken or not, no one else could occupy the number one position in the British Government and he did not want the British people to be told anything about the heart attack! Dr Moran had no qualms in agreeing with his patient.

During the latter part of his second term as Prime Minister, Churchill was reduced to a mere ghost of his former self. As Dr Moran revealed several years later, Churchill was the victim of a variety of maladies. While recording in his diary in 1954 that the Prime Minister was in a state of advanced "decrepitude", and listing the several serious ailments, operations and strokes that Churchill had had since his heart attack, Dr Moran patted himself on the back for having kept it all, from the public, and for that matter the political world?

Franklin Roosevelt, too, was rather a sick man as he neared the end of his third term as President of the US. But, as his 'handler' and cronies applauded, he sought to show himself to his people as the same leader of buoyant vigour and tireless energy as they had known him for so many years. A young heart specialist who had

been summoned by Roosevelt's personal physician to examine the President, made a diagnosis of "hypertension, hypertensive heart disease, cardiac failure (left ventricular) and acute bronchitis". Despite this finding, Roosevelt's personal doctor went along with the rest of the President's entourage in pushing him on.

The American people had no inkling that the man whom they had elected for a fourth term was in very poor health. Members of his Cabinet talked anxiously only among themselves about the President's haggard appearance and trembling hands. The man found himself being hauled to a summit conference in distant Yalta with Stalin and Churchill, instead of to his cottage in Georgia for an extended period of rest and medical care. A few weeks later he died "in harness".

The onset of the cold war and the political controversy in the US over the agreements reached at Yalta brought into the open the issue whether President Roosevelt's poor health had seriously impaired his effectiveness in his discussions with Joseph Stalin. The controversy brought back to the consciousness of the American people two earlier episodes of presidential disability. Shot by an assassin in 1881, President James Garfield remained incapacitated for some months before his death. Washington remained rudderless and confused during that period. The second and much more bizarre incident occurred in 1919 when President Woodrow Wilson was laid low by a paralytic stroke.

Total Seclusion

When Wilson was stricken, no word of his real condition was conveyed to the American public, to Congress, or even to members of his Cabinet by the President's wife and by his personal physician. Under the watchful eyes of his wife the President remained in total seclusion in the White House for weeks that extended into months. Even after the passage of three months Secretary of State Robert Lansing had not been able to see the patient. He told his friends that it was his belief that the President was "much sicker than the public is led to believe". As the senior member of the Cabinet, Lansing had called for informal meetings so that he and his colleagues could discuss matters and carry on the business of government. When news of Lansing's action reached Mr. Wilson, a letter went forth from the White House requesting the immediate resignation of the Secretary of State.

During the many long months when the President remained in seclusion, with his strength and faculties seriously impaired, the US came to be virtually governed in his name by an "extra-constitutional authority"—Mrs Wilson.

(To be concluded)

UTILITY OF MAPS-1

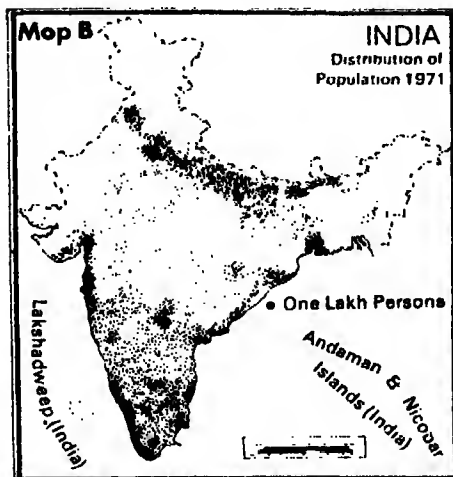

BY N K HANS

Are you appearing in an interview, in the Civil Services Prelims, Bank PO exam or in any other competition? Can you afford to go blank when map interpretation questions are asked or can you afford to ignore questions on agricultural distribution, mineral belts, industrial concentration or places of historical or political importance? Remember, losing one point (or mark) may mean losing your chance in the competition. Do not ignore such areas. A little more effort on your part and you score over others. This series provides a background on map reading and map tracing, and practical interpretation of geographical, economic, political and historical maps. The last two parts of the series are specially meant for those appearing in the Civil Services Mains with History as optional and will also help students score well in questions based on maps.

Hitler used to say, "Give me a detailed map of a country and I shall conquer it." Maps have guided the strategies of wars. History of the world shows that wars were won by those nations who committed fewer blunders in map interpretation.

A map is a representation of a small or large area of the earth on paper. It may be regarded as a conventional picture of the earth's surface, as seen from above, to which lettering is added for identification. A map always has some proportion to the actual size of the area on the ground. This proportion is known as the scale of the map and is always given on it.

Maps are classified either on the basis of their scales or on the basis of their content and purpose for which they are required. Based on scales, maps have

been divided into four types:

Cadastral maps: The term *cadastral* is derived from the French word *cadestre* meaning register of territorial property. They are maps based on the largest scales and are sometimes known as 'plans'. These maps are useful for identification of boundaries of property, in legal documents, and for detailed issues such as local administration, taxation and the management of estates.

Topographical maps: The topographical maps of India are prepared by the department of Survey of India. They are large scale maps but their scale is smaller than that of the cadastral maps. Mainly, the scale is of one inch, half inch and quarter inch respectively, to a mile. Such type of maps are useful for travellers, motorists, soldiers for war operations and geographers for studying the regional geography of an area in detail.

Wall maps: Wall maps are usually drawn boldly so that they may be used in the class room. Their scale is smaller than that of topographical maps but larger than that of atlas maps.

Chorographical or atlas maps: Drawn on a very small scale they give a more or less generalised picture regarding the physical, climatic and economic conditions of different regions of earth. The atlas maps are drawn on a very small scale.

Based on the content and the purpose for which they are required maps are divided into:

Physical maps: Supply information regarding natural features.

Astronomical maps: Show heavenly features.

Orographical or relief maps: Depict relief and drainage of the area, i.e., mountains, rivers, etc.

Bathymetric maps: Indicate the depth of

oceans.

Bathorographical maps: Deal with the combination of the above two features.

Geological maps: Show rocks, their types and structure.

Climatic maps: Indicate sum total of weather conditions spread over a longer period. The data is generally the average for a considerable number of years or months as the case may be. A climatic map generally shows only one condition, be it temperature, rainfall or any other.

Weather maps: Deal with conditions observed at a given time. In India these are prepared twice a day by the Meteorological Department of India, Pune.

Vegetation maps: Show distribution of natural vegetation in the area.

Soil maps: Show various types of soils covering any given area.

Cultural maps: Provide information about manmade features.

Ethnographic maps: Show distribution of different races.

Political maps: Show political boundaries between the political units, roads, railways, towns and administrative units.

Military maps: Show strategic points, routes, battle plans, etc.

Historical maps: Deal with past events.

Social maps: Deal with social organisations like tribes and races, their religion, language, etc.

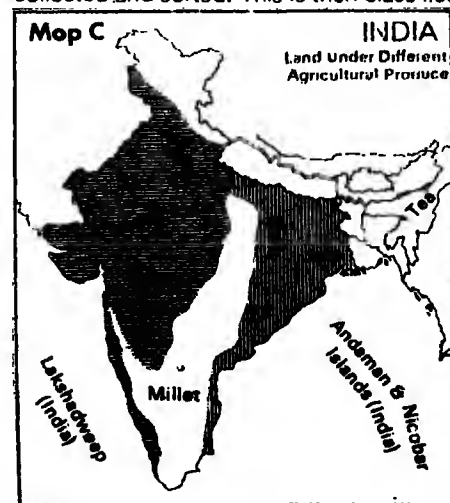

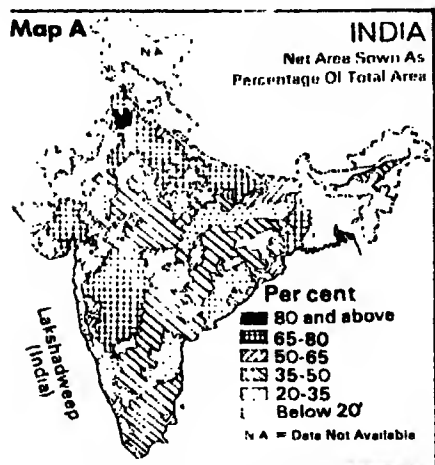

Population maps: Indicate the density of population in the area shown.

Economic and statistical maps: Show centres of agricultural yield, quantities produced in different years, trends and direction of trade, export, import, etc.

Communication maps: Show roads, railways, sea or air routes.

Map Reading

As a map encompasses a great deal of information in the form of symbols, letters, etc., we must learn these symbols, letters and then study the map systematically. The interpretation has to be from the map alone. The features shown in the map are collected and sorted. This is then classified

Unmetalled Road	Date palm
Metalled Road	Deciduous trees
Road through a cutting	Well
Double-line railway (broad gauge)	Spring
Single line railway	Pipe line
Metre gauge railway (under construction)	Tank with embankment
Metre gauge railway	Canal with lock
Tramway or mineral line	Marsh
Road over railway	Village
Railway over road	Scattered village
Railway over railway	Deserted village
Tunnel	Church
Aqueduct	Temple
Telegraph line	Mosque
Country boundary (surveyed)	Fort (surveyed)
Country boundary (unsurveyed)	Fort (conventional)
State boundary (surveyed)	Camping ground
State boundary (unsurveyed)	PO Post Office
District boundary	TO Telegraph office
Coniferous trees	RH Rest House
	DB Dak Bungalow
	BM300 Bench Mark

in illustrations of some aspect of physical geography, of human geography or of both. First of all, the marginal information (that is, information of a general character always shown on the margins of all maps) must be carefully studied. The information includes: (1) Name of the sheet, given at the top or foot of the map (2) Scale shown at the foot of the map (3) North and magnetic variation (4) Altitudes given in feet (generally) (5) Heights depicted by layer-tints or contours (6) Index or legend (or symbols) giving an abstract of important conventional signs (7) Reference numbers, shown on the top right hand corner (8) Longitudinal and latitudinal extent of the map (9) Area covered by the map in square miles (10) Date of publication and surveying.

Different symbols are used for various

features and distinct letters for different purposes. These symbols, known as conventional signs, are shown on what is called a characteristic sheet (available from the Map Record and Issue Office, Survey Of India, Dehra Dun). A good symbol is one which can be recognised without the help of a legend. To read a map legibly, we must acquaint ourselves with the symbols generally used. The symbols of a map (see Box I) may be divided into four groups:

Relief features (Hypsography)—by various shades of brown

Relief features (Hydrography)—by blue

Vegetation features—by various shades of green

Manmade features (cultural)—generally shown by red and black

Milestones are marked by a numeral indicating the distance; roads are exaggerated in scale to make them prominent. Bridle paths and foot paths are shown by broken lines in red. Bench mark abbreviated as BM is a fixed point that serves as a datum line from which other measurements can be checked or made. Railways are depicted in black by double lines with short ticks in between; for a double line the alternate spaces are solid black. Hachures taper away from the railway line in the case of embankments, while in the case of cuttings the hachures taper towards the railway. Rivers are shown by a double line with water lining and are tinted blue on coloured maps. Rivers less than 15 feet in width are shown by a single line. Canals are shown in double parallel lines, in blue. Pasture ground is shown by minute black ticks arranged in series. Orchards are shown by small tree signs symmetrically arranged. Woods are shown by trees and tinted green on coloured maps. Parks are shown by stippling of black dots. Quarries are shown by a dark line from which emerge short lines. Buildings are marked solid black or red.

In order to study physical geography, human geography and vegetation the area is to be divided into two or three zones based on relief.

Each zone is studied in terms of an analysis of relief, i.e., slopes, heights, waterfalls, watersheds, high ground, low lying valleys, etc; river work—stages of development; glacial phenomena—erosion and deposition; coastal features and type of rock and soil, if indicated. Then we study natural vegetation. In human geography, we then analyse the human response to physical environment, we observe and analyse agricultural and land utilisation; various means of communications—the class, type and direction; town sites; industries; recreation; historically important places, events, routes and rural settlements. Thus we read

Calm	Moderate thunder
Light air	Severe thunder
Light breeze	Gale
Moderate breeze	Shower
Fresh breeze	Rain shower
Strong breeze	Drizzle
Moderate gale	Snow
Fresh gale	Shower of snow
Strong gale	Sky clear
Whole gale	1/4 sky overcast
Storm	1/2 sky overcast
Hurricane	3/4 sky overcast
Snow storm	Absolutely cloudy sky
Small hail	
Hail	
Distant lightning	
Light thunder	

Capital letters indicate intensity; repetition of letters indicate continuity and suffix O indicates slight

R = heavy

r₀ = slight rain

r = continuous moderate rain

r₀ = continuous slight rain

b = blue sky (not more than 1/4 covered)

be = partly cloudy sky (1/2 covered)

c = generally cloudy (3/4 covered)

O = overcast sky

d = drizzle

f = fog

h = hail

kg = line squall

l = lightning

m = mist

r = rain

p = passing showers

Q = squall

rs = sleet (rain and snow)

s = snow

t = thunder

v = normal visibility

w = dew

x = hoar frost

y = dry air (when the humidity is less than 60%)

z = dust haze (the muddy atmosphere of dry weather)

Temperature is shown in °F, average velocity in miles/hour by figures in small circles, wind direction by arrows flying with the wind.

PUNJAB

PEACE IN SIGHT ?

The Centre's gamble has failed to pay off once again. Far from creating a congenial atmosphere for the conduction of talks between the Centre and the Sikh leadership, the release of the Akali leaders has succeeded in undoing, to a large extent, what the government had done by way of normalising conditions in Punjab, over the past few months. For, contrary to expectations that the Akali leaders would adopt a more conciliatory attitude in response to the Centre's placatory moves, the Sikh leadership is still intent on moving on the path of confrontation.

Ever since his release Harchand Singh Longowal has been crusading for the Sikh cause—reiterating the very demands which had earlier resulted in a deadlock between the Centre and the Akalis. Featuring prominently on the list of demands are the acceptance of the Anandpur Sahib resolution and an inquiry into the November riots. The Akalis have also adopted their threatening tactics again and issued an ultimatum to the government to accept their demands or else they would revive their agitation.

Meanwhile, the Centre, undeterred by the aggressive stance of the Akalis, went ahead with another fresh bid to solve the Punjab tangle. For, as the Home Minister S B Chavan explained, the government was prepared to give this agitating faction some time to make up its mind. The earlier bids included the release of the arrested Akali leaders and the appointment of Arjun Singh as the new Governor of the state. This time the Centre demonstrated its flexibility even on such issues as the removal of army when it withdrew army personnel on civil duty in Amritsar, Ferozepur and Gurdaspur districts and replaced them with additional security forces. Already ten more battalions of the CRPF and BSF have been inducted into the state with the result that Punjab, at the moment, has the highest ever concentration of security forces. The government, having casted off its earlier inhibition, is not averse to holding an inquiry into the November riots if it manages to create a congenial atmosphere.

On Mar 23, PM Rajiv Gandhi, during his visit to Hussainiwala, near Ferozepur, expressed his government's willingness to keep its promises. He also declared his own keenness to restore to Punjab its earlier pace of development by constructing a Rs 700 crore multipurpose Thein dam project and setting up an integral coach factory in the state.

But, evidently, the extremist elements did not appreciate such gestures which could ultimately lead to an amicable solution to the Punjab problem. Within 24 hours of the PM's departure they struck a lethal blow which shattered the existing calm. The Chandigarh BJP General Secretary, Krishan Lal Marchanda, was gunned down by unidentified assailants in his premises while his 11-year-old son was seriously injured. To avert further ramifications, the authorities immediately clamped prohibitory orders in the Union territory and also ordered the closure of all educational institutions. Owing to these measures the bandh organised by the BJP, on Mar 26, in Punjab and Haryana, to protest against this brutal killing also passed off peacefully.

The Centre, on its part, did not rise to the bait and is at the moment engaged in preparing a package of proposals for solving the Punjab issue. On Apr 3 a high ranking Cabinet Committee comprising S.B. Chavan and the Union Education Minister, K C. Pant, toured the state to record the views and grievances of the people, which will be taken into consideration while finalising the peace package. The objective of this package—which will include an inquiry into the riots, proposals for solving the territorial issue, the river-water issue and the Anandpur Sahib resolution—is to strengthen the political process in the state. The AICC(I) has also launched a mass drive to explain the various aspects of the Punjab issue to the people of the state so that they may view the situation in the correct perspective. The present term of the Punjab Assembly will end in June while the President's rule will expire in October. The Centre, therefore, is keen to conduct both Lok Sabha and Assembly elections in the state between June and October. At this juncture the Akalis should realise that actions like the boycotting of consultations called by Chavan and Pant, while in Chandigarh, will not help them in any way; neither will the rejection of the olive branches, extended by the government time and again. In its latest attempt to pacify the Akalis it has already acceded to the demands for a probe into the November riots and the lifting of the ban on the All India Sikh Students

Federation (AISSF). A judicial inquiry into the riots by a sitting judge of the Supreme Court has been ordered. These gestures have been hailed by the Akalis. But this does not mean that they have solved the Punjab imbroglio either. The Akalis, apparently under the impression that threats will achieve for them what negotiations may not, have now issued a fresh threat to resume their agitation in June if their other demands are not fulfilled. As things stand now, only negotiations will prove beneficial to both sides.

ANTI-RESERVATION STIR

ASSUMING 'CLASSIC' PROPORTIONS

The caste-class cauldron finally boiled over in Gujarat and, to a lesser extent, in Madhya Pradesh. It all began on Mar 18 when the Gujarat bandh organised by the Akhil Gujarat Navrachana Samiti, as part of a month-old anti-reservation stir, took a violent turn. The Rane Commission report, finally made public after persistent demands, revealed its recommendation that reservations should be linked with the economic condition and the occupation of the beneficiary. The income limit suggested by the commission for granting concessions was Rs 10,000 per annum. What perhaps incensed the agitators and triggered off the recent spurt of violence was the fact that the Gujarat government had conveniently overlooked the latter half of the commission's recommendation, i.e., the vital clause which linked reservation quota to the degree of backwardness (including economic criteria).

Protesting students in Gujarat went about expressing their displeasure in the most violent ways. They freely indulged in incidents of arson, stone-throwing, brick-batting and also went about setting shops, houses and buildings ablaze. The situation soon went out of control compelling the authorities to impose shoot-at-sight orders. Large contingents of army and special reserve police were deployed and the entire walled city of Ahmedabad was placed under indefinite curfew on Mar 19. Apart from the massive loss of property the death toll also kept rising steadily, with each passing day, and according to official estimates 13 people lost their lives in the orgy of mob fury. On Mar 20 the Union Home Minister, S B. Chavan, air dashed to the not affected city of Ahmedabad to make an on the spot assessment of the situation.

But, even the presence of the army did not deter anti-social elements from attacking police pickets and patrolling parties. They even attacked the police with fire balls. Soon Baroda, initially the only city which had remained relatively unaffected, also came under the grip of widespread violence. And then, just when the authorities thought they had succeeded in curbing violence and had even relaxed the curfew imposed in several areas in the state they were faced by a fresh bout of incidents of stabbing, on Mar 22, which forced them to reimpose curfew all over again.

Such was the gravity of the situation that on Mar 23 the PM visited Ahmedabad and even sanctioned Rs 5 lakhs from the PM's relief fund for those affected during the riots.

Following the PM's visit, violence abated but tension escalated again on Mar 27, following the Saurashtra bandh. The stir took a new turn when 600 junior doctors of the government civil hospital and dental hospital went on an indefinite strike to protest against the arrest of some student leaders under the National Security Act (NSA).

Keeping the conditions in view exams in the colleges and universities of the two states have been postponed indefinitely. Unless the Centre intervenes to control the situation, the anti-reservation stir may take an ugly turn. Violence erupted again on Apr 2, and to make matters worse, the backward castes—beneficiaries of the reservation policy—have formed a new counter agitation body "Anamat Andolan Pratikar Manch" and have warned the anti-reservationists of launching a counter-agitation if they do not call off their stir. The government of Gujarat, after hurried consultations, has announced its decision to defer the implementation of the policy and appoint a commission to review the policy before implementing it. The MP government has gone a step further and decided to shelve the policy. It can only be hoped that these decisions will help to restore peace to the strife torn states and avert any further confrontations between the pro and the anti-reservationists.

For, the anti reservationists in Gujarat have now, to complicate matters further, refused to have any negotiations with the state government until the unconditional release of student leaders detained under NSA. Their other demands include immediate revocation of termination orders against striking junior doctors of the Ahmedabad Civil Hospital and also

the reservation of appointments of officers made in their place. The state government, on its part, has refused to review the reservation policy till the agitationists call off their stir. In order to woo the sympathy of the pro-reservationist group, the spearheading organisation of the anti-reservationists, the Akhil Gujarat Navrachana Samiti, has now suggested additional scholarships for backward classes. In its latest offensive it has also threatened to launch a no-tax movement if the government decided to hold back grants to schools not conducting exams and has also given a call for boycotting all programmes attended by government officials, ministers and MLAs. In such a situation the chances of the stir subsiding appear to be very scant indeed.

SOVIET DIPLOMATS

DEFECTION AND DEATH

It all started with the mysterious disappearance of a Soviet diplomat on Mar 17. A third secretary in the information department of the Soviet embassy, Igor Guejo had been working in the Delhi-based Soviet Information Centre, for the past six years. On the day of his disappearance he had gone for his routine morning walk in the Lodhi Gardens and only when he failed to return home till evening was a report lodged with the police. And, even as the police was engaged in tracing out the whereabouts of the missing Russian, another Soviet official V. Khitzichenko, a senior engineer in the economic division of the Soviet embassy, was gunned down by two unidentified assailants in broad daylight, on Mar 22.

The incident occurred when Khitzichenko was returning home with his wife after a shopping spree. The two assailants who had been following their chauffeured embassy car on a motorcycle, overtook the car and fired a volley of shots through the rear windscreen, killing Khitzichenko who sustained four bullet injuries. This perfectly planned macabre operation was obviously the handiwork of professionals.

The cold-blooded murder of the Soviet official sent shock waves rippling through the diplomatic community in the capital. Though a US based Ukrainian group, viz., the Ukrainian Reaction Force (URF) claimed responsibility for the killing, as a protest against the presence of Soviet occupation forces in Ukraine, terrorised diplomats in the city raised a clamour for intensified security. The rounding up of numerous Afghans by the Delhi police and their subsequent investigations, however, failed to provide any clue to the whereabouts of the killers.

Meanwhile, the Soviet embassy quickly established a connection between Guejo's disappearance and Khitzichenko's murder and assumed that Guejo had been abducted by associates of the killers. Their fears were converted to shocked disbelief when the missing diplomat surfaced in the United States. Guejo had defected to the US and was granted political asylum. Surprisingly the news of the defection was conveyed to the foreign secretary, Romesh Bhandari, by the Soviet ambassador and only later was it confirmed by the US charge d'affaires in Delhi. Guejo's defection was obviously meticulously planned and executed, for not a word about it got around till after the defection was completed. But what has created a ruffle in the Soviet embassy is the fact that Guejo was not even listed in the diplomatic circles and was a relatively non-entity in the embassy's hierarchy.

The possibility of the Khitzichenko killing having been executed to throw the police off Guejo's trail cannot be ruled out at this juncture. Needless to say, these two incidents, following each other in quick succession, have embarrassed both Moscow and New Delhi considerably. For India, of late, seems to have become a happy hunting ground for such international defections and terrorist activities. And what continues to baffle the authorities is why two relatively insignificant diplomats were made the targets of defection and death.

MIZORAM

DEADLOCK YET AGAIN

Certainly no solution to the 18-year-old Mizo insurgency problem is anywhere in sight at the moment. All hopes of a final settlement of the vexed issue are fast receding. Talks between the Centre and the outlawed leader of the Mizo National Front (MNF), Laldenga, have failed to resolve the deadlock over various outstanding issues. And a stalemate has recurred.

As the Centre and the MNF had earlier agreed on the granting of statehood to Mizoram, similar to that of Nagaland, under Art 371 A of the Constitution, several problems have now cropped up, viz., the special status accorded to the Governor under this article. According to Laldenga, this move would virtually place the state under Central rule. Again, no accord can be reached over the interim arrangement, before the Parliament is able to grant statehood to Mizoram and conduct fresh

elections in the state following the dissolution of the Assembly. The erstwhile MNF leader has suggested that in the event of a dissolution of the state Assembly, President's rule should be declared in Mizoram and administration should be carried on by the Lt Governor with the help of a council of advisers, presumably to be headed by Laldenga himself. For, Laldenga feels, only then will the Mizo underground be assured of their safety in the hands of the administration. In fact he even went to the extent of saying that special constitutional provisions were needed to safeguard the interest of the entire Mizo population as they were backward and, hence, could not compete with the others. Not content with the acceptance of statehood for Mizoram the MNF leader is now demanding 'Kashmir-type reservation' for the state in trade and commerce.

Also enlisted among the MNF demands is the dissolution of the autonomous district council for the minority Chakma tribes and, thereby, the withdrawal of the Sixth Schedule to the Constitution, applicable in certain parts of the state. The MNF is strongly opposed to the creation of the autonomous district council for Chakmas in particular, since it is of the view that the Chakmas are not inhabitants of India and therefore this would be highly objectionable, irregular and unconstitutional. As for the schedule the MNF feels it promotes divisiveness as it provides for administration of tribal areas in Mizoram through autonomous district and regional councils.

While the government has given the three-member MNF delegation, headed by Laldenga, which visited the capital recently, a sympathetic hearing, no solution has been forthcoming. Hence the insurgency problem remains unresolved.

ASSAM

CRUMBLING FENCES?

The closed door talks between the Centre and the Assam agitation leaders, held in February this year, has only left both the sides to reconsider their respective stands. The agitation leaders, comprising the All Assam Students Union (AASU) and the All Assam Gana Sangram Parishad (AAGSP), have apparently not retracted from their earlier stands on the immigrants issue and are still being persistent about their demand for the deportation of the immigrants who entered Assam between 1961-71, back to Bangladesh, or their dispersal elsewhere in the country.

Earlier, the agitation leaders had expressed their willingness to consider 1965 as the cut-off year for the detection of immigrants from Bangladesh, provided the Centre agreed to disenfranchise all those illegal immigrants who had entered India between 1965-71, for a period of 20 years. The government, however, is reluctant to extend this period beyond five years.

The Centre is now having second thoughts on its agreement to detect and deport the post '71 immigrants to Bangladesh as the Bangladesh government has refused to recognise their presence and has clearly indicated its intention of stonewalling any attempt to push them back. These immigrants cannot be dispersed to other states either, firstly because their identification may prove to be a consuming problem, and secondly because they will now find it difficult to readjust themselves to new conditions, all over again.

Meanwhile, in the agitating camps, serious rifts have occurred and the once all-powerful AASU has suffered serious erosion at its grassroots. A number of leaders and members have split and formed a new student body—the All Assam Elected Students Representatives Union (AAESRU)—which is also seeking official recognition. This fact, coupled with the widening rift between the AASU and AAGSP could considerably weaken their agitation. But, the Centre has wisely restrained itself from being lax in seeking an early solution to the Assam problem. The Union Home Minister, S.B. Chavan, recently visited Assam to reaffirm the Centre's desire to negotiate with the leaders. The Centre has taken fresh initiative to resume talks but has sought some proposals from the agitating leaders before the talks actually get underway. Meanwhile the pre-poll preparations for the 14 Lok Sabha seats in the state, scheduled for May, are proceeding unhampered.

INDO-SRI LANKA

CAUTIOUS OVERTURES

Foreign secretary Romesh Bhandari's three-day visit to Colombo has considerably brightened the prospects of an early meet between PM Rajiv Gandhi and the Sri Lankan President, Jayewardene, to review bilateral relations between the two countries. On Mar 24 Bhandari left on a solution mission to Sri Lanka as the PM's special envoy and this peace initiative was duly appreciated by President

Jayewardene.

The outcome of Bhandari's visit was that an accord was reached on the urgent necessity for the cessation of violence to create a congenial atmosphere for political dialogue between the two countries. It was also decided upon by both sides that steps should be taken to improve communication and travel facilities and also maintain regular consultation at an official level on bilateral and regional matters between the two countries. The problem of harassment of fishermen, the swelling rate of Tamil refugees in India and the question of stateless persons, were also reviewed during this visit.

Sri Lanka, however, specified that the solution to the island country's ethnic problem should be within the framework of the unity, sovereignty and integrity of the country. And, on his part, Jayewardene is also contemplating a step towards easing the problem which has assumed such alarming proportions, he is considering issuing cease-fire orders to the Sri Lankan forces in the predominantly Tamil north-east. And, as this was the area where the Sri Lankan militant forces inflicted the maximum atrocities on the Tamil population, this announcement comes as a welcome relief for the tortured Tamils at least.

But, shortly after Bhandari's visit, on Mar 31, six Tamils were gunned down by the Sri Lankan troops on the pretext that they were Eelam guerrillas. And then on Apr 10 in a four-hour pitched battle between Tamil militants and the police in Jaffna, 20 militants and four policemen were killed. This offensive by the Tamil militants provoked Jayewardene into lashing out against India once more. Which leaves one to wonder exactly how far one should read into repeated affirmations of goodwill by the two countries.

EXPORT-IMPORT POLICY

BALANCING THE SCALES

The government's new policy package for trade and industry comes as a pleasant surprise. Valid for a period of three years (1985-88) the import-export policy aims at providing a major thrust to exports, improving productivity and also promoting import substitution. To achieve these aims a large number of innovative procedural changes have been incorporated into the policy.

The government has also tried to remove the year-to-year uncertainties by providing a stable environment to trade and industry as this will go a long way in helping the industry to plan production on a longer term perspective. The latest measures have also been implemented by the Centre to support indigenous production.

In the import-export policy as many as 201 items of industrial machinery have been included in the list of capital goods that are allowed for import under the Open General Licence (OGL). This will undoubtedly strengthen the base for export production through upgradation of technology.

Automobiles, leather garments, oil field services, electronics, jute manufactures, cement and cement products, canning and pen machinery, fishing and engineering are the major beneficiaries of the liberalised policy of capital goods import. With regard to the indigenous availability exemption of industrial goods components have been shifted from the banned list to the restricted list. From the open general licence (automatic permit) list of 197 items have been shifted to the restricted list. Only two items, liquor in the banned list—animal oil and cement.

The automatic permit system has been abolished altogether and a majority of the items, usually under the automatic permissible list have been brought under the OGL. Consequently there will be no need for the importers to get post-examination and to apply for an import licence which will prove to be particularly beneficial to small-scale industries.

Another important highlight of the introduction of the new import-export policy package is the exemption to provide manufacturer-exporters with an 8% import duty credit. The scheme is wider in its scope than the present 5% import duty credit scheme and will come into effect from Oct 1, 1985.

In addition to the aforesaid policy has been adopted for import of computer goods, computerised systems. Those costing Rs 10 lakh (or) above are exempted from import duty provided for their own use, and if the same are sold after obtaining prior clearance of the department of electronics, a concessional rate of 5% will be payable. However, import of computer goods for other purposes of a system costing less than Rs 10 lakhs will have to attract higher rate of duty. The scope of the computer goods import scheme has now also been extended to satellite countries.

The value limit per unit, to cover foreign exchange requirements for buying balancing equipment and acquiring technical know-how from the US, has been raised from \$5 lakhs to the US dollar equivalent of Rs. 100 lakhs. Also, trading houses and export houses will now be allowed to import technical drawings and designs for their supporting manufacturers to the tune of Rs 10 lakhs and Rs 25 lakhs, respectively, against their own REP additional licences. Meanwhile, the concept of eligibility for additional licences based on net realisation of foreign exchange has been extended to the growth rate prescribed for the renewal of export/trading house certificate. Special facilities for import to non-resident Indians and to persons of Indian origin, returning to India for permanent settlement will also continue.

The policy on import of firearms has, however, been tightened. Important changes have also been introduced in the export licensing policy. Exports to Pakistan have been brought on par with other permissible destinations. Also, the export of large number of items which were earlier banned will now be allowed within a limited ceiling. Large powers have been delegated at various levels for import of capital goods, raw materials and components to facilitate quicker decision-making through decentralisation.

In toto then, this new import-export policy will be a further step towards improving the overall economic situation by striking a balance between export promotion and import substitution.

BUDGETS '85-86

LIFTING LEVIES

Seldom does a budget obtain the unanimous approval of all sections of society. This year again both the railway budget and the general budget for 1985-86, incurred the expected criticism from the affected sectors. Criticism of the railway budget, in fact, took the form of a rail roko agitation in West Bengal by various organisations in protest against the rise in passenger and freight fares. The government, however, took immediate stock of the situation and announced a cut in the rail fares hike and also withdrew a few other budgetary levies—apparently to pacify the poor and the agriculturists.

The hike in rail fare was reduced from 12.5% to 10% and is now the same as the increase in freight fare. This will, however, further worsen the state of railway finances since expenditure would now exceed the earnings. It has been estimated that the deficit, at current rates of tariff, will be Rs 403 crores this year.

And, within a week of the announcement of the general budget, the new levy on *bidis* was withdrawn and a seven paise per litre reduction was introduced in the increased prices of high speed diesel and kerosene. Excise exemption on poultry equipment and agricultural implements was also given. To make up for this loss of revenue, a fresh levy on cigarettes has been announced which will yield a total revenue of Rs 95 crores in a year. This levy will be at the rate of one paise per cigarette and will be higher for a pack of 10 cigarettes costing Rs 3 or more, per pack. Cigarette packets of 10 cigarettes priced at less than 60 paise will, however, not be affected.

By withdrawing the new import on *bidi* the government will incur a loss of Rs 10 crores in a full year. In order to provide relief to peasants the government has decided to exempt agricultural implements—including power-operated implements and poultry farm equipment—from item 68 of the excise tax.

STATE BUDGETS '85-86

MIXED FORTUNES

Following the presentation of the Union budget for 1985-86, several states have also put forward their annual budget proposals. The main measures proposed in the Haryana budget include increase in bus fares, duty on electricity and duties and fees on alcohol and liquor shops. It has been estimated that these measures will fetch an additional revenue of Rs 86.5 crores. They will also help in neutralising the anticipated closing deficit of Rs 114,321 crores for the next financial year, to a large extent. A noteworthy feature of this budget is that there will be a significant increase in the proposed plan size for the next year—likely to be well over Rs 500 crores. A series of additional facilities and concessions for government employees, traders, industrialists and agriculturists have also been announced. The revenue surplus for 1985-86 is thus likely to go up from Rs 47.55 crores to Rs 72.5 crores.

The annual budget for West Bengal came as a welcome surprise. Reduction in tax on cinema tickets, motor cars, milk powder, exemption of power plants from electricity duty were proposed. Entertainment tax

to give a boost to the state film industry. However, a new tax was imposed on Janta formations and a levy on bank traffic through the state was introduced. The budget also proposed a raise in tax on liquor, select hosiery items and inter-state tea trade. But, what is most heartening about the West Bengal budget is that it shows an estimated surplus of Rs 29.92 crores with taxation proposals yielding an additional revenue of Rs 41.34 crores.

In sharp contrast to the West Bengal budget was the Rs 264.20 crores deficit budget of Tamil Nadu. This, despite the imposition of a mammoth Rs 40 crore additional levy on arrack (country liquor). Additional tax was also imposed on certain minerals and motor vehicles. A meagre sales-tax concession on some items amounting to Rs 5 crores was also announced.

Following in the lines of the Tamil Nadu budget came the Rs 133.66 crores deficit interim Madhya Pradesh budget. However, the MP finance minister, sought a vote on account for expenditure of Rs 1,372.99 crores for four months, upto July, on the plea that he could not fully consider the state's policies as the ministry had been recently constituted. It has been estimated that the budget will yield a surplus of Rs 8.74 crores but on account of the opening balance of minus Rs 142.40 crores, the deficit by the year end will be Rs 133.66 crores.

Karnataka, however, presented an interim budget with a record deficit. The final budget will be presented by July end as the state Plan for 1985-86 has not been finalised. The budget showed a phenomenal Rs 341.60 crores deficit. No new tax proposals were announced.

ELECTRONICS POLICY

TOWARDS LIBERALISATION

The government's new package of incentives for the electronics industry obviously aims at giving a boost to the industry by providing the much-desired liberal environment. Over the past few months it is the third move the Centre has made in this direction—the first was in November last, in the form of the computer policy, followed by certain fiscal incentives in the Union budget.

The new electronics policy provides for liberalised licensing and a bigger role for the FERA and MRTP companies and Indian companies with foreign equity upto 40%. Also, the private sector has been asked to make larger investments in the communications sector, while the government has restricted its own participation in the proposed electronics switching unit based on indigenous development. The government investment in this venture will now be restricted to 26%; a private sector party will be offered 25% while the remaining 49% will be thrown open to the general public.

Steps have also been taken to ensure an influx of new brand names into the TV market. Henceforth, Indian companies, including those with foreign equity of 40% or less, will not be debarred from any field of electronics open to the organised private sector. Also, the government has invited foreign equity companies (with more than 40% foreign equity) to set up manufacturing facilities for electronic components, materials and related technologies in which the country has been unable to invest sufficiently in research and development.

The inflow of technology has also been made less cumbersome. The new package states that import of technology will be permitted freely to facilitate development of an appropriate electronics base. The scope for centralised purchase of technology has also been minimised, for it will now be resorted to only in cases where a variety of technologies render indigenous products expensive, when compared to international prices.

The number of electronic items exempted from the MRTP Act have also been increased and now include electronics, computers, broadcasting equipment, control instrumentation, communication equipment, industrial and professional electronics. The concept of broad banding of industrial licences has also been extended to electronics to ensure optimal utilisation of investments—broad band licences will be issued for items of entertainment electronics, including TV, radio, tape recorder, electronic toys, as also for computer peripherals, semi-conductor devices and electronic test and measuring instruments.

Financial institutions will, henceforth, have special cells for electronics. It has been made compulsory for all electronic units to submit a single proforma every year so that the government has sufficient data for planning the industry in an integrated manner. The government has also proposed to scrap the reservation for the small sector in case of some components to encourage large-scale production.

And, apart from this new electronics package, the government has also proposed to suitably extend the computer policy to electronic con-

struction and professional electronics. All these measures have been adopted with a view to raising the electronics production to Rs 10,000 crores in the year 1989-90.

NCAER REPORT

ACCELERATED GNP

A paper on Indian economy prepared by the National Council of Applied Economic Research (NCAER) contends that the structural changes in income, consumption and savings, over the years, contain a whole set of stimuli for the growth potential of the economy in the coming years. The Gross National Product (GNP) has also accelerated. The compound rate of growth of GNP for the period 1961-62 to 1973-74 was 3.31% and for the period 1973-74 to 1983-84 was 4.01%. This acceleration, according to the paper, is statistically significant but would have been sharper if the GNP had not been underestimated in the official national accounts. This underestimation is specially marked in the organised manufacturing sector and in the unorganised or informal manufacturing sector.

On the consumption side, while the share of total consumption expenditure had exhibited a rising trend until the mid-seventies, with some vicissitudes, it had taken a fairly marked downward trend after that. This meant an increase in the area of discretion in the budgeting of household expenditure. A marked spurt in the share of expenditure on protective foods such as fats, pulses, sugar, vegetables, meat, fish, eggs and fruits was also evident. But, while there was progress towards self-sufficiency in foodgrains, production of protective foods did not increase to this extent. Consequently the thrust in agriculture must now respond to the shift in the demand pattern by moving away from cereals to types of protective foods, without ignoring the demand for cereals.

The share of household expenditure on non-food consumer goods has increased with a substantial increase in the share of consumer durables. However, the paper also stresses the need for making domestically produced goods competitive in quality and price since the growing maturity of consumer decision-making may also make smuggling a profitable business. Therefore, taking into account these changes in the patterns of aggregate consumption, the need for liberalisation of consumer goods production has become imperative. A suggested solution is that the cost of production could be directly reduced by a downward adjustment in indirect taxes on manufacturers. Also, a 10% cut in the indirect taxes on the manufacturing sector may well have a salutary effect on the economy. The paper also suggests that food subsidy can be brought down by reducing the coverage of the public distribution system.

And, on the saving side the paper contradicted the Seventh Plan estimate that the saving rate would reach its peak of 26% in the last year of the Sixth Plan. For, the preliminary estimates for 1983-84 put the savings rate at a mere 3.7%. However, the paper categorically pointed out that any attempt to force the pace of savings for the sake of additional resources, in the short run, may have an adverse effect on consumption.

BRITAIN'S FILM RENAISSANCE

British film-making is fast recovering from the doldrums that afflicted it in the 1960s and 1970s, when Britain's film producers were eclipsed by the great international acclaim that met their fellow-countrymen working in TV and theatre. The revival of the industry has been greeted with the enthusiastic approval of both audiences and critics, the high point of this being the award of Oscars for best picture in 1982 and 1983 to *Chariots Of Fire* and *Gandhi* respectively.

That trend is continuing with ever-increasing vigour in 1985, which has been officially designated as British Film Year in a £1m promotional initiative backed by the government, the domestic film industry and private industry. Described as "one of the most important cultural projects in the world today", by the Minister for the Arts, Lord Gowrie, the initiative has been endorsed by the US Academy Awards for 1985, just announced. Two British films, *A Passage To India* and *The Killing Fields*, picked up five Oscars between them.

In view of the accolades that British films are receiving, one cannot help but agree with Lord Gowrie that "this is a remarkable time of revival of new kinds of film-making and artistic exploration, and of the discovery of a vast reservoir of new talent".

USSR

UNDER A NEW HEAD

Mikhail Gorbachov, the new General Secretary of the CPSU, is, at 54, the youngest member of the Soviet Union's top leadership. When news of his confirmation to the post was announced, the world knew that he was a 9-to-9, six-day-a-week worker, family man, restrained vodka imbibor, classical music fancier, hiker and reader—but little else. He has risen so fast that people have little but a superficial picture to go by.

A law graduate from Moscow State University, he is among the few top leaders in Russia with an academic background and is the most educated head of state since Lenin. It is said that he stayed in power by not taking risks. He was elevated to full membership of the ruling politburo in 1980 under Leonid Brezhnev and made his mark in the agricultural sector where he is known as an 'apostle of change'. He tried to improve the farm system by loosening bureaucratic control over farms and by giving managers power in decision-making. A second plan was to make wages more directly dependent on results and to encourage this, workers were put on a so-called team contract under which they effectively subcontracted work from managers and split the profits. This scheme helped raise productivity rates in most regions and brought Gorbachov into the limelight.

His style is very different from the stolid, intensely private behaviour of most Soviet leaders. During the February national elections, he brought his wife, daughter and grand-daughter with him to the polling booth. His wife, Raisa, too, is very different from the wives of former Soviet leaders. A former student of philosophy at Moscow State University, she is glamorous and very much her husband's companion. She accompanied him on a trip to Britain and caused a sensation among the photographers.

Gorbachov is also publicly affable and foreign leaders have been impressed by his humour. On a tour of the British Museum, where Karl Marx wrote part of his *Das Kapital*, he exclaimed, "If people don't like Marxism, they would blame the British Museum." Yet, he is a cool, reflective man, capable of steady reserve.

He, in fact, is a perfect example of the New Guard, raised after the Stalinist horrors and to whom the catastrophe of World War II is but an adolescent memory. The West feels that he is someone with whom it can do business. Yet, he is just as determined as the Old Guard on basic Soviet policies towards the West and there is no indication that he will be more yielding on matters like the MX missile or Reagan's 'Star Wars' plans than Chernenko.

Gorbachov is essentially a 'Europeanist' and he took pains to demonstrate the fact even at Chernenko's funeral by his effusive welcome of European dignitaries. And, as all Europeanists, he too believes that the best way to undermine American strength is to drive a wedge between the US and its West European allies. Needless to say then, that the Americans are slightly apprehensive about Gorbachov. Western Europe, on its part, views him as a pragmatist who may inject the much needed decentralisation and flexibility into the Soviet system, setting a new trend for them to ape. More likely than not Gorbachov will be sympathetic to their appeal. As far as the crucial relations between the two superpowers go, Gorbachov being young, and likely to outlast the septuagenarian American President, he will perhaps prove to be a more formidable adversary.

IRAN-IRAQ

AND WAR GOES ON

"Every punch will be answered by a harder punch". So said Iranian President Ali Khamenei during a sermon at Tehran University, after a terrorist made a human bomb of himself, killing himself along with five other persons.

The on-again-off-again fighting between Iran and Iraq which has been continuing for over four years was on again in March. This time it began with an Iraqi air attack on an incomplete Iranian nuclear power plant at Bushehr on the Persian Gulf coast. An agreement of June 1984 to keep off was violated again as both Baghdad and Tehran came in for air attacks. Baghdad's Rafidain Bank was shattered by a bomb blast, which the Iranians claimed was a ground-to-ground scud missile fired

from 100 miles away. The Iraqi city of Basra too was badly shelled and was in danger of falling into Iranian hands as their troops reached the Baghdad-to-Basra highway. However, the Iraqis brought up reinforcements and halted the Iranian drive. The Iranians also accused Iraq of again using chemical weapons but the accusation has not yet been confirmed. In the various attacks on civilians, at least 500 people have been killed on both sides.

Peace seeking missions were kept busy through the month. The Algerians, who had presided over an Iran-Iraq deal in 1975, Sweden's Olaf Palme and the UN's Perez De Cuellar all took interest, while for the non-aligned movement, Rajiv Gandhi sent a peace mission to Teheran. The Gambian chairman of the Islamic Conference Organisation was in Saudi Arabia in late March to discuss possible peace moves. Iraq has hinted at concessions over the disputed Shatt-el-Arab waterway at the head of the Gulf, better access for Iranian pilgrims to the Shia holy places of Karbala and Najaf in Iraq, and perhaps even Iranian control over Abu Musa and the Tumbs, the islands in the Strait of Hormuz which Iran seized in 1971. However, Ayatollah Khomeini wants to destroy Iraqi President Saddam Hussein and overthrow the Baath party and will accept nothing less. Hussein is not likely to assent to his own downfall. Further, both sides have enough weapons and have been skirting out enough oil to keep their people fed and clothed.

Meanwhile despite the various overtures by concerned countries to end the Gulf war, the war is continuing, on a more intensive scale. In the latest bout of fighting, well over a hundred people were killed in a major Iraqi bomb attack on Teheran. Apart from this, casualties are continuously being reported from both the countries. Under the circumstances there appears to be no end to the war in sight.

US-USSR

MYSTERIOUS MOVES

The much-awaited arms talks in Geneva began in March with much small talk in public. As to what was discussed behind closed doors, not much was known because both sides had already reached one agreement: not to discuss anything of consequence with reporters for fear of misinterpretation and jeopardisation of the talks. The three leading American negotiators are Max Kampelman, John Tower and Maynard Glitman, while their Soviet counterparts are Victor Karpov, Yuri Kvitsinsky and Alexei Obukhov.

Glitman and Obukhov are the chief negotiators on the intermediate-range Nuclear Forces (INF) negotiations. The basic US approach is to reach an equal level of intermediate range weapons all over the world and is willing to set that level anywhere between zero and 572, the number of Pershing I and Cruise missiles scheduled to be deployed in West Europe. Tower and Karpov will be the point men in the Strategic Arms Reduction Talks (START). The most difficult set of negotiations have been left to Kvitsinsky and Kampelman: President Reagan's Strategic Defence Initiative (SDI), better known as "Star Wars". While the Soviets are determined to make "Star Wars" the centrepiece of the negotiations, President Reagan declared before the negotiations that above all, "we seek agreement as soon as possible on real and verifiable reductions in American and Soviet offensive arms", thus trying to "divert attention from his defensive anti-satellite weapons. The SDI is still under research and the Washington stand is that it was too early to talk about restrictions on things not yet constructed. The Soviets, however, wish to nip it in the bud.

On the European front, the Belgian Cabinet finally capitulated and decided to accept the 48 cruise missiles to which it had committed itself in 1979. Sixteen of the missiles arrived soon afterwards on Belgian soil. However, Eastern and Western Europe were again keen on making advances to each other. West German Foreign Minister Hans-Dietrich Genscher visited Moscow and Warsaw early in March. Moscow's message was that if the Kohl administration voiced disapproval of Reagan's SDI plans, it would go along with West Germany's Ostpolitik. The West German Economics Minister Martin Bangemann, also met the East German leader Erich Honecker, on Mar 12. Hungary's Foreign Minister was in London on Mar 5-7, and British Foreign Minister Sir Geoffrey Howe was due to visit 6 East European countries in April. This frenzied exchange of visits can partly be explained by Hungarian party leader, Janos Kadar's statement: "Our politics is economics, and our economics is foreign trade".

MARCHING ORDERS

On Apr 6, yet another coup was added to the history of world politics. This time the stage for the enactment of the bloodless coup was set in Sudan. The 16-year-old Nimeiri regime was overthrown by the country's newly appointed Defence Minister, Maj Gen Abdul-Rahman Suwar Al-Dahab. Taking into consideration the prevailing turmoil in the country, the coup, far from being criticised, has been enthusiastically welcomed by the Sudanese people. And, not surprisingly, Al-Dahab's move had received instant acclaim from several countries all over the world.

For, over the years, Mohammed Jafer Nimeiri's erratic politicking had become the cause of widespread discontent. Lately, under the influence of Islamic fundamentalism, Nimeiri had, as recently as last year, imposed Islamic Sharia (jurisprudence) laws on the predominantly Christian population of southern Sudan. This oppression of the Christians had resulted in the sparking off of frequent clashes between them and the Sudanese army. And, taking his newfound Islamic fervour a bit too far, Nimeiri had even introduced public flogging, hanging and amputation as penalties for wrongdoers. Like Iran, perhaps, he too nurtured the hope of converting Sudan into a Muslim republic. But this did not deter him from oppressing the Muslim population apparently for fear of their revolting against him.

What ultimately led the country into dire straits, however, was the gross mismanagement of the economy in Nimeiri's regime. Once a country of plenty, Sudan had lately been reduced to a state where it had to seek assistance from other countries with the proverbial begging bowl in hand. Even heavy borrowing from the US was not sufficient to tide over the severe shortages of basic commodities. The problem was aggravated manifold by the influx of an estimated 10 lakh refugees from famine-stricken Ethiopia and Chad. But the faux pas which finally led to Nimeiri's ouster was his devaluation of the Sudanese dollar by a phenomenal 48%, coupled with the cutting of food subsidies. The price of bread was consequently raised, which infuriated the population, leading first to bloody demonstrations in Khartoum and then to the bloodless coup. Nimeiri had his hands full not only with national problems but international ones as well. His oppression of the Christians in Sudan evoked criticism from US and there was no love lost with Saudi Arabia, Libya or Syria either.

In these circumstances Al-Dahab decided to seize power to avoid bloodshed and to preserve the independence of the country. That, at a time, when Nimeiri was away in Cairo, conferring with Egyptian President Hosni Mubarak. The new strongman, immediately on coming to power relieved all members of the Nimeiri regime of their posts, dismissed all provincial governors replacing them with army commandos, dissolved the Parliament, disbanded the Sudanese Socialist Party and suspended the Constitution. In addition to this, he sealed off the country and declared a state of emergency. According to Al-Dahab, the army will be in power for a transitional period only after which democracy will be restored to Sudan. For the time being then, the largest country in Africa is now under military rule and whether this prolongs into another military dictatorship like in Bangladesh and Pakistan, only time will tell.

BRITAIN

STRIKING STRIKES OUT

The 51-week-old strike of mineworkers ended in March as more and more of Britain's 1,86,000 miners trudged back to work. Early in the month delegates of the National Union of Mineworkers (NUM) voted 98 to 91 to overrule Arthur Scargill, the Union's militantly Marxist leader and ended the walkout. Initially the miners of Kent and Scotland voted to continue the strike until amnesty was granted to 682 workers who had been fired during the disputes for various offenses like stealing coal and vandalism. However, the Scots capitulated and Scargill admitted that the strike was over but added that "our fight will go on".

The strike began when the Coal Board proposed to close 20 money-losing pits and lay off about 20,000 miners. However, the union was sharply divided and about 26% of the workers continued to work. Steelworkers, too, did not give their support, and although the dockworkers called a sympathy strike, they could not hold it together. The country was also going through a recession period and under PM Thatcher's tough stand on the closures, the mineworkers too, were not ready to suffer more. Further, Britain has developed its North Sea oil and gas fields and has become less dependent on coal. The government

also has encouraged them to work.

miners decided to resume work.

The cost of the strike, however, has been heavy. It has resulted in 14 deaths, 9,808 arrests and many injuries on the picket lines. There has also been a \$3b loss in output and other economic consequences. Further, it has highlighted the fact that the labour movement in Britain is not as united as in earlier years. The Labor Party splintered in 1981 when many leading moderates formed their own separate Social Democratic Party. Quite a few of Labor's rank and file members have taken radical leftist position and no longer support the leadership. About 30% of union members, in fact, voted for Thatcher in the 1983 elections. There has also been a sharp decline in union membership: since 1979, the membership of the umbrella organisation, the Trades Union Congress, has tumbled by 20% to about 9.6m. Part of the reason for this lies in the fact that the nature of jobs in Britain is changing. While old line industries like steel and coal are shrinking, high-technology fields like computers are expanding. The latter type of industries employ white-collar educated labour, who are less receptive to union talk of solidarity and militancy. This, in fact, is happening all over Europe, and the trade union movement is facing an all-European crisis.

MIDDLE EAST

INCREASING TURBULENCE

The situation in Lebanon is again deteriorating, and this time the cause was a split in the armed militia of the Maronite Christians, known as the Lebanese forces. President Amin Gemayel, who is himself a Maronite, has over the last few months, been increasingly accepting Syrian protection against a possible Muslim takeover. Many of his leading militiamen, however, favour Israel, and some even call themselves 'Sharonites' after Israel's former defence minister, Ariel Sharon. They were greatly displeased when a high level Phalange party delegation visited Syria in late February and agreed to a new path of relations between the Phalange and Syria. Two militia leaders, Samir Geagea and Elie Hobeika revolted and called themselves the Movement for Christian Decision. Shortly afterwards, Syrian tanks reached the outskirts of East Beirut where Geagea loyalists had taken control of most Christian militia positions and units.

There was more trouble in southern Beirut where a car bomb killed over 92 persons. The attack was directed against the Hizbullah, a Shi'ite fundamentalist group, and their spiritual leader, Muhammad Hussein Fadlallah. The Hizbullah blamed the Americans for the bombing though there was no apparent link. The US deemed the situation risky and began to evacuate the American embassy. The remaining Americans were badly shaken when an American journalist, Terry Anderson, was kidnapped by an unknown group in mid-March. Israel, too, was anguished over its mounting casualties as Shi'ite guerrillas kept up their attack on them in southern Lebanon. A day after a truck bomb killed 12 Israeli soldiers, Israel mounted an attack on the Lebanese village of Zranyeh. At least 34 resistance fighters and civilians were killed.

But the situation appeared to be at an impasse. President Hosni Mubarak of Egypt flew to Washington with a peace plan which called on the US to meet with a joint delegation of Jordanians and Palestinians as a first step towards eventual peace talks with Israel. Although President Reagan gave him a polite hearing, he showed no enthusiasm because the Americans want the Palestine Liberation Organisation (PLO) to first recognise the UN Security Council Resolution 242 asking for Israel's right to exist. Further, the Reagan Administration has not at all fared well with its peace initiatives in the Middle East so far, and does not wish to burn its fingers any more. Mubarak accused the US of taking a backward step and adopting a defeatist approach. But the long and short of it is, that the problem remains unsolved.

CENTRAL AMERICA

PARTIAL RESPITES

The Nicaraguan President Daniel Ortega Saavedra and the US Secretary of State, George Shultz met in Montevideo, on the occasion of the inauguration of Julio Maria Sanguinetti, Uruguay's first democratically elected President in 13 years. This was a brief respite from the battle of words which has been going on between the Sandinistas and the Reagan Administration over the last few weeks. The propaganda battle has been aimed not so much at winning the hearts of the Central Americans as at gaining the support of US Congressmen. Congress is due to consider Reagan's request for \$14m in aid for the contras in late April or early May, and while the Reagan Administration wants to make the Sandinistas "cry uncle" (Reagan's words), the Nicaraguans are bent on derailing the aid. In this they may be

successful as a majority in both the House of Congress and the Senate against the "secret" war in Central America and disapprove of supplying covert funds to the contras. Further, according to a recent *Washington Post-ABC News* poll, 70% of those who polled stated that they were against the US involvement in trying to overthrow the Sandinistas.

Cashing in on such popular feelings, Ortega told a delegation of five US Roman Catholic bishops who had come to discuss church-state relations in Nicaragua, that the Sandinistas were willing to send home 100 Cuban advisers and to stop seeking new weapons systems including Soviet MiG aircraft. He further promised to resolve a dispute with Costa Rica so that the Contadora peace process could continue and invited a bipartisan delegation of US senators and Congressmen to verify that the military build-up of the Sandinistas was purely defensive. He reiterated his stand during his meeting with Shultz. The Americans, however, feel that this is not enough. There were 8,000 Cuban advisers in Nicaragua and about 2,000 of these were military advisers; therefore, the removal of 100 advisers would not make a dent. The Reagan Administration also wants Nicaragua to stop lending support to insurgents and terrorists in the region, meaning the Salvadoran guerrillas, and also to expand the government to include the political Opposition.

Meanwhile, in nearby El Salvador, the left-wing guerrillas struck again. A force of 400 guerrillas slipped through the army's security cordon and fired mortars at a telecommunications installation on top of the San Salvador volcano. Although the installation was undamaged the guerrillas could not be caught, showing that they are still a force to be reckoned with. The country is facing elections for a new legislative assembly on Mar 31. President Jose Napoleon Duarte's Christian Democratic Party at present holds 24 of the 60 seats. Most observers feel that it will lose two of the seats. Duarte is opposed by an alliance of three right-wing groups: the Nationalist Republican Alliance (ARENA), the National Conciliation Party and the Salvadoran Authentic Institutional Party. Together, these have 33 seats in the outgoing Assembly. The left-wing guerrillas have denounced the election as a farce and are trying to disrupt it.

BANGLADESH

ERSHAD'S CHARADE

Bangladesh came a full circle when Lt Gen H.M. Ershad re-imposed full martial law in early March, reinstituting censorship and postponing Parliamentary elections. The leader of the 15-party Opposition alliance, Hasina Wajed, and the leader of the 7-party Opposition alliance, Khaleda Zia, were put under house arrest and a number of Opposition leaders and political activists were taken into custody. The country's six universities, which are politically very active, were shut down, trade-union activities were banned and the nation's courts were closed. All political agitation was forbidden, and anti-Ershad graffiti's were washed off from the walls. However, later in the month, Ershad freed a large number of political prisoners who had been detained during the February riots.

Ershad, who had earlier relaxed martial law and had agreed to hold parliamentary elections, had simply run out of patience. The opposition alliances had refused to participate in the elections unless martial law was withdrawn and the government turned over to a neutral caretaker administration. Ershad, therefore, went back on his words and decided to toe a line which resembled Zia-ul-Haq's. He called for a referendum on his government's policies, on Mar 21, the third anniversary of the bloodless coup which brought him to power. With the ban on all political activity, the arrest of prominent Opposition leaders, and the full rigours of martial law in force, the result of the plebiscite was a foregone conclusion. He secured about 80-lakh 'yes' votes and three and a half lakh 'no' votes and thus feels that his policies have been vindicated and he has been given the go-ahead to continue as President, until parliamentary elections are held. The Opposition, however, has dismissed the referendum as a farce. Early in April, Ershad announced the withdrawal of all concessions he had earlier offered to the country's opposition parties for their participation in the parliamentary poll. The next step is now awaited.

CHINA

TOWARDS CAPITALISM

Is China going capitalist? Under the impact of Deng's impressive reforms over the past five years, it would appear that market forces have begun to play an important role in the country's economy. Since 1978, there has been an average annual increase in agricultural produc-

tion of 7.5% in 1978 to \$155 in 1980 and there was a 23% expansion in foreign trade last year, to a record \$49.7b.

However, in so far as capitalism means big corporations, organised labour and a rapid movement of money, China is not likely to become capitalistic in the foreseeable future. In fact, although the economic reforms continue, there has been a marked tendency to draw in the reins in the last few months. Economic liberalisation had led to an increase in lotteries, hoarding and inflated expectations. Instead of being banked or reinvested otherwise, profits from government enterprises were being too often doled out as bonuses. There is a growing concern among government officials that the economic reforms may have resulted in a drop in state revenues, the by-passing of the Communist ideology and the potential appearance of the capitalistic phenomenon—inflation.

Under the circumstances, the government has decided to apply the brakes. Lotteries have been condemned as "counter to efforts to build socialist ethics" and in mid-March, the perpetrator of the reforms, Chinese leader Deng Xiaoping declared that "the aim of China's open

WORLD'S LARGEST CITY

Chongqing, one of China's old cities, has now acquired the distinction of becoming the largest city—not only in China but in the entire world. A bird's eye view of the city has a marked resemblance to a large ship. Situated atop a bluff above the confluence of the Yangtze and Jialing rivers, Chongqing encompasses a population of 1,38,90,000 living over an area of 8,610 sq miles. Comprising of 90 districts and 12 counties, the city has undergone momentous change and rapid growth over the 40 years since the war with Japan.

In view of this phenomenal development Chongqing was given the economic and administrative powers of a province in 1983. Ever since then the city has virtually become an economic laboratory for China. In fact it is said that an idea which works in Chongqing can work anywhere else in China too!

Unfortunately, though, Chongqing is also facing some growing problems. For starters, its economy is not compatible with the large population size. Then, transportation facilities are woefully short of target too. Lack of hotel space and inadequate air service to cope with the influx of visitors is another major problem. Still, Chongqing residents are tackling these problems skillfully. The city is fast acquiring a modern look with orchestras, fox trots becoming an integral part of life—quite unimaginable only a couple of years ago.

policy is to develop socialism, not to turn the country into a capitalist economy." The government introduced a number of measures aimed at correcting the "adverse" effects of too much reform. A 10% cut in spending has been imposed on all government agencies, guidelines for bank loans have been raised to encourage saving; gold bullion has been released from government stocks to produce jewellery, which is expected to soak up dormant currency from the economy, and government agencies have been forbidden to lend government funds for private purchases.

On another front, China aims at reducing its population of over 1b to 700m in the next hundred years. In this, however, it has run into unexpected opposition. Although China denies that it uses forced abortion for birth control, the US thinks otherwise. The Reagan Administration is withholding \$23m from the US fund for population activities from China until it is certain that the fund will not be used for supporting abortion in that country.

PAKISTAN

MARTIAL LAW TO MARTIAL LAW

Many Western analysts felt that Pakistan was edging towards democracy as about 53% of the electorate turned up to vote in a new National Assembly. The voters put six Cabinet ministers out of power and also proved disastrous to those groups which had aligned themselves with President Zia-ul-Haq's military regime. People assumed that the President would bow to their will and move faster towards parliamentary democracy.

But the hopes were belied. Early in March, Zia announced several amendments to Pakistan's Constitution, which was drawn up in 1973, suspended in 1977, and which the President says he intends to restore.

(Continued on page 56)

SPORTS FOR A HIGHER JUMP

It's all in the Indian game—the occasional victories, the slipped cups, and the spiritless players. And potential talent remains unrecognised. But the game has to be replayed; the entire sports pitch needs to be dug up and repaired for nurturing young talent; future sportsmen have to be coached to wrestle against the odds and their abilities perfected so that they stump the world with their glorious hit wickets. Meanwhile, we couldn't but help you to play the exam game in the right spirit by equipping you with maximum facts on our sporting scene, lest the examining umpire should declare you out!

SPORTS IN INDIA

remains a paid hobby, since sports promotion—the basis of a sporting career—in schools is just an eye-wash.

Except in games like football (Calcutta clubs), cricket (Test matches) and tennis (prize-money tournaments), most Indian sports stars earn their living through a salaried job. They are absorbed by the public or private sector in recognition of their sporting talent.

The Railways recruit the largest number of players—about 6,000 every year. Their sports budget is about Rs 24 lakhs, based on an allocation of Rs 1.50 per employee and there are nearly 16 lakh employees. This amount is distributed among the various zonal units in accordance with their staff strength and quantum of activity in various sports. With the money allotted to them, the units have to organise annual inter-divisional meets and prepare their teams for inter-railway championships and occasionally conduct a zonal tournament in a particular sport.

Jobs on sports basis in the Railways are obtained at the divisional level. The major units can employ 24 players per year, the minor 18 and others 12 per year. Depending on the educational background and achievement of the player, the salary is either in the Rs 280-400 grade or Rs 350-560 grade. International players like hockey centre-forward Mohammed Naeem are recruited as senior welfare officers with a carry-home pay

of about Rs 2,500. The Railways use sports to boost their public image. However, they follow the competitive approach, with emphasis on top performance. Jobs are mostly available in the clerical division.

In direct contrast to the approach of the Railways is the approach of the Petroleum Sports Control Board (PSCB) and the Central Public Enterprises Sports Control Board (CPESC). Both follow the adage of sports for all, with emphasis on recreation rather than outstanding performance. There is no recruitment of personnel just on the basis of excellence in sports. However, a person with talent gets preference in employment. Sports are used for community interaction and promoting good health with stress on inter-organisational tournaments rather than national meets.

Sportsmen and women of reasonable achievement (at least university level) can get employment in these public sector undertakings with a starting pay of about Rs 1,500. But no daily short leave is given for practice. Equal importance is attached to developing one's career and playing sports.

Players in private sector firms are employed either in the public relations or security departments. Most of them earn a monthly salary which varies from about

Rs 750 p.m. for a new aspirant to about Rs 5,000 p.m. paid by Nirlons to Sunil Gavaskar. Some firms like JCT Mills, Pragwara, Mafatlal and Tatas employ players (mostly football) on a yearly contract basis. Most of the football players of Tatas are from Kerala, Goa and Karnataka and earn about Rs 4,000 p.m. However, for most players in the private sector, jobs are available mostly in the clerical division. Sportsmen and women in this sector enjoy a distinct advantage over their public sector counterparts as they get a much higher diet and kit allowance. Asiad probables from the Tatas, TELCO and TISCO got extra diet allowance of as much as Rs 50 per day as compared to Rs 2 per day of athletes from the Police and Railways.

Besides employing players, the private sector plays a vital role by sponsoring numerous sports tournaments all over India (for details see pages 32-33).

In fact, almost 80% of the money spent annually on sports in India comes from private sponsors. State patronage is mainly for maintenance of stadia, creating new sports facilities, salaries of NIS coaches, foreign tours and subsidies for school and university sports.

But, the real big money in Indian sports is earned by Test cricketers and the footballers representing Calcutta's Big Three clubs—Mohan Bagan, East Bengal and Mohammedan Sporting. Test cricketers earn Rs 14,600 per Test match and Rs 3,000 per one-day international. Admittedly, from the Test match earnings, Rs 2,000 is kept in a

Mass adulation for the Test cricketers is amazing! Ptc shows Ravi Shastri obliging his fans.

benevolent fund maintained by the Board of Control for Cricket in India (BCCI) and given to the players after they retire. As each Test player also has a lucrative job, invariably an officer status in a nationalised bank or a private firm; his annual income is considerable. The more popular Test stars obtain sizeable amounts as royalty from sports firms, by lending their names to columns, by appearing in ads and by endorsement of goods. Amongst all Indian sports stars, social mobility of Test cricketers is most rapid. The adulation and status is akin to film stars.

Leading footballers in Calcutta earn a lot of money but in an underhand manner. As the players are not officially professional, they cannot openly accept cash payments, so money is given to them in the form of kit allowance, diet and travel expenditure, etc.

Last season the highest paid player was medio Prasanta Banerjee who got around Rs 1,25,000 for his transfer from East Bengal to Mohun Bagan. However, all this money does

not come to Banerjee immediately. It is paid in instalments during the season. The lesser known players, whose informal contract may be for about Rs 40,000 or 50,000 per season, lose money because of instalment payments. Unless they become indispensable members of the team during the season, they are rarely paid their stipulated full amounts. On some pretext or the other, the clubs avoid giving the agreed sum. Also, lesser known players do not have regular agents or command ample muscle power to make sure they are fully paid. In spite of the shady deals and prevalent shambles, good soccer players earn a sizeable income from playing football. Besides the money they get from their clubs, they draw a regular salary (with little work) in jobs provided by nationalised banks or the private sector. The promise of big money and fame is a motivating factor for boys from Bengal to excel in football. Bengal, Goa and Kerala have a long tradition of involvement in football with the maximum spectator response.

Now, in spite of reasonable employment opportunities especially in popular sports like cricket, football and hockey, the number of

the school level, where the promotion of sports should really start.

In all schools in India, the annual budget allocates money for sports. Every state government provides allowances for sports in educational institutions. Yet in most cases, this financial allocation is not used for sports development or providing sports equipment for children. In Delhi, we have observed every year that the most brisk sale of sports equipment takes place between Mar 20 and 31, the closing of the financial year. After the routine inspection, the equipment is resold at a lower rate either to the shop or to unsuspecting children supposedly being favoured.

In this unseemly transaction, both the sports dealer and the PT instructor in school or the more grandiose director of physical education in college take their share of the spoils. This corrupt practice is not confined to Delhi alone but is prevalent in all cities.

Even the programmes chalked out for sports promotion in various states in India are impressive only on paper. In actuality they are just a facade to camouflage rampant corruption and stagnation at school level. For instance, in a state like Punjab, where hockey once had a fervent following, the game is in a near shambles at the grassroots level. On paper, the hockey programme seems impressive as a schedule of six months is chalked out. In reality the opposite occurs. Over 80% of the schools take the hockey schedule non-seriously by forming a team just a week or 10 days prior to the main inter-school tournament. They then lose in the first round, the kit and sticks are retrieved from the boys and hockey practice for the year ceases. Hence the flow of hockey talent in Punjab is on the decline.

It is because of such rampant corruption and nefarious practices at the school level, that sports promotion in India does not get a proper boost, in spite of reasonable opportunities and sponsorship. Children are not encouraged to play and talent at the school level is harnessed insufficiently.

NOVY KAPADIA

OVER 700m AND YET NO GOLDS

Why? Because the masses don't play; because sports has limited social acceptance; because adequate facilities are not available; because the significance of proper diet has not been understood...

The motto for success in any sports movement is 'mass participation and mastery' with emphasis on the first half of the formula. Unfortunately, the basic defect of Indian sports is that there are no systematic and scientifically planned programmes for games at the school level. Consequently, sporting consciousness and mass participation is at a very low level and confined mainly to urban areas (just 20% of the population), except in wrestling, popular in rural Punjab, Haryana and Maharashtra.

Mass participation in sports cannot be achieved in India as playfields are not available in abundance for the recreation of children. Ultra modern stadia, like the 17 constructed or reconstructed for the Delhi Asiad, are only the tip of the iceberg. They serve the finished pro-

duct only, that is the international sports star or an aspirant to that status. The newly created Sports Authority of India (SAI) have organised coaching schemes for children in various sports at the Nehru and National Stadium complexes. This is a step in the right direction but its basic value is to assist some teenaged players to develop proficiency in their sport, rather than leading to mass participation.

International sports champions in India will always remain negligible because facilities do not exist for mass participation in sports. From quantity comes quality is an old sports adage, vindicated in countries ranging from populous China and sprawling USSR to vast Australia and Brazil (in the case of football) and sparsely populated East Germany and Cuba.

An apt illustration of the negligible sports

facilities available at the school level, the base for future champions, is the discomfiting fact that out of 5,00,000 high schools in India, only 1.8% have playgrounds. Most of these 1.8% high schools with playgrounds have just a 200X100 m sports arena which is used for organised sports and recreational activities like marbles and *gooli danda* as well as events like weddings, musical nights and 'Ram Leela'.

A perusal of sports facilities in Delhi with its ultra modern 17 stadia aptly indicates the paucity of playing space for the youth. The Municipal Corporation of Delhi runs 1,500 primary schools. Of these, 540 schools do not possess anything resembling a playground while many have just the barest infrastructure. Again, less than 10% of these schools have physical instructors.

The magnificence of our stadia is rendered insignificant by the limping pace of sports promotion and mass participation.

The New Delhi Municipal Corporation (NDMC) covers an area of a little over 42 sq km. About 4,00,000 people live here. The NDMC also controls 79 primary schools. They have playfields ranging from 50 sq yds to less than half a dozen with 1.5 acre plots. Some of these schools have concrete playing surfaces of a mere 25 sq yds. The NDMC runs 16 nursery schools of which only six provide playing space with swings, slides or seesaws.

There are 700 middle and higher secondary schools run by the Delhi Administration. For every 1,200 students there is just one physical education teacher. Just six gymnasiums serve 700 schools. Only six schools have swimming pools. The sports facilities in other states are as mediocre. Catch them young (!) is just a pious homily mouthed by administrators of sport and politicians alike for nearly three decades but as a policy it is still in the formulatory phase as the basic infrastructure of sport, like playfields, is available to so few.

Ironically, in Delhi, like in other urban areas of India, spacious playing fields only exist in elitist public schools which the children of affluent people attend. In such institutions children of the pampered rich indulge in sport for leisure (except some who take to tennis seriously nowadays as there is money to be earned on the foreign circuit). Rampant apartheid exists in the availability of sports facilities amongst, for instance, the students of the elitist Modern School in Delhi and the rat-infested government schools in Mongolpuri or Trilokpuri. Sports facilities, like everything else in a class society, is only for the privileged. Yet, it is the children of the lower middle classes who mostly take to sports as a career for the sake of social mobility. Sadly, in their formative years they have limited facilities and schemes for serious practice in a particular sport. Thus Indian sport is trapped in too vicious a circle to extricate itself from it easily unless money is channelled in proper directions like increased playing areas for the young in their schools and colonies and optimum utilisation of existing facilities.

The example to emulate is obviously that of the USSR. Today there are about a million sports facilities of various kinds in the Soviet Union, which are able to accommodate more than 20m people a day. Regular sports participants in the USSR today total to about 80m. Physical culture has become an organic part of the life of the people of the USSR,

which is not even remotely so in India, where in most families a sports enthusiast after a certain age is looked on as a quirk. In USSR compulsory physical education is provided to about 46m children. There are numerous participants in the USSR schoolchildren's games. Almost 37m children took part in the 1982 Games for instance. Mass contests for junior and age-group sports teams are arranged annually throughout the USSR in which 25m children participate annually. It is from such a mass base and reservoir of sports talent that world champions regularly emerge in the USSR.

The intake of nutritive diet, also essential for success in sports, receives scant attention in India. Not only are children ill-informed about the value of food, even parents and teachers have no concept about the importance of diet in sports. While conceding that about 350m Indians live below the poverty line, in urban areas where people can afford healthy food, money is wasted on spicy items like *pakorae* and *chaat* which have no nutritive value. India can never produce internationally renowned sportsmen and women when most of our players at home eat a substandard diet like *dal*, *roti*, *subzi* and *bread pakoras*. Even at the National Institute of Sports (NIS) where teams and coaches are trained, substandard food is served. There is no miracle food for athletes. What really matters is the maintenance of the right balance or the recovery of it once it has been lost.

This does not occur in India owing to the anachronistic concepts of nutrition. After extensive practice, lost energy must be replenished by having food rich in carbohydrates, like lots of jam, cakes and biscuits. Most Indian players prefer to take spicy or greasy food instead, which is detrimental to development.

A protein-rich diet helps in building tissues and strength. Sadly the quantity and quality of protein intake of an average Indian is also poor. With very little protein coming from animal foods like meat, milk and eggs (not eaten regularly by many Indians because of prohibitive costs or religious taboos), the protein which is actually eaten has a biological score of about 60 as compared to about 80 or 90 for animal protein. Children, in particular, need extra protein. However, the calorie intake is so low in India, that the protein procured is mainly used to maintain energy rather than carry out its primary function of building tissues and strength. According to the National Institute of Nutrition of Hyderabad, calorie intake of the low and middle-income groups in rural and urban areas is 775 and 820 respectively as against the recommended allowance of 1,275. Hence, unless a concerted effort is made to improve the diet of the youth and change the eating habits of Indian players, this inherent deficiency will always remain. Part of this problem could be tackled by making food a compulsory subject at schools.

Another primary malady which hinders sports in India is limited social acceptance. The prevalent notion for body contact sports is that they are the pastime of the unintelligent. Till school leaving age, participation in hockey, football, athletics and boxing is tolerated but afterwards meets with parental disapproval owing to the prevailing social stigma. Such an attitude towards body contact sports is out of tune with international requirements. Miljen Miljetic of Yugoslavia, a renowned soccer

coach, stresses that for modern football skill, intelligence and mental toughness are the three qualities most required. In India the very base is unbalanced as the intelligent boys shy away from games like football and hockey because of social ostracism. This fact is upheld by India's hockey coach for the 1984 Los Angeles Olympics, Balkishen Singh, when he said, "In my days (1940s and 1950s) whoever played top class hockey in his village or town was considered a hero and so many took to the game. Nowadays only the leftover talent with no other means of social advancement takes to hockey and standards have correspondingly declined."

This is an accurate indictment of social attitudes to sports in India. To remedy this parents must be made to realise that sport prepares a child for the competitive 20th century and helps in the moral, mental and aesthetic development of both boys and girls. The Sports Ministry and SAI must endeavour to make sports part of the Indian ethos by intensive propaganda and easily accessible playgrounds. People must be encouraged to play a friendly game on weekends which nowadays is still a stigma unless it has tournament status. 'Make the people play' should be the motto for Indian sports. Otherwise we will continue to wallow in the quagmire of mediocrity with an occasional star like P.T. Usha, Milkha Singh, Sunil Gavaskar, Vijay Amritraj, Prakash Padukone, K.D. Singh (Babu), Wilson Jones and Michael Ferreira developing more by accident or individual labour than any conceived design.

N.K.

HER GAMES

have carried the Indian woman to newer heights in the world of sports... and to longer lengths on the Olympic track.

Asha Agarwal (left): A marathon step ahead. Shiny Abraham (right): Just a slip between foot and the finish.

With bated breath, thousands of Indians watched their TV sets as P.T. Usha jumped one hurdle after another, coming ever closer to the finishing tape. A few more jumps and, by Jove, she was leading the race! With nails half chewed off, and half off their seats, the Indian people cheered her hoarse. Then, as the hurdlers came round for the final straight run down the track, they saw her fall back to second... third... fourth place. Disappointed that they had been deprived of a gold, oh, what a thrilling gold,

they slumped back into their seats. But what a race it was!

The Los Angeles experience won't be forgotten in a hurry. Usha became the first Indian woman to reach an Olympic final. And took three more along with her—Shiny Abraham, M.D. Valsamma and Vandana Rao—into yet another final (4x400 m relay) where they finished seventh. Their male counterparts were nowhere in the headlines then and have made no waves on the international scene since then.

If there is a silver lining in the somewhat clouded depression confronting Indian sports (barring the glorious victory carved out by Gavaskar and his men down under), it's the very steady progress made by the Indian women on the sports field. Donning shorts and skirts, they are stepping out in increasing numbers to prove they could well be worth their weight in international gold.

What has prompted the Indian girls to take to sports? During the past decade, a regular string of successful coaching schemes were

announced at the national and state levels. Young girls, especially from the lower middle income group, came forward to take full advantage of the training given in gymnasiums and stadia. The thrill of participating in meets or matches, inside a packed stadium, was attraction enough. Sports for them has also meant a very pleasant alternative to household chores, an excellent release which, in turn, has given them a new identity.

The result of increased participation of women has shown up in the overall quality of performance in almost all games. The women's hockey, cricket and table tennis teams, for instance, look almost as professional, if not more, than their male counterparts. In this context the IX Asian Games of 1982 might well prove an important turning point in the history of women's sports in India. It was the first major international meet where Indian women earned more headlines than the men who represented India in the various events. India won the women's hockey at the Asiad convincingly, recording their most successful venture to date.

In athletics too, for the first time in India, it was the women who stole the show. Valsamma dominated the scene as she glided over the 400 m hurdles to record a spectacular win in a new Asian best of 58.47 sec. Apart from her, Usha, Shiny, Geeta Zutshi and Rita Sen were there to win medals for the country. The year appeared to have marked the beginning of a superb Indian story on the success for women's sporting ambitions.

The L.A. Olympics last year took this a step further. And now Asha Agarwal, the diminutive marathon runner, has kept the flag flying high on the international scene. On the cricketing field, Indian women fought hard against the visiting New Zealand side, last month and forced a draw—a healthy sign in terms of the progress of the sport.

Thus, women's sports have finally arrived in India and are very much here to stay. If more regular coaching programmes are organised for them, who knows within a few years it would be India striking the gold.

RANJIT BHATIA

NURSING SPORTS TALENT

is the key to redeeming India's sagging image in the world arena. Sports nurseries, which have brought fame and fortune to many countries the world over, can do the same for India...

The concept of sports nurseries has never been fully understood or properly implemented in India. Sports nurseries do exist in India, like the sports hostels in Lucknow and Meerut and the sports school in UP, sports school and college in Jullundur, sports schools in various cities in Kerala, sports school at Rel (Haryana) and the veterans club football coaching scheme in Calcutta. However, maximum benefit has not been obtained from these institutions as the approach has not been systematic and organised on scientific lines.

The example to emulate is undoubtedly that of China. Since the formation of the Communist government in 1949, the Chinese have made public sports increasingly popular and to produce champions, they have developed the 'homes of sport' concept. These are areas which, according to local interests, physique and customs, have developed one or two kinds of sports as their specialities. With long practice they consolidate and improve their standards for these sports to turn them into their traditions.

For instance, China's 'home of swimmers' is Dongguan County in Guangdong Province where, with its many lakes and rivers, at least 50% of the population can be considered competent swimmers. Swimming is so popular in the county's Daojiao People's Commune that, of a population of 40,000, some 30,000 are regular swimmers. More than 25,000 students in the county participate on their school swimming teams and over 1,000 receive systematic training in 11 sparetime sports schools, specialising in swimming. It is from quantity that quality emerges and it is this province that has produced most of China's leading swimmers (all of Asian class).

Similarly, Teishan County in Guangdong Province is China's 'home of volleyball'. This region boasts of abundant volleyball facilities and, interestingly enough, people who are taller than the average Chinese. There are 2,200 volleyball courts and 5,500 volleyball teams in the county, almost one for every production team of the people's commune. Over 300 players from this county have represented China in both men's and women's volleyball over the years. China are incidentally Olympic and World champions in women's volleyball and among the best six nations in the world in men's volleyball.

Another idea of sports nursery originated in Bulgaria. They introduced the concept of

Talent extracted! P.T. Usha owes it to her coach, Nambiar, for having reached Olympian heights.

'Specific Effort'. In the late 1960s the Bulgarians decided to be a leading weightlifting nation. After intensive scientific and medical research the authorities selected a conglomerate of village communes with a population of about 10,000 in the northern proximities of the country. The area was known to have the most naturally able-bodied men in Bulgaria and the selection for intensive training was made after scanning through all necessary bio-medical data. Then the region was flooded with the most modern weightlifting facilities and trained coaches. Within half a decade the Bulgarians matched the Russians as the leading weightlifting nation in the world. From this system emerged Naim Suleimov, the youngest lifter in history to break a world record, believe it or not, at the age of 15.

In the late 1970s Sweden, capitalising on the popularity of tennis following Bjorn Borg's legendary exploits, made tennis into a sports nursery. Courts were opened in every village and weekend tournaments were regularly organised. They are now reaping the benefits of making tennis a truly people's game. Sweden are the 1984 Davis Cup champions, their team of teenagers trouncing the seemingly invincible John McEnroe and Jimmy Connors 4-1 in the final. Also out of the best 10 men players in the world, according to ATP rankings, there are four Swedes, Mats Wilander, Henrik Sundstrom, Andrej Jerryd and Stefan Edberg.

India should emulate such examples in forging sports nurseries. If, for instance, after P.T. Usha's phenomenal success at the Olympics, the state government of Kerala had taken athletics to the people by making numerous

running tracks and jumping pits in remote areas and villages, many young girls would have taken to athletics. If systematic coaching had been provided to them, over the years maybe by the 1990s, India would have emerged as a power to reckon with in women's athletics in Asia at least. Usha has become a vogue and is a cult figure in Kerala and if her success had been capitalised on (like Sweden did with Borg), women's athletics could have been enhanced in India.

The sports hostels concept in India has produced reasonable results, especially hockey in UP. Young hockey talent from the state is assembled for specialised coaching at the sports hostels and schools. They receive education and training twice a day. There are stipends for the talented and those unable to afford fees. Many hockey internationals have emerged from this system, the most prominent being inside left Mohammed Shahid, nippy centre Mohammed Naeem, left winger Syed Ali and centre half Ravinder Pal Singh. Nine out of the 11 players in the junior Indian hockey team are from UP and the state has been national junior hockey champions for the last four years. Similarly in Kerala, athletics queens like Usha, M.D. Velsamma and Shiny Abraham are products of the sports schools system. Unfortunately these projects are limited to only a few states in India and the youngster, when given admission, is not subjected to close medical scrutiny and scientific analysis to decide if he or she has the potential to be a champion. Hence the results from these sports institutions, though satisfactory, have not had the maximum impact.

All the goodwill and sports nurseries in India cannot produce results as very few children take to sports because of lack of colony playgrounds owing to the erroneous priorities of our urban planners. Hence children are not attracted to sports, and selection for specialised sports schools is restricted to a limited few, often those with family connections or whose parents have interest in sports. Mass sport as a popular means of recreation for all age groups has never been part of the Indian milieu. So the need of the hour for Indian sports is to divert finance and facilities from the competitive sports syndrome and generate mass participation by creating spare-time sports schools and more playing facilities.

The Sports Authority of India (SAI) intends to choose certain schools in different areas for specialised coaching depending on local factors (the Chinese model). However, their efforts may be futile, unless they can get many children to regularly participate in sports. Otherwise like the SAI's recent attempt to create a swimming nursery at the Talkatora swimming pool in Delhi, all efforts will stagnate. Fifty-five school principals attended a meeting in December 1984 and were told about facilities available at the Talkatora pool, open from 7 a.m. to 7 p.m. Fees are a nominal Rs 50 p.m. in summer and Rs 100 in a heated pool in winter and just Rs 10 and 20 respectively for state level swimmers. NIS coaches are also in attendance. Yet just about 75 students from four schools in Delhi use this facility, and only three schools in the capital have their own swimming pools. A sad reflection on sports enthusiasm in the capital.

Indian coaching needs a shot in the arm! Sports nurseries, sports hostels and sports schools do exist but their approach is unscientific.

THE SPONSORED GAME

carries with it all the glamour of financial incentives and prestige, depending on the sponsor.

Who's the star of the Benson & Hedges World Cup cricket? Is it Ravi Shastri or his aristocratic Audi car? It would be little surprising if most cricket fans opted for the latter.

Well that's the glamour of sponsored sports today. Sponsorship itself is becoming a prestigious game with companies vying with one another—not to win a prize but give away one that is unique.

The Indian sports arena is undoubtedly commercial. Recent years have witnessed the significant role of sponsors in boosting the morale of players in the game concerned. Sponsorship also offers attractive financial incentives which go with the prestige it brings along. And if the player happens to play a winning game the laurels are shared by the player as well as the sponsor.

Riding success! Gavaskar in his Maruti car presented by Thums Up.

The present day sportsman enjoys his game almost as much as his predecessors did but the quantum and intensity of training imparted for a high level of performance is more than just time-consuming; it may even result in definite curbs on other activities. Naturally there is the desire to be compensated in some form. This need has been appreciated by the elders of sports establishments all over the world, who have indicated their willingness to professionalise sports in a more realistic manner. Leading sportsmen can enjoy financial and other benefits which make it worthwhile to remain in the sport of their choice.

Sports today are thus professional, i.e., much better organised and better supervised than ever before. The media, for its part, has accepted the changed situation, and better coverage is being given to sporting activities round the globe through radio, TV and the Press. For instance, the kind of prominence that Sunil Gavaskar enjoys in Indian sports compares favourably with the popularity of film stars.

Top level sportsmen, particularly, are far more secure than ever before. Even the enterprising sportsman can afford to plan his future with a certain degree of optimism. There are a few games where additional effort is being made in this direction. The International Amateur Athletic Federation, considered the most important wing of the Olympic movement, and

The sponsor's ad game adds spirit to the football match.

which had hitherto resisted attempts to bring in professionalism through cash incentives, has now modified its rules in order to implement measures to help the competitors, without jeopardising their amateur status. Under the scheme, athletes would be eligible to compete in prize-money meets at the national and international levels, but the benefits from such participation would be put in a trust to be utilised only after the athlete retired from sports.

It is something on the lines of the Provident Fund but with the proviso that the athlete concerned can withdraw money for education or medical purposes. Thus, it is very much on the cards that an Olympian like Sebastian Coe

Farman as Bjorn Borg.

Hence, financing of sports in India would, as a consequence, become an expensive proposition, in which the token subsidy from the state or the Central Government may not prove sufficient. It is here that companies are stepping in to lend a helping hand.

The Wells one-day cricket tournament, started in 1980, to provide Indian players competitive practice in the limited-overs game, is annually sponsored by the Indian Tobacco Company (ITC). The Modi Industries conduct a Gold Cup hockey tournament at Meerut and a junior tennis tournament. In the capital, the DCM annually conducts one of Asia's premier football tournaments for clubs. The Times of India publishing group sponsors a cricket tournament in Bombay and a table tennis open tournament in Delhi and the Punjab National Bank a football tournament in Jullundur. There are also the Mohan Meakins football and volleyball championships at Mohan Nagar and Solan respectively. The Tatas, since 1983, have sponsored the only hockey tournament for schoolboys under 15. This tournament is held annually with the

Nehru hockey tournament in Delhi. Metaltal Mills, Sireem Rayons, the Associated Cement Company, Dunlop India and the Vazir Sultan tobacco company are some of the other regular sponsors of sports meets. Besides these well-known firms, there are hundreds of other industrial houses—among them soft drink bottling companies, shoe manufacturers and sports goods manufacturers—which donate liberally to the national sports federations, especially during the conduct of national championships.

Sponsorships also help in giving that touch of glamour which helps to make the concerned game a little more attractive and interesting. The diehards, who oppose this kind of commercialisation, are not exactly overjoyed, but they have accepted the situation that the involvement of the industry may well help Indian sports to develop and flourish. In order to ensure the proper nurturing and growth of amateur sports in the country one has to ensure proper management through professional expertise. Which is not possible without monetary help.

R.R

Proper nutritious food is another vital aspect of training, which the Chinese have mastered. When questioned about special food for their athletes during Asiad '82, the chief weightlifting coach confided that for their top class lifters they advocated European type of food with boiled/roast meat, steamed vegetables, fresh fruit and milk. Food supplements like Vitamins C, B and E were also being liberally used.

However, food alone is not the answer to this miracle. Their athletes have been working extremely hard and for long hours. It has taken Zhu Jianhua 10 long years to reach his present world record of 2.39 m in high jump. It may, nevertheless, be well remembered that he started at 1.10 m in 1973/74, from where he has reached his present standard by sheer hard work and determination. The Chinese gymnasts, who won the world team title in 1983, beating the mighty team of USSR, are another example of dedicated hard work—working from four to six hours a day. So also is the case with Wu Shude, their strongman, who has held six world records in the past, and is an Olympic gold medalist. While Indian weightlifters find it difficult to lift 50 tonnes in a week, the Chinese lift 100 to 110 tonnes per week. It's a lot of tough work the Chinese put in. And the results are nothing short of marvellous.

Their coaching system, which has proved its efficiency in volleyball, badminton, diving, gymnastics, basketball, weightlifting and table tennis to name a few, emphasises remarkable ability to utilise the existing resources. China does not have the type of sports infrastructure which advanced countries like USSR and GDR possess. But it has still come up by making the most of whatever facilities it has in its selection of coaches. While we in India tend to discard our former champions, the Chinese fully utilise their knowledge and expertise. This was during Asiad '82. Their coaches were usually former national or world class performers. When Huang, who bettered three world records in his prime, and was the chief coach for weightlifting, was asked whether in China one could become a coach (like it happens in India) without excelling in that sports discipline, he laughed. "How can you coach and earn respect of your pupils, unless you have yourself excelled in that discipline, and have personal experience?" This opinion was shared by all the coaches. One of the secrets of their recent success is evidently the utilisation of proven ability of former champs, who are employed as coaches.

P K. MAHANAND

THEIR EXCELLENCE THE CHINESE

owe it to their champion coaches who adopt scientific training techniques.

Zhu Jianhua: Jumping higher since 10.

By all counts, the performance of the Chinese sportsmen at the Los Angeles Olympics with their incredible tally of 32 medals, is the biggest surprise in sports today. How is it that China, which had not taken part in the Olympics, in the past 50 years, beat the foremost Asian participant Japan, which had been coming Olympic gold medals ever since 1928? How did the Chinese emerge as world class sportsmen in such diverse events as athletics, gymnastics, volleyball, shooting and weightlifting? This question is more pertinent as Indian athletes returned empty handed from Los Angeles.

China's laudable performance could be attributed to the fact that though China did not take part in world championships and the Olympics for a long time, they were not sitting idle. It is claimed that the Chinese athletes improved upon the world record 268 times, between 1949 and 1983. In athletics their women high jump champion Cheng Fengyong improved upon the world record in 1957. Later, another Chinese athlete Nichih Chin set a world record of 2.29 m, in 1970. Chinese weightlifters had already set world records way back in 1963. Their present performance,

therefore, is no flash in the pan; it is the result of dedicated work for over three decades.

Such outstanding results are also due to nation-wide enthusiasm for sports and the government's wise policy of catching 'em young. Wu Shude, the world recorder in weightlifting, Li Ning the superlative gymnast; Zhu Jianhua, their best athlete and world record holder in high jump, were spotted at the age of 10 and have been trained since then.

Scientific training is another factor which has sky rocketed their performance. If the Chinese did not know what is scientific training, they have learnt it extremely fast. My Hongfei, the coach of Zhu Jianhua, left no stone unturned in mastering the latest training methods employed by the American and Russian high jumpers. The same is the case with their weightlifters who bagged four golds and two silvers at Los Angeles. The coaches studied the training methods adopted in USSR, GDR and Bulgaria, to evolve a scientific method of training.

THE E. EUROPEAN GOLD RUSH

is the immediate outcome of their players' penchant for perfection. And it has been so ever since they proved their worth in gold at Montreal.

There is no denying the fact that the East Bloc, viz. USSR, GDR, Poland, Bulgaria, Romania, etc have outshone sports giants like the US. This was never more evident than at the Montreal Olympics, where USSR bagged 125 medals (47 golds, 43 silvers and 35 bronzes), GDR won 90 (40 golds, 25 silvers, 25 bronzes), Romania 27 and Poland and Bulgaria 25 and 24 respectively. The US could get only 94 medals, while West Germany got 39.

After the Montreal Olympics, the Eastern Bloc has kept up its pace of victories. At the Moscow Olympics, where the US, West Germany, Japan, etc did not take part, USSR again took the lion's share of 195 medals, while GDR bagged 126. The absence of these major sports nations had deprived the Los Angeles Olympics of world champions, whose participation is looked forward to.

What are the reasons for this tremendous domination of the Eastern Bloc? First and

These world records are upto the end of the 1984 season.

foremost, it is the desire of this Bloc to dominate the world of sports to prove that their political and social system is superior to that of capitalist countries. The whole nation is vitally concerned about producing 'world beaters'. In GDR and USSR, top sportsmen are provided excellent food, even at the time of scarcity. Western observers have noted that even if the general populace do not get enough meat, fresh vegetables and fruit, their sportsmen are provided with these in plenty. The nation as a whole does not mind being deprived of good food, if it helps their sportsmen win laurels and beat the capitalist sportsmen.

There is also a general awakening in areas of physical culture and sports, in these countries. In GDR, every third person is a sportsman while in USSR is known to be having about 50m people who actively take part in sports—35m men and 15m women. This has certainly given them a wealth of talented athletes. As soon as one star fades two others crop up to take his place. We lack this type of a system in India.

These countries are also quick to realise that medals don't hang on trees, people should have the basic facilities for winning them. USSR which leads the world in Olympics and world championships, in the medal tally, also has the best sports facilities in the world. There are 2,282 stadia in USSR with a seating capacity for more than 11.5m, more than 1,000 swimming pools and a network of 1,000 gymnasia, in order to build up strength and power in their sportsmen. There are also more than 6 lakh sports grounds available for sports activities.

These stadia, swimming pools and gym-

Victor Saneyev. Golds and silver in leaps and bounds.

nasiums are well staffed with competent and well-qualified coaches. USSR has more than 52,000 well-qualified coaches and 1,25,000 physical instructors, in addition to 9,000 vocational school coaches. And, most important, their national and world champions are not left to look for jobs as clerks, but are enrolled for physical culture right from the

beginning. As soon as he or she retires from active competition, they become coaches so that they could pass on their experience and knowledge to the youngsters.

Early spotting of talent is another vital aspect in which the Eastern Bloc has specialised. While swimmers are spotted at the early age of six, their gymnasts and weightlifters start specialising at the age of 10 or 11. After this the youth is carefully trained under watchful eyes, so that he could mature and reach world stature at the right time.

While scientific training is just a theory in our country, it is a reality for the Eastern Bloc coaches. Their doctors, physiotherapists, dieticians and scientists get together to plan the training load, diet, recovery rate of the athlete, etc. Valeri Borzov, winner of the 100 m and 200 m at the Munich Olympics, 1972 was a typical example of a product of scientific training. Add to that the inspired and determined efforts of the sportsmen and you have the key to the success of the Eastern Bloc athletes. Since winning the world and Olympic titles has a lot of benefits—better status and living conditions—their athletes work very hard. A work-out of four to six hours a day is normal. Stars like Nadia Comaneci, Victor Saneyev and Jarmila Kratochvilova of Romania worked even harder.

The emergence of the East European Bloc is, therefore, the result of intense motivation, careful planning, scientific training, involved coaches and hard work. If it is a miracle, well, they have been working hard for more than three decades to achieve it.

P.K.M.

THE MATCH OF THE DAY

is the one-day cricket. The five-day Test matches are being bowled out.

When runs flow from the willow catches are dropped or taken, fours are converted to twos or ones, sizes get stopped in mid-flight or sail over the fence... when one has to lose or win in the short span of 50 or 60 overs, there is never a dull moment.

Such thrills and nail-biting finishes have enabled one-day cricket to gain more popularity over Test cricket, especially amongst the average spectators. During a recent national survey of a cross-section of people in Australia, it was discovered that 70% preferred the one-day variety, whereas only 24% opted for Test matches. Even in India, where watching international cricket has always been a craze, in the recent series against England, all the five one-day internationals had capacity crowds whereas, except in Calcutta, attendance in the five-day Test matches was invariably mediocre.

Excessive one-day cricket does lead to a decline in standards, especially in bowling. It breeds negative bowling—containment rather than getting batsmen out becomes the aim of the bowler. Spin bowlers, except those with excellent control and accuracy, are not encouraged in one-day cricket. A young fast bowler, who has the potential to become genuinely fast but is inclined to be erratic, seeks accuracy instead of extra pace. Therefore, limited overs cricket is not very conducive to producing quality fast bowlers or subtle spinners.

The one-day game also encourages bad batting habits which are hard to eradicate and when practised in the traditional game, lead to

disastrous results. For instance, in order to score runs quickly against defensive bowling supported by run-saving fields, a batsman must play some risky strokes. Driving a good length straight ball to the midwicket boundary is exhilarating but unwise to employ in a Test match, unless you have the talent of a Vivian Richards. The limited-overs game does not provide the batsman ample time to build an innings. Hence a young player does not learn the value of grafting and building an innings.

On the other hand, there have been some distinct benefits of one-day cricket also. Running between the wickets has greatly improved, as batsmen try to steal singles off every ball. Again, improvisation of strokes, so essential in the one-day game has made batsmen more adventurous and entertaining. Most of all, the overall level of fitness and the standards of fielding have improved rapidly. As saving runs on the field helps to win matches in one-dayers, fielders are more agile—acrobatic sliding stops have become permanent fixtures. Throws to the wicket-keeper and back-up by other fielders have also become sharper and more accurate.

However much the purists and traditional supporters of Test cricket may decry the limited-overs game, the one-day game is getting increasingly popular. And judging by the success of the three Prudential Cups and the recent World Cricket Championship in Australia, it definitely has more glamour than Test cricket.

N.K.

volleyball stars.

A vicious circle is thus created. As cricket is popular in urban India, there are more sponsors for cricket programmes, commentaries on radio and TV and more advertisers for cricket specials in sports magazines and newspapers. Other sports have yet to acquire the marketability of cricket.

This leads to another query as to why cricket has been so effectively promoted. Owing to the status the game has acquired, each state association is managed by people of high-income groups, bureaucrats, businessmen, successful lawyers and now even politicians—all well-connected people. This is not uniformly so in other sports. These administrators use their position to successfully promote cricket. For instance, the President of BCCI is N.K.P. Salve, a former Union Minister for Steel and Mines and the Vice-President is I.S. Bindra, special adviser to the President of India. These men use their vast clout to procure benefits and financial help for cricket. As this has been the practice for years, the BCCI is the only sports body in India that is financially secure and completely independent of the government. Also, cricket is the only sport which regularly brings in foreign exchange, so government support is always forthcoming.

There is also a certain colonial tinge about cricket, played in pleasant green surroundings, with pure white clothing which appeals to the romantic and nostalgic nature of the average spectator. Scribes just capitalise on this popularity of cricket, perpetuate it and thus create a vicious circle of popularity. Class distinction has a lot to do with the hero worship of cricket stars. Test players are always from an urban environment and easily identifiable with the urban readership which forms the bulk for sports magazines and sports pages of a newspaper. Such a reader or a sports scribe who invariably comes from an urban background finds it difficult to identify with a tribal like Charles Borromeo (800 m winner, 1982 Delhi Asiad) or a rustic like heavy-weight wrestler Satpal or 20 km Asiad gold medalist Chand Ram. Sports writing, like everything else in a class society, is mainly addressed to the privileged classes.

The transistor and magazine boom in India in the last decade has taken cricket to all sections of society in urban India. Media adulation and the high income (lucrative jobs in the private sector or nationalised banks) plus other earnings from playing make Test cricketers the ideal of the youth and educated unemployed. As successful cricketers in India move in a higher social milieu than their normal middle class background would permit, the sport receives parental approval and even encouragement. This is so as such rapid social mobility is not possible in any other strata of Indian society.

Above all, cricket is better organised than any other sport in the country. It is the only sport which regularly organises on a national scale, age-group tournaments for the under-15 (Vijay Hazare Trophy), inter-state schools tournament (Cooch-Behar Trophy), inter-university tournaments (Rohinton-Baria and Vizzy Trophy for zonal teams) and for the under-21 years (C.K. Nayudu Trophy). Hence talent in cricket is better harnessed and spotted as compared to other sports in India.

N.K.

THE CRICKET CULT

is here to stay. How does the placid game hit out and make runs against other Indian games?

Cricket! It's the game people play and the cult people rave about. Today there's hardly any sport or thrill in games other than cricket. Why this supremacy of the wicket?

The popularity and craze for the game in urban India is mainly due to the in-depth coverage given to it by the media. Cricket has acquired a status in cities as the value systems prevailing are that of conspicuous consumerism. Big and medium business houses in India need winners both to market their goods and to legitimise enduring inequalities in society. Test cricketers are the visible triumphs of a system employed to exhort the rest of us to consume. They are lionised and used in ads and hoardings as a foil to the underprivileged and lower middle classes, to project the "anyone can make it" ideal.

The question now arises as to why cricket has acquired such status and glamour in India and why other games do not get similar support and promotion. The reasons are sociological, psychological, historical and socio-economic.

The serene, languid pace of the game with occasional bursts of excitement seems to

Politicians' blue-eyed game: Three cheers for Kapil Dev (with the Iran Trophy) from M.P. Kamal Nath.

attract the placid middle-class character of urban India. Then, again, cricket is of a longer duration. Each day's play is about five and a half to six hours, so exposure of players on radio and TV is much longer than in any other sport. This longer exposure enables the names of cricketers to be permanently etched in the psyche of the people. Any toddler can rattle off the names of a dozen Test cricketers, but, except in Bengal, would grope to name even a couple of popular football, hockey or

GOALS OF THE INDIAN STICK

are a sad case of missed hits. India is paying the penalty for not cornering the new trends in hockey.

Indian hockey has not so much declined, as the game has improved rapidly in other countries. Nevertheless, our players prefer to cling on to the erroneous belief that Indian hockey is intrinsically superior to that in the rest of the world not realising that changes in the rules of the game and the recent introduction of artificial surfaces have revolutionised hockey. Countries like Australia have developed their own style which is a combination of Asian stick work and European fitness and speed. West Germany, Holland, Spain, USSR and New Zealand, with their tactically astute and physically fit teams, have taken to hockey in a scientific manner. The game is no longer confined to the sub-continent. With so many countries taking to hockey seriously, numerous styles of play have evolved which Indian hockey, basking in past glory, is unable to cope with.

For instance, most of our club and state teams play the old style in which quick counter-attacks are almost negligible. Quick counter-attacks are used by means of an overhead pass, long scoops or quick crossfield pass— aspects of the game not common in domestic hockey. When our national team plays the European teams, they are unable to counter the accurate defence-splitting scoops of the opposition and so concede many goals.

Then there is the handicap of playing on artificial surfaces like astro-turf or polygrass, on which all international matches are played. While all other leading hockey nations acquired an astro-turf since 1976, India managed one only in 1982, for the Delhi Asiad. A small

A game unwitnessed? Hockey is losing its popularity, both with the public and media.

country like Holland has about 40 astro-turfs and they are regularly grooming their young talent (both men and women) on these surfaces. In India the priorities are top-sided. As a developing country we cannot afford many astro-turfs, so the one at the National Stadium in Delhi ought to be utilised to the maximum. All national championships at the junior and senior levels should be played on astro-turf, so that more and more players get used to the surface. Playing on artificial turf requires extra fitness and stamina and strong leg muscles. The game on astro-turf is also very speedy, so a slow mover even with good stick work is not effective. The more the players get used to playing on artificial surfaces the better we will fare in international hockey. Yet, since 1982, only once—in February '84—has the senior national championship been held in Delhi. Even the Nehru Hockey Tournament for clubs, held annually in Delhi, is not played on astro-turf but on grass at the Shivaji Stadium as the

organisers cannot afford it. There is no proper, long-term promotion of hockey in India.

In Europe and Australia, international competitions are played in various age-groups on a league basis at the mini level (below 12 years), cadets (below 14 years), sub-junior (below 16 years) and juniors (below 20 years). Hence, they do not fear international competitions. In India, hockey at the grassroots level is stagnant. Except for the Junior Nehru Hockey Tournament and sub-junior Nehru Tournament (started in 1983), there are no organised school tournaments in India. In the Junior Nehru Tournament, mostly the same schools participate every year. Certain institutions where the game is encouraged, like the Sports College, Lucknow, B.A.V. Inter College, Meerut, Stata School of Sports, Jullundur and S.S. High School, Khunti have monopolised the tournament. Hence quality players do not regularly emerge as the game has not acquired a mass base.

Traditional hockey nurseries of India like Punjab and Bhopal have a sporadic flow of talent now. Factionalism has made hockey almost stagnant in Bhopal and for various socio-economic reasons the game is on the decline in Punjab. In a city like Patiala, three decades ago there were nearly 25 hockey teams regularly playing in a league; now only a few clubs are active. Even in other states there has not been a resurgence of hockey talent except amongst the Adivasis. Services, the winners of the recent National Hockey Championship, had seven Adivasi players in their playing eleven. The Adivasis have the speed, dash and mental toughness to succeed in international hockey. They could replace the Anglo-Indian community and Punjabi Muslims who migrated after partition and were once the bulwark of Indian hockey.

Pusillanimous umpiring and varied inter-

pretations of the rules have also led to a decline in the standard of the game. Most umpires in India are reluctant to award penalty corners and penalty strokes even when defenders foul inside the 25-yard line and striking circle, whereas such infringements are promptly penalised in outside countries. Indian umpires must be provided international experience so that there can be uniform interpretation of rules and our players can get used to stringent supervision.

Finally the indifference of the media has reduced the popularity of hockey. Unlike cricket, which gets wide coverage from the Press

and the electronic media, hockey gets only limited exposure. For instance, Pressmen and radio commentators are never sent abroad for international hockey tournaments, except for the Olympics. Result: the game has not caught the imagination of the public and is rapidly losing social status. A concerted effort is required to revive the sagging fortunes of Indian hockey by popularising the game at school level and ensuring that factionalism, favouritism and administrative malpractices do not jeopardise the careers of promising players.

N.K.

BENGAL COURTS THE BALL

with endearing care. The Bengali's heart beat keeps pace with the speed of the football game.

Bengal have and will continue to monopolise Indian football, as long as the three famous clubs of Calcutta, Mohun Bagan, East Bengal and Mohammedan Sporting, remain the best and most sought after teams in the country. The detractors of Bengal football maintain that it is money power of the 'big three' clubs and their subsequent pervading influence on the All India Football Federation (AIFF) which has led to their dominance of Indian football. This is partially correct as it does not explain Bengal's overwhelming superiority in domestic football. Bengal have the most outstanding record in the National Championship for football for the Santosh Trophy, having entered the final on 30 occasions, winning 21 times and being runners-up nine times. The famous Calcutta clubs have won the major tournaments of India,

Blazing a trail Prasanta Bannerjee is one of the few highly paid players from Bengal.

Maha Choudhury

like the Durand, DCM, Rovers and Federation Cup and the IFA Shield many more times than any other club in India.

What are the primary factors for Bengal's dominance of football? Tony Graig, captain of England's cricket team to India in 1976, said, "I like touring India, as everybody likes being treated as a king." This is the main reason for Bengal's dominance of football. Crowd adulation, bordering on sheer frenzy and fanatical support has always been a spur for Calcutta clubs to strive for success and is instrumental in attracting other players to the eastern metropolis. Calcutta is the only city in India where the status of football players is high and akin to that of film stars. There are at least half a dozen magazines in Bengali, dealing exclusively with football. Successful players in Calcutta are household names and pin-up boys, a recognition not accorded to them elsewhere. More people know about international medio Parminder Singh of JCT Mills Phagwara in Calcutta than in Chandigarh or his native village. Whenever popular East Bengal win an important match their supporters celebrate by preparing Hilsa fish for dinner. The price of this fish goes up when East Bengal beat traditional rivals Mohun Bagan, such is the fanatical support. The people's involvement in football also reflects in the playing standards. The legions of lower middle class supporters, whose happiness is identified with the fortunes of the football team they support, demand success. Players are always under pressure to improve and win in Calcutta, otherwise on public

demand they are on the way out.

Another reason why Bengal has always succeeded in football is the systematic organisation. Ninety-six clubs play in four divisions in the Calcutta league every summer. In nearly each locality there is organised coaching for teenaged players. Players get regular exposure in the league and competition is intense, so even the best of footballers cannot remain slack. As football remains the dream for social mobility for most middle and lower middle class youth in Bengal, every year a stream of talented players emerge in lower division clubs. Contracts are only for one year. So even international players realise they have to produce results for their club, otherwise they can be replaced. Calcutta football does not allow stagnation. This is unlike other cities in India, where office professionalism prevails so that once a player has secured a job there is less motivation or pressure for him to improve.

Admittedly footballers in the 'big three' clubs of Calcutta are the best paid in the country. International stars like Prasanta Bannerjee and Manorenjan Bhattacharya get over Rs 1 lakh per season whereas lesser known players also get in the range of Rs 40,000-70,000 per season. They also have a job, in a nationalised bank or a firm, courtesy the club. Financially footballers in Calcutta are better off than the rest of India. No wonder the best players are lured to Bengal. This is a movement common to all football playing nations. The big clubs have the best players and so get the best terms from tournament committees as they alone attract crowds. For instance, the DCM tournament in Delhi pays East Bengal or Mohammedan Sporting nearly Rs 2 lakhs as expenses and appearance money to participate in the tournament as they are crowdpullers. The clubs use this money plus members subscriptions and funds accumulated over the years to buy the best playing and coaching talent every year. Thus success continues unabated.

Tradition, years of organisation and success has enabled Bengal to acquire a mass base for football. To break Bengal's hegemony in the game, other states should popularise football, instead of adopting the gladiatorial approach, with emphasis on just a couple of clubs. Football will only improve all over India when many club teams participate in state-wide regularly organised junior and senior division league matches.

N.K.

ON THE TT TURNTABLE

several countries have performed wonders. While Asia has been hogging the limelight over the past few decades—India has failed with the pimpled bat.

The Asian dominance of table tennis which is taken for granted nowadays, really developed a little over three decades ago. Prior to that, from the period 1926 to 1951, Europe ruled the roost in the table tennis world, accounting for 109 of the 117 world titles. The Hungarians took 58 or 49.3% of the total. A major factor of the Hungarian supremacy was their innovation and use of new techniques and surfaces. The Hungarians capitalised on the discovery of the new-type pimpled rubber bat and the new chopping

game. Their innovations ushered in a new historical period by injecting vicious spin into table tennis techniques.

Japan dominated the game during the period 1952-1959. Technical innovations were again the cause of Japanese domination. They created their own style of forehand attack from slightly off the table with the pen-hold grip. They also creatively evolved and applied the sponge bat which added to their attacking style and rendered the defensive tactics of the European players obsolete. With Japan started

Asia's dominance in table tennis, which is continuing till now, by giving prominence to speed in the game.

From 1961 onwards China has dominated the world tables (except for a brief spell in the mid-sixties, when because of the Cultural Revolution it did not participate in international meets). China's dominance of the sport is because of the diversified playing styles of Chinese players and technical innovations. China invented the pen-hold grip close-to-table fast attacking game, developed the long pimpled rubber bat and evolved a chopping game with two different surfaces. China continues to dominate international table tennis (they won six of the seven titles at stake in the last World Championships) by developing important reforms in training and in each championship it comes forward with improvements in the techniques and tactics of serving and attacking after service.

Other Asian countries which have done well in international table tennis, like North and South Korea, have also evolved styles of play which suit them and have raised the level of their technical skills. India remains stagnant in international table tennis as no creative effort to evolve unique skills, to achieve success has been made. There has been no technical innovation by India. Unfortunately even in the development of technical skills (such as loop-drives, mixed chops, variety of services) and maturity of playing style, India has made no contribution. Recently many young Indian players have had coaching stints under Chinese, Japanese and Korean coaches with emphasis on aggression and quick 'kills' instead of long rallies. Evidence of the impact of this coaching was visible at the recent 46th National Table Tennis Championship in Calcutta in the form of a drastic reduction in long rallies. However, as Indian players lack the physical fitness, ability, speed, strength and level of technical skills possessed by players from the Far East, aping their style of play

will not help. Indian players use the orthodox Western grip and not the pen-hold grip favoured by the aggressive Chinese and Japanese, which is conducive to attacking play.

The biggest drawback in Indian table tennis is that there are too few players. China has nearly a 100m people playing the sport and there are 25m registered players. India will not have more than 25,000 registered table tennis players. Quality players are limited in India and the percentage of players using different styles is negligible. Hence Indian table tennis players flounder against opponents with varying styles of play. Technical skills and mental aggression essential for improvement in table tennis remain stagnant in India, as there is not much depth in the talent available in the country.

A glaring example of the paucity of talent in Indian table tennis was revealed at the recent 46th National Championship. Railway's 40-year-old G. Jagannath, national champion in 1971 is among a dying breed of defensive

players in India. His relaxed and steady play enabled him to upset several ranked players and enabled Railways to annex the men's team title. Last year's national champion S. Srinam explained Jagannath's success as: "We hardly get a chance to practise against a defensive player. That was our nemesis."

This is the predicament of Indian table tennis. It has remained a sport of the elite, urban middle and upper classes, many of whom drop out from the game by the age of 25, in search of more lucrative careers. Unfortunately the Table Tennis Federation of India (TTFI) is more intent on organising glamour events like the Asian Cup (December 1984 in Delhi) and World Championships (at Calcutta in 1975 and at Delhi in 1987) than in making facilities easily available to popularise the sport in the country. At present the cost of the rubber on the racket and even the balls are too exorbitant for table tennis to have a mass appeal. And while the Asians dominate table tennis, India still lags far behind.

N.K.

INDIA CRAWLS ON THE TRACK

despite a steady emergence of promising athletes.

In spite of an early start, the progress made by track and field athletics in India never attained the kind of dizzy heights enjoyed by games like cricket. This is probably because until recently, interest in it was confined to the Services, Police and Railways. The expansion of the national sports coaching scheme since the late 1950s, however, has done much to boost track and field events in schools and colleges. Talent of a very high order is beginning to emerge on the national scene and if the organisation of the amateur

athletic movement is streamlined, India could produce a good crop of athletes.

India's record in the Olympics has been nothing but dismal. Not a single medal has been won till date, except for the second place in the 200 m achieved by a Calcutta based Englishman, Norman Pritchard in 1900. This does not, however, detract from the fact that a number of Indian athletes have made their presence felt in the Olympic Games, chief among them being Milkha Singh who finished fourth in the 400 m final in 1960 at Rome clocking 45.73

National Champs: Railways (1985)

Some records:

- The record for highest score in international is held by India who beat the US 24-1, at the 1932 Los Angeles Olympics. Roup Singh scored 10 goals and Dhyan Chand eight
- Most Olympic titles have been earned by India—eight (1928 to 1960 and 1980).

BADMINTON

Governed by the International Badminton Federation (IBF) founded in 1934.

The premier tournament in the All-England Championship (first held in 1899), dominated by the Malaysians, Danes, Indonesians and the Chinese for the last 40 years. Eddie Choong (Malaya) won it four times (between 1953-57). Erland Kops (Denmark) seven times (between 1958-67) and Rudy Hartono (Indonesia) eight times (1968 to '74 and '76), while among women Judy Hashman (nee Devlin) won 10 times (between 1954 and '67).

Reigning champions (1984)*

Men's singles: Morten Frust Hansen (Den)
Men's doubles: Rudy Heryanto & Harianto Kartono (Indonesia)
Women's singles: Lin Ling Wei (Chn)
Mixed doubles: Martin Dew & Gillian Gilks (Eng)

*For 1985 change see page 117-53

In 1977, the IBF introduced the World Championships, to be held every three years.

Reigning champions (1984)

Men's singles: Luk Sugiarto (Indonesia)
Men's doubles: Sten Fladberg & Jespe Helledie (Nor)
Women's singles: Lin Ling Wei (Chn)
Women's doubles: Lin Ying & Wu Dixi (Chn)
Mixed doubles: Thomas Kihlstrom & Nore Persv (Swe/Eng)

The Indian National Championships have been held since the 1934-35 season. Prakash Padukone has won it nine times in a row from 1971-72 to 1979-80.

National champions (1985)

Men's singles: Syed Modi (Rly)
Men's doubles: Le Roy D'sa & Sanat Misra (Rly)
Women's singles: Ma Harmita Brist (Rly)
Women's doubles: Anu Gha & Deepthi (Mah)

Mixed doubles: Pradeep Gandhi & Anu Gha (Mah)

The International Team Championships are known as the Thomas Cup (for men) and Uber Cup (for women)

BASKETBALL

Governed by the International Amateur Basketball Federation (FIBA), founded in 1932.

Modern basketball was devised by the Canadian born Dr James Naismith (1861-1939) at the Training School of the International YMCA College at Springfield, Massachusetts, USA in 1891.

Reigning champions

Men:
World Champs: Soviet Union (1982)
Olympic Champs: USA (1984)
Women:
World Champs: Soviet Union (1983)
Olympic Champs: USA (1984)

sec, a time not bettered in Asia until last season by Japan's Susumo Takano. In the 1964 Games in Tokyo, Gurbachan Singh Randhawa was fifth in the 100 m hurdles final in a national best time of 14.09 sec (hand timed 14.0 sec). And in 1976 at Montreal, Sriram Singh was a creditable seventh in the final of the 800 m in 1:45.77. Last year, Kerala's P.T. Usha ran for the fourth position in the hurdles in 55.42 sec.

In the Commonwealth Games, India's showing since 1954 has been of a reasonable calibre. Milkha Singh won the 440 yards title in the 1958 Games in Cardiff (Wales); Praveen Kumar was second in the hammer throw in the 1962 Games and Mohinder Singh Gill finished third in the triple jump in 1970, and was second in 1974. In the 1978 Commonwealth Games, it was long jumper Suresh Babu who wound up third. The next Games are scheduled for 1983 in Edinburgh and this might provide the occasion for Usha to become India's first woman medallist in these Games.

In the Asian Games, India and Japan were leaders and strong rivals until the Chinese made their entry in 1978. Since then the Games have become a triangular contest with the Chinese steadily gaining ground. 1982 saw them moving to the top of the ladder in the IX

Over the hurdles, into the lap of victory: M.D. Valsamma crosses the 400 m hurdles in the IX Asiad.

Asiad in New Delhi, a position that is bound to remain theirs in the next meeting in Seoul next year. India have produced many outstanding names in the Asian Games and other Asian region fixtures. Of these, Sriram Singh (800 m), Shivnath Singh (5,000 and 10,000 m), Suresh Babu (decathlon), Yohannan (triple jump), Geeta Zutshi (800 and 1,500 m) have been some of the most outstanding in recent times. Kamaljit Sandhu was India's first-ever woman gold medallist in the Asian Games when she won the 400 m in 1970.

The current list of outstanding Indians in track and field events shows a dominance of women (see page 29). Promising names among male athletes are Hakam Singh (1,500 m), Surender Singh and Charanjit Bajwa (400 m), and N. Annavi (high jump). With the next Asian Track and Field Championships scheduled for Djakarta next September and the World Cup in Canberra four weeks later, there will be much interest in athletics at the national and international levels during the coming months.

R.B.

MASTERS OF THE GAME

FOOTBALL (SOCCER)

Governed by the Federation Internationale de Football Association (FIFA), founded in 1904.

Reigning champions

World Champs: Italy (b West Germany 3-1) 1982
European Champs: France (b Spain 2-0) 1984
Olympic (Amateurs): France (b Brazil 2-0) 1984
Asian Champs: Saudi Arabia (b China 2-0) 1984
National Champs: Punjab (b Maharashtra 3-0) 1984

Some World Cup records

- Brazil and Italy have won the World Cup (instituted in 1930 and played every four years), thrice each.
- Most goals in a World Cup: Thirteen goals by Just Fontaine (France) in six matches in 1958 (in Sweden).

- Highest score, Hungary's 10-1 win over El Salvador in Spain during the 1982 tournament.

Other records

- Greatest recorded crowd at any football match was an estimated 2,05,000 (1,99,854 paid) for the Brazil vs Uruguay World Cup final at the Maracana Stadium, Rio de Janeiro, Brazil on Jul 16, 1950
- The only country to win the Olympic football title three is Hungary—in '52, '54 and '68.

HOCKEY

Governed by the Federation Internationale de Hockey (FIH) founded in 1924

Reigning champions

Men:
World Champs: Pakistan (1982)
Olympic Champs: Pakistan (1984)
National Champs: Services (1985)

ALL TABLES COMPILED BY S.G

Bjorn Borg: At our service.

LAWN TENNIS

Governed by the International Lawn Tennis Federation (ILTF), founded in 1913.

There are no world championships in tennis, though it was included at the Olympic Games in 1896 through 1924, and then discontinued. It will be staged once again at the 1988 Games in Seoul. Though there are no individual world championships, there is a team championship of the world, called Davis Cup.

There are four major tournaments of the

world, together called the Grand Slam.

Reigning champions

● The French Open Championships.

Men: **Ivan Lendl** (Czech).

Bjorn Borg (Sweden) won this title six times (1974-75, 1978-81).

Women: **Martina Navratilova** (USA)

● Wimbledon Championships (all-England lawn tennis championship):

Borg won this title five times consecutively from 1976-80. (All-time record is seven by William Renshaw 1881-6, '89). Helen Wills Moody (USA) won it eight times in 1927-30 1932-33, 1935 and 1938.

Maximum titles at Wimbledon: twenty. titles have been won by Billie Jean King between 1961-79 (16 singles, 10 doubles and 4 mixed doubles).

Reigning champions

Men: **John McEnroe** (USA)

Women: **Martina** (USA)

● The US Open:

Reigning champions

Men: **McEnroe**

Women: **Martina**

● The Australian Open:

Reigning champions

Men: **Mats Wilander** (Swe)

Women: **Chris Evert Lloyd** (USA)

The Grand Slam of tennis was defined as winning the four major championships in the same year.

Winners of Grand Slam:

Men: (i) **Donald Budge** (USA) in 1938.

(ii) **Rodney Laver** (Aus) in 1962 as an amateur, and again in 1969 as a professional, to become the only player in history to do the Slam twice.

Women: (i) **Maureen Connolly** (USA) in 1953; (ii) **Margaret Court** (Aus) in 1970

In the year 1983, the ILTF re-defined the Slam to mean holding of the four titles simultaneously, in any order, not necessarily in the same year. Since then **Martina** is the only one to have done the Grand Slam winning Wimbledon '83, US Open '83, Australia Open '83, and French Open '84 (four in a row) and continued winning the Wimbledon '84 and US Open '84.

SANJEEV GUPTA

SPORTSPEECH

ATHLETICS

Baton: Metal or wooden tube, 11 in to 1 ft long and weighing not less than 1½ oz; **baton passing:** the handing on of the baton by one relay runner to a team-mate, an operation which must be completed within a 22-yd zone. It yds either side of each relay stage mark.

Break the start: To start before the signal is given.

Break the tape: To finish a race; the winner's torso crosses the finishing line, marked

with a tape across the track at chest height.

Cross-country run: Race across a given track of country, usually including natural hazards such as stiles and ditches.

Dash: Colloquial term for a sprint, as in 100 yds dash.

Dead heat: A tie; race in which competitors finish at exactly the same time.

Decathlon: All-round contest of 10 events. In the Olympic Games these comprise: (first day) 100 m, long jump, putting the weight,

BUILD YOURSELF A BODY

You can be
proud of
with

NEW

POWER FLEX

Add inches of solid muscle, powerize your body and get that muscular, handsome physique you have always craved - in just 15 minutes a day OR PAY NOTHING!

From the makers of Bullworker now a new, amazingly effective portable rubber expander **POWER FLEX**. Use it for just 15 minutes a day and build a masculine, athletic body - muscular arms, rock-hard stomach, broad shoulders and powerful legs. Free illustrated chart shows how you can perform the step-by-step **POWER FLEX** Bodybuilding programme with ease. Guaranteed satisfaction in just 2 weeks or your money back. That's right! If you do not see results within the 14 days Free Home Trial that you can SEE, FEEL and MEASURE, simply return everything for an immediate refund (less P & F charges) **NO QUESTIONS ASKED!** Mail your coupon TODAY!

Feel the difference from the very first workout

1. This exercise adds solid muscle to your back and chest.

2. This simple exercise firms your waistline

3. This exercise powerizes your arms and shoulders

Plus 13 other beginner and advanced exercises with **POWER FLEX** powerize your complete body in just 15 minutes a day!

POWER FLEX is also available for Rs. 160/- from Bullworker, Mehta Mahal, 15 Mathew Road, Bombay-400 004.

☐ Send by Registered Post Parcel. I am sending Rs. 160/- by Draft / I.P.O. / M.O. No. dated (Payable to Bullworker Pvt Ltd)

☐ Send by V.P.P. I promise to pay postman Rs. 160/- on delivery.

Name:

Address:

Pin: Signature:

1 jump, 400 m; (second day) 100 m hurdles, discus, pole vault, javelin, 1,500 m.

False start: Crossing of the starting-line before the signal has been given; a competitor who makes two false starts is disqualified.

Half mile: Race of 880 yds, usually two circuits of the track.

Open (of an event): Unrestricted; free to any competitor to enter.

Pentathlon: Contest of 5 events, all of which must be attempted by each entrant. In the Olympic Games, the events (for women) are: (first day) 80 m hurdles, putting the weight, high jump; (second day) long jump, 200 m.

Quarter mile: Race of 440 yds.

Run-up: Marked-out approach area for jumping and javelin events; also the approach made by an athlete in these events.

Sprint: 1. To run at maximum speed. 2. Race, usually 100 to 220 yds, in which competitors run whole distance at their maximum speed. **Sprinter:** Athlete who specialises in sprint races.

Steeplechase: Track event in which runners must negotiate hurdles, obstacles and a water jump.

Stop-watch: Watch fitted with a device by

which it can be stopped or started as desired; used to time athletic events to 1/5th or 1/10th of a second.

Straddle: Most popular high-jumping style, in which athlete approaches frontally, crosses bar horizontally and face down, rolling forward to land on his back.

Tap: Strip of worsted stretched across the track 4 ft above the finishing line to guide the judges in giving their decision.

Track: Specially prepared circuit, usually of close-packed fine cinders, on which races are held. The track may be oval or straight-sided with round ends, and usually measures 440 yds on its inside perimeter; **track suit:** loose-fitting garment worn by an athlete before and between races to prevent chilling.

Veteran: Competitor 40 years old or more

CRICKET

Body-line, body-line bowling: Fast bowling consistently delivered on or outside the line of the leg stump and directed at the batsman's body with the intention of intimidating him; and now illegal.

Bosie: Term common in Australia for a **Googly**, derived from name of the player who first perfected it, B.J.T. Bosanquet.

Bye: Run scored from a legitimately

delivered ball which passes the wicket without touching the bat or batsman; **leg bye:** run scored when the ball passes the wicket after striking the batsman when he is making a stroke.

Carry one's bat: To be not out when the side's innings is completed, usually applied to a player who also opened the innings.

Chinaman: Off-break bowled by a left-handed bowler to a right-handed batsman.

Covers: Protective sheets, usually of corrugated metal and mounted on wheels, used to protect the wicket area against rain when play is not in progress.

Cress: One of the lines on a cricket pitch; **bowling cress:** line 8 ft 8 in long, with the stumps in the centre, from which a bowler delivers the ball; **popping cress:** line 4 ft in front of each wicket and deemed to be of unlimited length, at which a batsman stands to receive the bowling; when acting as a non-striker he stands behind it; if he moves outside the cress in making a stroke he may be stumped; if he fails to reach it when making a run he may be run out; **return cress:** one of the short lines marking the ends of the bowling cresses.

Dolly catch: Simple catch, easily taken by a fieldman.

Flight: To attempt to deceive the batsman by varying the trajectory of the ball when bowling; also the trajectory of the ball when bowled.

Full pitch, full toss: Delivery which reaches the batsman without pitching.

Googly: Ball bowled with what appears to be a leg-break action, but which breaks from the off when pitching (in the case of a right-handed bowler and right-handed batsman); also known as a bosie or a wrong'un.

Half volley: Ball that pitches slightly in front of the batsman.

L.b.w.: Abbreviation for leg-before-wicket. Mode of dismissal in which the batsman's leg, or other part of his body except his hand, intercepts a fairly delivered ball that would otherwise have hit the wicket.

Leg, leg-side: Playing area to the left (in the case of a right-handed batsman) of an imaginary line drawn through the middle stump of each wicket. The term is more frequently applied to that part of the ground which is also behind the wicket, as distinct from the on-side.

Long leg: Leg-side fielding position behind the batsman and close to the boundary.

Long off: Off-side fielding position close to the boundary in the area between mid-wicket and the bowler; also called deep mid-on.

Mid-off: Off-side fielding position between cover-point and the bowler.

Mid-on: On-side fielding position between mid-wicket and the bowler.

Mid-wicket: On-side fielding position between square-leg and mid-on.

No ball: Ball so declared by the umpire because it has not been delivered according to the laws. A batsman may score from this with risk only of being run out.

Off, off-side: Playing area to the right (in the case of a right-handed batsman) of an imaginary line drawn between the middle stumps.

Off-spin: Spinning motion imparted to the ball so that on pitching it deviates from off to leg

Off-spinner: bowler whose standard

THE SYNCHRONISED SPECTACLE

Courtesy USSR Information Centre

Two enchanting mermaids rise from the cool aquatic glory of the pool, swaying with the breeze to the sound of lilting music. The mermaids look identical to their last strand of hair and perform alike to each twist of their graceful forms. They are the synchronised swimmers who hold the audience in rapt attention whenever they perform.

The art of synchronised swimming was pioneered by the US, though the event was recognised internationally in 1952. Although many countries organised their own championships, and held international competitions it was only in 1984 that this event was included in the Olympic Games.

Equipped with the endurance of a trained swimmer, the synchronised swimmer must have the skill and artistry of a ballet dancer and the grace, rhythm and acrobatic ability of the gymnast to perform the somersaults, twists and spins and the leg and arm movements, both above and below the water level. There are three types of competitions--solo, duet and team (which consists of four or more members). Each competition has two sections, the first for stunts and the second for original interpretative free routines, set to music. The

final marks for each section are added together to declare the winner.

Five or seven judges officiate in awarding marks for the performance, from 0 to 10. The highest and lowest of these assessments are eliminated before the remaining scores are averaged to one judge. In the stunts, the averaged marks are multiplied by a degree of difficulty. These degrees of difficulty are incorporated in a final tariff table and range from 1.4 to 2.1 according to the difficulty of the particular stunt. The stunts are marked for their slow, high and controlled movements, with each part of the stunt clearly defined and in a uniform motion. The routine is to be judged as units, taking into account the perfection of strokes, stunts, and parts thereof; variety of difficulty and bill pattern; and the synchronisation of the swimmers, one with the others, and with the accompanying music.

In the stunts, the competitors wear dark-coloured costumes and plain white caps so that nothing detracts from the simple perfection of their performance. In some countries they are allowed to wear special costumes, head dresses and other clothes or ornaments, suited to the themes of their harmonic water ballet.

P.G.

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating: Evaluate your performance on the basis of the following score-card:

- 100 questions in 60 minutes—Excellent
- 60 questions in 60 minutes—Good
- 50 questions in 60 minutes—Fair
- 35 questions in 60 minutes—Poor

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

General Knowledge

BY SHIV KUMAR

FOR NDA EXAM

While preparing this practice test we have kept in mind the syllabi of both the NDA GK papers. However, Geography and Science which were covered extensively in our January and February issues, respectively, have not been included.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this test.

1. When did the Community Development Programme start in the country?
 - (a) 1950 (b) 1952
 - (c) 1956 (d) 1960
2. The Community Development Programme is now known as
 - (a) Integrated Rural Development Programme
 - (b) Rural Development
 - (c) All India Community Development
 - (d) Integrated Community Development Programme
3. The IRDP aims to raise the income of
 - (a) Farmers (b) Artisans
 - (c) Harijans (d) Rural poor
 - (e) None of the above
4. SFDA stands for
 - (a) Small Farmers Development Agency
 - (b) Scheduled Caste Farmers Demands Association
 - (c) Sikh Farmers Demands Agency
 - (d) South Asian Farmers Demands Association
5. The aim of SFDA, which was started during the Fourth Five-Year Plan is
 - (a) To help small farmers
 - (b) To benefit the weaker sections of the society in rural areas
 - (c) To help scheduled castes in rural areas
 - (d) None of the above
6. The Drought Prone Areas Programme (DPAP) aims at
 - (a) A long-term development of areas frequently affected by drought
 - (b) To provide financial aid to farmers of areas hit by drought
 - (c) To extend help to farmers in the drought-affected areas of Ethiopia
 - (d) None of the above
7. The problem of unemployment in rural areas is mainly due to
 - (a) Seasonal and under employment
 - (b) Scarcity of people for employment
 - (c) Rural people do not want to work
 - (d) None of the above
8. NREP stands for
 - (a) National Rural Employment Programme
 - (b) National Re-employment Programme
 - (c) National Regional Employment Policy
 - (d) National Regional Evaluation Policy
9. The objectives of NREP are
 - (a) to give full employment opportunities to the rural work force in local rural areas
 - (b) to give employment to rural people anywhere in the country
 - (c) to give employment to rural people outside India
 - (d) None of the above
10. The NREP was earlier known as
 - (a) Rural Employment Programme
 - (b) Rural Reconstruction Programme
 - (c) Food For Work
 - (d) None of the above
11. The NREP is being implemented as a centrally sponsored scheme, between the Centre and the states on a — basis
 - (a) 30% : 70% (b) 40% : 60%
 - (c) 50% : 50% (d) 60% : 40%
12. The National Scheme of Training of Rural Youth for Self-Employment (TRYSEM) was started in
 - (a) 1977 (b) 1979
 - (c) 1980 (d) 1983
13. The Panchayati Raj, a three-tier structure of local self-Government at the village, block and district levels was started in
 - (a) 1950 (b) 1952
 - (c) 1957 (d) 1959
14. With a view to reviewing the functioning of the Panchayati Raj institutions in the country and suggesting measures to strengthen them, a committee under the chairmanship of Ashok Mehta was appointed in
 - (a) 1970 (b) 1971
 - (c) 1977 (d) 1980
15. The cooperative system started in India in
 - (a) 1872 (b) 1904
 - (c) 1915 (d) 1925
16. Gandhiji started the Non-Cooperation Movement in
 - (a) 1920 (b) 1921
 - (c) 1922 (d) 1923
17. Gandhiji started the Civil Disobedience Movement for the first time in
 - (a) 1930 (b) 1931
 - (c) 1932 (d) 1943
18. Gandhiji preferred violence to
 - (a) Non-violence (b) Regionalism
 - (c) Cowardice (d) Bribery
19. Before he came to India, Gandhiji was in South Africa for
 - (a) 5 years (b) 10 years
 - (c) 15 years (d) 20 years
20. The largest number of cooperative societies are in the

- (b) Marketing and processing cooperatives
(c) Storage cooperatives
(d) Industrial societies
21. A three-tier well-organised structure of cooperative management is known as the
(a) Vaikunth Lal Mehta National Institute of Cooperative Management
(b) Vishnu Mahajan National Institute of Cooperative Management
(c) None of the above
22. The percentage of cooperatives operating in the rural areas is
(a) 50% (b) 55%
(c) 60% (d) 65%
23. The financial year of cooperatives starts in
(a) January (b) April
(c) July (d) October
24. The total number of cooperatives in the country is—lakhs.
(a) 2.9 (b) 3.20
(c) 3.50 (d) 3.75
25. Who gave the name UNO?
(a) Thomas Woodrow Wilson
(b) Harry F. Truman
(c) Franklin Delano Roosevelt
(d) Winston Churchill
26. The agreement to set up the UN was signed in June 1945 in
(a) New York (b) London
(c) San Francisco (d) Los Angeles
27. The original membership of the UN was
(a) 50 (b) 51
(c) 53 (d) 55
28. The Secretary-General of the UN who resigned was
(a) Sithu U Thant
(b) Dag Hammarskjöld
(c) Kurt Waldheim
(d) Trigve Lee
29. Discussions to create the UN were held in
(a) Dumbarton Oak
(b) San Francisco
(c) Paris
(d) None of the above
30. The country which left the UN membership in 1965 and rejoined in 1966 was
(a) South Africa
(b) Israel
(c) Indonesia
(d) None of the above
31. The only country expelled from UN membership, so far, is
(a) Israel (b) South Africa
(c) Taiwan (d) China
(e) None of the above
32. The total membership of the UN at present is
(a) 156 (b) 158
(c) 159 (d) 160
(e) None of the above
- UN member. The country joined the organisation in
(a) 1981 (b) 1982
(c) 1984 (d) 1985
34. A welfare state is one which looks after the
(a) Defence of the country
(b) Internal affairs of the country
(c) Internal and defence affairs of the country
(d) The maximum betterment of the people
35. The present day states are
(a) Police states
(b) Welfare states
(c) Military states
(d) None of the above
36. The Renaissance means
(a) Re-awakening
(b) Re-start
(c) Unsound sleep
(d) None of the above
37. The Renaissance period was between
(a) Mid-15th and Mid-16th centuries
(b) 13th and 14th centuries
(c) 19th and 20th centuries
38. During the Renaissance period
(a) Inventions were made
(b) Discoveries were made
(c) Inventions and discoveries were made
(d) Medical science made a steep progress
(e) None of the above
39. Leading books of the Renaissance period were
(a) *The Prince* and *The Republic*
(b) *The Republic* and *Utopia*
(c) *Utopia* and *Prince*
(d) *Leviathan* and *My Life, My Time*
40. The American War of Independence took place between 1776 and 1783 and was fought against
(a) France (b) Portugal
(c) Spain (d) England
41. The Military General of the US force during the War of Independence was
(a) George Washington
(b) General McCarthy
(c) General Dwight David Eisenhower
(d) General Ulysses Simpson Grant
42. The number of states who fought the American War of Independence were
(a) 13 (b) 15
(c) 17 (d) 25
(e) 31
43. The Declaration of American Independence was made on Jul 4, 1776 in
(a) New York (b) Boston
(c) Los Angeles (d) Philadelphia
44. The French Revolution took place in
(a) 1789 (b) 1793
(c) 1795 (d) 1796
- Revolution period was
(a) Louis X (b) Louis XI
(c) Louis XIII (d) Louis XVI
(e) None of the above
46. The fort attacked by rebels during the French Revolution was
(a) Bastille (b) Notre-Dame
(c) Riene (d) Sien
(e) None of the above
47. The slogan of the French Revolutionary rebels was
(a) Liberty, Equality and Justice
(b) Liberty, Equality and Food
(c) Liberty, Clothes and Shelter
(d) Liberty, Equality and Fraternity
48. After the 1917 revolution the Government in Russia was formed by
(a) Bolsheviks (b) Czars
(c) Trotsky (d) Lavr Kornilov
(e) None of the above
49. During the Russian Revolution in 1917, Russia was under
(a) Nicholas I (b) Alexander II
(c) Alexander III (d) Nicholas II
50. Socialism aims at the transformation of private property into
(a) Public property
(b) Important means of production
(c) Autonomous body
(d) Mixed economy
(e) None of the above
51. In a socialistic form of society profit is controlled by the government with a view to ensuring equality of
(a) Income
(b) Expenditure
(c) Consumption
(d) Income and expenditure
52. Gandhiji's parents were
(a) Karam Chand Gandhi & Putli Bai
(b) Mohan Das and Kasturba
(c) Ranchodji and Manu Ben
(d) None of the above
53. The places associated with the life of Gandhiji were
(a) Wardha and Noakhali
(b) Madras and Calcutta
(c) London and Lucknow
(d) Washington and Dacca
54. Gandhiji's political guru was
(a) Lokmanya Tilak
(b) Gopal Krishna Gokhale
(c) Dada Bhai Naoroji
(d) M.G. Ranade
55. Gandhiji advocated cow protection on a
(a) Religious basis
(b) Moral basis
(c) Economic basis
(d) None of the above
56. Gandhiji's unique way of removing economic disparities was
(a) Satyagraha (b) Trusteeship
(c) Hijrat (d) Dhama
(e) None of the above
57. According to Gandhiji God is

- (b) Invisible and mortal

(e) None of the above
59. The Indian Constitution has been amended
(a) 46 times (b) 50 times
(c) 52 times (d) 54 times
60. The politics of defection has been banned by—Constitution Amendment Act.
(a) 48 (b) 49
(c) 52 (d) 54
61. The election dispute of the President of India can be heard only by the
(a) Election Commission
(b) Election Tribunal
(c) High Court of Delhi
(d) Supreme Court
62. The Vice-President of India is elected by
(a) The Rajya Sabha
(b) The Parliament
(c) The State Legislatures
(d) The Parliament & the State Legislatures
(e) None of the above
63. The Rajya Sabha is presided over by
(a) The President
(b) The Vice-President
(c) The Prime Minister
(d) The Speaker of the Rajya Sabha
64. The number of schedules in the Indian Constitution are
(a) 7 (b) 8
(c) 9 (d) 12
65. Is the President of India a member of the Parliament?
(a) No
(b) Yes
(c) He is a member of the Rajya Sabha
(d) None of the above
66. How many times have the Lok Sabha elections taken place?
(a) 7 (b) 8
(c) 9 (d) 10
67. The Rajya Sabha members are elected by the
(a) Lok Sabha members
(b) State Legislatures
(c) Members of municipal corporations
(d) None of the above
68. The final decision on whether a Bill is a Money-Bill or not is given by

- (b) The President
(c) The Prime Minister
(d) Speaker of the Lok Sabha
69. Till this day internal emergency has been declared
(a) Once (b) Twice
(c) Thrice (d) Never
70. The Supreme Court judges are appointed by
(a) The Parliament
(b) The President
(c) The Prime Minister
(d) None of the above
71. The Attorney General who is the highest legal adviser to the government of India and can appear on behalf of the Central Government throughout the country has qualifications equal to

(a) The President
(b) The Vice-President
(c) The Chief Justice of India
(d) The Attorney General
73. The Governor of a state is appointed by
(a) The President
(b) The Vice-President
(c) The Parliament
(d) The Prime Minister

ERRATA

In *A To Z Of Science* (Feb '85) in the definition of 1 joule (*Energy*), read 1/g kg in place of 1 kg

The information given in the table of blood groups (*The Body Beautiful*) should be as follows:

Group	Content
B	Antigen B and Anti-A
O	Anti-A and Anti-B

and not what has been published. The source of our information was *The Question And Answer Encyclopedia Series: The Body Machine*.

The definition of *Innervation* should read as follows—'The distribution of nerves to an organ' while that of *Osmosis* as—'Diffusion of a solvent through a semi-permeable membrane into a more concentrated solution tending to equalise the concentrations on both sides of the membrane'.

In the *Practice Tests (Science)* for NDA, POs, CDS in Q 5 of Section 1, read 'decrease' instead of 'increase'; in Q 12 choice (d) read 7 m in place of 3 m; and in Q 86 read 'stellite' instead of 'satellite'. In Q 49 of Section 2, 'in addition to iron' should be added as the last line.

The answers to Q 101 (Section 1), Q 32 and Q 42 (Section 2) should read as (d), (a & d) and (a & c) respectively.

- (a) The President
(b) The Prime Minister
(c) The Parliament
(d) The State Legislature
(e) The state Chief Minister concerned
75. The presidential elections in the country have taken place
(a) 6 times (b) 7 times
(c) 8 times (d) 9 times
(e) None of the above
76. How many Presidents of India died while in office?
(a) One (b) Two
(c) Three (d) None
77. Which part of the Indian Constitution includes the Directive Principles of State Policy?
(a) Part I (b) Part II
(c) Part III (d) Part IV
78. The Constitution of India was adopted on
(a) Sept 14, 1949 (b) Oct 20, 1949
(c) Nov 14, 1949 (d) Nov 26, 1949
79. Fundamental duties were included in the Constitution in 1976 by the
(a) 40th Amendment
(b) 42nd Amendment
(c) 44th Amendment
(d) 46th Amendment
80. The Comptroller and Auditor-General is appointed and removed by
(a) The President and the Parliament
(b) The President
(c) The Prime Minister and the Parliament
(d) None of the above
81. A candidate for the Rajya Sabha should be
(a) 25 years (b) 28 years
(c) 30 years (d) 35 years
82. The Prime Minister is responsible to
(a) The Council of Ministers
(b) The President
(c) The Rajya Sabha
(d) The Lok Sabha
83. The number of states under President's rule is
(a) 1 (b) 2
(c) 4 (d) None
84. The percentage of decrease in rural population in India between 1971 and 1981 is
(a) 3% (b) 2.4%
(c) 3.4% (d) 3.5%
85. The leaders of the six nations attending the Summit in New Delhi in January 1985 appealed to the big powers
(a) To give up the nuclear arms race
(b) To stop the launching of spacecraft
(c) To intervene in the war between Iran and Iraq
(d) None of the above
86. The pro tem speaker of the 8th Lok

- (a) Balram Jhakar
(b) Bale Ram Bhagat
(c) G. Lakshmanan
(d) Jaspwan Ram
91. The Kudal Commission which has submitted its report was appointed to enquire into the activities of
(a) Employees Provident Fund
(b) Life Insurance Corporation
(c) Special Bazaar Foundation
(d) General Provident Fund
92. James Hailey, a Chinese who died recently was a famous English
(a) Poet (b) Poetess
(c) Writer of thriller
(d) Dramatist
93. The Deputy Speaker of the Lok Sabha is
(a) G. Lakshmanan
(b) Naima Heptullah
(c) M. Thambi Dorai
(d) None of the above
94. The chief guest at the Republic Day parade 1985 was
(a) Dr Raul Alfonsin
(b) Miguel De La Madrid
(c) Julius Nyerere
(d) Maumoon Abdul Gayoom
(e) None of the above
95. The Governor of the Reserve Bank of India is
(a) Man Mohan Singh
(b) R.N. Malhotra
(c) Dr I.G. Patel
96. The 1984 Nehru Award for International Understanding went to
(a) Mother Teresa
(b) Julius Nyerere
(c) Margaret Thatcher
(d) Indira Gandhi
97. The US has withdrawn and the UK intends to leave the
(a) UN (b) UNESCO
(c) World Bank
(d) None of the above
98. The first woman to walk in space is
(a) Sally Ride
(b) Svetlana Savitskaya
(c) Valentina Tereszkova
(d) None of the above
99. Which of the following states did not go to polls in the Lok Sabha elections in December 1984?
(a) Punjab (b) Nagaland
(c) Assam (d) Manipur
(e) Meghalaya
100. The total number of seats contested in the Lok Sabha elections, 1984 were
(a) 492 (b) 502
(c) 508 (d) 526
101. Where was the 10 International Film Festival of India held?
(a) Bombay (b) New Delhi
(c) Calcutta (d) Madras
102. How many states and Union territories went to the polls in March 1985?

- (b) 12 states and two Union territories
(c) 11 states and two Union territories
(d) 12 states and one Union territory
103. The number of states not under the Congress(I) rule is
(a) 5 (b) 6
(c) 7 (d) 8
104. Kumar Gandharva, a leading vocalist, received the Kalidas Award which is given by the government of
(a) MP (b) UP
(c) Karnataka (d) Maharashtra
105. Israel has recently withdrawn its forces from
(a) Lebanon
(b) Egypt
(c) Jordan
(d) None of the above
106. Noted Urdu writer and producer-director of Hindi movies who died recently was
(a) Shahid Latif
(b) Krishan Chandra
(c) K.A. Abbas
(d) Rajinder Singh Bedi
107. The Judicial Commission probing into the assassination of Mrs Gandhi is headed by
(a) Justice M.P. Thakkar
(b) Anand Ram
(c) L.N. Sinha
(d) Justice M.H. Beg
(e) None of the above
108. The Deputy Chairman of the Planning Commission is
(a) K.R. Narayanan
(b) Man Mohan Singh
(c) T.D. Lakshwala
(d) None of the above
109. Neutralisation of lethal methyl isocyanate (MIC) gas in Bhopal was called
(a) Operation Flood
(b) Neutralisation of MIC
(c) Operation Faith
(d) Operation Gas
(e) None of the above
110. Our neighbouring countries which recently had a referendum are
(a) Bangladesh (b) Switzerland
(c) Pakistan (d) Japan
(e) None of the above
111. Russia and the US had talks recently on Space and Nuclear arms in
(a) Washington (b) Moscow
(c) Geneva (d) Paris
(e) None of the above
112. The Fourth Indian Scientific expedition to Antarctica was led by
(a) Dr H.K. Gupta
(b) S.Z. Qasim
(c) M.G.K. Menon
(d) Dr B.B. Bhattacharya
113. Russia launched two unmanned inter-planetary stations Vaha I and

- Vaha II in December 1984 to study
(a) Hailey's Comet
(b) Venus
(c) Mars
(d) None of the above
114. The Seventh Five-Year Plan period will be
(a) 1985-90
(b) 1986-91
(c) 1987-92
(d) None of the above
115. The first Indira Priyadarshini Award for promoting the ideas of Mrs Gandhi was given to
(a) Kamaljit Tripathi
(b) Srikanth Verma
(c) Baba Sahib Amle
(d) Pranab Mukherjee
116. The youngest Indian chess player to get the International Master Norms is
(a) Ravi Shekhar (b) A.N. Thepsey
(c) Rishi Khan (d) V. Anand
117. The headquarters of the newly formed Southern Air Command of the Indian Air Force is in
(a) Hyderabad (b) Madras
(c) Bangalore (d) Mangalore
(e) Trivandrum
118. The Government of India has decided to set up four more free trade zones. The earlier two zones are
(a) Vishakhapatnam and Cochin
(b) Kandla and Goa
(c) Madras and Tuticorin
(d) Kandla and Santa Cruz
119. Britain and China have signed an agreement under which the latter will, in 1997, get
(a) Macao
(b) Hong Kong
(c) Taiwan
(d) None of the above
120. The 31st National Boxing Championship (for 1984) was held in
(a) Madras (b) Pune
(c) Hyderabad (d) Calcutta
(e) None of the above
121. The West Indies-Australia cricket test played in Australia was won by West Indies defeating Australia by
(a) 3-2
(b) 4-1
(c) 3-1
(d) None of the above
122. The Asia Cup Football Tournament played in Singapore was won by
(a) South Korea (b) China
(c) Kuwait (d) Saudi Arabia
123. The Sixth Champions Cup tournament (Hockey) was won by Australia defeating Pakistan. The tournament was played in
(a) Holland (b) Melbourne
(c) Munich (d) Karachi
124. The Nehru Hockey tournament, 1984 was won by the Indian Air-

121. The Davis Cup Tennis Tournament, 1984 played in Gottenburg was won by USA 4-1 defeating
(a) Australia (b) France
(c) Czechoslovakia (d) Sweden
122. The National Tennis Championship, 1984 for men went to
(a) Vijay Amritraj
(b) Anand Amritraj
(c) Shashi Menon
(d) Nandan Bal
123. The women's title for the National Tennis Championship, 1984 went to
(a) Bela Pandit
(b) Nandini Rangarajan
(c) Vidya Priya
(d) Namrata Apparao
124. Om Aggarwal defeated Tarry Parson in the finals of the World
(a) Billiards Championship
(b) Snooker Championship
(c) Golf Championship
(d) Badminton Championship
125. England defeated India in the one-day international matches played in India by
(a) 3-2
(b) 4-1
(c) 5-0
(d) None of the above
126. Geet Sethi was the National Billiards Champion. In the final, he defeated
(a) Michael Ferreira
(b) Syed Habib
(c) Arvind Savoor
(d) Subhas Agarwal
127. The **Communist Manifesto** was written by Marx in
(a) 1847 (b) 1848
(c) 1947 (d) 1948
128. The **Communist Manifesto** contains Marx's
(a) Political ideas
(b) Economic ideas
(c) Economic and Political ideas
(d) Economic and Historical ideas
129. Marxism advocates that
(a) Workers will overthrow the ruling class
- (b) Workers will not be covered by government

(a) Democracy
(b) Monarchy
(c) Dictatorship
(d) None of the above
134. India is a leading industrial nation among
(a) Third World countries
(b) Fourth World countries
(c) Communist countries
(d) Western countries
135. India can help poor countries for the development of
(a) Agriculture
(b) Industry
(c) Space technology
(d) Industry and agriculture
136. The Bhoodan Movement was started in 1951 by
(a) Mahatma Gandhi
(b) Jaiprakash Narain
(c) Thakkar Bapa
(d) Vinoba Bhave
(e) Acharya Kripalani
137. Bhoodan Movement means
(a) Gift of Land
- (c) Gift of land to the government
(d) Nona of the above
138. The Bhoodan Movement was started in
(a) Pochampalli village (Andhra Pradesh)
(b) Porbandar (Gujarat)
(c) Balasore (Orissa)
(d) Raipur (MP)
139. Sarvodaya means
(a) Welfare of Harijans
(b) Betterment of Asians
(c) Uplift of all religions
(d) Welfare of all
140. Sarvodaya visualises
(a) Disciplined society without the need for an administration
(b) Society free from all wants
(c) Society free from diseases
(d) None of the above
141. Sarvodaya envisages
(a) Village swaraj and planning
(b) Planning and military training
(c) Military training and village swaraj
(d) None of the above
142. Panchsheel was referred to for the first time in September 1954 when
(a) The Chinese PM visited India
(b) Pandit Nehru visited China
(c) Indian PM visited Russia
(d) PM of Indonesia visited India
(e) None of the above
143. Panchsheel got recognition for the first time in talks in June 1954 between
(a) India and China in New Delhi
(b) India and Egypt in Cairo
(c) India and Yugoslavia in Belgrade
(d) India and Egypt in New Delhi
(e) None of the above
144. The Russian Revolution took place in
(a) 1904 (b) 1917
(c) 1920 (d) 1924
145. The Russian Revolution was led by
(a) Kari Marx
(b) Joseph Stalin
(c) Vladimir Lenin
(d) Rasputin
(e) None of the above

Test Of Reasoning

BY KAVITA KAPOOR & B.L. ARORA

FOR BSRB (PO) EXAM

As reasoning tests form an important part of exams like BSRB (PO), these questions have been selected to help you master the techniques of tackling similar problems.

Time: 15 minutes—half a minute for each question.

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. 3. Then rate yourself as follows:

Excellent....27-30 Very good....23-26 Good....19-22 Fair....15-18 Poor...Below 15

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of this test.

Directions: In questions 1-5, there is a series with one term missing as shown by ? Find this term from amongst the alternatives given below each question:

1. 3, 5, 8, 13, 20, 31, ?
(a) 44 (c) 48
(b) 46 (d) 50
2. 35, 60, ?, 85, 89, 90
(a) 68 (c) 74
(b) 72 (d) 76
3. 5, -8, 14, -23, 35, ?
(a) 47 (c) -47
(b) -50 (d) -35
4. 20, 21, 30, 55, ?, 185
(a) 89 (c) 104
(b) 98 (d) 108
5. 2, 3, 6, 18, 108, ?
(a) 324 (c) 1944
(b) 216 (d) 1296
6. Shyam's age is $\frac{4}{7}$ of his age plus 21 years. His age is _____ years
(a) 28 (c) 42
(b) 35 (d) 49
7. The value of $(895)^2$ is
(a) 810025 (c) 801125
(b) 801025 (d) 810125
8. The expression $(10^{30}-1)$ is divisible by
(a) 9 (c) Neither 9 nor 11
(b) 11 (d) Both 9 & 11
9. If 1 2 3 Y 5 6 7 8 9 0 3 2 is divisible by 24, Y must be
(a) 2 (c) 4
(b) 3 (d) 5
10. The value of $\sqrt{26} - \sqrt{25}$ is nearly
(a) 0.101 (c) 0.089
(b) 0.110 (d) 0.099
11. The number $(10^{37}+1)$ is divisible by
(a) 14 (c) 33
(b) 11 (d) 11 as well as 33
12. Which of these is not a perfect

square?

- (a) 42025 (c) 3522
(b) 2916 (d) 6241

Directions: In questions 13-15 various faces of a cube are shown. Study them carefully and answer these questions:

13. Which number is on the face opposite 4?

- (a) 6 (c) 3
(b) 5 (d) 1

14. The number opposite face 6 is

- (a) 1 (c) 4
(b) 3 (d) 5

15. The number opposite face 2 in the blocks shown above is

- (a) 1 (c) 4
(b) 3 (d) 6

16. The number opposite face 1 is

- (a) 2 (c) 4
(b) 3 (d) 6

17. If Dec 25, 1984 is Tuesday, Jan 1, 1984 was

- (a) Monday (c) Friday

- (b) Wednesday (d) Sunday
18. If Jan 31, 1978 was Tuesday, Feb 1, 1988 would fall on
(a) Monday (c) Thursday
(b) Friday (d) Saturday

19. If $2 \times 3 = 13$ and $3 \times 5 = 34$, 4×5 is equal to
(a) 54 (c) 45
(b) 48 (d) 41

20. If GRASS is coded 63516, SIR will be coded (codes not necessarily in order)

- (a) 631 (c) 536
(b) 315 (d) 617

21. If LOW is coded 542 and WON is coded 458, LOAN will be coded.

- (a) 8245 (c) 8468
(b) 8241 (d) 8576

22. If RADIO is coded Wegkp, MEANT will be coded

- (a) Ridpv (c) Ricpu
(b) Ridqu (d) Ridpu

23. Which of the following is the greatest?

- (a) $\frac{5}{6}$ (c) $\frac{11}{12}$
(b) $\frac{8}{9}$ (d) $\frac{2}{3}$

24. Which of the following is the greatest?

- (a) 7^4 (c) $(.7)^{-4}$
(b) $(-7)^4$ (d) $(.07)^{-4}$

Directions: Spot the odd one out in the following questions:

25. (a) Rohini (c) Aryabhata
(b) Bhaskara (d) Apsara
26. (a) AB MN (c) TU VS
(b) YZ EF (d) HI-KJ
27. (a) Lower (c) Liars
(b) Upper (d) Flask
28. (a) 37 (c) 29
(b) 71 (d) 89
29. (a) 100 (c) 10,000
(b) 1,000 (d) 10,00,000
30. If $A * B$ means $AB - \frac{A}{B}$, the value of $\frac{4}{3} * \frac{3}{2}$ is
(a) $\frac{11}{6}$ (c) 1
(b) $\frac{17}{6}$ (d) 0.24

SKYSHIP 7000

The world will soon witness the advent of a giant 140-metre-long airship, capable of carrying up to 250 people. The new Skyship-7000 is a development of the Skyship-500 and 800 craft that are already flying. The craft, now on the drawing board of Airship Industries (AI) of London, would get its buoyancy from some 70,000 cubic metres of non-inflammable gas stored in an envelope between 120 and 140 metres long.

YOURS!

A BRITISH POST GRADUATE DIPLOMA IN EXPORT MANAGEMENT

FROM THE INTERNATIONAL EXPORT ASSOCIATION ENGLAND

Master the total operational framework of the Indian export business by taking our scientific, step-by-step correspondence course.

You will receive comprehensive instruction on up-to-date export marketing techniques. With special emphasis on EXPORT-IMPORT POLICIES, PROCEDURES & DOCUMENTATION.

Our lessons are presented in a clear, one-to-one classroom style and language.

You are eligible for admission if you are a graduate.

For prospectus and application form, send a crossed postal order for Rs 10, drawn in favour of:

THE INTERNATIONAL EXPORT ASSOCIATION
 B-22, Anand Niketan, New Delhi-110 021. Tel: 675757

Piscis Conglomerate's

PISCAN INSTITUTE OF MARITIME STUDIES

Affiliated to
The International University
 Missouri, U.S.A.

announces admissions to external courses leading to B.B.A./M.B.A. with specialization in shipping.

Eligibility --- B.B.A. : (1) Graduates (2) Cadets passed out of I.S. Rajendra (3) D.M.T. Cadets having completed 3 yrs training (4) Undergraduates with 3 yrs working experience

M.B.A. : (1) Graduates (2) M.C.T. 2nd Class Marine Engineers (3) Those passed out of D.M.T. (4) 2nd Mate I.G. and Mule H.T. (5) Undergraduates with 3 yrs working experience in officer category under special provisions, at the discretion of the Course Director

These degrees, having legal validity, accreditation, recognition, approvals & compliance in trade, industry & business, open the door of the international job markets

Multinationals, Governments and the largest employers recruit and/or sponsor studentships of The International University (T.I.U.) e.g. N.A.S.A. Cummins Engine, Lohing International, Cameron-Miller Inc., & innumerable others

These degree courses can be pursued through us, from any place, in a cost controlled budget, without residency requirements in either U.S.A. or any other country. Doctoral programmes are open to those who complete M.B.A.

Piscan Institute of Maritime Studies is the only institute in the world authorized by T.I.U. (U.S.A.) to conduct Shipping Management Courses on its behalf.

Contact:
Capt. Amit Banerjee (Course Director)
 703, Shivam, Opp. Pratap Society Jai Prakash Road, Andheri (W), Bombay 400 058. Tel.: 620165, 629266

For Prospectus:
 Remit Rs. 25/- by M.O./P.O. to 'Piscis Conglomerate' along with self addressed, stamped (Rs. 2.10) size of envelope 24 cms x 11 cms.

1. (a) The difference between successive numbers are prime numbers. The next number should, therefore, be $31+13=44$
2. (d) The difference between successive terms is $25(=5^2)$, $16(=4^2)$,.....
3. (b) The difference between successive terms (ignoring the sign) is 3,6,9,... and the terms are alternately positive and negative.
4. (c) The difference between successive terms is $1,9(=3^2)$, $25(=5^2)$,...
5. (c) The terms are products of two previous terms (starting from the third term).
6. (d) Let his age be x , then
 $4x/7+21=x$
Thus, $3x/7=21$, or $x=49$.
7. (b) $895^2-5^2=(890)(900)=801000$
Thus, $895^2=801025$
8. (d) $10^{30}-1$ will consist of thirty 9's (999...99). It is thus divisible by both 9 and 11.
9. (a) Since $24=8 \times 3$, the number must be divisible by 8 as well as 3. To be divisible by 3, the sum of its digits ($46+y$) must be divisible by 3. Thus $y=2$.
10. (d) $\sqrt{26}-\sqrt{25}=\frac{26-25}{\sqrt{26}+\sqrt{25}} \approx \frac{1}{10}$. 0.099 is thus the only possible answer.
11. (b) $(10^{37}+1)$ has (10^3+1) as a factor which has $(10+1=11)$ as a factor since $10^{37}+1=10,000,000,001$ it is not divisible by 3 and hence 33.
12. (c) A perfect square can never end in 2.
13. (d) Each number has four numbers as its neighbours and one number opposite it. From the first two cubes, the neighbours of 4 are seen to be 2,5,3 and 6. Therefore, the number opposite it will be 1.
14. (d) The neighbours of 6 are 3,4,1 and 2. Therefore, the number opposite it is 5.
15. (b) The neighbours of 3 are 4,6,1 and 5. Therefore 2 must be opposite 3.
16. (c) The neighbours of face 1 are 2,6,3 and 5.
17. (d) Jan 1, 1985 will be Tuesday. Since 1984 is a leap year, Jan 1, 1984 will be 2 days before Tuesday, viz, Sunday.
18. (a) Jan 31, 1988 would be $(10+2)$ days or 5 days after Tuesday, viz, Sunday. Therefore, Feb 1, 1988 would be Monday.
19. (d) $2 \times 3 = 2^2 + 3^2 = 13$... Thus
 $4 \times 5 = 4^2 + 5^2 = 41$.
20. (d) GRASS contains two S's and the code contains two 6's. Thus, 6 is the code for S. Since I does not occur in GRASS, the code for SIR should contain 6 and only one of other numbers occurring in the code for GRASS.
21. (b)
22. (d) The first letter (R) is replaced by the letter (w) which is fifth letter from R in the alphabet, the second letter (a) is replaced by fourth letter from it, etc.
23. (c) $\frac{1}{11} > 0.9$. All other numbers are less than this.
24. (a)
25. (d) All others are names of satellites.
26. (c) Each set consists of two groups of letters which are successive letters in the alphabet.
27. (d) The only word containing one vowel. All others contain two vowels.
28. (e) The only composite number.
29. (b) The only number which is not a perfect square.
30. (b) $\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$ $\frac{1}{4} \times \frac{1}{4} = \frac{1}{16}$ $1 - \frac{1}{16} = \frac{15}{16}$.

RAIN, RAIN GO AWAY

Dependence on rain gods for bumper harvests is fast diminishing—especially in Germany where the Perrot Company is busy developing ways of preventing famine, protecting the environment and revitalising barren soil. The underground sprinkler system designed by the company some 30 years ago has gone a long way in ensuring good crops. Crop yields resulting from the use of sprinkler system are much higher as compared to yields of non-sprinkled crops. So efficient is the sprinkler technology that it could well prove to be the key to solving the world's food problem.

ROBOTS HAVE COME TO STAY

Will man be a mere extra in the factory of the future while industrial robots glide past him soundlessly as passengers of unmanned vehicles, welders, processors, casters, cleaners—the main actors on a fully automated stage? To answer this question extensive research is being carried out at a German institute. Its findings: there will be a hierarchy of computers with only a few qualified human workers around. And if this is so then the world is at the threshold of the third industrial revolution—or perhaps evolution would be more appropriate?

NEWS CAPSULE

AWARDED

The UN Secretary-General's prestigious **Peace Medal** to internationally renowned Indian sculptor, Amar Nath Sehgal, in recognition of his works devoted to human understanding. The award came after Sehgal presented a work entitled *The Crushing Burden* to Javier Perez de Cuellar, depicting Mother Earth being crushed under the burden of burgeoning humanity.

The 16th annual **British Academy of Film and Television Art Awards** for best picture to: *The Killing Fields*, a David Puttnam-Roland Joffe film about Kampuchea's fall to Khmer Rouge in 1973; for best actor to: Haing S. Ngor for his role in the above film; for best actress to: Maggie Smith for her part in the comedy *A Private Function*. The leading television awards went to the India-set saga *The Jewel In The Crown*, which won best drama series-serial, best actress (Dame Peggy Ashcroft) and best actor (Tim Pigott-Smith) awards.

The **B.D. Goenka Awards** for 1984, instituted by the Indian Express group of newspapers, to: R.K. Keswani, a freelance journalist of Bhopal for his investigative pieces on the Union Carbide; to: Prem Bhatia, Editor of *The Tribune*, for his outstanding contribution to journalism. The awards carry a cash prize of Rs 1 lakh.

The **People's Union of Civil Liberties (PUCL)-India Today Journalism for Human Rights Award** to Shahnaz Anklesaria, environment correspondent of *The Statesman*.

At the 57th Academy Awards presentation, the **Oscar** for the best picture to: *Amadeus*; for best actor to: F. Murray Abraham for his performance in *Amadeus*; for best actress to: Sally Field for her role in *Places In The Heart*; for best supporting actor to: Haing S. Ngor for his role in *The Killing Fields*; for best supporting actress to: Dame Peggy Ashcroft for her role in *A Passage To India*; for best director to: Milos Forman for *Amadeus*; for the best screenplay writer to: Peter Shaffer for *Amadeus*; and for the best direction, costume design, sound and makeup to: *Amadeus*.

The **Directors Guild of America award** for the best director of 1984 to Milos Forman for his movie, *Amadeus*. Forman has previously directed such highly acclaimed films as *One Flew Over The Cuckoo's Nest*, *Hair* and *Ragtime*.

Instituted by the University Grants Commission (UGC), the **C.V. Ramen Award** for research in physical sciences for 1981 to: S. Chandrasekhar of the Raman Research Institute, Bangalore; for 1982 to: Asima Chatterjee of Calcutta University; the **Meghnath Saha Award** for research in theoretical sciences for 1981 to: S.M. Alladdin of Osmania University; for 1982 to: R.P. Rastogi of Gorakhpur University; and the **J.C. Bose Award** for research in life sciences for 1981 to: M.A. Viswamitra of the Indian Institute of Science, Bangalore. Each award carries Rs 10,000 in cash.

The **World Health Organisation (WHO)**

Sasakawa health prize for 1985 jointly to the Society for Education, Welfare and Action (SEWA) of rural district Bheruch in Gujarat, Dr Jesum C. Azurim of the Philippines and Dr David Bersh Ecobar of Columbia. SEWA gets \$40,000 and the others share \$30,000 each. SEWA has been championing the cause of women and helping woman artisans make their work popular and profitable.

APPOINTED

Arjun Singh, CM of MP, as the Governor of Punjab, replacing K.T. Sataravalla, in a move seen as a broad political initiative to solve the Punjab problem. MPCC (I) chief, **Moti Lal Vora** was sworn in as CM of MP.

P. Venkatasubbaiah, former minister of state for home, as the Governor of Bihar, replacing A.R. Kidwai; **Mohammad Usman Arif**, former deputy minister for works and housing, as the Governor of UP, replacing C.P.N. Singh.

Jean-Bernard Merimee, French ambassador to Australia, as France's new envoy to India, replacing Serge Boidevaix who returned to Paris following allegations of a French link in the espionage scandal.

VISITED

Milka Planinc Yugoslav PM on Mar 18 on a day's stopover on her return home after a tour of south Asian countries. Mrs Planinc met PM Rajiv Gandhi for nearly two hours and discussed bilateral relations, specially ways to expand economic cooperation between the two countries.

Siddhi Savetsila, Thailand's foreign minister, on Mar 21, on an official visit during which he met PM Rajiv Gandhi, President Zail Singh and the chairman of the policy planning committee of the external affairs ministry, G. Parthasarathy. During Siddhi's visit India and Thailand agreed to work closely in multilateral forums, and discussed the South East Asian situation, disarmament and the Gulf war, among others.

Sam Nujoma, the president of the South-West African People's Organisation (SWAPO), on Mar 25, for talks with Indian leaders on the Namibian question. Nujoma appraised Indian officials of South Africa's efforts to destabilise frontline states which had pledged support to SWAPO.

SCIENCE

New hearts for old: An artificial heart that can automatically control the flow of blood and has features that prevent formation of blood clots, has been designed by researchers at the Pennsylvania State University. The air-driven device, which is an improvement on the Jarvik-7 model, will serve to keep a patient alive until a donor heart can be found. It is a self-contained electrical unit.

Research related to the Antarctica, deep sea mining and ocean thermal energy conversion (OTEC) will be the major preoccupa-

tion of the department of ocean development during 1985-86. Out of the Rs 28.90 crores and Rs 21 crores allotted to the department for plan and non-plan expenditures, it will spend nine crore rupees on India's fifth expedition to the frozen continent. A provision has been made for acquiring underwater technology, and detailed surveys for polymetallic nodules in the central Indian Ocean will be continued. Incidentally, the fourth expedition to the Antarctica returned home on Mar 25 after a three-and-a-half month stay on the icy-continent. The 12 members of the third expedition who had manned 'Dakshin Gangotri' for 15 months have also returned.

'Hydrophobic Silicate'—a new material that picks up oil like a sponge and forms a sludge that can be skimmed off, has been developed by scientists at the Defence Science Centre. Its potential use as an agent to combat oil spills in the sea is, therefore, a distinct possibility. Being heavier than most synthetic absorbents, the silicate sponge will require less storage space and can be air-dropped over oil spills.

Relief for crippled knees: Arthritis victims have something to look forward to now that a new experimental therapy to slow down or temporarily halt the often relentless destruction caused by rheumatoid arthritis, has been developed by researchers at the Harvard Medical School. The therapy, which involves injecting of short-lived radioactive material into crippled knees, is safe because the material decays in a day and its radiation affects only the cells it is intended to kill. Healthy lining of the knee joint eventually grows back and patients start to feel improvement in three months.

Among the most powerful galaxies in the universe are the six distant galaxies, radiating energy of upto five trillion suns, US astronomers have revealed in a study—the first in which scientists have calculated the tremendous energy emitted by them, mostly in the form of invisible and infra-red light. The six galaxies upto three billion light years away from the earth, are 100 to 500 times as powerful as the Milky Way.

India's first indigenous satellite will be launched into orbit by the advanced satellite launch vehicle later this year, the department of space indicated in its demands for grants presented to Parliament on Mar 17. The satellite will be launched under the stretched Rohini satellite series project undertaken by ISRO for designing and fabricating a series of small and low cost satellites. It will provide a satellite platform for conducting technological, and scientific experiments.

Electromagnetic waves from trees: An ISRO scientist has successfully tapped trees in his backyard for electricity and lit a light-emitting diode (LED) for three hours, and a torch bulb intermittently, opening up many possibilities in the renewable energy field. Dr Shiv Prasad Kosta embarked on his experiment in 1979, using green vegetation canopy as a radio frequency (RF) antenna. He successfully conducted experiments on a live cypress plant and freshly cut date palms. His experiments

revealed that certain geometrically-shaped vegetation can, due to its water and chlorophyll content, and dynamic, complex and dielectric properties, sustain, propagate and radiate electromagnetic waves from its structure. In other words, trees and other selected vegetation can be used as media in microwave contact. The Bangalore police is using his technique to combat crime. In 1984 Kosta thought of tapping electricity from trees, and the success of his experiments in that direction may find application in the electronics industry. Other possible uses: to reactivate low capacity cells, cure plant diseases, indicate a tree's health, and perhaps brighten up rural huts.

EDUCATION

Medical council takes initiative: The medical council of India has urged the government to amend the Central and state acts to invest it with more power for maintaining the standards of medical education. According to the council, the mushrooming of private medical colleges in the country has resulted in a decline in the standards. The council has also recommended to the Centre an amendment of the Medical Council Act to make registration of medical practitioners with the council obligatory. Also, it has been suggested that a screening test be held for foreign qualified doctors before they were allowed to practise in India. On its own, the council is making arrangements to enable practitioners to continue their education and update their knowledge, and setting up a committee to study the problems of Indian medical students abroad.

The new education budget shows a 14.5% rise at Rs 514 crores, against Rs 449 crores during 1984-85. One new feature is the government's commitment to make education for girls free all over the country from classes nine to twelve. A sum of Rs 8 crores has been reserved for it. Though a substantial Rs 6.65 crores is to be spent on INSAT cells and assistance to specialised institutions a mere trickle of Rs 2 lakhs and Rs 80,000 under two heads has been allotted for computer education in schools. A sum of Rs 19 lakhs has been set aside for promotion of yoga. There is no mention of the open university in the budget.

Asia-Pacific regional cooperation in Education: Vice-chancellors of universities in the Asia-Pacific region on Mar 20 concluded a conference in New Delhi, expressing the opinion that the first step to encourage regional cooperation should be to recognise each other's degrees. They also agreed to initiate joint projects and have teacher exchange programmes between their universities. The delegates also discussed a proposal to formulate a common syllabus, alternatives in higher education, student indiscipline and ways to curb it. They resolved to set up a permanent secretariat of Asian and Pacific universities and till this was done, requested India to look after the secretariat work.

DEFENCE

India's naval defence is being shored up in the wake of reports of introduction of sophisticated and nuclear weaponry in the Indian Ocean region. Plans for increased recon-

naissance by aircraft, introduction of superior submarines, more surface-to-surface missiles and improved electronic warfare capabilities, have been finalised.

NATO's guarded endorsement of 'star wars' at a meeting of its defence ministers at Luxembourg on Mar 27, is in tune with its misgivings about the feasibility of the project. The wording of the communique issued at the end of the two-day meeting, indicated scepticism; the ministers were careful to stress that they only supported the research part of the \$26 b project.

Enhancing Pakistan's defence capability continues to be a major preoccupation of the US. On Mar 27, the US defence department announced that the US will sell Pakistan 15 radar units estimated at \$65m and designed to pinpoint enemy mortar fire. On Mar 29, the sale of 500 air-to-air Sidewinder, AIM-9L missiles, valued at \$50m was announced.

The defence budget for 1985-86 has shown an increase of Rs 511 crores: the Rs 7,686-crore outlay represents 15% of the country's budget. In 1984-85, it was estimated that Rs 6,800 crores will be spent on defence but the figure was later revised to Rs 7,175 crores. The army receives Rs 4,702 crores, an increase of Rs 500 crores, the navy Rs 602 crores, an increase of Rs 100 crores, and the air force Rs 1,730 crores, about Rs. 241 crores higher than its outlay for the current year.

HEALTH

Guinea worm threat: Over 12m people are at the risk of guinea worm infestation in seven states in the country, according to a survey of the UN development programme (UNDP). The states: Andhra Pradesh, Gujarat, Karnataka, MP, Maharashtra, Rajasthan and Tamil Nadu. Rajasthan is the most seriously affected state with 14,905 people from 6,104 villages found to be infected. Besides India, the survey says the disease afflicts an estimated 20m, people in sub-Saharan northeastern Africa, the Arabian peninsula, Iraq and Pakistan. Guinea worm infestation, transmitted entirely by drinking water, can be painful, and even causes disability from painful ulcers and abscesses which last four to six weeks. The appearance of the worm at the surface is preceded by slight fever, blisters on the skin, nausea, vomiting, diarrhoea, asthma, giddiness and fainting spells.

WHO's ambitious plans: The World Health Organisation (WHO) has decided to assign a major role to nurses in its primary health care programme and supply essential drugs to the developing countries at the lowest possible cost to help reach the goal of health for all by 2000. It also plans to increase its 1986-87 budget outlay by 6.52% to \$54m. The budget proposal, recommended by the 75th WHO session in Geneva recently, is to be approved by the world health assembly in May.

NEIGHBOURS

The 'forbidden city' no longer forbidden: Nepal and China have agreed to open up Lhasa, the capital of Tibet, to western tourists through an overland route from Nepal. Western tourists visiting Nepal will be able to travel for

two days by road to Lhasa through authorised travel agents. The Chinese have also opened some border areas along the Nepal-Tibet border for trekking. Incidentally, China and Nepal have initiated a memorandum to open the Tibet-Nepal border to tourists. Tourist agencies from both Nepal and China will be allowed to organise cross-border trips after the memorandum is officially approved by Beijing and Kathmandu.

ECONOMY-National

ESCAP survey: Though India has been successful in making adjustments to external payments constraints in recent years, it will not be easy to ensure that success in the coming years, says the UN Economic and Social Commission for Asia and the Pacific (ESCAP). In its 1984 survey, ESCAP mentions two reasons for the pessimism: an anticipated decrease in India's crude oil production and the shift in the structure of external financing away from long-term concessional flows towards medium-term non-concessional flows. The survey says that India's successful external adjustments thus far have been greatly helped by its ability to increase domestic crude oil production in the past five years. Though oil production may continue to increase, its rate of growth is expected to be much lower, the survey says. The survey has cautioned that the capacities of the developing countries for adjustments have become "overstrained." Also, restrictions to the free flow of world trade continue, real interest rates in world capital markets remain high, and sluggishness in the demand for primary commodities persists, the survey pointed out.

World Bank assistance: The World Bank has announced loans totalling \$798m to be applied to power, irrigation and coal mining projects in India. Among them is a 20-year credit of \$200m for the construction of the Sardar Sarovar dam, drainage and power projects on the Narmada river. In addition, two 50-year interest-free loans of \$200m and \$150m are being provided for the canal and aqueduct construction, road and rail bridges by the DA. The Indian state governments and other local sources will cover the remainder of the \$2.5b cost.

New tea marketing policy: The Centre has announced its new tea marketing policy for 1985, envisaging a production of 655m kg. The export target is fixed at 220m kg, and the domestic consumption target at 435m kg. To ensure even phasing of exports, the government has set quarterly export targets. Export targets in the first and second quarter of the year have been fixed at 40m kg each. During the third quarter, when the bulk of the production reaches the market, the target is 80m kg and in the fourth quarter, 60m kg. The US Agency for International Development (USAID) has requested \$179m for India as economic assistance during fiscal 1986. In comparison, Pakistan is entitled to get 675 m dollars during the year as economic and military aid. USAID has sought a total of \$1.096b for aid to South Asia.

FICCI-China council agreement: The Federation of Indian Chambers of Commerce and Industry (FICCI) and the China council for promotion of international trade on Mar 2

signed an agreement to develop and expand trade relations. The agreement came during a visit to New Delhi by an 8-member Chinese business delegation. The two sides identified specific items for import and export. Items India could export include consumer goods, raw materials, computer software, scientific instruments and engineering and transport equipment. China, in its turn, could supply India with edible oils, drugs, jute machinery and chemicals.

India's trade deficit during the first nine months of 1984-85 stood at Rs 3,99.9 crores against Rs 3,558.2 crores during the same period in the previous year. While exports went up by 18.8% to Rs 8,146.2 crores, imports registered an increase of 12.8% to Rs 11,746.1 crores.

India to buy US polysilicon technology:

The government on Mar 14 announced its decision to buy polysilicon technology from a US firm, Hemlock, after a careful assessment of the "techno-economic viability and cost-effectiveness of the indigenously-developed process". However, in order to give the indigenous effort a chance to prove itself, the investment decision on the public sector national silicon facility has been postponed by a year. PM Rajiv Gandhi announced in Parliament on Mar 14. The agreement to buy technology from Hemlock had been approved by the government earlier but following criticism of the deal by several departments and scientists, the PM ordered a review of the decision. The agreement provides for the supply of process knowhow, basic engineering and proprietary equipment for the production of polysilicon.

ECONOMY-International

Global trade grew in volume by 9% in 1984, nearly double the rise in world output, taking the total of world exports to an all-time high, according to the general agreement on tariffs and trade (GATT). Exports totalled \$1,995b, an increase of 6.5%. The increase is attributed to the continued appreciation of the US dollar whose real effective exchange rate was 6.0% above that of 1983. Developing countries increased their export earnings by 7.5%. Japan became the world's largest exporter of manufactured goods, edging West Germany from the position. GATT said the growth in world trade reflected the strong recovery and 7% growth in GDP of the US, but cautioned against complacency. Tensions over trade issues are still being felt, it said, and called on industrial countries to liberalise their trade policies to facilitate a return to healthy economic growth.

Bank loans to developing countries are on the decline again, according to the IMF's latest analysis. Bank lending to non-oil developing countries totalled \$22b during the year ended September 1984, compared with \$36b in the year before. Mexico's debt crisis of 1982, followed by a similar crisis in Brazil and Argentina, has made bankers wary, the IMF says. The new drop comes after a period when low living standards were further declining in Latin America and Africa. It is also expected to hit hard countries that got used to fast growth in the 1960s and 1970s.

An IMF study of government finances shows that total outlays—expenditures and

lending minus repayments—are outpacing overall economic growth. In industrial countries, the combined outlays of all levels of government topped 45% of gross domestic product in 1982, an increase of four percentage points since 1979. For non-oil developing countries, total government outlays reached 31.5% of the GDP, compared with 27% in 1974. There have been increases as well in tax revenues and deficit financing. The industrial world's tax ratio rose to 34% of GDP in 1982 and average deficits to 5.3%. The figures for the non-oil developing countries were 20.2% and 5.7%. The expenditure on arms reached a global average of 4% in 1982, and spending on social security and welfare 37.9% in industrial countries and 5.2% in the non-oil developing countries.

Total external debts of developing countries reached nearly \$900b at the end of 1984 and it is projected to reach \$970b by 1985-end, according to the latest edition of world debt tables. The growth of debt was far less than the estimated nominal increase in the GDP and World Bank officials see that as a healthy sign. During 1984, about \$7b more was paid by 104 countries to service their debts, than they received by way of long-term disbursements. Among countries with no debt problems at all were India and China which followed conservative policies and kept their debt service ratio low.

Rich grow richer, poor poorer: While the US, Japan and the Arab oil countries and Western Europe grew steadily richer in the last decade, the average person in 30 poor countries of Africa and Latin America grew even poorer, according to a World Bank study. The US was second to Switzerland in average income, the American earning \$14,090 to the Swiss's \$16,390. Outside the oil countries, the closest averages to the US were Norway (\$13,820) and Sweden (\$12,400). The average in some of the smaller oil countries in the Gulf was the UAE \$21,340, Qatar \$21,170, Brunei \$21,140 and Kuwait \$18,180. These however, are special cases in which the averages are not very meaningful since much of the wealth goes in the hands of the government. Most of the poor countries that showed decline in their already low living standards were in Africa and Latin America, with Chad

and Nicaragua heading the list there. Detailed information shows Bangladesh is the poorest country, with an average per capita income of \$130 a year, followed by Nepal with \$170. Both Bangladesh and Nepal are, however, improving their standards, despite constraints, the World Bank says.

OAU to take stock of African economics:

The Organisation of African Unity (OAU) foreign ministers on Mar 4 ended a week-long meeting in Addis Ababa, paving the way for a major review of the continent's faltering economies, the first in five years. The members agreed to hold a summit meeting in the Ethiopian capital from Jul 18 to 21, which will attempt to find remedies to falling food output, stagnant economic growth and the recurrent nightmare of widespread hunger because of drought. It will be the first time that the OAU has devoted a heads of state session to economic matters since a summit meeting in the Nigerian capital of Lagos in 1980 drew up a blueprint for co-ordinated economic development through Africa, now a distant dream.

STATES

High technology electronics city in Haryana: The Haryana state electronics development corporation plans to set up a high-technology electronics city in Gurgaon, about 20 km from New Delhi, to attract non-resident Indians to set up industrial units for exports. The city will have centralised computer service, centralised standby power sources, and satellite communication. There would be 200 units in all. Being close to the capital, units in the belt would have easy liaison with the central government and other departments. The corporation is basically a promotional organisation unlike other state electronics corporations engaged in direct commercial project.

Modernisation of Assam's police force:

The Assam government is launching a Rs 5-crore scheme to modernise the police force in the state in view of political developments in the northeastern region, according to the Home department. The police will have a computer for maintaining crime records for providing speedy assistance to law enforcement agencies. Along with the crime information system, computerisation of several other systems, including personnel, traffic inventory and accounts, is on the cards.

Left front charter of demands: The Chairman of West Bengal's left front, Saroj Mukherjee on Mar 17 announced an eight-point charter of "urgent demands" of the people of the state and called upon the front cadres to launch campaigns to support the demands. He also announced a series of programmes to mobilise people's support for the demands. The demands broadly aim at the revival of industry in the state by opening the closed units and nursing the sick ones back to health, nationalisation of the jute industry, setting up of more industries in Bengal, incorporation of the right to work in the fundamental rights, allowance to the unemployed, improvements in the education system, round-the-year work for landless labourers, among other things. The series of programmes announced by Mukherjee included an all-Bengal strike by students, sit-in strikes at railway stations and a march to

BALLOONS AND BABIES

A tiny balloon pump has now been devised to assist babies' hearts while healing after open-heart surgery. This inter-aortic balloon pump, inserted into the main artery next to the baby's heart, works in time with the heart to open and close off the aorta. When the ventricle pumps, the balloon deflates, thus allowing blood to pass into the body. And when the ventricle is at rest, a console outside the body pumps gas through a catheter causing the balloon to inflate which closes off the aorta so blood can't run back into the heart. For an infant this balloon needs only 2 1/2-22 cubic centimetres of gas but has to work much faster. Such inter-aortic devices are successfully being used in adults since 1971 but have been introduced for babies only now—modified to be small enough and fast enough for them.

J. B. E. government proposes to set up a Rs 1.26-crore mountaineering institute at Pahalgam for long-term promotion of tourism in the state. It will also add 400 new skiing equipment at Gulmarg to give a fillip to tourism, the state's major revenue-earner. The de-restriction of some more areas in Leh-Ladakh is also expected to enlarge the scope for attracting the foreign tourist. More trekking areas in the valley have been identified, and a ski and trekking hire shop set up at Srinagar. Last year, tourism suffered its worst slump in recent times, with domestic arrivals slumping to an all-time low of 225,000 from the 1982 peak of 642,000.

EVENTS—National

Nuclear power station in Karnataka: The Union Cabinet has approved the location of a nuclear power station in Karnataka. Two units of 235 mw each will be built at Kaiga on the banks of the Kali river, close to the Kadra dam under construction in Dharwar. In addition, the government has also approved the installation of two more units of 235 mw at the existing atomic power station at Rawabhatta in Rajasthan.

Major Indo-US deal on technology transfer: India and the US on Mar 9 concluded a major deal on the transfer of high technology to India. The agreement, signed in Washington, also includes American technology parks to be set up in India to facilitate easy transfer of technology, and the so-called super computers. The signing of the deal is seen as a softening of the US stand; earlier, the US had refused to transfer super computer technology to India, fearing that the technology would be put to military use or diverted to the Soviet bloc.

EVENTS—International

UN lambasts USSR: A UN draft report accuses the Soviet Union of carrying out a deliberate policy of bombing villages in Afghanistan and killing civilians. In terms unusually strong for the UN, the report blamed the Soviet presence for the flight of four million refugees from Afghanistan and the serious food shortages in that land-locked state. It charged Moscow with almost total disregard for the Geneva concessions offered to prisoners of war, saying captured guerrillas were routinely executed. Torture was so common that, in effect, it had become an administrative practice, the report said. The Babrak Karmal regime, it said, was holding 50,000 political prisoners.

Belgian soil for nuclear weapons: The Belgian Parliament on Mar 20 approved the government's controversial decision to deploy 48 nuclear-tipped US cruise missiles on Belgian soil. The 116-93 vote with one abstention on a confidence motion, followed a 15-hour debate a week after PM Wilfred Martens announced the government's decision to accept the missiles. Within hours of Martens' announcement, the first 16 missiles arrived and were deployed at Florennes.

Britain gets tougher on Asians: The British Government on Mar 26 announced immigration restrictions virtually banning overseas doc-

umentary and non-Asian immigrants working in Britain. The curbs will affect mostly doctors from India and Pakistan and dentists from Australia. About 2,000 doctors and 200 dentists go to the UK every year.

MISCELLANY

Most populous cities in the future: Four Indian cities—Bombay, Madras, Calcutta and Delhi—will be among the world's most populous metropolitan cities by the year 2000, according to the Economic and Social Commission for Asia and the Pacific (ESCAP). Eleven other Asian cities will also reach the status of megacities by that year: Shanghai, Tokyo, Beijing, Jakarta, Seoul, Karachi, Teheran, Osaka-Kobe, Dhaka, Manila and Bangkok. The survey warns that the "deterioration in conditions of life and the burden of providing amenities will be major problems for governments of the region." Population growth and migration of rural peoples to the urban areas were the factors mainly responsible for the rise in the number of city-dwellers. Urban population grew by 23.4% in 1978 and rose to 26.4% in 1980-83.

New York takes the cake: New York's subway has the highest crime rate in the world, while Japan and the Soviet Union have systems that are virtually crime-free, says an Associated Press survey. Even in Paris, where the French are considering calling in the army to control subway crime, the subway crime rate falls short of New York's 14,000 felonies a year, with 4,101 felonies reported in 1984. The survey says New York subway's antique design, full of nooks, pillars, long corridors, is more hospitable to criminals than the newer subways of cities such as Washington, which are designed for clear sightlines, television monitoring, and safety. The survey, which covered four continents, found that some subway systems, such as in Japan, are almost crime-free because of small size, limited times of operation, heavily middle-class ridership and new designs that make them easier to patrol.

DIED

Tom Adams, 53, the Prime Minister of Barbados and one of the English-speaking Caribbean's most prominent leaders on Mar 11 at Bridgetown of unspecified causes. Adams, elected premier in 1976 and re-elected in 1981, took the lead in forming an eastern Caribbean security alliance with smaller states and after a bloody military takeover of Grenada in October 1983, helped coordinate talks that led the US-led invasion of Grenada on Oct 25, 1983.

Def G Phadkar, 59, one of India's finest post-war cricketers, on Mar 17 in Madras after unsuccessful open heart surgery. Phadkar had been a national selector.

V.A. Syed Mohammad, 61, former minister of state for law and former Indian high commissioner to Britain, on Feb 28 at New Delhi's AIIMS, after a brief illness.

Henry Cabot Lodge, 82, a former Republican vice-presidential candidate and a diplomat closely connected with the Vietnam war, on Feb 28 at his Beverley (US) home after a long illness.

CALCUTTA-700007

BE TALLER

A confident erect posture shows a successful person, be it male or female. Research has proved that a tall posture is more appealing to the opposite sex. Are you being denied the good things of life just because of a poor posture? Don't despair, whatever be your age and whatever be your present state, here is good news for you.

No gadgets or strenuous exercise, no artificial aids like elevator shoes, no appliances.

New Height is an all new, scientific method based on an exclusive Swiss principle which reactivates the whole body.

New Height is remarkably effective for both, men and women - has been proved in thousands of cases all over Europe. Now spend only a few minutes each day following the step-by-step instructions. In 2 short weeks, measure your height. You will find it has increased - perhaps by as much as 15 full centimetres. And remember, if you do not obtain satisfactory results, we'll refund your money immediately, no questions asked.

FAILURE TO SUCCEED IN JUST 14 DAYS

A TORRENT OF TRIBUTES FROM NEW HEIGHT USERS:

"I didn't think it was possible to gain height. But to my delight, New Height helped me to keep going until I reached 185 cms" S.R.K.

"The New Height course is worth its weight in gold and more. My life has changed since I gained 11 cms in height." R.H.

FOR BOTH MEN AND WOMEN

Please note that the NEW HEIGHT PROGRAMME is a BOOK OF INSTRUCTIONS on how to be taller and how to correct your posture with the help of certain scientific exercises. IT IS NOT A MEDICINE OR DRUG.

Positive results or your moneyback!

New Height available by V.P.P. from New Height Mehta, 15, Mathew Road.

MAIL THIS COUPON TODAY

NEW HEIGHT, 201A Mehta Mehta, 15, Mathew Road, Bombay 400 004.

Please send me the New Height, I understand that if I am not fully satisfied with the results, I may return the programme within 14 days for an immediate refund (less handling & forwarding charges).

CCT-32

Please tick appropriate box.

- ☐ Send by V.P.P. I promise to pay the postman Rs. 34/- on delivery.
- ☐ Send by Regd. Post Parcel. I am enclosing Rs. 34/- by Draft/I.P.O./M.O. No. (Payable to Bullworker Pvt. Ltd.)

What Zia wants is that the President, and not the Parliament should choose the prime minister. The Cabinet will merely "aid and advice" him, and he will be able to dissolve the Parliament at will. He will be the arbiter of powers under the Constitution and his decision will be irrevocable. The President has also written into the Constitution the so-called judgement of the December referendum, according to which he has been given five more years in office. The amended Constitution will come into force when martial law ends, but Zia has not yet specified as to how long that will take.

Later in the month, he assumed the mantle of an elected President with martial law still in force. He also appointed Mohammad Khan Junejo from the sensitive province of Sind as Pakistan's new Prime Minister. Junejo won a vote of confidence in the National Assembly and soon afterwards declared that all political leaders living in exile abroad were welcome to return. The 11-party Opposition, the Movement for Restoration of Democracy (MRD), however, ruled out any dialogue with Junejo, on the grounds that their leaders and workers were still detained by the government and that no talks could be held in their absence, or under duress.

AFGHANISTAN

DEFENDING ATROCITIES

A report, ordered by the UN's Human Rights Commission, has come in for a lot of flak from the Afghans. The author of the report is Prof Felix Ermacora, an Austrian with a non-partisan record. He was responsible for a damning report on Chile in 1974 and took part in a UN enquiry on human rights in South Africa. His present report on Afghanistan is second-hand because the Afghan government did not reply to his request asking permission to enter the country. He interviewed refugees in Pakistan, France and America and talked to humanitarian organisations working with refugees and came to the conclusion that 'foreign' (he does not name the Soviet Union) troops were

responsible for the mass murder of Afghan civilians. He said that the bombardment of villages was part of a deliberate policy to deprive guerrillas of support and food and that torture had become an administrative policy. He claimed that about 50,000 people are presently being held as political prisoners.

The Afghan delegate in the Human Rights Commission denounced the report as a "pre-fabrication of the factories of American imperialism" and claimed that Prof Ermacora was a CIA agent. However, the commission accepted the report and voted 31 to 7, with five abstentions, for the withdrawal of foreign troops from Afghanistan. The Russians have, so far, ignored the report. But if the Human Rights Commission decides to send the report to the General Assembly, and if the latter accepts it, the Russians will have to defend themselves publicly.

GREECE

SHUTTLING BETWEEN EXTREMITIES

Greece's unpredictable PM, Andreas Papandreou has done it again. He first declared that he had decided to back the conservative President, Constantine Caramanlis. This upset members of his Pan Hellenic Socialist Movement (Pasok) as well as the main communist party (KKE). Shortly afterwards, however, Papandreou reversed his stand and announced that he would back the left-leaning alternative to Caramanlis, Christos Sartzetakis, a Supreme Court judge, who gained notoriety as the prosecutor in a case involving the murder of a leftist politician 22 years ago.

Caramanlis resigned, throwing Greece into a new political turmoil. The question is, did Papandreou dump Caramanlis for reasons of political expediency or does this mean that Greece is tilting further to the left? Papandreou's adverse stand on US defence installations in Greece, his refusal to cooperate militarily with the other NATO allies and his frequent praise for the Soviet Union have already aroused American suspicions. Washington feels that Greek politics is moving definitely to the left. With this in mind, the Americans have recently begun to implement contingency plans to move the four US naval and air bases out of Greece.

S.B. & J.S.

UTILITY OF MAPS-1

(Continued from page 19)

and retain such information which is relevant and useful to our purpose, at a given time.

Map Tracing

Essential drawing tools in map tracing are (i) Drawing instrument sets with dividers, compasses—both ink and pencil, protractors, ruling pens; (ii) T-square triangles and celluloid set squares; (iii) Graduated scales and sliding rules; (iv) Drawing material including paper, pencil, eraser, ink, colour, brush, reproduction whites, sticking tape, pins; and (v) UNO stencils or Le Roy pens, particularly for lettering.

While drawing a map the selection and depiction of the scale is very important. There are three ways in which the scale is depicted on the map: (a) By a statement such as '2 inches to the mile' or '½ mile to the inch', (b) by a graphic scale; and (c) by a Representative Fraction. R.F. = $\frac{\text{Map distance}}{\text{Ground distance}}$

(Suppose the scale is 2 inches to the mile then 2 inches = 1 mile or 2 inches = 63,360 inches because 1 mile = 63,360 inches and therefore R.F. = $\frac{1}{31,680}$ or 1:31,680.

Now, to draw a map, carefully read the data supplied and make a mental note of the main features in their proper position. Then make a rough sketch and write the

names of these features in the right place. Keeping in mind the extent of the country to be shown draw the border of the map after selecting a convenient scale. After drawing the lowest and highest contour lines insert rivers and the major features, the means of communication and cultural settlements. Then check the sketch and see that all the features required in the data are shown, and there is nothing of an impossible nature (like a river flowing uphill) inserted. The features not required in the data should not be inserted. Another point to be kept in mind is that the contour lines must either form closed chains or run to the edge of the map. Also, the map should neither be crowded by contours to obscure other features nor should the contours be too few in number. Now ink the map showing the contours in red or brown and using conventional signs for various features, label the other necessary features. Finally, draw the border, scale, show the north and give a key to all the symbols used through a legend, and also write the name of the map below.

Weather Maps

For drawing weather maps, atmospheric pressure, temperature, humidity, condition of the sky and various other aspects are constantly monitored through various scientific instruments and then the data is compiled. This data is used to draw weather maps. The various symbols used for drawing weather maps

are shown in Box II.

Distribution maps are useful for studying the variation in value, amount or density of stocks, crops, minerals, industries, voting trends and of population. But the limitations with such maps is that a map based on one year's figures cannot give us a true picture, for there are variations from season to season and year to year. Three methods are used to show crops, stocks, minerals, etc on distribution maps:

Layer tint or shading method: This is useful for showing density or average figures per unit area. In order to draw such maps, distribution is shown by different types of black and white shading or different tints of colours. In the map given below the net area shown as percentage of total area has been depicted in various shades (see Map A).

Dot method: The purpose of the dot maps is to give a unit number for absolute figures. A unit number, say 5000 or 1 lakh according to density and scale of the map is represented by one dot. By this method the wasteland may also be avoided (see Map B).

Writing the name of the commodity: The name of the item is printed in capital letters or in rectangles across the area where that commodity or item is produced. The method being qualitative does not give any quantitative idea of the item in question (see Map C).

(To be continued)

SPORTS

ATHLETICS

At the USA-Mobal Indoor Athletics meet in New York on Feb 22, two American women sprinters set world indoor bests, twice each. Triple Olympic gold medallist Valerie Brisco Hookey set a world best in the heats of the 200 m at 23.08 sec and then smashed it in the final to clock 22.95 sec. In the 400 m Dianne Dixon clocked 52.77 sec in the heats and 52.20 sec in the final to set world bests.

Britain's Todd Bennett set a new world indoor best in the 400 m for men, on Mar 3 at the 16th Indoor European Championships in Athens, clocking 46.56 sec. Marita Koch set the track ablaze in the 200 m for women, as the East German girl clocked 22.82 sec to set a world best, despite a recent injury. (For indoor meets, the world records are called world bests—as the tracks can differ, vastly from each other and be of various lengths for a lap and at different angles for banking).

At the World Cross-Country Championships, held in Lisbon on Mar 24, Olympic marathon champion Carlos Lopes of Portugal won the men's event for the third time. The women's event was won by Zola Budd, the controversial little girl from South Africa, who runs for Britain.

BADMINTON

At the 49th National Championships which were held at the Indraprastha Indoor Stadium in New Delhi in early March, it was encouraging to see a youngster topple the established veteran in the women's singles final. The men's championship, however, went true to form. Results:

Men: Singles: Syed Modi (Rlys) b Vimal Kumar (Ker) 18-17, 15-8. Doubles: Leroy D'sa and Sanat Mishra (Rlys) b Uday Pawar and Pradeep Gandhe (Mah) 15-13, 15-8.

Women: Singles: Madhumita Bisht (Rlys) b Arni Ghia (Mah) 11-6, 2-11, 11-4. Doubles: Ami and Deepti Thanekar (Mah) b Madhumita and Ameeta Kulkarni Modi (Rlys) 15-9, 15-7. Mixed Doubles: Gandhe and Ami (Mah) b D'sa and Madhumita (Rlys) 15-12, 18-13.

Since Prakash Padukone stopped participating in the Nationals, Modi has always won the singles crown and this was his fifth straight title.

Morten Frost Hansen won his native Danish Open Championships for the fifth time, at Copenhagen on Mar 10, with a 15-4, 15-5 win over Sung Han Kook of South Korea. Second-seeded Prakash was eliminated in the third round by a young Chinese Xiang Guobao 11-15, 15-12, 15-7.

The All-England Championships concluded in London on Mar 24 with China's Zhao Jian-Hua creating a major upset on his very first attempt when he claimed the men's singles title by defeating defending champion Hansen 6-15, 15-10, 18-15. The 20-year-old Chinese became the first player to win the title on debut, since Rudy Hartono of Indonesia clinched the first of his eight singles titles in

Chinese Women's singles final, as second seed Han Aiping dethroned the reigning champion and top seed, Li Liqin Wei 11-7, 12-10.

CHESS

India's number one chess player Pravin Thipsay was declared joint champion of the Commonwealth Championships which ended in London on Feb 27. With this victory he also received the first norm of the grandmaster title. He now requires a second norm to become the first Grandmaster from India. Thipsay, a 25-year-old bank employee, was national champion in 1982.

CRICKET

The Indian women cricketers are not far behind their male counterparts in setting world records. The Indian captain Diana Eduljee has claimed more than 100 wickets which is a world record.

Wills XI coasted to a comfortable six-wicket victory over holders Board President's XI to lift the **Wills Trophy** in the Limited Overs Tournament in Bombay on Mar 17.

The **Sheffield Shield** (i.e., the national championship of Australia, equivalent to our

when they defeated Queensland in the final ended on Mar 19, by a narrow one-wicket margin.

The three-Test series between India and New Zealand women's cricket teams ended in a draw as all the matches were indecisive.

FOOTBALL

The National Championship for the **Santosh Trophy** was won by Punjab, as they thrashed Maharashtra 3-0 in the final at the Green Park Stadium in Kanpur on Mar 23.

SQUASH

The French Open Championship in Paris was won for the fourth time in a row, on Mar 16, by world champion Jahangir Khan of Pakistan, who was absolutely devastating. In an incredibly fast game, he disposed of New Zealand's Stuart Davenport in just 27 minutes—which must rank as one of the quickest wins in an international final—winning 9-0, 9-1, 9-1.

TENNIS

In the first round match of the world group

MADE FOR EACH OTHER

On the night of Mar 10, the final of the World Championship of Cricket was played in Melbourne, Australia. Two dynamic packages shot into prominence. Ravi Shastri—the Champion of Champions; Audi-100—the prize car he received. A sleek, ultra-modern, jet-setting car, Audi-100 is just the stuff for champs.

The only car in the world designed to reduce wind resistance to the minimum, Audi-100 has the lowest drag coefficient and an extremely economical petrol consumption of 58 km per gallon at a speed of 120 km per hour. The comforts of the driver and passengers are not, however, overlooked. A plush air-conditioned carpeted interior complements the super-sleek rust-proof exterior. Apart from this the car is highly automated. The windows are electrically operated and the steering wheel power operated. Why, even the driver's seat is microprocessor controlled to adjust itself to a driver of any height! To top it all the Audi-100 has a computerised spokesmen tool. As soon as the engine is switched on, an electronic gadget immediately examines the various mechanisms to check whether these are in working order. If they aren't, the car tells you so! The Audi-100 is system-tested for speed, comfort, and total reliability. It is, in fact, made to last!

Calcutta on Mar 10. In the opening match Ramesh Krishnan defeated Francesco Cancellotti 6-3, 11-9, 4-6, 3-6, 6-4. Then Vijay Amritraj was given a tough fight by Claudio Panatta. Vijay managed to scrape through 6-1, 6-4, 5-7, 3-6, 6-3. But the young Italians were not going to give in easily. Their doubles pair of Claudio Panatta and Gianni Occhipinti blasted off Anand Amritraj and Shashi Menon 6-3, 6-3, 11-7. But, on the final day, Vijay got the better of Cancellotti 5-7, 6-4, 6-3, 8-6 to give India the winning 3-1 lead.

Krishnan lost the inconsequential last match to Panatta 6-8, 6-4, 6-1.

India thus stay in the world group (consisting of 16 nations) and will meet the winners of the Sweden vs Chile match in the quarter-finals.

S.G.

ROTHMANS

AN AFFAIR TO REMEMBER

This time when India clinched the Rothmans Trophy at Sharjah it was no bolt from the blue. It was an expected victory earned through dint of sheer hard work, excellent team work and fielding par excellence. And thus winning the fourth international one-day championship in succession—the previous ones being the Prudential Cup, the Asia Cup, and the Benson and Hedges World Championship of Cricket—the Indian team richly deserves the widespread accolade it is receiving. Once the underdogs, the Indians now reign supreme in the willow world.

On Mar 22 in the first match of the tournament Rothmans Tournament, Pakistan suffered a convincing defeat at India's hands. In an extremely low-scoring match, India was initially bowled out for a paltry 125, thanks to a devastating pace attack by none other than the night-tribes who pocketed six wickets for only 14 runs—indeed a stupendous bowling performance. But the Indians fought back with a vengeance bowling the opponents out for an unbelievable 87 runs. As an Australian later joked, India would have bowled Pakistan out for less than 50 runs had it made 85. Which speaks volumes for the calibre of the team.

Australia beat England in another hard fought match and made it to the finals too. So on Mar 29, the stage at Sharjah was once again all set for what promised to be a gripping contest. The Aussies walked into the match with nothing to lose while the Indians walked in under pressure to prove to the world that they were champs all the way. And prove it they did although Australia did not hand the match over to them on a platter. After skittling Australia out for 139 runs India went in to bat and almost topped the match at one stage with the scoreboard showing 120 for 7. With the world champs still needing 20 runs to win, Mohinder Amarnath and Madan Lal demonstrated some superb rear-guard action steering India out of troubled waters safely. India won the Rothmans Trophy and the \$45,000 that went with it. Ex-captain Sunil Gavaskar was declared Man of the Series, essentially for his outstanding fielding performance. So, yet again, Indian cricketers have romped back home quite indisputably invincible.

J.S

THE WHIZZ KID

The 'wonder boy' of Indian cricket. That is how Mohammed Azharuddin is hailed all over the cricketing world. But little was known about this batting sensation from Hyderabad till that fateful moment when he made his Test debut in Calcutta against England. With a century on debut, Azhar was able to make his presence felt on the Indian cricket horizon. But his deeds in the next two Tests in Madras and Kanpur made him a celebrity. This 22-year-old Hyderabad youngster had hit a century in each of his first three Tests. Something even the great Don Bradman had not achieved. Overnight, Azhar became the toast of the country. So much so that if you go to Hyderabad now, literally any rickshawala or auto driver would be able to take you to his house. It has become as much a tourists' attraction as the famed Salarjung Museum.

However, Azhar's march to fame has been a hard one. His middle-class family background had always taught him to be a fighter and grab the chances that came his way. His entry to Ranji Trophy is just two years old. He was aware that his inclusion in the Indian team depended on Sandeep Pati's failure. I remember, when I brought it to his notice during the Bombay Test, he was quick to say, "Nakko baba, don't say that. Sandeep is a great player." But ironically Azhar made his debut following Pati's exclusion after the Delhi Test debacle. And rest is history. Azhar hammered consecutive centuries—110 at Calcutta, 105 at Madras and 122 at Kanpur to enter his name in the record books.

He continued in the same form for the World Championship of Cricket in Australia where the critics were delighted with his style and grace. Not to mention his strokes. His remarkable ability to play the ball late was compared to the great West Indian Sir Frank Worrell by BBC commentator Christopher Martin Jenkins, who is considered an authority on cricket. After Sunil Gavaskar, this youngster has superbly taken over the mantle of creating records with fine timing. As the legend faded in the series against England, Azhar emerged as the 'messiah' of Indian cricket.

In Hyderabad, Azhar was just one of those cricketers who make it quick to the Ranji Trophy level and stagnate. Examples like Shahid Akbar and Arshad Ayub being the most recent. But Azhar was a class apart. His teacher at All Saints High School, Rector Brother Joseph was the first to notice Azhar's talents. "He never missed his practice and was very particular about his dress. It used to be spotless white", he recalls. But the greatest encouragement Azhar got was from his uncle Mir Zhamulabiddin, a good league cricketer in his day, and his grandfather. Azhar always used to watch his uncle's match. His grandfather would prefer to watch Azhar's batting far away from the crowd. He would never accept an invitation to watch it from the pavilion. "The boy would feel nervous", he felt. For Azhar, it was the greatest misfortune that his grandfather never watched him make his Test debut. He died about a month before Azhar played at Calcutta.

In the beginning, Azhar was a leg-spinner but later switched onto medium-pace. It was much later that he realised his batting potential.

Azhar's first big break came in 1977 as a 10th class student when he played for South Zone Schools against English Schools and got a pleasing 42. From his first cricket match till the Kanpur Test, Azhar has maintained a copy where he himself writes his scores and the manner in which he got out.

Azhar was never good at studies but he didn't neglect them either. His day would begin with a 'namaaz' at 5 a.m. followed by jogging and exercises. After school, he practised from 3 to 6. Study in the evening and to bed before 9. He graduated from Nizam College.

Azhar is the eldest of four brothers—Farsuddin, Balizuddin and Iteqaruddin, and two sisters—Lubna Aziz and Amina Aziz. He is highly religious too. He would keep *roza* even while playing matches in his school and college days. Now he finds it difficult. Azhar's penchant for big scores is not a recent development. On his debut in Duleep Trophy, he hammered 226 against Central Zone at Dhanbad last year missing Ajit Wadekar's record by three runs. A year before, he had slammed 245 against West Zone in the Vizzy Trophy at Mohan Nagar and missed Gavaskar's record by two runs. A brilliant 153 against England in the Ahmedabad and 121 and 109 against Andhra in the Ranji Trophy paved the way for his Test entry and he has not looked back since.

Basically, Azhar is an on-the-rise player. He has all the strokes and can play them with authority against spinners and fast bowlers alike. The pick of his strokes being the whipping on-drive he executes with all the grace of a Greg Chappell and the late cut he plays a la G.R. Viswanath. The most important factor of Azhar's batting is his ability to play the ball at the last moment and his abhorrence to play the strokes in the air. It is one reason he refrains from playing the hook. His brilliant fielding is another plus point. His greatest asset, his modesty and willingness to learn all the time. Azhar is a very soft-spoken person. At times it is difficult to hear him even from very close. It has been a great start for one who watched his first ever Test only after he was selected to play in Bombay. Though he didn't make his debut there, he watched every ball of the match like any youngster would do while at his first Test.

VJAY

PERSONALITY DEVELOPMENT

WRITING A RESUME-1

A good resumé should mirror your individuality, and convince the employer about your suitability for the post advertised. A two-part serial on how to write an effective resumé.

Selling one's services in the job market is as tough and tricky as the promotion of consumer goods is for the salesman. However, if the latter popularises his products through gimmicky commercial ads, how does the job-seeker present his capabilities to the potential employers? Well, the answer lies in the preparation of an effective resumé which is very close to designing a 'self ad copy'. For, what's the good of all your knowledge and competence if you cannot put them across, straight, to the employer?

Writing a good resumé, which is usually accompanied by an application letter, is an art. A well-developed resumé must introduce you to the employer, arrest his attention, arouse his interest in your potential abilities and convince him that you are the person to interview and perhaps employ. Hence, this preliminary communication with the employer must be to the point and written in such a manner that it presents straight facts, with a promotional approach.

Know Yourself

The process of resumé writing can be systematised by broadly analysing your interests and assessing your plus and minus points. Knowing your accomplishments in the academic sphere and your attitudes towards people, of a certain kind, is essential to career planning. Hence, you must go through an exercise in self-analysis.

An honest self-analysis may have its roots in one's school days. A recollection of your high school experiences, extra curricular activities, voluntary help offered and part time jobs taken up can help you assess the nature of the job you would like to choose. Your self-evaluation must also include the type of work you can do best (relating to data, people, objects etc.), your capacity to express through words or writings, the extent to which you can stretch your patience, your ability to work under pressure, leadership qualities, the

extent to which you can be flexible to changing situations.

This invaluable information about yourself would help in preparing a crisp, complete resumé which would, in fact, help the prospective employer in quickly deciding whether you are cut out for the kind of job he is offering. On the other hand, you would also be holding the key to the vital aspect of every career of one's choice, viz. 'job satisfaction'.

The Content

Resumé writing cannot be based on a set format. For, every job seeker wants to stand out, above his competitors. Nevertheless, certain accepted rules are followed universally. They can be said to constitute the five W's and the five C's of resumé writing. The W's, which outline your educational qualifications and employment experience, your interests and aims should have clear answers to questions like

- Who are you?
- What do you know?
- What have you done so far?
- What would you like to do?

What can you do for the employer? The resumé, in order to satisfy the five 'C's, must be

Clean: Neatly typed or handwritten (if the employer so indicates in his advertisement), easy to read, free of spelling and grammatical errors.

Clear: Well divided into separate paragraphs, each highlighting your qualifications, work experience, aims and other information. It must provide ready information to the employer who is skimming through your resumé along with a hundred others.

Compact: Limited to one or two pages, brief, to the point and written in phrases rather than in prose, with complete sentences.

Correct: Indicate exact academic record,

give a correct picture of the period of work experience, salary drawn etc.

Complete: Contain every relevant information relating to education, work experience, exposure to jobs of various types (part time commissioned jobs) even if not, widely divergent.

In general a resumé has to be polished and provide an in-depth picture of yourself. Depending on your career objectives you may slant your resumé elaborating on all the relevant work experiences and condensing those not directly related to the particular job you are applying for. Hence, it is better not to send out carbon copies of one's resumé. Every resumé must be suitably modified to suit varied job requirements. But, your resumé should be original and concise, so as to mirror your individuality.

Guidelines

Your approach to resumé writing depends on your background. But, two broad approaches to resumé writing can be underlined: the biographical approach and the functional approach.

The biographical resumé is the style suitable for most of the fresh graduates who are entering the employment market. The format of the biographical resumé is based on a summary of relevant information written in a chronological order within the following framework

(a) Job objectives: Explain the type of job you wish to do indicating your skills, abilities and background. If you are interested in a broad occupational field, it should be stated clearly.

(b) Education: Emphasise the positive aspects of your academic career and extra-curricular activities. Describe any academic honors or financial rewards you have received; also indicate any positions you have assumed in school/college.

(c) Work experience: Describe the specific responsibilities or tasks you have undertaken, including civic services or voluntary social work rendered. Periods of self-employment, if any, should also be indicated.

(d) Hobbies and interests. These may be included to highlight other aspects of your personality.

(e) Personal data: Any information about sex, race, age and marital status should be specified.

(f) References: Furnish the names, addresses and designations of persons holding recognised positions, provided they have known you and have acknowledged your capabilities. Names of relatives should not be mentioned. Make sure that you have the permission of the

(Continued on page 60)

ECONOMY

GENERAL BUDGET '85-86

A LESS-TAXING PROPOSITION

The Union Budget should not be a money-gathering exercise. It should be planned keeping in view the long-term projections of the economic policy. It is also not correct to think that the Budget is the major instrument to shift the common man from the poverty area to the non-poverty area. The problem of poverty is complex and has to be handled by various programmes for improving productivity in the economy.

The Budget is based on the presumption that the net tax revenue cannot be increased by raising tax rates. In fact, this has been the thinking for many years. Y.B. Chavan was the first Finance Minister who took the bold step of reducing income tax rates. There was a 38% increase in the revenue from income tax. The next Finance Minister Subramaniam also reduced tax rates. However, the tax revenue did not increase. It was realised that this was due to the raising of the exemption limit. Pranab Mukherjee also took a risk and brought down the maximum rate of taxation to 61% and there was a steep rise in tax revenues. V.P. Singh has further reduced the maximum tax limit and it is hoped that the tax revenues would go up further. Therefore, experience has shown that lower rates provide more incentive to honest tax payers to pay their taxes. However, we have to develop a culture of tax payment because in India a large number of persons have developed a culture of non-tax payment—they would not pay tax under any circumstances.

The strong point of the Budget is the way it seeks to handle black money, which is earned in three ways:

- from activities which are illegal—bribes and smuggling.
- from selling a product at a price which is illegal. This happens when items of controlled prices are sold at higher prices;
- from tax evasion. There cannot be any fourth way to earn black money.

The earlier finance ministers only made efforts to mop up the black money. Steps taken by them like bearer bonds and voluntary disclosures, were aimed at reducing the quantity of black money. This did not prove to be of much help because black money and white money move in two streams which cross each other at several points. Since efforts were not made to check the origin of black money, the steps taken by the finance ministers did not produce the desired results.

This is a summary of a lecture delivered recently by Prof A.M. Khuroo at Hindu College, University of Delhi. It was sponsored by CCTimes.

V.P. Singh has taken steps to stop the generation of black money. He is the first one to do so. Since donations to political parties have now been legalised, there would be no need for them to earn money illegally. Secondly, 25 industries have been delicensed. Licensing of industries was another source of black money because bribes had to be given at several points for getting licences. Thirdly, the MRTP limit has been raised and there would be no need to earn money and not show it. And lastly, the reduction of the maximum limit to a reasonable rate of 50% would be a very strong incentive to pay tax.

The Budget also explains the need for economies of skill which is the real solution to the economic problems in poor countries. It is a strange contradiction that commodities produced in villages, like handloom shirts and handmade chappals, cannot be sold in villages. They are either exported or bought by the elite. However plastic chappals made in factories on a large scale are needed and sold in rural areas. Budgets in the years to come will have to tackle this strange phenomenon.

The Budget is also an effort to switch over from petrol to other sources of energy which can be old and non-conventional. The tax on petrol, though harsh on certain sections of the society, would force people to reduce the use of petroleum products.

The Budget, however, has not done much for people earning less than Rs 1,500 p.m. They were not paying taxes previously and, therefore, they are not affected by the recent tax exemption limit or the reduction of rates. In fact, the increase in petrol gas prices would affect them adversely.

The Budget has also not done anything about the generation of black money in the real estate sector. In fact, this sector is the largest creator of black money and the main culprit is the capital gains tax which motivates people to show purchases at low prices. In fact, if the capital gains tax is removed or changed in such a way that earnings from rural society, if invested in the interests of the economy, are exempted from tax, the generation of black money would be reduced considerably.

references to furnish their names.

The functional resume is one which goes beyond the outline of education and experience. It enables you to focus on your transferable skills in certain jobs where your aptitude and talent can be creatively utilised irrespective of your educational and technical qualifications. For eg. you can work for an editorial office or in a publicity organisation if you are creative and have the ability to convert thoughts into beautiful words. It is not necessary that you should be a qualified journalist, though it may be an added qualification. Similarly a person who has a business acumen may be ideally suited for salesmanship without the necessary qualifications.

The functional resume is invaluable for people with considerable work experience or with little work experience and considerable non-paid experience if: (a) they wish to change fields, (b) they want to work in fields not directly related to their education and (c) they are liberal arts graduates and have to bridge the gap between generalised education and specific job requirements.

A key element of the functional resume is your section on skills' eg. managing and organising skills, human relations and interpersonal skills, research and analysis skills, communications skills. You are expected to pick or design 'skill clusters' that best describe how you can be useful to the employer.

In a functional resume, you must single out your experiences and place them in a 'skill cluster' e.g., administrative and management skills, staff supervision directed programmes and organised efforts. This format allows you to draw from life's experiences and not just from paid jobs. Now, the fact that you spoke publicly, designed ads, and negotiated conflicts will transfer easily to other work situations.

Covering Note

Every resume should be sent along with a covering letter which may be warm, personalised but strictly businesslike in its approach in introducing you to the employer. Commonly called an application letter, the covering letter should be:

*Typed neatly on paper.

*Addressed to a specific person, by name and title.

*Conveying to the employer how you got to know him and why you are interested in working for him.

*Telling the employer what you can offer, not what you anticipate from his organisation.

*Reflecting your individuality.

(Look out for some samples in our next issue)

P.G.

INDIA & THE 21st CENTURY

BY JYOTSNA SHARMA

"While the 16th century belonged to the Spanish, the 17th to the Dutch, the 18th to the French, the 19th to the British and the 20th to the American—the 21st century belongs to India," quipped Prof A.M. Khusro. With an optimistic forecast like that, what more can India possibly desire?

"T wentieth century India has made phenomenal progress, practically in every sphere of activity, ranging from travel to gadgetry," claimed Prof Khusro, former member of the Planning Commission. He was speaking at the seminar on 'India and the 21st Century', organised by the TRF Institute for Social Sciences Research and Education, at the India International Centre, New Delhi, on Mar 21. The participants included several eminent scholars and heads of educational and other institutions.

According to Samir Jain, Joint Managing Director, Bennett, Coleman & Co Ltd, the seminar was designed as a "brainstorming exercise aimed at providing several clear alternative scenarios and action plans on the key fronts, if not a blueprint on what the Indian scenario would be at the advent of the 21st century".

Presiding over the session on Economy, Prof Khusro felt that "as far as the pace of change was concerned it would be difficult for the 21st century to match the 20th". However, he struck an optimistic note when he claimed that the 21st century would witness the advent of a new economic, social and developmental era punctuated by rapid growth in these fields. And, with technical changes moving ahead of social change, science and technology will reach the common masses and facilitate their growth.

In his keynote address, P.L. Tandon, Chairman, National Council of Applied Economic Research, underscored the need for better interaction between the various levels of public and political leadership in order to ensure India's entry into the next century with an accelerated pace of growth and development. These levels of leadership included political, administrative, academic, managerial and defence leadership. Tandon also stressed the need for "quick decision-making" now that India stood on the threshold of the 21st century.

Socio-political Set-up

Analysing the political and social set-up

in the country, Prof C.P. Bhambri, Dean, School of Social Sciences, JNU, highlighted the prominent role of politics in countering the negative trends operating in the country. But, the influence of caste and religion, Bhambri opined, were hampering India's progress. These elements tend to make politics passive and subservient to pressures and demands, he said.

The management of 'politics for change' in the 21st century will also be restricted by the lack of comprehension of the linkage between internal and external forces. This has been made explicitly clear by the Punjab problem, where certain external forces and pressure groups have been instrumental in creating tension in the country, the seminar reiterated.

Prof Sushila Kaushik, Professor of Political Science, University of Delhi, however, foresaw the possibility of revivalism in Indian politics, owing to the growth of the middle class. "This will be coupled with a demand for decentralisation of politics and will subsequently lead to emergence of more regional parties. And national parties, in the coming years, will have to aim low and not be ambitious," she said.

Economy

Several economists taking part in the seminar focussed on the role of the private sector in India. The private sector was expected to become more significant than the public sector; and the inexorable process of urbanisation, which was leading to industrialisation, was discussed. B.M. Nigam, Professor of Commerce Delhi University, held that once the benefits of industrialisation effectively reached the masses, India may well become a power to reckon with.

Referring to the rapidly uplifting growth curve and the lowering population curve, Prof Khusro claimed that these were healthy signs, as they were accompanied by an increasing per capita income. According to Dr K.N. Kabra of the Indian Institute of Public Administration, effective employment opportunities to the tune of 36,000 per day will have to be created to provide the population of the 21st century with increased purchasing power. The seminar stressed the need for according top priority to population control, education—especially primary and secondary, health and other vital issues of national importance. According to Nigam, while the rate of population growth in China had come down from 2.4% per

annum to 1.2% per annum, that of India remained stagnant at 2.1% per annum. At this rate India would be the most populous country in the world in the 21st century, with all its attendant problems, he said.

Education

Prof M.V. Mathur, Member, Pay Commission, while presiding over the session which focussed on education, emphasised the necessity of good teachers. For, teachers were ultimately responsible for moulding the character of students. Prof Mathur called for rigorous testing before teachers were chosen and, thereafter, training and orientation of those selected, before they were finally allowed to teach.

The Director of the Bharatiya Vidya Bhavan, Dr M.P. Chhaya, also underlined the imperative need for good teachers while emphasising the vital role of education in the upliftment of a country.

Science And Technology

The session on science and technology was chaired by Prof Dinesh Mohan, former director of the Central Building Research Institute, Roorkee. Prof Mohan believed that non-conventional energy sources, though not a commercial success at the moment, were bound to find wider use in future. He was of the opinion that as a result of the initiative taken by the PM, progress in the areas of computer technology and electronics, in the coming years, would be rapid. Innovation, he felt was the need of the hour and, for this, change in the attitude of the government was essential. Massive efforts should be made for the extension and development of new technology, he suggested.

Sweeping aside all claims on the status of India in the field of science and technology, Dr Dinesh Mohan, IIT, Delhi, disputed the claim that India had the third largest scientific manpower in the world. Mohan spoke vehemently about the need to impart knowledge to students in Indian languages as against English, which he believed, was not comprehensible to at least 90% of the students.

S. Arunachalam of the Publications and Information Directorate, CSIR, was of the opinion that basic research should be emphasised as no technology could develop without a firm foundation of basic research; scientific establishments in India had failed to function up to their expectation because only their institutional framework was copied from the West, while the content remained indigenous. Also, referring to the existing disparity between the economic status of scientists and that of professionals in other fields, he recommended that only by granting better social status to scientists would India march into the 21st century with the confidence of a scientifically progressed nation.

CAREER NEWS

ASSISTANT'S GRADE EXAM

Never mind if you aren't the initiating type. You could still be a good assistant to start with. So why not try your luck in the UPSC Assistant's Grade Exam, on the basis of which recruitment will be made for a number of vacancies in the Assistant's Grade of the Railway Board Secretariat Service, Central Secretariat Service, Armed Forces Headquarters, etc.

But take care you are at least 20 years in age, with a degree from any recognised university. If yes, you may fill in the application form, published in the *Indian Express* and in *Employment News*, dated Apr 6, 1985, in accordance with the specifications provided therein.

The completed application form, addressed to the Secretary, UPSC, Dhoolpur House, New Delhi-110 001, should be submitted on or before May 20, 1985, alongwith a fee of Rs 28 (Rs 7 for SC & ST candidates), through crossed IPO, payable to the Secretary, UPSC, at the New Delhi GPO, or crossed bank draft from any branch of the SBI, payable to the Secretary, UPSC, at the SBI Main Branch, New Delhi.

RBI OFFICERS

Unless you have some reservations about being a bank officer, you may compete for the exam for the recruitment of Grade 'B' officers in the RBI.

Before May 8, 1985, you should have qualified for (i) a master's degree with at least 58% marks, or (ii) a doctorate degree with a second class master's degree or

accountant with a bachelor's degree, or (iv) a postgraduate diploma in management institute of repute like IIM, with a bachelor's degree. If you are an SC/ST candidate possess a master's degree with minimum pass marks or any equivalent recognised qualification, you can still try your hand. But you must be between 21-28 years in age as on Apr 1, 1985, for taking the exam. For format of application you may look up *The Hindustan Times* dated Apr 10, 1985.

Completed application forms are expected to be submitted to The Secretary Reserve Bank Of India Services Board Hong Kong Bank Building, 6th Floor Mahatma Gandhi Road, PO No. 10009 Hutatma Chowk, Bombay-400 023, on or before May 8, 1985, alongwith a fee of Rs 40 (Rs 12 for SC/ST candidates) in the form of crossed IPO only, payable at GPO, Bombay, in favour of RBI.

GIC OFFICERS

Your career is insured if you choose to take up a job with the General Insurance Corporation of India.

Make sure you have an accounting background, i.e., (i) a degree in Commerce from a recognised university with Accounts and/or Audit as special subjects or (ii) qualified the intermediate exam for chartered accountants or cost accountants. But you cannot be below 21 years and not above 26 years, as on Mar 1, 1985, in order to apply for the post. Selection will be based on a written exam which will be held at various centres, all over India. For format of application and other details you will have

Apr 12, 1985.

Completed forms, accompanied by a crossed IPO for Rs 40, drawn in favour of General Insurance Corporation of India, payable at GPO, Bombay, should be forwarded to The Adviser, Post Bag No. 2281, Chanakypuri PO, New Delhi-110 021, latest by May 6, 1985.

POST-DOCTORAL FELLOWSHIPS

Matsumae International Foundation, Tokyo, Japan, invites applications from Indian nationals residing in India for the award of Doctoral/Post-Doctoral research fellowships in (a) Computer Sciences, (b) Electronics (solid state) and (c) Conversion of Coal (carbonisation).

You stand a good chance of bagging the fellowship—(1) if you are below 40 years as on Oct 1, 1985 (relaxable upto two years for SC/ST candidates), (2) if you possess a doctoral degree equivalent to a Japanese doctoral degree with 60% marks or above at master's degree level in the subject concerned or related field or 60% marks or above at master's degree level in the subject concerned or related field and at least two years research experience as on Oct 1, 1985.

Find yourself a sponsor and you may be given preference. Take all the time you need, but apply latest by Jul 31, 1985, to Tulsi Ram, Section Officer (E.S-III Section), Room No. 516-B-Wing, Ministry of Education, Shastri Bhavan, New Delhi-110 001. For details see *Employment News* of Mar 2.

Answers to

TEST YOUR WORD POWER

- abyss:** B: very deep pit or gulf; hole so deep as to appear bottomless. Embattled as it is, the European auto industry is not staring into a uniformly bleak abyss.
- animosity:** C: hostility; strong dislike or active enmity. Israel's pullback in southern Lebanon is aggravating the animosities stirred up by nearly three years of occupation.
- baffle:** A: to puzzle; confuse; bewilder; perplex. Jeane Kirkpatrick is all of those things that at once baffle and fascinate Ronald Reagan—a woman, an academic and a Democrat.
- barter:** D: act of exchanging one thing for another. While barter can be an inefficient and cumbersome form of trading, it is a natural solution for countries with serious cash-flow problems like debt-laden Brazil and Nigeria.
- dwindle:** A: to become less or smaller by degrees; decline. European trade union leaders are watching helplessly as their membership rolls dwindle and their political clout withers.
- etiquette:** B: conventional code of good manners; rules for formal relations or behaviour among people. The young worker of Brazil learns the etiquette of farm work at a tender age.
- fret:** A: to worry. Health experts in China fret that the under-six crowd is so well-fed that for the first time, China is facing a rash of juvenile obesity.
- futile:** B: useless; without results. More often than not, the search for peace in the Middle East seems almost as futile as looking for a needle in a sandstorm.
- genocide:** C: the extermination of an entire race by mass murder. Traumatized by the genocide unleashed by the army, thousands of terrified Tamils have abandoned their homes and fled Sri Lanka.
- heretic:** C: one holding opinions contrary to established doctrines of his religion, political party, profession, etc. History is replete with instances of revolutionary thinkers being put to death, condemned as heretics.
- irrelevant:** B: not related to the subject or topic. The very basis of

secularism is that a person's religious faith is irrelevant.

- lucrative:** B: profitable. With an eye on the lucrative fees that may lie ahead, lawyers suing Union Carbide on behalf of thousands of Indians killed and injured in the Bhopal gas leak are jockeying for position.
- maelstrom:** D: a whirlpool or any turbulent, dangerous and irresistible force; a restless, disordered or tumultuous state of affairs. A cruel civil war has converted Sri Lanka from a soothing Shangri-La on the Indian Ocean to a maelstrom of violence.
- reprieve:** C: respite, temporary relief; suspension of execution. Serious amateur astronomers who are weary of staying awake all night to record their observations may soon have a reprieve in the form of a new telescope that gathers data electronically.
- savour:** A: to enjoy or taste with pleasure. Unlike the Falklands war, the miners' strike has left British PM Margaret Thatcher with little reason to savour her moment of triumph.
- secede:** A: to withdraw from membership of a state, federation, organisation, etc. The Labour Party of Britain splintered in 1981 when most of the leading moderates seceded to form the Social Democratic Party.
- supplement:** A: to make additions to. Most Mexican drug agents earn less than \$400 a month, and the temptation to supplement their salaries with bribes is enormous.
- tangible:** C: that can be perceptible by touch; definite and clear; concrete; real. Reputation, of all human possessions, is perhaps the least tangible yet the most zealously guarded.
- vie:** A: to compete with; rival; contend. With profits running into billions of dollars, the cocaine lords vie with Third World governments in wealth and power.
- vilify:** A: to abuse, slander; say evil things about. In our overpopulated country where opportunities to excel have traditionally been limited, achievers of success have often been vilified.

Vocabulary Ratings:

20-18 correct	exceptional
17-15 correct	excellent
14-12 correct	good

GK.GK.GK.GK.GK.GK.GK.GK.GK.GK.

The **Planning Commission** was constituted by a Government of India Resolution on Mar 15, 1950, to outline and give direction to India's Plan effort. However, it was as far back as 1938 that the first step in this direction was taken when a National Planning Committee was set up with Pandit Jawaharlal Nehru as its Chairman. The committee discussed certain basic issues and also appointed 29 sub-committees to study and report on different sectors of the economy and on certain special problems relating to national planning.

World War II disrupted the work of the committee, though some of the sub-committees did submit their reports by 1945. However, it was only after independence that serious thought could be given to creating a system of planning in India. So, in 1950, the Planning Commission was born.

The functions of the commission are:

- to assess the country's material, capital and human resources and investigate possibilities of augmenting the resources that fall short of its requirements;
- to formulate a plan for the most effective and balanced utilisation of the country's resources;
- to define the stages of the plan's execution and propose allocation of resources for each stage;
- to identify factors responsible for retarding economic development and determine conditions to be established for the successful execution of the plan;
- to determine the nature of machinery required for each stage in all its aspects;
- to periodically appraise the progress in the execution of each stage and recommend policy adjustments and measures that such appraisal may show to be necessary;
- to make such interim or ancillary recommendations considered by it to be appropriate for facilitating the discharge of its duties or, on a consideration of the prevailing economic conditions, current policies, measures and development programmes, or on an examination of such

specific problems as may be referred to it for advice by Centre or State.

The commission is presided over by the PM who is also minister for planning. It has a deputy chairman. There is also a minister of state for planning. The commission has eminent economists and experts in various fields as full-time members.

After the December '84 general elections, the Planning Commission was reconstituted in January '85. The members of the reconstituted Planning Commission are—Chairman: Rajiv Gandhi; Dy Chairman: Dr Manmohan Singh. Members: P.V. Narasimha Rao, Minister of Defence; Vishwanath Pratap Singh Minister of Finance; Prof M.G.K. Menon; Dr C.H. Hanumantha Rao; Dr Raja J. Chelliah; Hiten Bhaya; Abid Hussain.

It was as early as 1867 that oil was discovered in India in the remote north-eastern state of Assam. However, the country's **oil production** was negligible till as late as 1955 when a Directorate of Oil and Natural Gas was created. In 1956, it was converted into a commission and is now known as Oil and Natural Gas Commission (ONGC). Since then, oil production in India has advanced steadily. The ONGC's sphere of activity, which includes exploratory survey, drilling operation and production of crude oil and gas and other ancillary services, extend all over India except the north-eastern states.

Assam and Gujarat are the two main onshore oil fields of the country while Bombay High is the major offshore oil field. Oil was found in Ankleshwar, Gujarat, in 1960 and at Bombay High in 1974.

The country has at present 12 oil refineries. Before independence it had only one at Dighbri. The refineries are at Dighbri (Assam), Bongaigaon (Assam), Nunamati (Assam), Haldi (West Bengal), Barauni (Bihar), Visakhapatnam (Andhra Pradesh), Madras (Tamil Nadu), Cochin (Kerala), Trombay (Maharashtra), Koyali (Gujarat) and Mathura (UP). Trombay has two oil refineries while the Mathura refinery was commissioned in 1983. Koyali in Gujarat is the biggest refinery in the country. Two more sites—Karnal (Haryana) and Mangalore (Karnataka) have been selected for oil refineries.

The total production of crude during the years 1982-83 and 1983-84 was 21.06m and 26.02m tonnes respectively. The target of production for 1984-85 has been fixed at 29.63m tonnes. At present, India is producing 66% of its requirement of oil.

The USSR is the only country which is collaborating with India in oil exploration activities. Eight contracts have been finalised during 1980-84 under various Indo-Soviet protocols for geo-scientific surveys and drilling for exploration of crude oil and gas.

Oil and gas have been found at the following places during April December '84:

Place	Oil/Gas
Onshore	
Dahej-Gujarat	Oil
Chargmaigaon-Assam	Oil
Rokhia-Tripura	Gas
Kaikalur-Andhra Pradesh	Gas
Offshore West Coast	
B-148	Oil
kdi	Oil

BETTER ENGLISH

UNDERSTANDING COMPREHENSION-3

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

In this concluding part, we are giving some sample passages, which include the multiple-choice type and the short-answer type. Tackle these on the lines discussed in the preceding issues, and you should have no problems.

Read the passages and answer the questions that follow:

New York is a city of many beauties, and with a reckless prodigality she had done her best to obscure them all. Driven by a vain love of swift traffic, she assails your ear with an incessant din and your eye with the unsightliest railroad that human ingenuity has ever contrived. She has sacrificed the amenity of her streets and the dignity of her buildings to the false god of speed. The men of New York, as they tell you with an insistent pride, are 'hustlers', but the 'hustling' probably leads to little enough. Haste and industry are not synonymous. To run up and down is but a form of busy idleness. The captains of industry who do the work of the world sit still, surrounded by bells and telephones. They show themselves furtively behind vast expanses of plate glass, and move only to eat or sleep. It is the common citizen of New York who is never quiet. He finds it irksome to stay long in the same place. Though his house may be comfortable, even luxurious, he is in a fever to leave it. And so it comes about that what he is wont to call 'transportation' seems the most important thing in his life.

- The author uses 'she' for New York because
 - New York has more women than men
 - 'beauties' refers to women only
 - it is conventional to do so
 - 'prodigality' is a human trait
- The second sentence (Driven...contrived) implies that
 - New York is a very ugly city
 - New York shows how skilled human beings can be
 - New Yorkers are vain and hurried
 - in New York one experiences speed, noise and ugliness
- The third sentence (She has... speed) shows that the author is opposed to
 - too much speed
 - living in New York
 - dignified buildings
 - streets with amenities
- The expression "the 'hustling' probably leads to little enough" in lines 9-10 has been used to mean

- haste makes people proud
 - haste does not always result in hard work
 - haste is not always enough
 - industrialists should avoid haste
- The phrase 'busy idleness' in line 12 means
 - being more busy than idle
 - being more idle than busy
 - being busy but looking idle
 - being idle but looking busy
 - According to the author, eminent industrialists
 - are idle people
 - work secretly
 - do not move about often
 - believe only in eating and sleeping
 - The passage gives a true picture of big industrialists'
 - domestic life
 - mode of working
 - secret habits
 - office life
 - The attitude of the author towards the common citizen is one of
 - disapproval
 - sympathy
 - pity
 - anger
 - In line 19, 'he is in a fever to leave it' employs the word *fever* to mean
 - too much haste
 - nervous excitement
 - anxiety
 - compulsion
 - 'Transportation' looks important to the average New Yorker because
 - New York is a big city
 - he is proud to reach his destination early
 - he has to do running about for his bosses
 - he finds being for long in the same place tedious

If it is evident that there is a close connection between the capacity to use language and the capacities covered by the verb 'to think'. Indeed, some writers

have identified thinking with using words: Plato coined the aphorism, 'In thinking the soul is talking to itself'. J.B. Watson reduced thinking to inhibited speech located in the minute movements or tensions of the physiological mechanism involved in speaking; and although Ryle is careful to point out that there are many senses in which a person is said to think in which words are not in evidence, he has also said that saying something in a specific frame of mind is thinking a thought.

Is thinking reducible to, or dependent upon, language habits? It would seem that many thinking situations are hardly distinguishable from the skilful use of language, although there are some others in which language is not involved. Thought cannot be simply identified with using language. It may be the case, of course, that the non-linguistic skills involved in thought can only be acquired and developed if the learner is able to use and understand language. However, this question is one which we cannot hope to answer in this book. Obviously being able to use language makes for a considerable development in all one's capacities but how precisely this comes about we cannot say.

At the common-sense level it appears that there is often a distinction between thought and the words we employ to communicate with other people. We often have to struggle hard to find words to capture what our thinking has already grasped, and when we do what our thinking has already grasped, and when we do find words we sometimes feel that they fail to do their job properly. Again, when we report or describe our thinking to other people we do not merely report unspoken words and sentences. Such sentences do not always occur in thinking, and when they do they are merged with vague imagery and the hint of unconscious or subliminal activities going on just out of range. Thinking, as it happens, is more like struggling, striving or searching for something than it is like talking or reading. Words do play their part but they are rarely the only feature of thought.

- Thinking and using language, according to the author, are
 - unrelated
 - closely connected
 - identical
 - mutually dependent

COMPREHENSION BLUES

How comprehensible is our series *Better English*, which we introduced in January 1985? Has the feature helped you to 'better' your English? Write to us, your frank opinion on the utility or otherwise of the series. You may be one of the 10 to win a prize in the draw of lots, on the incoming letters on the topic.

and style is their belief in

- (a) the soul's capacity to talk to itself
 - (b) some relation between most thinking and language
 - (c) thinking being unexpressed speech
 - (d) complete identity between thinking and speech
3. The author himself thinks that
- (a) language use and thinking are the same
 - (b) thoughts are not dependent upon language
 - (c) language use and thinking are not altogether identical
 - (d) it cannot be known whether thought and language are related
4. The most suitable heading for this extract can be
- (a) Language without Thought
 - (b) Language and Thought
 - (c) Identity of Thinking and Speech
 - (d) Thought without Language
5. To strengthen his point of view the author brings in the authority of
- (a) some well-known writers
 - (b) philosophers and scientists
 - (c) empirical evidence
 - (d) normal understanding

III It is almost impossible to escape from advertisements. Hoardings stare down at us from the sides of the roads; crude neon signs wink above shops; jingles and slogans assault our ear; in magazines, pictures of washing machines and custard powders take up more room than the letter-press. All these are twentieth century developments which have grown side by side with the spread of education, and technical advances in radio and T.V.

Advertising assaults not only our eyes and ears but also our pockets. Its critics point out that in this country 1.6% of national income is spent on advertising and that this advertising actually raises the cost of products. When a housewife buys a pound of flour, 5% of what she pays goes to some advertiser or other, even if she has not bothered to ask the shopkeeper for a particular brand. If she buys a named brand of aspirin, up to 29% of what she pays may represent the cost of advertising the name.

These amounts seem a great deal to pay for the questionable benefits of advertising, but there are a few things to be said in its favour. Although some things cost more because of advertising, other things cost less. Newspapers, magazines, commercial radio and television all carry advertisements, and the money received from the advertisers helps to lower the cost of production. In this way we get information and entertainment at lower prices than would otherwise have to be charged, and so what we lose on the swings we gain on the roundabouts. Apart from this very

some extent ensures that a product will maintain its quality. It also gives rise to competition among manufacturers, which benefits the customer by offering him a wider choice. Competition may even succeed, in some cases, reversing the influence of advertising and causing a reduction in price.

1. The author regards advertisements

 - (a) as an evil necessity
 - (b) as an unmixed evil
 - (c) with mixed feelings
 - (d) as highly beneficial to the consumer

2. Find out three examples from the passage of verbs and adjectives, which indicate the author's negative view about advertisements.
3. In how many ways does advertising affect the consumers adversely? Elaborate.
4. What inference can one draw from the clause 'even if she has not bothered to ask the shopkeeper for a particular brand' in the sentence in which it occurs?
5. Pick out from the text a part of a sentence which directly expresses the author's doubts about the value of advertising.
6. Explain what is meant by 'what we lose on the swings we gain on the roundabouts'.
7. In what sense can advertising prove self-defeating?

IV By far the most common difficulty in study is simple failure to get down to regular concentrated work. This difficulty is much greater for those who do not work to a plan and have no regular routine of study. Many students muddle along, doing a bit of this subject or that, as the mood takes them, or letting their set work pile up until the last possible moment.

Few students work to a set time-table. They say that if they did construct a time-table for themselves they would not keep to it, or would have to alter it constantly, since they can never predict from one day to the next what their activities will be.

No doubt some temperaments take much more kindly to a regular routine than others. There are many who shy away from the self-regimentation of a weekly time-table, and dislike being tied down to a definite programme of work. Many able students claim that they work in cycles. When they become interested in a topic they work on it intensively for three or four days at a time. On other days they avoid work completely. It has to be confessed that we do not fully understand the complexities of the motivation to work. Most people over about 25 years of age have become conditioned to a work routine, and the majority of really productive workers set aside regular hours for the

tough-minded school of workers. It is usually very contemptuous of the idea that good work can only be done spontaneously, under the influence of inspiration. That most energetic of authors, Anthony Trollope, wrote: "There are those... who think that the man who works with his imagination should allow himself to wait till inspiration moves him. When I have heard such doctrine preached, I have hardly been able to repress my scorn."

Not many people are gifted with Trollope's great energy and physical strength, but he was undoubtedly right in declaring that a person can always do the work for which he is fitted if he will give himself the habit of regarding regular daily work as a normal condition of his life. Many creative writers have in fact disciplined themselves to perform a daily stint. The great Italian dramatist, Alfieri, even made his servant tie him to his table.

1. What does the author mean by the phrase 'muddle along'?
2. What is the common objection to working to a set time-table?
3. What is meant by 'working in cycles'?
4. Point out evidence from the text to prove that the author is not given to claiming universal knowledge.
5. What would be the best opposite of the word 'spontaneously' as used in the third paragraph?
6. Point out an example from the text where the author overtly expresses agreement.
7. What extreme example of regular concentrated work do you find in the passage?
8. The best heading for the above passage will be

 - (a) Advantage of a Set Time-Table
 - (b) The Organisation of Study
 - (c) Motivation to Work

(Concluded)

SUMMING IT UP

Ancient India made three notable contributions to Mathematics, namely, the notation system, the decimal system and the use of zero. The Indian notational system was adopted by the Arabs and spread to the Western world by them. In fact, the Indian numerals had been used in India for centuries before they appeared in the West. The decimal system was also first used in India and its earliest epigraphic evidence dates back to the 5th century A.D. Aryabhata, the famous mathematician, was associated with it. Finally, the zero was discovered by Indian mathematicians as early as the 2nd century B.C. whereas in Arabia its earliest use was made in 873 A.D. From the very beginning, zero was considered a separate numeral by Indian mathematicians and used in arithmetic sums too.

STEPS TO SUCCESS

The UPSC issues application forms for the Civil Services Exam sometime in December. The Prelims are held in June, the subsequent year and the Mains are held sometime in Nov-Dec, followed by the Interview in March, the following year. This gives the candidate almost 14-15 months time to prepare for the exam.

While preparing for the Prelims, attention may be paid to the Mains as well. One should rather prepare for the Mains with due emphasis on questions that may also be expected in the Prelims.

Mains

Do not wait for the declaration of the Prelims results. Prepare for the Mains right from the day the Prelims are over; this will help you to maintain continuity and understanding of the subjects. This is more important for the General Studies paper where continuity is to be maintained in your knowledge of current events.

Minimum essential marks are to be scored in the qualifying papers and maximum attention is to be paid to Optionals and General Studies.

The qualifying papers (English and Indian language) are of matriculation standard. They should be tackled in brief, immediately after the Prelims and then left till the eve of these exams. However, you should do full justice to these papers in the exam hall as they have to be cleared first (as per minimum marks to be decided by UPSC) before the rest of the papers (Optionals and General Studies) are evaluated.

Interview

Keep reading the General Studies paper after the Mains. In the interview you are likely to be asked more about General Studies rather than the Optionals.

Interview is of 250 marks. Whereas out of every two candidates one is selected for the Civil Services, the marks obtained in the interview determine the allocation of services (IFS, IAS, IPS, etc.).

In the interview one is judged on the basis of one's personality, depth of knowledge and expression (including the power to analyse and think logically). You must be well informed about the Civil Services. In fact any information specified in your biodata can lead to a question from the interviewers.

General Studies

General Studies is an important subject for Civil Services, not only at every stage of the exam (Prelims, Mains and the Interview) but also for the civil servants. Civil Services are 'Generalist' services and civil servants are supposed to know something about everything, and that is precisely the

scope of General Studies.

The General Studies course is very wide. Though both the papers have sufficient choices, the papers are very lengthy and questions asked are very specific. Hence you cannot afford to leave out any topic.

Preparation for the General Studies paper has to be made over the years. It takes time to follow the concepts in Politics and Economics and, to have a total view, one has to trace the origin of events, e.g., in order to follow India's stand on a seat for Kampuchea at NAM one has to trace back history. Similarly the Indian defence scenario has to be considered in the light of preparedness of India's neighbours and threats to the country's security—both internal as well as external. In the same way, the concept of Planning in India has to be evaluated in the light of the country's shattered economy at the time of independence, dependence of agriculture on the monsoons, post-war inflation, etc.

This is one particular subject where abundant material is available and one has to be choosy about the material to be read. Markets are flooded with books on general knowledge and magazines dealing with current affairs. However, you must go through old question papers and study the type of questions asked.

GS-I

In the first paper, the section on Indian History and Culture usually includes questions referring to Indian National Movement, Indian renaissance, social reforms, Indian dance, sculpture, art, etc. One or two questions are devoted to the teachings of Mahatma Gandhi, Pandit Nehru and Rabindranath Tagore. Questions are usually straightforward and students are advised to be specific and answer to the point. Most of the study material is available in NCERT books for classes IX to XII, in the concerned subjects.

The second part of the first paper concerns current affairs of national and international importance. Important meetings, conferences, sport events and important places are usually asked. You can rely on government publications like *India Year Book*, *Yojana*, *Indian And Foreign Review*, *Kurukshetra*, etc. These, in addition to newspaper reports, editorials, radio and TV, can update your knowledge.

The third part of the first paper concentrates on statistical analysis and graphs. Candidates are asked to draw inferences and conclusions on the basis of given data. Study material is available in any

good book on statistics at the intermediate level. Candidates must practise such exercises repeatedly in order to gain proficiency.

GS II

The second paper mainly consists of Indian Polity and Constitution. Besides NCERT books, D.D. Basu's book on Constitutional Law is very useful for the subject. Some of the relevant topics are Democracy (Parliamentary vs Presidential system), Fundamental Rights and Directive Principles of State Policy, the Parliament and its committees, role of governors, elections, etc.

Indian economy including Planning constitutes the major part of the second half of the paper. Study material is available in *Yojana*, *Plan Document Of Government Of India*, *Indian Economics* by Dutt and Sundaram. One or two questions are devoted to rural development programmes and schemes.

Questions on Indian Geography (socio-economic and political) concern the location of modern industries (iron and steel, oil, etc) and population studies. Study material is available in NCERT books on Geography. Questions relating to soils of India may also be asked.

The role of science and technology in India constitutes the subject matter for nearly 100 marks in the second paper. Questions normally cover the following topics:

- * Environment, pollution, soil erosion, etc.
- * Exploration programme, space, Antarctica etc.
- * Energy crisis, atomic energy, etc.
- * Role of science and technology in the development and modernisation of agriculture, animal husbandry, communication, etc.

Study material can be found in newspapers, *India Year Book*, *Indian And Foreign Review*, etc. You are supposed to know the fundamental aspects of these subject areas and must be able to show your awareness to the changing scene in the country—India's achievements as the largest source of scientific and technological manpower in the world; as the pioneer state in sea mining; the three expeditions to Antarctica; our indigenous multipurpose satellites, etc.

The General Studies papers try to test your awareness, alertness and receptiveness to the developments in the country. They judge how much you have been influenced by your surrounding environment and your suitability for the job of a 'generalist' in the Civil Services.

EDUCATION NEEDS AWARENESS

BY VIJAY KONWAR

EDUCATION - DOORWAY INTO

NOWHERE

IS IT LEADING
TO CHILDREN
A LAND OF CONFUSION,
A Labyrinth of
COMPLEXITY,
A Labyrinth
IN PREPARING THE CHILD
PRECISELY NOTHING
WE WANT
CHILDREN
CONTINUE FLOURISHING
AS WASTELAND
END UP AS
PRODUCTIVE
USED ADULTS.

WE WANT THEM TO BEGIN LEARNING?

As with everything else in India, in the vital sphere of education too, there is a massive gap between what should be and what actually is. It goes without saying that salvation for the Indians lies in a concerted effort, at both the public and governmental levels, to close this gap. Arousing social consciousness thereby becomes an imperative necessity. And, in this context, it would be in the fitness of things to focus attention on the phenomenon called national awareness advertising, which has established itself as

an organised institution in many countries because of its proven effectiveness in changing people's consciousness.

Keeping in view India's manifold problems, education being one of them, and a deepening social crisis, there is hardly any need to emphasise that a collective and organised effort ought to be made to promote public service advertising. The institution of the Ashok Jain Awards for National Awareness Advertising in 1984, by Bennett, Coleman & Co Ltd; publishers of the Times of India group of publications, could not have come a day sooner. And as a fitting tribute to the urgent need for resolving the problem of education, the pictures accompanying this article won a cash award of Rs 10,000 for a 'renewed vision provided for an otherwise well-known issue.' They were entered in the competition by Shilpi Advertising, Ahmedabad.

It is quite evident, therefore, that in this first stage of urging people to do something about education in India, advertising for national awareness can play a crucial role. The exhibits make it abundantly clear that the people themselves are ultimately responsible for the present order of things, and that it is a futile exercise to point the finger at the government or even wait for it to make the first move. The people must be willing to take the initiative and, on the basis of a strong unity, both out of a common well-understood purpose, press for change. When such a thing happens, not even the most insensitive and unresponsive of governments can remain unmoved.

CASH IN, AMATEURS

Cheer up, young amateurs! You won't believe this, but it's true. A cash prize of Rs 10,000 awaits you if you are below 21 and your creation happens to be the best print media advertising campaign to promote greater awareness of important social issues and public causes. All you have to do now is to give free play to your amateur yearnings and who knows you might just turn out to be the winner of this prestigious Ashok Jain Award for National Awareness Advertising, instituted by the publishers of the Times of India group of publications, Bennett, Coleman & Co Ltd. And, to top it all, your winning entry will hobnob with professional winners in exhibitions for public viewing, and will be given free space in all the leading publications.

Last date for the receipt of entries for the 1985 competition: Jun 20, 1985. For more details please write to Dinesh Mishra, Social Secretary, Bennett Coleman & Co Ltd, 7, Bahadurshah Zafar Marg, New Delhi-110 002.

EXAMINATIONS - THE FINAL CONFRONTATION?

HAVE WE EVOLVED A SYSTEM OF EXAMINATIONS THAT SUBVERTS LEARNING AND PROMOTES A CULTURE OF CRAMMING? BY DRIVING STUDENTS AWAY FROM FOLLOWING GUIDES, READY REFERENCES AND COACHING, WE PROVIDE CRUTCHES FOR HEALTHY YOUNGSTERS.

THE EDUCATION MACHINE

IF YOU CARE DO SOMETHING

Some encouraging signs have begun to appear on the education horizon, with the Rajiv Gandhi Government having firmly lodged itself in power with the help of an overwhelmingly massive mandate. The determination and fresh approach with which the new government is addressing itself to the herculean task of educational reform is an unmistakable proof of its correct reading of the hidden implications of the mandate. This demonstration of sensitivity to a very sensitive issue is certainly in keeping with the vexatious demands of the situation and is more than welcome. The setting up of an expert panel to suggest a new education policy, the instant talk of delinking jobs from degrees and the message that the new PM meant business have encouraged hope.

SPORTS FOR A HIGHER JUMP

(Continued from page 42)

delivery is an off-break.

Outswinger: Ball swerving from leg to off in flight.

Sightscreen: Movable white (or sometimes blue) board or sheet situated on the boundary directly behind the bowler's arm to give the batsman an unhindered view of the ball in flight.

Silly (of a fielding position): Close in, as in *silly mid-off*, *silly mid-on*, fielding positions closer to the batsman than mid-off and mid-on.

Square leg: Leg-side fielding position level with the wicket; **short square leg:** leg-side fielding position level with the wicket but closer in than square leg.

Willow: Colloquial term for a bat.

York: To bowl a batsman with a yorker, a delivery pitching under the batsman's bat as he plays his stroke.

FOOTBALL

Back: One of two team positions nearest to the goal being defended; **left back:** defender on left side of field and nearest to the goal; **right back:** defender on right side.

Corner kick: Kick made from corner of field when ball was last touched by defending player before it crossed the goal-line, wide of goal or above the cross-bar.

Dribble: To propel ball on one's feet; to attempt to beat opponents in this manner.

Dummy: Feigned manoeuvre to trick opponent.

Field, field of play: Rectangular field on which football is played. Its length must be not more than 130 yds nor less than 100 yds and its breadth not more than 100 yds nor less than 50 yds.

Four-two-four: Tactical positioning of players much used by European teams. Team lines up with four backs, two half-backs, and four forwards, in addition to the goal-keeper.

Goal: 1. Structure at each end of field, consisting of two upright posts 8 ft high and 8 yds apart, joined at top by a cross-bar and usually backed by a net. 2. Score in football—by forcing the ball over the goal-line between goal-posts and beneath cross-bar without infringing the rules; **goal area:** rectangular space 20 yds wide and six yds deep in front of each goal; **goalkeeper:** player positioned in goal to prevent opponents scoring, the only player allowed to touch the ball with his hands; **goal kick:** taken by defending team after the ball has crossed its goal-line, but not passed into the goal, after being last played by an opponent; **goal line:** line marking end of field of play; **goal mouth:** area immediately in front of each goal; **goal post:** one of the two posts forming a goal.

Indirect free-kick: Awarded after an infringement, from which a goal can be scored only if it first touches a player other than the kicker.

Inside forwards: The inside left end inside right; **inside left:** position in forward line between outside left and centre-forward; **inside right:** position in forward line between outside right end centre-forward.

Offside: Denotes a player who is nearer his opponent's goal-line than the ball is at the moment when the ball is played, unless: (a) he is in his own half of the field of play; (b) there

are two opponents nearer their own goal-line than he is; (c) the ball last touched an opponent or was last played by him; (d) he receives the ball direct from a goal-kick, corner kick, throw-in, or when dropped by the referee. Penalty for offside is a free-kick to opposing side from the place of infringement; **offside trap:** tactic by which defenders attempt to put an attacker offside.

Penalty: Awarded to team which is victim of foul play or **hands** within opponents' penalty area; **penalty area:** space 18 yds deep and 44 yds wide in front of each goal; **penalty kick:** result of penalty award, a free kick taken 12 yds from opponents' goal, defended only by the goalkeeper; **penalty spot:** a mark 12 yds from each goal on which the ball is placed for a penalty kick.

Scissors, scissors kick: Kick made by jumping, raising one foot, and kicking the ball with the other.

Throw-in: Ball thrown into play with the hands and from above the head after it has crossed one of the touch-lines; awarded to the team opposing that which last played the ball before it crossed the touch-line.

Touch-line: Line marking each side of the field of play.

Wing: Strip of field adjacent to the touch-line; **one the wing:** playing in this part of the field; **winger:** player in wing position of forward line, outside right or outside left.

HOCKEY

Corner: Hit from corner of the field awarded to attacking side after the ball has been accidentally sent over the goal-line by a defender from within his own 25-yd line; **penalty corner:** hit awarded to attacking side when the ball has been deliberately sent over the goal line by a defender from anywhere on the field. The hit may be taken from anywhere on the goal-line, but not within 10 yds of a goalpost.

Penalty stroke: A push, flick or scoop stroke taken from a spot 8 yds in front of the centre of the goal. An award made to the attacking side after an intentional breach of the rules by the defending side to prevent a goal being scored.

Reverse stick: To hit the ball with the back of the stick; a foul.

Roll-in: To return the ball to play after it has crossed the side-lines, by rolling it on to the pitch; **roller-in:** player who rolls in the ball after it has been put out of play by an opponent.

Scoop: To hit under the ball, causing it to rise; a foul if done dangerously.

Side-line: White line marking the side limits of the pitch.

Sticks: The raising of the stick above shoulder level; a foul if done dangerously or if such a movement impedes an opponent.

Striking circle: Roughly semi-circular area with a radius of about 16 yds, immediately in front of each goal, within which the ball must be struck for a goal to be scored.

Twenty-five-yard line: A white broken line 25 yds from, and parallel with, each goal-line.

LAWN TENNIS

Ace: Shot which an opponent fails to return; **service ace:** test, unreturned service ball.

Advantage: The first of two successive points needed by either player to win the game when the score is deuce; **advantage game:** the

first of two successive winning games needed by either player to win the set when each has won five games or more; **advantage server:** call in scoring to indicate that the player receiving the service has won the first point after deuce.

Back court: Part of the court between the service line and the baseline.

Backhand: Stroke made with the hand turned inward by $\frac{1}{4}$ turn from eastern grip, and the thumb diagonally across the back of the handle; **backhand court:** oblong area on left-hand side of the court into which the ball must be served for the second point (and alternate points) of the game.

Backspin: Spinning motion imparted to the ball, so that it does not move on to the receiver at the expected pace after touching the ground.

Baseline: Boundary line at each end of a court; **baseline player:** tends to play from positions near the baseline and hesitates to approach the net.

Cannonball: Colloquial term for fast service.

Covered court: An indoor court, usually with a wooden surface.

Davis Cup: Challenge cup given by an American, Dwight Davis, for an annual international competition between teams of men.

Double fault: Breach of the rules, particularly in serving; **foot-fault:** an offence in serving, in which server allows one or both feet to cross the baseline.

Federation Cup: Cup for ladies' teams presented by the International Lawn Tennis Federation to celebrate its 50th anniversary in 1963.

Forehand: Stroke made on the right side of a right-handed player; **forehand court:** oblong area on right-hand side of the court into which the ball must be delivered to start a game and for every second point from then on.

Passing shot: Shot which goes past an opponent.

Scoring: The system of counting the points scored by each player (or pair). The first point for each player is 15, the second 30, the third 40, the fourth, game. If each player wins 3 points, i.e., a score of 40-all, deuce is called. A player must then win two successive points to take the game. The first player to win six games wins a set, provided that he is then leading by at least two games. If he is not, the set continues until one player gains such a lead. In championships, a men's match is usually the best of five sets, a women's the best of three.

Sideline: Line marking boundary on each side of the court.

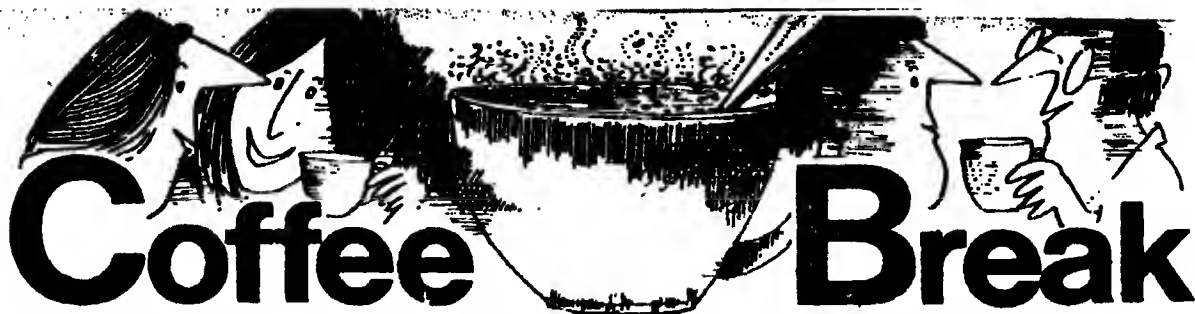

Smash: Overhead shot in which the ball is struck downward with force.

Stop volley: Stroke played with little power before ball bounces, and usually close to the net, so that the ball falls with little bounce on opposite side of net.

Tramlines: Parallel strips down each side of court which increase playing area for doubles games.

Wightman Cup: Cup given in 1923 by Hazel Wightman (former U.S. singles champion Hazel Hotchkiss) for competition between 'ladies' teams from UK and US, held annually, alternately in the two countries.

Wimbledon: Venue of world's most famous lawn tennis tournament, in South London; **Wimbledon fortnight:** two weeks each year (June-July) when All-England Championships are held there.

Coffee Break

HUM LOG: SOME SOAPY STUFF

Manohar Shyam Joshi (above left): A tested formula can't fail! Right: Preparing for the street play in Hum Log.

Maggi....! The clarion call sends the entire household staggering into the TV room, all their appetising thoughts focussed on the popular family serial *Hum Log*. Nothing, not even problems of *sans ki badbu* or *dant ka dardh* could cause enough *pareshani* to keep them away from this marathon serial. Introduced last July, *Hum Log* has ushered in the entertainment era in Indian television.

While the ads are busy displaying their wares, the viewers exchange some grapevine notes. "People visited Badki and begged her to marry Ashwani!... they call Usharani, Mrs Lallu! ...I saw Dadaji basking on the sunny Mandi House lawn!..." Such commentaries, sweet and sour, gradually fade out as the introductory song "Aiye..." transfixes them to the flickering cathode ray tube. Ssh...it's time for *Hum Log*!

Evidently, there is a perfect mass rapport with the *Hum Log* family members, who wade through the rapids of life's trials and tribulations. "That's life today, particularly in the middle and lower middle-class Indian families," convinces Manohar Shyam Joshi, the author of the serial. "*Hum Log* is a candid portrayal of life where success and happiness is often eclipsed by the struggle for survival," he says. Though the variety of issues highlighted in the serial may not concern all the upper class urbanites, other sections of the society can easily identify themselves with its central characters. Therein lies the secret behind the amazingly large mass acceptance of this otherwise mediocre serial.

Tracing the origin of *Hum Log*, jointly sponsored by Doordarshan and the Bombay ad woman, Shobha Doctor's Time and Space Video Communication firm, Joshi recalled the active role of I & B Secretary, S.S. Gill, whose brain child it was. Gill was all out to expand the TV network in the country and make the pro-

grammes more interesting. The underlying idea was to produce an entertaining, message-oriented serial for nation-wide viewing. And the natural corollary that followed the serial idea was to get hold of a big wig company to sponsor it.

The genesis of entertainment was traced to the West where the bubbly soap opera serials had taken America by storm. "It is their staple diet," Joshi remarked. The serial idea in itself is an outgrowth of early radio programmes of 1930s, which were mostly soap operas and detective serials. They mainly concerned the emotional involvement of a character who narrated a different story in each episode.

Contemporary TV adaptations of these serials are now viewed with mesmerised interest in programmes like soap operas, situation comedies and prime-time serials (peak viewing period programmes between 9 p.m. to 12 mid-night) in the US. However, it's the frothy soap operas that have lathered, to the immense satisfaction of American women in particular. It may be added that soap operas have no similarity with musical operas. They got their name 'soap' from their original sponsors Proctor & Gamble, the largest manufacturers of soaps in the US. "The target audience are women and it is telecast during the forenoon when housewives could comfortably view them," Joshi elaborated. The episodes are written by one single writer, mostly women—Agnes Nixon being the highest paid woman soap writer. Indeed, a woman's forte it is—both soap and the operal

Our Soap

Basically, *Hum Log* follows the American

formula where the episodes are not based on a complete story with a beginning and an end.

"The US soap operas are woven around a significant character or a group of characters," Joshi pointed out. Every character is actually 'designed' by a character designer.

The portrayal of the multi-faceted lives of a set of inter-related characters, in *Hum Log*, though lacking in finesse and dexterity, marks a major deviation from the regular cinema stuff. Joshi has also taken care to use the American passwords 'character identification', in constructing his story line. The *Hum Log* members are representative of the characteristic idiosyncrasies of a majority of Indians. For example, an irresponsible, alcoholic lather, Basesar Ram, who lives in a world of Utopian dreams and plays 'yes son' to a dominating mother is quite common in both urban and rural India. A harassed, helpless Bhagwanti, who bears with all the excruciating remarks flung at her by her sharp-tongued mother-in-law, symbolises the traditional Indian woman.

Identification is even stronger with characters like the lovable Dadaji who has a feasible solution for all family problems; the quixotic son who persistently exhibits his 'lalluism', the flamboyant Nanhe who does as he pleases, the wide-eyed, shy daughter, Badki who suddenly wakes up to the hypocrisies of social norms; the pampered Manjhi who falls from grace while saddling over her illusory dreams of attaining stardom and the chirpy Chutki who aspires to be a doctor. Usharani is portrayed as the daughter-in-law with a difference who refuses to take injustice lying down and leads her immature husband, by the finger, on to the path of enterprise and determination.

Apparently, the audience takes vicarious pleasure from these *Hum Log* characters (not considered actors) who appear to be very much like them in their dress, language, income, aspirations and interests. Joshi also has each of his characters "represent a separate generation altogether" so that there is interesting tele-material for both, young and old, who watch the show. "The reading of Ram Charitra Manas is a pleasant emotional experience for the older generation and the sprightly Chutki is symbolic of the intelligent, aspiring youngsters", Joshi exemplified. The plus points of joint family life, totally unrecognised and underestimated by the present social milieu, was incorporated in *Hum Log* with a deliberate attempt to highlight the value of personal relationships. "I have known a Badki, Manjhi and Chutki," Joshi recalled, nostalgically.

Hum Log also has a suggestion of distinct soap opera elements like packed dialogues, monologues and soliloquies, apparent in the US soap operas. Though lacking in professional polish, these elements can be traced to Lallu's

imaginative interviews with a bevy of pretty young girls and in Nanhe's grotesquely portrayed dream of heading the underworld. "Such dialogues and monologues do not appeal to the sophisticated and may also irritate the intelligent," Joshi admits. Not surprisingly, *Hum Log* scoffed at by the elite and poor editing, laboured style and

expensive sets and "internalised action" of a guest, sounding of the call-bell, and a creaking enough, according to Joshi. But these ingredients have prevented the serial from becoming the pseud's cup of tea.

Filmi Twist

Viewers of *Hum Log* would agree that the escapist trends portrayed by the 'filmi' touch given to the otherwise down-to-earth serial, is totally unwarranted. It is hard to believe that the same writer could have imagined such inconsistent situations in the life of a middle-class family, part of the story is as realistic as the life of the family next-door; while the other half reeks of the weird absurdity of Bombay box-office flops. If any purpose has been served by adding such scenes to the straight forward story line, it has ended up in making *Hum Log* a clumsy patch-work.

The only saving grace is that there has been

HUM LOGON KI PASAND

Rajesh Puri yani... woh kya kahen hain j...
Lallu

Who's the most popular character of the much talked about serial *Hum Log*? *CCTimes* held a random survey, asking a cross-section of Delhiites on their favourite *Hum Log* star. And who do you think was rated the most popular? No less than the absent-minded Lallu!

Now the ball is in your court. You may send in your opinion on the most popular *Hum Log* character latest by **May 25**, on a postcard with your name, address and age. Also indicate in four lines, the reason for your choice. The first 10 nominators to be decided after a draw of lots) of the most popular character have an attractive but surprise gift waiting

THE SERIAL THAT LAUNCHED A THOUSAND OTHERS

Entertainment television is here to stay. And *Hum Log* has been instrumental in introducing the era of sponsored entertainment in India. The popular serial has caught on and opened fresh avenues for independent producers who want to display their creative genius and cinematographic talent in producing a successful programme. The wide audience response to *Hum Log* has set off a chain reaction in the TV film circle and a whole row of producers, young and old, have jumped onto the TV bandwagon. Today, most of us trace out the days of our lives through the ubiquitous TV serial.

After *Hum Log* came the rip-roaring serial *Yeh Jo Hai Zindagi*—a pure, refreshing, light comedy produced by S.D. Oberoi, launched in September, last.

October brought *Mashoor Mahal*, the televised version of an earlier radio programme, *Double or Quits*. The programme has its way of entertaining people through ticklish brain teasers. But Bombay viewers alone have the privilege of participating in the quiz and winning

no deviation from the no hero-heroine element, a strong feature of US soap operas. "Badki is popular as Badki and not as Seema Bhargava. And Lallu is good old Lallu; neither Lalit Prasad nor Rajesh Puri," Joshi pointed out. There is no typecasting of characters (as in films); they actually exist for the audience.

Is he writing *Hum Log* all by himself or is the labour shared? "Why should I let out the secret?" Joshi quipped. "And as for the filmi touch, the producers developed cold feet on the success of its simple theme," he explained. Joshi is optimistic about the success of his serial. "After all, it is based on a tested US formula, which has clicked." "The filmi twist was introduced for better visuals (Manjhi on stage doing a disco and some 'dhoom damaka' scenes when the underground leader was seen escaping). But the visuals are hardly eye-catching. They, instead, smack of poor acting and immature production techniques.

Feedback

The viewer response to each of the *Hum Log* episodes has been overwhelming. "Their view points are often considered," says Joshi. Nanhe did not turn into a smuggler because the viewers protested strongly against it and even threatened to break their sets if he did; Lallu's return, after his flying visit to the Dubai airport, was also the viewers' choice. "But the feedback ought to be more systematised, with a complete infrastructure like, in the US and Mexico, in order to handle the letters that flood Doordarshan," Joshi suggested.

Hum Log was originally contracted by Doordarshan for 200 episodes. Now that it is expanding into an Arabian Nights series, the authorities are demanding that the show be wound up. Commenting on its bullock-cart pace, Joshi had this to say, "A good soap opera moves at life's pace. American soap operas untringly run till their 200th episode."

The Message

As for the propagandist overtones in *Hum Log*, the serial was originally conceived for propagating the family planning message. The idea had delivered the goods in Mexico where the

the magnificent prizes offered by the sponsors.

Basu Bhattacharya's *Anveshan* introduced in December was a revelation on rural Indian life, portrayed through the eyes of a young writer and her photographer friend. The slow-paced film was pepped up by the two lively youngsters speeding through the villages on a motorbike.

The recent additions are *Apradhi Kaun*—a series of diluted mystery thrillers which have failed to thrill; and Hindustan Thompson Video's (HTV) *Khanda*, a big-budget serial about a self-made tycoon, based on the popular American serial *Dynasty*. *Khanda* also has undertones of *Kaliyug*.

Popular producers are also taking to the electronic media. Sai Paranjpe's comedy serial *Ados Pados* on the lines of *Katha*, propagates Hindi as our national language. *Idar Udhar* runs on the lines of the dialogue-packed US soap operas (Three Is Company).

Several other sponsored serials like *Banno Rani* and a sitcom series being produced by B.R. Chopra are also underway.

Mexican soap operas, loudly hammering the small family norm, had helped reduce the baby boom in the country.

A Mexican television expert, Sabo was instrumental in selling messages through soap operas. Values of national importance like patriotism, literacy and family planning were to be instilled into people's minds through entertainment. Even messages on moral principles like selflessness, value of truth, goodness, etc were got across through the electronic media. The policy was backed by the Director of Communications, UN Institute for Population Studies, New York. David O. Point Dexter, and the entire programme made headway in Mexico.

Our soap is an Indianised amalgamation of both the US and the Mexican soap operas. Instead of administering an overdose of the family planning message, running through interminable episodes, the authorities preferred to use the serial as a pulpit for debating on a number of social issues gripping contemporary society. Problems of unemployment, dowry, corruption, strikes, adoption and, of course, the priority issue of birth control, are being highlighted. It could only be hoped that the writer continues to throw light on the finer aspects of child upbringing, human behaviour, mother-in-law-daughter-in-law relationship, etc—problems which ultimately boomerang on the society.

Hum Log is being shot at the cost of Rs 85,000, at Dhirendra Brahmachari's Aparna Studios, Gurgaon. Doordarshan earns Rs 35,000 from the sponsors who buy 30 minutes of precious TV time for the serial.

Today, almost 70% of the Indians linked by the national network are exposed to the visuals on the idiot box. And not many can distinguish between TV programmes which make for intelligent viewing and others meant for senseless gaping. But, if the major function of the commercial TV is only to promote sales, why would the network office bother about the quality or the popularity of a programme?

Prabha Gopal, New Delhi

Sports Quiz-42 Keywords-42

BY NAROTTAM PURI

WIN RS 100 IN BOOKS

1. Name the only player to have hit a century and a double century in his first two innings in Test cricket.
2. Name the four players who have hit a century in their first two Tests.
3. Which sport is played on a field of 300 x 200 yard size?
4. Who won the DCM Football Tournament in 1984-85?
5. Which three weapons are used in the men's fencing events in the Olympics?
6. Which colour balls are being tried in the day-night matches in Australian cricket?
7. With which athletic event are Thierry Vigneron and Sergei Bubka associated?

PRIZES

SPORTS QUIZ-42:

2 First Prizes

Sports books worth Rs 50 each from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no *all-corrects*) pulled out of the hat.

Plus 5 Consolation Prizes worth Rs 20 each from **Rupa & Co.**

KENWORDS-42:

2 First Prizes

Sidney Sheldon's *If Tomorrow Comes* and Tariq Ali's *The Nehrus And The Gandhis* from **Rupa & Co., New Delhi** to the first two *all-correct* entries (or *one-error* entries if there are no *all-corrects*) pulled out of the hat.

Plus 5 Consolation Prizes—Alistair Maclean's *San Andreas* from **Rupa & Co.**

HOW TO ENTER

● Print the answers neatly in capital letters alongwith your name, age and address. Each crossword must be pasted/clipped on a larger piece of paper.

● You may send in any number of entries but each must be numbered accordingly and accompanied with its respective COUPON.

● Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the two contests: May 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions to this issue's contests will be published in July.

REMEMBER FOREIGN DEGREE HOLDERS GET FABULOUS JOBS

TO KILL OR NOT TO KILL

Jonathan Schell's *The Abolition* is a timely book, coming when it is most needed. In a world faced by the threat of extinction, it is necessary to re-evaluate the policies followed by nuclear weapons nations who have kept humanity in suspense on a balance of terror. The book is divided into two parts, 'Defining The Great Predicament' and 'A Deliberate Policy'. In the first part the author vividly explains the consequences of a nuclear holocaust and discusses the theories of Albert Einstein, who suggests a "world state" as a solution to the problem, and of the political scientist Bernard Brodie, in whose writings one finds the basic tenets of the doctrine of deterrence: that nuclear weapons will lead to annihilation and, therefore, act as deterrents to war. According to Schell, a world state is a difficult thing to achieve and the theory of deterrence is full of contradictions. Schell is also critical of the current peace movement, which has only backed modest plans of action within the framework of the existing broad policy, such as a nuclear freeze, leaving the deeper political question open for the time being.

The choice that the author offers us in the second part of the book is abolition: first, "the world would, by agreement, institutionalise the broad global stalemate that we are already in, and abolish nuclear weapons". In this stage, differences between nations would not be taken up and resolved but suppressed and postponed. In the second stage, "the frozen world of deterrence would begin to melt and move—peacefully—as new, non-violent means of decision-making were worked out and instituted".

The striking thing about this book is the logical development of ideas. In the space of 160

over his arguments on why he thinks that deterrence alone will not protect the earth and why he thinks that abolition is a better solution and that it will work. The book is rational and poignant and offers humanity a ray of hope. It is extremely well researched and draws extensively from past political testaments as well as contemporary research work.

This, however, does not detract from the quality of writing. In simple language, the author draws portraits of a post-nuclear war world, in colours as vivid as those presented by the film, *The Day After* and, like the film, has the power to move people. It is directed not only at policy-makers, but also at the policy-shapers—the general public. It is a book that everyone must read, even though he or she may not agree with the author's conclusion. It will prod people into thinking about the nuclear predicament which could destroy us all at the press of a button.

S.B., New Delhi

Extract

The argument between the Einsteinian school and the Brodiean school reflected not just a split in opinion but a split in the world itself. For the arrival of nuclear weapons in the world had at a stroke opened a fissure down the centre of human life, placing whole realms of human existence at odds with one another. The traditional demands of man's international political existence, rooted in sovereignty and pursued through the use of force, were suddenly at variance with the demands of man's existence pure and simple, which was now mortally endangered. Political man held a knife to the throat of biological man, but since politics, like every other human activity, is possible only where there are human beings, political man also held a knife to his own throat. At the same time, the demands of man's moral existence, which were meaningless if they did not call on us to hold back at all costs from slaughtering billions of people and perhaps putting our species to death, were at variance with those of man's political existence, which seemed to require that we threaten to do just that, on pain of military defeat by our enemies if we did not. Einstein and Brodie, in a manner of speaking, took up positions on opposite sides of the gap, with Einstein standing alongside trembling, imperilled biological man and asking political man to yield, and Brodie standing alongside dug-in, unbudgeable political man and asking biological man to endure the peril. And each, of course, had a compelling reason for standing where he did, since no one could deny, on the one hand, that the peril was great—and its urgency extreme or, on the other, that the immediate top-to-bottom transformation of international political life was, at the very least, doubtful. A bystander looking for guidance was left to contemplate two conclusions, each of which had apparently been established incontrovertibly by experts: (1) that the nature of physical reality as it had now been revealed by physics made a swift revolution in global politics necessary if human survival was to be assured, and (2) that the nature of political reality as it had revealed itself throughout history made such a revolution impossible....

Einstein and Brodie, each rooted firmly in the reality he knew best, were unable to find common ground. Einstein, the proponent of what was necessary for survival, could not persuade the

other to enlarge his conception of it to encompass what was necessary for survival. The world was offered two problematic proposals: one that would solve the problem but could not be brought into being, and one that could be brought into being but did not solve the problem. The gap between them—between imperilled biological man and entrenched political man; between the irresistible force of nuclear weapons and the immovable object of the world's political institutions (immovable, that is, except by nuclear weapons, which could move them right out of existence in an instant); between a resolution of the broad human crisis of the peril of extinction and a resolution of the political crisis of how the world was to be organised without war; between the laws of science and the laws of history; between the dictates of conscience and the dictates of policy; between "idealism" and "realism"; between the "long term" and the "short term"; between the necessary and the possible; between the slowness of political change and the swiftness of the approach of doom—remained unbridged. And it has remained so to the present day.

Sometimes our performance in the postwar period is called a great success, on the ground that we have so far avoided a nuclear holocaust, and much of the credit for the success is given to the policy of deterrence. What this reckoning overlooks is that in the same period the world had built up arsenals of more than fifty thousand nuclear warheads—in short that behind the screen of our deterrence policy we have built the means of our annihilation. Seen in the best possible light, this self-endangerment of our species was a tragic necessity. Seen less forgivingly—and, I believe, more justly—it was the greatest collective failure of responsibility by any generation in history. But, whichever of these it was, self-congratulation is certainly out of order. If someone climbs out on the ledge of a high building and threatens to jump off, we do not stand around congratulating him on his wisdom and restraint in not having jumped yet, and expounding on how safe a place the ledge of a building must be, we seek to pull him out at the earliest possible opportunity.

DEFT DEFINITIONS

Wedding ring: The smallest handcuff in the world.

Skeleton: A man with his inside out and his outside missing.

Egoist: A person of low taste more interested in himself than myself.

Boss: The man at the office who is early when you are late and late when you are early.

Second marriage: A triumph of hope over experience.

Husband: A person under the impression that he bosses the house, when in reality he only houses the BOSS.

Architect: One who drafts a plan of your house and plans a draft of your money.

Gossip manager: A person with a good sense of rumour.

Secret: Something that is hushed up from place to place.

Tact: The art of refusing a drink without losing.

Narinder Singh Manral, Chandigarh

*THE ABOLITION by Jonathan Schell; published by Picador in association with Jonathan Cape; distributed by Rupe & Co., pages: 170; price: £2.50.

From The Club Desk

There has been a sudden, and heartening, spurt in the activities of CCTimes Clubs all over the country. Under these circumstances, club news is the first item on the agenda. The Nightmare Club, Madurai, conducted many group discussions, debates and quizzes. Four of their members have succeeded in getting appointments and this has raised the prestige of their club (nothing nightmarish about it) in the neighbourhood. The CCTimes Club at NDRI (Karnal) organised a sports quiz. Copies of Gevaskar's Run'n Ruins were at stake. There were GK books for winners of the GK quiz and a dictionary for the winning team of 'What's The Good Word'. A symposium on 'Democracy in India' was organised by the CCTimes Club, Ganjam (Orissa). While the CCTimes Club, Madhubani (Bihar) organised a lecture on 'Creative role of youth in present days'. Another enterprising CCTimes Club from Darbhanga launched an eye-donation campaign under the guidance of A.P. Atri, Programme Manager of TERF. The CCTimes Club call of the Akhil Bharatiya Vikas Sangathan is actively involved in propagating a conducive atmosphere for students appearing for various competitive exams while the entire Sangathan is engaged in working for national unity, integrity and character.

And now onto the 'Club of the Month'. The CCTimes Club, Vijay Nager, Jullundur bags it this time. A group discussion on the prevailing system of education was organised by the club which sent us a detailed report of the proceedings too. Excerpts from the report: "The education system of the country is faulty. Most of the so-called model schools are nothing but 'whole-sale depots of education'. Barely 2% of such schools are recognised. Huge sums by way of tuition fee, besides donations, are collected by these schools without any worthwhile attempt being made to impart education. It is now a usual practice for school and college teachers to compel students to join tuition groups run by them. Those who resist are penalised. To curb this malpractice, model schools should obtain recognition either from the Central or state governments; also the government must check the amount collected by these schools. No student should be compelled to join tuition groups. The disparity existing between private and regular candidates while appearing for various examinations must be removed too."

So much for club news. We are still receiving letters asking us what the objectives of these clubs should be. To give such newcomers an idea, here are some proposals laid down by the CCTimes Club at Raviwar Peth, Pune, itself a new arrival: 1. Organise programmes on personality development 2. Open an information bank on career opportunities in India and abroad 3. Arrange programmes to keep your city neighbourhood clean. These proposals should prove to be successful, especially if some teachers or lecturers could be roped in to provide guidance.

And to give you an idea of what type of socially beneficial activities the clubs can organise, the 'Chancellors' CCTimes Club, Allahabad, rendered assistance during the Megh Mela to help and guide visitors and devotees and also guided and controlled vehicular traffic during those days. The club also plans to hold a debate-cum-talent contest for all CCTimes Clubs from UP at Allahabad in June. So, if you have established a CCTimes Club in UP and are keen to participate in this inter-state clubs meet, contact the 'Chancellors' CCTimes Club, 5 Sir T.B. Sepru (and not 'Sepri' as inadvertently published in our February issue) Road, Civil Lines, Allahabad.

By now you must have got a fair idea of the large number of letters we receive from you all. Therefore, please do not expect personal replies to your queries and problems unless they are of a very specific nature. The rest of your problems we'll try to solve through this column itself. Letters enquiring about procedures to form a club, activities, suggestions, and topics will also be dealt with through the column itself. Also, since each club has a long list of members, membership cards henceforth will be issued only to the President and Secretary. And, once again, please quote your club's membership number (if you've been allotted one) in all your correspondence with us.

6. A.M.I.M.I. (London)/A.M.I.A.E. (India) (Auto Engg.).
7. A.M.I.E. (Studentship, Sec. 'A' & Sec. 'B' classes in Civil, Mechanical, Electronics & Electrical Branches).
8. A.M.Ae.S.I. (Aeronautical Engg. S/S, Sec. 'A' & Sec. 'B').
- GRAD. I.E.T.E. (Electronics - S/S, Sec. 'A' & Sec. 'B').
10. A.M.S.E. (London) MECH/CIVIL/ELECTRICAL ENGG.
11. COMPUTER PROGRAMMING (COBOL/BASIC & FORTRAN).
12. BUSINESS MANAGEMENT (Postal Tuition only)
13. D.Com. (Postal Tuition only).

14. POST DIPLOMA COURSES for further specialisation offered in Mechanical Engg., Civil Engg., Electrical Engg., Diesel Engg., A/C & Ref., Electronics/Audio & Video Engg.

Course No. 1 approved by D.G.C.A., Govt. of India. A pass in courses 7, 8 & 9 recognised as equivalent to B.E. Degree.

CORRESPONDENCE COACHING Also available FOR ABOVE COURSES EXCEPT COURSE No. 1.

QUALIFICATION FOR ADMISSION

For Course No. 1 : 10 + 2/PDC or equivalent with Maths, Physics & Chemistry. For other courses : S.S.L.C./Matriculation.

FACILITIES

Expert faculty, Well-equipped Workshops and Labs, Latest Audio-Visual Aids, Facility for Postal Students to undergo practical training, Post-institutional apprenticeship and placement services.

For prospectus and application form remit Rs. 10/- M.O./P.O.

Science can enable you to develop muscle power you never suspected you had

In just 14 days you can prove it for yourself with this Free Home-Trial Offer!

A Revolutionary scientific breakthrough in Isotonic/Isometric principles developed at the Max Planck Institute in Germany produces results **THREE TIMES FASTER** than conventional methods of exercise! In this special 14 day home trial offer you can prove to yourself the unbelievable increase in strength Bullworker can bring to you—results in 14 days or you pay nothing!

Transform your arms

Thin, weak biceps and forearms develop amazingly fast as soon as you begin with Bullworker. Many reports of over 50% improvement have been recorded in the first 3 months. The first week's programme include two exercises specifically aimed at improving your arms—that's just 28 seconds of your time every day to produce bulging steel-hard biceps.

Forearms charged with new strength.

Shoulders and chest of a he-man

You will be amazed that such an easy, quick, non-tiring method can produce results so fast. Develop that massive he-man chest all the girls go for... and muscular shoulders that will fill out shirts

with bulging muscles. Find a new zest for life, radiate the energy and super self confidence that only real fitness brings.

Ashamed of the way you look? This could be you after just a few weeks using Bullworker.

Are you letting yourself go and laughing it off? Is your lifestyle weakening your body? Then it's time you did something about it—but what? Conventional exercise is both time consuming and costly—and most of all, boring! Now there's an easier, faster, more interesting way to keep your self trim to tone up your muscles.

Bullworker just 5 minutes a day is all it takes to achieve remarkable results with Bullworker just look at these exercises.

1. This exercise develops a deep powerhouse chest.
2. This builds huge steel-hard rippling biceps.
3. Here's how you can develop muscular shoulders.
4. Mould flabby stomach into a solid wall of muscle.
5. Here's how to attain that handsome, athletic "V" shape.

FREE

Bullworker Carrying Case.
24 page Brochure.
Illustrated Exercise Chart, Nutrition and Training guide

Bullworker—the World's leading body builder.

The Bullworker is superbly engineered from high grade steel, chromium plated. The traction cables are steel cored. Every Bullworker is tested before despatch. Use the Bullworker regularly and you will be fitter and stronger than ever before. Many professional athletes like Peter Shilton, Eddy Merckx, and even Muhammad Ali recommend Bullworker.

EXCLUSIVE BUILT-IN POWERMETER

This feature, exclusive to Bullworker measures your day-by-day increase in muscle power. As you compress Bullworker the force of your muscles slides the power gauge along a specially calibrated scale, so that each day you can see at a glance the massive increase in power which you achieve for every group of muscles in your body.

*Letters from 1000's of men all over the World testify to the effectiveness of Bullworker—it works for them it can work for you! Develop a manly physique—feel fitter, confident, stronger.

*No more boring, repetitive exercises... no sweat... no strain... just simple seven second exercises only 5 minutes a day!

SCIENCE CAN GIVE YOU A PERFECT BODY—EASILY.

ADMISSION-NOTICE FOR GOVERNMENT OF INDIA & UNION STATES- RECOGNISED DIPLOMAS & DEGREES.

Applications are invited from employed/unemployed Boys & Girls for the following Engineering & Management Correspondence Courses and eligible students for IIT/JEE & M.B.B.S. Entrance Exams.

ENGINEERING COURSES

1. GRADUATESHIP (B.E.): A.M.I.E (INDIA) - Studentship, Section A&B in Architectural, Chemical, Civil, Electrical, Electronics & Communications, Mechanical, Metallurgical, Mining & Textile Engineering
 2. GRADUATESHIP (B.E.): SURVEYOR.
 3. GRADUATESHIP (B.E.): A.M.I.E.T.E. (INDIA) Section A&B in Telecommunication & Electronics Engineering.
 4. GRADUATESHIP (B.E.): A.M.Ae.S.I. AERONAUTICAL Studentship, Section A&B.
 5. GRADUATESHIP (B.E.): A.M.I.M.E. (INDIA) MECHANICAL Studentship, Section A&B.
 6. GRADUATESHIP (B.E.): C.E.(U.K.) In Civil, Chemical, Electronics & Radio Engineering, Fuel Engineering, Marine, Mechanical, Production, Naval Architect & Structural Engineering.
 7. GRADUATESHIP (B.E.): A.M.I.I.CHEM.E. (INDIA). Studentship, Section A&B.
 8. GRADUATESHIP (B.E.): I.I.M. (INDIA) - Metals Engineering Part I & II.
 9. GRADUATESHIP (B.E.): Industrial Engineering-Preliminary, Section A&B.
- (ALL THE ABOVE COURSES ARE RECOGNISED BY THE GOVT. OF INDIA & ALL INDIAN UNION STATES AS EQUIVALENT TO B.E. OR B.Tech. EVEN AFTER PASSING ANY OF THE ABOVE COURSES, STUDENTS ARE ELIGIBLE FOR ADMISSION TO M.E. M.Tech. COURSES OF INDIAN UNIVERSITY)
10. GRADUATESHIP AUTOMOBILE: A.M.I.A.E. Studentship, Section A&B.
 11. A.M.I.M.I. (INDIA) Motor Industry - Diploma in Automobile Engineering Part A, B & C.
 12. DIPLOMA IN REFRIGERATION AND AIRCONDITIONING.
 13. GOVERNMENT AGRICULTURE ENGINEERING.
 14. DIPLOMA IN DRAUGHTSMAN - CIVIL & MECHANICAL ENGINEERING.
 15. STATE BOARD OF TECHNICAL EDUCATION: Govt. of Andhra Pradesh, Tamilnadu, and Kerala States - Diplomas in Civil, Electrical and Mechanical Engineering
 16. CITY & GUILDS MECHANICAL & ELECTRICAL DIPLOMA - C.G.I.I.(LONDON).
 17. CITY & GUILDS ELECTRICAL DIPLOMA - C.G.L.I.(LONDON).
 18. CITY & GUILDS (LONDON) RADIO & T.V. COURSE.
 19. GOVT. OF INDIA RADIO OFFICERS COURSE, C.O.P. CLASS I & II.

MANAGEMENT COURSES

1. GRADUATESHIP COURSES OF A.M.I.B.M. PART A & B.
 2. A.I.B.M. DIPLOMA IN BUSINESS MANAGEMENT.
 3. DIPLOMA IN BUSINESS & INDUSTRIAL MANAGEMENT, PERSONNEL MANAGEMENT, PURCHASING & MATERIAL MANAGEMENT, EXPORT MARKETING MANAGEMENT, MANAGEMENT ACCOUNTING.
 4. COMPANY SECRETARY EXAMINATION - Intermediate & Final.
 5. I.C.W.A. (INDIA) - Intermediate & Final
 6. I.C.M.A. (LONDON) - Part I, II, III & IV.
 7. CHARTERED SECRETARY (LONDON) Part I, II & III.
 8. CHARTERED ACCOUNTANT (C.A.) Entrance, Intermediate & Final.
 9. GOVERNMENT COMMERCIAL DIPLOMA - (G.C.D).
 10. DIPLOMA IN HOTEL MANAGEMENT.
- ADMISSION QUALIFICATIONS: Matric/S.S.C./H.S.C./P.U.C /Intermediate/Graduate/Diploma in any Branch or Graduates in Engineering with any Subject.

IIT/JEE & M.B.B.S. ENTRANCE

Effective, programmed postal instruction designed to get you through at first appearance depending on your own speed of learning and effort.

BENEFIT BY THESE ADVANTAGES: Training for expert career guidance through qualified and experienced staff. Excellent library. Course material, books and specially prepared lessons supplied free of cost. Arrangement for Practicals all over India.

TAKE THE ICS ROAD TO SUCCESS: This is not only a pioneer Institute but the largest and the most reputed Institute in India and abroad. Individual attention is paid to every student. Limited seats. Examination Centres all over India and abroad. All subjects are taught from the beginning and training is scientific. These factors have attracted thousands of Indian and foreign students and continue to do so. For detailed prospectus & admission form send Rs. 20/- for Engineering Courses, Rs. 15/- for Management Courses and Rs. 5/- for I.I.T./JEE & M.B.B.S. Entrance Courses, by money order to the Principal.

Another Special

The special issue for IIT, JEC was welcome. Hope you bring out a special issue for Combined Medical Admission Test.

Dharampal Anand, Patna

On Delinking

In this International Year of Youth, delinking degrees from jobs is a welcome proposal indeed. Apart from this politics must also be delinked from the college campuses.

R. Ramakrishnan, Bombay

Year Of Leakage

The year 1985 can go down in the history of India as a year of leakage. Bhopal gas leakage; documents leakage from Delhi to foreign countries; and exam question paper leakage at Nagpur. Many more may follow suit.

S. Suresh Kumar, Nagpur

Place In History

He, who endures his own life for the sake of the nation, covers only half a page of History. On the contrary, he, who causes the death of thousands of people, covers hundreds of pages of History.

*J.P. Gadhya
Distt. Balangir (Orissa)*

Rats And China

The Indian media has failed to convey the significance of China's drive against rats, in the recently concluded "Fat Year" in China. During the year-long extermination drive against rodents, almost five times, China's human population, millions of packets of rat poison were distributed, and hundreds of men and women were blamed to catch rats by driving them out of their hideouts by making mating calls. This resulted in considerable liquidation of rat population.

In India about 25m tonnes of foodgrains are destroyed every year by rats—not to talk of the pillage and plunder the rats commit in open fields, godowns, shops and elsewhere. Prompt measures have to be taken to control this menace and arrest the colossal destruction of foodgrains.

V.K. Bhan, Srinagar

Uniform Standards

The upper age limit for the UPSC Assistant's Grade Exam 1985 for certain categories of departmental candidates, such as LDC/UDC/Steno Gr 'D', is relaxed

only upto 30 years. While the upper age limit for departmental candidates in all other competitive exams conducted either by UPSC or SSC is 35 years. The UPSC should revise its decision and raise the upper age limit for the Assistant's Grade Exam 1985.

Luxmi Narayan, Delhi

Sethia's Generation

With reference to the 'Sethia scandal' (*Current Events: National*, Apr '85) there is a proverb that "one generation makes the bubbles and the next generation breaks them." I wonder to which generation Rajendra Sethia belongs.

B. Gangadhar, Rajmandanagar

UN Rechristened

The UNO, on the eve of its 40th anniversary, may be renamed as the 'Union of Neglected Optimists'.

Alok Misra, Lucknow

Nationalists Not Terrorists

I was shocked to read in your April issue the word 'terrorists' for Bhagat Singh, Chandrasekhar Azad etc.

These people were nationalists and not terrorists and they sacrificed their lives for the sake of the freedom of their mother land.

R.K. Singh, Dhanbad

Philosopher Kings

It is unfortunate that in some countries including India, ignorance and political pomposity is ruling and political leaders and bureaucrats have become demigods, even in this computer age.

Today the world needs philosopher kings; and let us make them our leaders so that we may establish universal peace, justice and prosperity.

R. Surendranath, Nellore

Rot In Banks!

If the rot that has set in the banking industry is to be eradicated, it is essential, as a first step, to restore the authority and autonomy of the RBI.

The responsibility of exercising supervision over the banking system of the country should be shouldered by the RBI and the government would do well to refrain from issuing instructions to banks directly.

S.V. Patankar, Jabalpur

On The Hit List

We hear about several VIPs being on the list. Why don't we keep some very important problems (VIPs) like poverty, communicable diseases, corruption etc on the hit list?

Karamchati, New Delhi

Philosophy of the 21st Century

Promise not; Hope not; Wish not; Pray not

D. Chattanathan, Tirupati

CA Stipends

With reference to financial assistance for CA students (*Career Counselling*), the following information may be useful.

The monthly stipend paid to articled students/audit students by the chartered accountants firms at present, are as follows: (a) In metropolitan cities like

Delhi, Bombay, Calcutta, Madras etc. Rs 200 in the first year; Rs 300 in the second year; Rs 450 in the final year. In other cities it is Rs 100, Rs 150 and Rs 225 during the first, second and final years of training respectively. (b) If a student passes the Intermediate exam within the stipulated period (i.e. within two years of training), he may join industrial training for the remaining period of articleship (one year) at a substantially higher rate of stipend, ranging between Rs 500 to Rs 1200 per month, depending upon the industry concerned.

For further details you may contact the Secretary of the Institute at New Delhi; Ph. 279211 and 274446.

Anil Kumar, Samastipur

Scoring Point

Making The Right Moves (Apr '85) was an invaluable gift to the younger generation. This is where your magazine scores over other 'competitive magazines'. You provide the method of reaping rich harvest from the fields well before the season commences.

Jitendra Kr Sinha, Pilani

The Real Terrorists

With reference to *Insurgency On The Rampage* (Mar '85), who could be a bigger and bloodier terrorist than either of the super powers, who arm themselves to the teeth with savage nuclear arsenals and hold the entire earth and its innocent people, at gun point? The two superpowers are the biggest and the most heinous terrorists of our times.

V.M. Manoj, Trichur

On Rajiv

Francis Bacon said—"If a man will begin with certainties he shall end in doubts." Mr Gandhi has started with certainties and one only hopes he will prove Bacon wrong.

P.K. Sahoo, Distt. Surguja (MP)

Very hurriedly Mr Verma came to the conclusion that 'Rajiv is India's man of destiny' (*Rajiv: His First Hundred Days*). Time and problems decide the dynamism of the leader. Though Rajiv is set to take India into the 21st century, he should be given a helping hand by the Opposition and petty interests of the parties have to be given up. Then alone will ruling party and the Opposition rise to the expectations of the masses.

Sunil Ranjan, Delhi

The lottery seller at the street corner gives Rs 60 to police, Rs 30 to traffic police and Rs 30 to municipal workers as hafta for the month. Mr Clean are you listening?

Urmilla Ramrakhiani, Bombay

The Price Of Deception

V.K. Sinha from Varanasi has rightly pointed out the republication of the prize winning letter titled *History Repeats Itself* (May '85) by D.K. Chanchal, Gaya. A similar letter by T. Mundargi was published under the heading *Mughal India* (Jul '84).

While accepting our inadvertence in this matter, we are withdrawing the prize awarded to D.K. Chanchal.

Why this has happened, why the police behaves in a barbarous way, is to be analysed. The major factor which makes the police hot-headed is political support. It was openly visible when the Union Home Minister justified police behaviour in the Lok Sabha and the state government described it as an effort and outburst of

The major problem for the police is political interference. A study, of six states conducted in 1983 shows that 82% of all sub-inspectors, 69% of inspectors, 90%

We have been talking about the relationship among the police, people and the politicians since 1947. Today, unless the human element in the police force is revitalized, better training provided and the police equipped with less lethal weapons, the police force might turn out to be a ruthless instrument of exploitation. The sooner it begins, that the sooner would be the damage to the society in the 21st century.

R. H. H. H.

TEST YOUR WORD POWER

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's on eloquent problem.

And so each month we bring you this column, tailor-made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about *our* word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is *nearest in meaning* to the key word.

1. **adjunct:** A. something right next door B. something omitted that is to be added C. something that comes to mind afterwards D. something extra but subordinate
2. **apt:** A. exact B. latest C. well-suited D. brief
3. **cavern:** A. inn B. underground chamber C. underground passage D. deep opening
4. **chew:** A. to grind with teeth B. send out from the mouth C. break into parts D. put into pieces
5. **cohort:** A. companion or follower B. business partner C. a person accompanying another to give protection D. life partner
6. **concoct:** A. to prepare by mixing together B. change from one thing to another C. think about D. perform clever tricks
7. **deplore:** A. to regret B. expel C. insult D. reduce to a lower rank
8. **dubious:** A. uncommon B. questionable C. imaginative D. available
9. **farce:** A. indelicate remark B. absurd and useless proceedings C. deception D. something difficult to understand
10. **frugal:** A. uncareful B. unimportant C. economical D. unkindly
11. **heap:** A. to pile B. furnish C. reach a peak D. pay attention to
12. **incinerate:** A. to burn to ashes B. make a cut in C. strip up D. test out
13. **lucre:** A. good fortune B. profit and ends C. Indian currency D. monetary gain
14. **oblivious:** A. hidden B. unaware C. crazy D. out of date
15. **Overwhelm:** A. to engulf B. exceed the strength C. go beyond D. decide against
16. **proselytise:** A. to convert B. start legal proceedings against C. do well in life D. put forward suggestion
17. **sloth:** A. laziness B. activity C. anger/ress D. deep sleep
18. **stew:** A. to cook slowly B. break into pieces C. learn D. become dull
19. **vendetta:** A. a weapon B. a last dance C. feast D. a feud
20. **woe:** A. risk B. lament C. trouble D. disliking

(Answers on page 64)

THOUGHTS

Here's some food for thought... provided you pause to ponder over it. These passing thoughts on various social, political and economic issues, expressed by a few observant minds, often portray the bare realities of life. They may even set your thought processes in motion!

What kind of freedom of the press exists in family-owned empires where the proprietor-editor dictates the reports to his editor, fixes the number of people in public meetings and can even dream up the number of stones hurled?

V. Gangadhar, *Sunday Observer*

A newspaper is the mirror of the society.

The press is generally the favourite whipping boy of politicians who happen to get caught in a vicious circle of their own making.

Hari Jai Singh, *Indian Express*

All things are subject to time; and everything is destroyed by time. Time

alone is real.

Krishna in *The Gita*

FOCUS

SRI LANKA

REIGN OF TERROR

BY SANJUKTA BANERJEE

Political solution or a military solution—is that the question? If it is, the problem would be relatively simple and could be solved, given a reasonable amount of time. But, as the months roll by, the issue is becoming more and more complex and is acquiring dimensions that it did not have before: the ethnic strife, Indo-Sri-Lankan relations, the superpower connection, an emerging power struggle in Sri Lanka and a shattered economy. Each of these have multifaceted dimensions and it will be difficult, indeed, to regain the island paradise.

The racial problem in Sri Lanka (*CCT*, Nov '84) dates back many centuries and stems from a popular feeling among the Sinhalese that though they are a majority, the Tamil minority dominates educationally and economically. But, as often happens, this has been slurred over by race. According to mythology, the Sinhalese are the "chosen race" of Lord Buddha and the Theravada form of Buddhism practised in the island is the purest form in the world. The Sinhalese also feel that Buddha's language—Sinhala—which has deep Sanskrit origins, has to be protected in the island, where they are isolated, and if they were to be driven from Sri Lanka, they would find a haven nowhere, unlike the Tamils, who have 50m Dravidians across the Palk Strait. Some Sinhalese have begun to draw parallels between their community's situation and that of the majority Greek Cypriots, who face a hostile Turkish minority in Cyprus, with Turkey only miles away. Some also draw parallels with Northern Ireland where the majority Protestants confront the minority Catholics with Catholic Eire just across the border.

While the British followed a divide-and-rule policy in colonial Ceylon by pampering the Tamils, after independence the Sinhalese tried to "correct" the situation through the passage of such acts as the Citizenship Act, which made most of the Indian Tamil plantation workers members of a stateless community, and the 1956 Sinhalese-Only Act, which made Sinhala the official language. In the 1970s, a "standardisation" system was introduced by which Tamil students had to gain higher marks than their Sinhalese counterparts to qualify for university admission.

Meanwhile, the Sinhalese politicians pandered to the basic fears of the community and raised the Tamil bogey off and on, bringing the situation to a crisis in 1983, although the Tamil United Liberation Front (TULF), a Tamil political organisation, perceived the ebbing position of the Tamils much earlier and had called for a separate Tamil state as early as 1976. In July 1983 the Pandora's box of racial hatred burst and the story is too well known to be related here.

There is a feeling across the Palk Straits that President Junius Jayewardene, had he tried to do so, could have nipped the problem in the bud in the capacity of a President and as commander of the Sri Lanka Armed Forces. But the issues snowballed and even today National Security Minister Lalith Athulathmudali is allowed to make incendiary statements like "we (the Sinhalese) are faced by an enemy who does not want to talk to us, an enemy who wants to kill all of us."

Peace Package

In December 1984, it appeared that Jayewardene was sincerely making an effort towards a political solution. He proposed a peace package, which was essentially a form of participatory democracy, involving a four-tier system of village councils, area councils, district councils and (inter-district) provincial councils. The last were supposed to be a concession to the Tamils who have been pressing for the linking of the predominantly Tamil Northern province with the Eastern province which has a mixed population of Tamils, Muslims and Sinhalese. The President also proposed a second chamber of 75 members, to be styled the Council of States. Fifty of its members were to be chairmen and vice-chairmen of the district councils. But under pressure from the majority Sinhala Buddhists, Jayewardene dropped the draft bill. In a speech to Parliament, the erstwhile industries minister Cyril Matthew, who is an extremist demagogue and a champion of the Buddhists, kindled xenophobic sentiments: "If these demands are granted, what will happen to the majority Sinhala community which is 74% of the entire population of the country? They will be compelled to retreat to Dondra, the southernmost tip of Sri Lanka and thereafter jump into the Indian Ocean."

Such chauvinistic statements reflect another side of the problem in Sri Lanka. The President, who came to power in 1977 is now 78, and has three more years of service left in what is his last term as President. There is also some speculation whether he will physically last out these three years. Under the circumstances, a power struggle is very much in the murky shadows that make up Sri Lanka politics. What appears to the

majority community at this stage is anti-Tamil sentiment, and it is not surprising that no really serious effort is being made to solve the issue. The would-be successors are Athulathmudali, the Minister for Lands and Land Development, Gamini Dissanayake, the Prime Minister Ranasinghe Premadasa, and Matthew and all of them make "more Sinhalese than thou" statements to gain the support of the majority community. It suits Jayewardene to sit back and watch them fight it out. Some Colombo analysts suspect that he has his own candidate in the wings. Like so many dictatorial leaders of state, he wants a family member to succeed. In this case, the Education Minister, Ranil Vikramasinghe, who has married into the family.

Opposition Nil

Political opposition is virtually nonexistent. The once-formidable Sri Lanka Freedom Party (SLFP) of Bandaranaike, is discredited and in complete disarray. However, there is a dim hope for the future in a breakaway faction of SLFP led by Bandaranaike's son-in-law, Vijai Kumaratunge, the Amitabh Bachchan of Sri Lankan cinema. Recently he stated at a meeting, "If Gautama Buddha were to come to Sri Lanka tomorrow he would be asked for his identity card. As an Indian, he wouldn't have one and would then be hauled off to the nearest police station and remanded as a terrorist." On the whole, however, such sentiments have not yet drawn popular political support.

Meanwhile, the Sri Lanka army has emerged from its 30-year-old ceremonial role in the parade grounds to international attention. Universally acknowledged to be one of the worst and most indisciplined in the world, it has become a Frankenstein's monster. Significantly, the top brass, who have so far exercised little control over their men, have become ambitious since they have been given a blank cheque in the Tamil-dominated areas and are accountable to nobody. The army's strength had doubled from 16,000 in 1982, and according to some analysts, the ground is just fine for an eventual army takeover. This would perhaps sound the death-knell for the Tamils in Sri Lanka, who are already facing acute terrorism at the hands of the army.

Several Tamils are killed everyday and stories of children burnt alive in gunny bags, women gang-raped, young men kidnapped and killed, pregnant women disembowelled are a dozen a penny. The rationale behind such atrocities is that all these people are terrorists. In fact, the terrorists belong to the Liberation Tigers of Tamil Eelam (LTTE), while the majority is in a state of negotiation. But, as a result of the attacks on Tamil civilians, even the moderate TULF is now pressing for closer

DISMAL DEVELOPMENTS

Even in 1985 the Sri Lankan Government and the Tamil militants are showing no signs of veering off the path of confrontation and collision. The result: violence continues to rock the tiny island nation leaving in its wake a trail of butchered bodies—mostly Tamil.

The past four months have been characterised by dismal developments. Reports of continued atrocities on the 2.5m Sri Lankan Tamil minority are pouring in ceaselessly. The Tamils are fighting for their lives with their backs to the wall trying to ward off a two-pronged attack from the 12m strong Sinhalese majority who have turned antagonistic and an utterly indisciplined, trigger-happy Sri Lankan army gleefully dabbling its hands in the blood of innocent victims.

The Sri Lankan Government's intention to abandon the search for a political settlement of the problem was made abundantly clear in January '85 when plans to settle 30,000 Sinhalese families in the predominantly Tamil north were finalised. For this, 250 Sinhalese families would be selected from each of the Sinhalese constituencies for resettlement in the northern province. The plan was in total violation of the promise made by the Sinhalese leaders in November '83 in Annexure 'C' viz. that the demographic pattern of the northern and eastern provinces would not be upset by the colonisation policy. And, as if this was not enough for the Tamils, it was decided that the new settlers would be given military training and provided with arms and equipment. That Colombo is also bent upon damaging cordial relations with India has been demonstrated in no uncertain terms, time and again. President Jayewardene is blaming India for what is essentially his internal problem by accusing it of harbouring Tamil separatists and allowing the setting up of training camps for terrorists. But, even in the face of this blatant provocation, India has kept a remarkably cool head, despite the fact that the Tamil issue in Sri Lanka is having widespread ramifications in India which now has on its hand the ever increasing problem of Tamil refugees coming in from across the Palk Strait. PM Rajiv Gandhi is keen on finding a political solution. He has ruled out Indian military intervention in Sri Lanka to liberate the Tamil majority areas, stating emphatically that a "Bangladesh type liberation of Tamil areas" does not arise.

President Jayewardene, on his part, is setting the stage for a military solution. Firstly he brought an end to the All Party Conference and put the blame for sabotaging the talks on the Tamils and more specifically on the Tamil United Liberation Front (TULF), the main representative of the Tamil minority in the island-nation. He has refused to have any further talks with TULF "as long as they advocate separatism". Then he has already quadrupled the arms budget from \$45m in 1982 to \$200m in 1984. The security budget has been increased five times and a programme has been launched to beef up the defence forces by the induction of new armaments and the strength of the army is being doubled by inducting 2,000 recruits every two months and by reducing the training period from four months to eight weeks.

For the acquisition of arms Colombo is frantically looking around for sympathetic suppliers to aid its cause. It has managed to obtain arms from UK, China and Israel, to name a few important nations. The British and the Israelis are also helping to train the Sri Lankan army. The UK has provided naval gunships and small arms but has been quick to point out that this has been done on a purely commercial basis so as not to jeopardise its relations with India. Jayewardene also suffered slight at Mrs Thatcher's hands when she turned down his plea to keep British troops stationed in his country in order to "sustain democracy". But what is perhaps most surprising is the fact that the US has denied Sri Lanka's request for a military assistance to the tune of \$100m because of continued violation of civil rights in Sri Lanka.

That these antagonistic moves are only going to worsen the situation in Sri Lanka is evident from the fact that the agitating Tamil militants have now joined forces against the oppressive measures of the Jayewardene government. They have finally decided to widen and strengthen their base and the Liberation Tigers of Tamil Eelam (LTTE), the Tamil Eelam Liberation Organisation (TELO), and Eelam Revolutionary Organisation (ERO) will henceforth fight for the Tamil cause under a collective banner. But, whether the Tamils ultimately succeed in obtaining an Eelam nation of their own or whether the Sinhalese, with the backing of the Sri Lankan army, are able to inflict upon them a lasting reign of terror—only time will tell. J S.

tencham. There is that the Sri Lanka Government's strategy is to wear out the militants. According to TULF Secretary General Appapillai Amrithalingam, "If some semblance of unity is achieved, that can only mean that the war of attrition will escalate, rendering the dim prospects of a political settlement of the problem even dimmer."

The indiscriminate killings of the Tamils has led to an exodus of Tamils from Sri Lanka to their ancestral home, Tamil Nadu. And it is this which has brought India sharply into the picture. Parallels are drawn with the Bangladesh situation in 1970-71 and it has been hinted in many circles that India will take steps similar to the ones taken in December 1971. Although the PM Rajiv Gandhi has dismissed such suggestions, there is a growing feeling among the Tamil refugees that India should "help" them.

The Problem

Sri Lanka's internal problems have suddenly become an internal problem of India. Every refugee is being fed at state expense for a few days and each one is being given two sets of clothes, a hurricane lantern, basic utensils, a mat and a blanket (valued at Rs 650 per person). Fortnightly doles of Rs 55 for the head of each family and Rs 27.50 for each additional member (less for children) are also being given. Special ration cards under which rice is available at 57 paise a kilo (market price Rs 3.50 a kilo) and firewood at 40 paise a kilo (market price Rs 3.00 a kilo) have all been issued. Not only is this a huge drain on India's economy, but a number of the country's own vagabonds have joined the band-wagon and are passing as refugees.

And as if this were not enough, India has been made the bete noire of Sri Lanka. It is very much the in-thing to be anti-India in Sri Lanka. The Sri Lanka Government has accused India of harbouring terrorists, providing them with refuge, conducting training camps, and providing them with weapons to be directed against the government. Although the Sri Lanka Government is beating up this xenophobia to divert attention from the genocide that is going on in its own country, it has had the effect of triggering off a cold war between India and its neighbour across the Palk Strait. While the former PM Indira Gandhi's stand was well-known, Rajiv Gandhi's appointment led to much speculation about India's stand. The cold war, in fact, has been blowing hot and cold over the last few months. When Rajiv was on his campaign trail in December the Sri Lankan authorities were dismayed at his statements accusing Sri Lankan troops of "indiscriminate killings". But, after the election, the PM was much softer towards

(Continued on page 67)

Should Indian states remain organised on a linguistic basis?

One of the problems faced by the Indian union, soon after independence, was that of integration of some 500 and odd princely states. The successful and peaceful welding together of these princely states can be rated as an outstanding achievement of our political leadership. But the principle underlying state reorganisation has often been questioned. Linguistic affinities for determining state boundaries was a favourite subject even during the pre-independence period. Since the idea has popular support many of the political leaders joined the bandwagon and demanded that political units be divided on a linguistic basis. The Congress Party was ambivalent on this issue and Pt Nehru wanted to wait a little before mapping out the political units. But the pressure on the Indian Government was enormous and in 1953 a committee was formed under Fazal Ali to study the question of state reorganisation. The report of this committee recognised that linguistic homogeneity was an important factor in the formation of states. In 1956, the State Reorganisation Act was passed and 14 states and six Union territories were created.

The events, after nearly three decades of formation of states, have necessitated an enquiry into the usefulness or otherwise of the reorganisation. It's high time we considered whether linguistic states have succeeded in forging a sense of national integration or given a fillip to regionalism and sub-regionalism—factors which endanger the unity of the country.

For

■ The advocates of linguistic states point out that such demarcation of territorial units is in keeping with the spirit of the Constitution. This measure is said to provide a sound footing for building up the democratic way of life as well as for socio-economic progress of the country. It is a gross libel to interpret linguistic states as a threat to national unity because language acts as a great unifying factor.

■ A state, which is being administered in the language of its people, makes them aware of the working of a democracy and the need to participate in it. An efficient and easy running of the state administration, its educational institutions and cultural activities in the state is ensured by such a demarcation of states. Thus the principle adopted for the formation of these political units is very sound.

■ The linguistic reorganisation of states was the best arrangement obtainable in the conditions prevalent in the '50s. Since this idea had mass appeal, adoption of any other principle for creation of states would have caused great confusion and chaos in the country.

■ India is also naturally divided on the basis of linguistic areas and the major language areas are not too many. Individuals speaking the same language and inhabiting a particular area, in spite of being loyal and devoted to the country, have certain affinities and would like to lead their own lives. Therefore, language can be the basis for drawing out state boundaries.

■ State reorganisation is regarded as a clearing ground for national integration. Since the Centre has recognised the cultural identity of areas and their language, the states, though self-conscious, are willing to consider themselves a part of the whole, of India. Therefore, linguistic organisation of states has paved the way for smooth Centre-state relations and has strengthened the forces of unity in the country.

■ The development process in the country over the last three decades has resulted in imbalances amongst the different regions. Under such circumstances language provides an excellent rallying point for states to mobilise people and helps them express their specific grievances.

■ The formation of linguistic states is not in the interest of any particular class alone but benefits all segments of society equally and has relevance for the working class as well as the peasantry. By bringing the capitalists and the proletariat together, linguistic formation of states leads to social harmony which positively contributes to the well-being of the nation.

Against

■ National unity has been weakened by the emphasis on local culture and language which linguistic organisation necessarily entails. Often passions aroused by regional chauvinism grip the minds of the citizens resulting in unnecessary violence.

■ The demarcation of linguistic states has hampered the economic development of the country. As one state resents the use of its resources for the benefit of other states, long-term projects involving adjoining states are difficult to undertake. Moreover, efficient workers not conversant with the local language get ignored. Sometimes inefficient people occupy top positions solely on the strength of their familiarity with a language, which is partly responsible for the failure of state administration. The experience over the years clearly reveals that meritorious candidates have often been neglected, which has resulted in chaos during an exigency.

■ The increasing inter-state disputes witnessed since independence have mainly been the result of artificial walls created by linguistic organisation of states. Intolerance for anything other than local sentiments, languages and culture has led to numerous river water disputes. The Karnataka-Maharashtra border dispute is an example of the loyalty for regional feelings at the cost of national prosperity. Thus, the measure poses serious problems for nation building and smooth working of federal institutions.

■ In modern times the social mobility of the people has increased. Since these people are unable to speak the local language of the state they migrate to, the linguistic majorities often attempt to dominate them. In some states problems have cropped up mainly due to the efforts of the majority to force these 'outsiders' to submerge their language and culture. This has assumed dangerous proportions thereby threatening the strength of the nation.

■ The creation of linguistic states has strengthened the hands of regional bourgeois elements. To prevent any threat to their own interests, power and position, these elements float the bogey of the regional language and culture. Therefore, such a principle of redrawing states has led to widespread schism in class relations.

■ The creation of linguistic states has affected smooth administrative relations between the Centre and states. Since the Centre has to correspond with the states, sometimes in the regional language of the state concerned, the administrative cost goes up. Thus, from the point of view of administrative convenience also linguistic states are quite unsuitable.

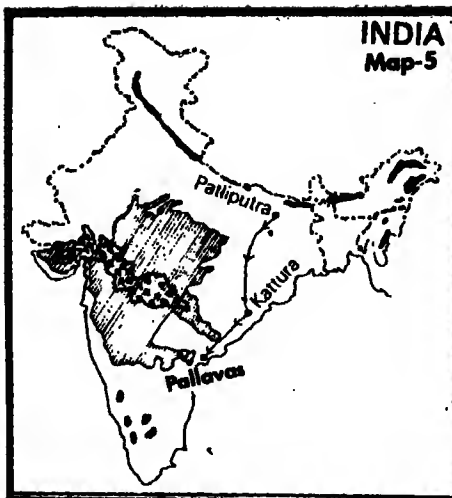

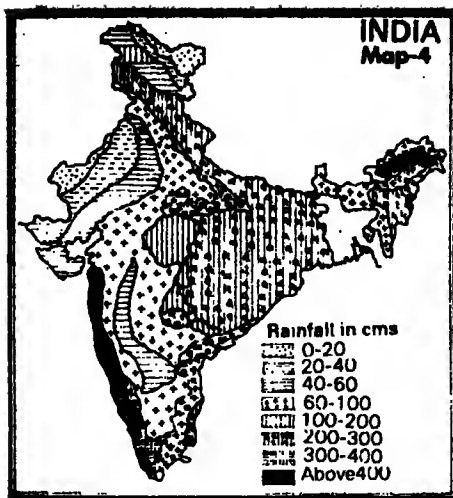

■ The creation of linguistic states has reinforced regionalism and has stirred demands for increased state autonomy. In some cases this obsession for greater state autonomy is so strong that the states threaten to secede if such demands are ignored.

A map is a useful and interesting way of studying various features of a place. In this part, the interpretation of maps has been taken up on the pattern of questions asked in competitive exams. A map may depict various aspects of a particular phenomenon for extensive study, or one or various aspects of different phenomena which may or may not be correlated to each other. In the exams, generally, a map is shown with some correlated and some different features; and on the basis of this information depicted, objective-type questions are asked. This has been illustrated in the following six maps. All you have to do is to study the maps and choose the correct alternative from the choices provided.

- In Map 1, if A represents Union territories (a_1, a_2, a_3, a_4), B represents ports (b_1, b_2, b_3, b_4) and C represents capitals of Union territories (c_1, c_2, c_3, c_4) then
 - A = Delhi, Lakshadweep, Dadra & Nagar Haveli, Mizoram
B = Bombay, Cochin, Paradip, Visakhapatnam
C = Hyderabad, Calcutta, Itanagar, Srinagar
 - A = Delhi, Andaman & Nicobar Islands, Dadra & Nagar Haveli, Goa, Diu & Daman
B = Bombay, Mangalore, Visakhapatnam, Paradip
C = Hyderabad, Calcutta, Itanagar, Srinagar
 - A = Delhi, Andaman & Nicobar Islands, Dadra & Nagar Haveli, Mizoram
B = Bombay, Cochin, Visakhapatnam, Paradip
C = Hyderabad, Calcutta, Itanagar, Srinagar
- In Map 2, the shaded portion represents
 - Coal bearing strata
 - Steel industrial belt
 - Oil bearing strata
 - A particular type of soil
- In Map 2, if a is an oil-field, b is a coalfield, c represents iron ore deposits and d shows oil bearing strata, a, b, c, d respectively are
 - Barauni, Jharia, Singhbhum, Bombay High
 - Cambay, Singhbhum, Narmada, Bombay High
 - Digboi, Jharia, Singhbhum, Bombay High
- In Map 2, if AAA, BBB and CCC are the three South Indian kingdoms, then BBB, CCC, AAA respectively are
 - Cholas, Cheras, Pandyas
 - Pandyas, Cheras, Cholas
 - Pallavas, Pandyas, Cheras

- Pandyas, Cheras, Pallavas
- Read Map 3 carefully: If R represents rivers, V represents river valley projects and H represents hydel power projects and if $A = (r_1, v_1, h_1)$, $B = (r_2, v_2, h_2)$, $C = (r_3, h_3)$ and $D = (r_4, v_1, h_2)$ then
 - A = Sutlej, Nagarjuna Sagar, Joginder Nagar
B = Tungabhadra, Hirakud, Bhakra
C = Narmada, Mayurakshi
D = Brahmaputra, Nagarjuna Sagar, Bhakra
 - A = Beas, Nagarjuna Sagar, Bhakra
B = Krishna, Hirakud, Joginder Nagar
C = Tapi, Mayurakshi
D = Brahmaputra, Nagarjuna Sagar, Joginder Nagar
 - A = Ravi, Nagarjuna Sagar, Rana Pratap Sagar, Bhakra
B = Cauvery, Hirakud, Joginder Nagar
C = Mahanadi, Mayurakshi
D = Brahmaputra, Rana Pratap Sagar, Joginder Nagar
 - In Map 4 annual average rainfall is shown by different shades. The area depicted by a a a ... represents the crop
 - Rice
 - Wheat
 - Jute
 - Sugarcane
 - Either (i) or (ii)
 - None of the above
 - In Map 5 the shaded area represents a particular type of soil on which a particular crop a a a ... is grown in some parts. The type of soil and crop respectively are
 - Alluvial soil and cotton
 - Red soil and cotton
 - Black soil and cotton
 - Black soil and jute
 - Laterite soil and jute
 - In Map 5, the blackened patches depict general vegetation of the type of
 - Moist tropical evergreen semi-evergreen
 - Tropical dry deciduous
 - Tropical thorn
 - Tropical deciduous moist

- v) Wet temperate
- vi) Dry temperate with grasslands
9. In Map 5, the path shown by the arrows(→ →) was the route taken by a famous king of Ancient India, on his campaign to south. This famous king was called by the famous historian V. Smith as the Napoleon of India. This king was
 - i) Chandragupta
 - ii) Samudragupta
 - iii) Asoka the great
10. Carefully study Map 6. The area shaded as A was the empire of a very great king of India. Identify the king.
 - i) Asoka
 - ii) Samudragupta
 - iii) Harshavardhana
 - iv) Akbar
 - v) Kanishka
11. The area shaded as B in Map 6 during that king's (refer to previous Q) time, i.e., 250 B.C., was known as
 - i) Sri Lanka
 - ii) Ceylon
 - iii) Samudradweep
 - iv) Tamraparni
12. The area shaded as C in Map 6 represents the battle place where a famous king of India fought a war in 261 B.C. After he won the war, his heart was filled with remorse and he pledged not to fight again in his life. Identify the name by which the place was known then and its present name.
 - i) Puri and Puri
 - ii) Kalinga and Orissa
 - iii) Purushapura and Orissa
13. In the same map D represents the capital of this great king of Maurya dynasty. The capital was
 - i) Palimbothra
 - ii) Kusumdhwaja
 - iii) Rajgir
 - iv) Patliputra
 - v) Patna
14. In Map 6 E represents
 - i) Rock edicts of Asoka
 - ii) Pillar edicts of Asoka
 - iii) Temples built by Asoka
 - iv) Bodh monasteries built by Asoka
15. In Map 6 F represents
 - i) Rock edicts of Asoka
 - ii) Pillar edicts of Asoka
 - iii) Temples built by Asoka
 - iv) Bodh monasteries built by Asoka
16. In Map 6, the present day Kathmandu (capital of Nepal) is

shown by the name

- i) Lolita Potan
- ii) Rampurva
- iii) Kapilvastu
- iv) Rumindei
17. In Map 6, how many rock edicts are shown?
 - i) 12
 - ii) 10
 - iii) 13
 - iv) 14
18. In Map 6, how many pillar edicts are shown?
 - i) 8
 - ii) 9
 - iii) 10
 - iv) 11
19. The two pillar edicts of Asoka found in Nepal (as seen in the map) are
 - i) Nigliva and Rumindei
 - ii) Nigliva and Lamiya Ara
 - iii) Rumindei and Topia
20. Tosali as shown in the map was
 - i) Capital of Asoka
 - ii) One of the five provinces of Asoka
 - iii) One of the provinces of Chandragupta

ESSAY CONTEST

Even at its ripe old age of 100 years, the Congress monolith stands strong and mighty. The party has, no doubt, had a chequered history - the stormy pre-independent days and the debacles of factionalism which crept in (trying to strike at the very roots of the party) during the post-independent era.

With a view to set young minds thinking, **CCTimes** announces an essay competition on - 'Indian National Congress—gains and losses'.

Send in your entries in **not more than 500 words**, latest by **June 25**, and **win prizes worth Rs 150, Rs 100 and Rs 75**.

AMERICA'S INTEREST IN INDIA

BY GEORGE ROSEN

Two movies and a popular TV programme, the assassination of Indira Gandhi followed by a new election and a new PM and a disaster in an American-owned firm in Bhopal have brought India to the attention of a far wider range of Americans than before. At the same time as the Bhopal disaster, a spy case, and charges of undue American interest in Indira Gandhi's assassination (set off by a book on Indian politics by an American political scientist) may have made Indians more aware of America's interest in India. But as a recent headline in the *New York Times* trumpets, "India is on our minds, but whose India?": while in India there is also a question as to how deep this American interest is.

In trying to answer the first question it is clear that there are many Indias, each of interest to different groups in the US. The appeals of the movies and TV programme are the widest in terms of numbers. All three films—*Gandhi*, *Passage To India* and *Jewel In The Crown*—were made in England, where an underlying historical interest is only natural. Of course many of the American viewers would have read the E.M. Forster novel, fewer the Paul Scott novels; many would also have known something of India's leader of the Independence movement, Mahatma Gandhi, and of his unusual ideas. The broader appeal of the movies, though, would also have reflected the wider involvement of Americans in a confusing Asian world, and the appeal of a man—Gandhi—who by his own actions was able to change the world in which he lived.

What groups are interested in contemporary India? First there is a scholarly group engaged in research in India's culture and society, both its historical past and its contemporary scene. One attraction is the intrinsic worth of the products of a great culture—India's art, literature, architecture and religion. There is also the intrinsic interest of the changing Indian society including its polity and economy, as that society responds to new pressures and demands. It is this process and problems of change that attracts the attention of American social scientists, including anthropologists, economists, historians and political scientists. India, with approximately 800m people, is one of the largest countries in the world; as a democracy it is one of the most open countries of the world; it is one of the few Asian countries where it is possible to do significant research in a variety of fields using English language material as a source. It is those same problems perceived by laymen that

may discourage a wider public interest in India, since the problems of India's apparent great size, bulky and rapidly growing population, ethnic complexity and grinding poverty seem overwhelming.

Another relatively small American group that is interested in India is the American foreign policy making group. This group not only includes the India 'hands' in the various government agencies, but the political leaders who set the framework within which those agencies function. The main focus of American foreign policy is the Soviet Union, and a country's importance in the world is determined by its geographic and political relationship to the USSR. India, while non-aligned, is friendly to the Soviet Union and neither in open conflict nor under a threat from it. Therefore it is regarded more as a minor rather than a major player in the game of American policy. One consequence of this centering of American interest upon Russia is that neighbours of India that are closer or more directly involved with the Soviet Union, including Pakistan and China, are considered more important to the US. India's relationships with those countries are ignored or brushed aside. America's 'India hands', including those in government, are aware of India's major role in South Asia, but South Asia is a peripheral rather than central interest for American foreign policy, although it is of course central to India's policy makers.

American policy makers of the department level are inevitably interested in the scholarly work being done by American scholars in related fields. One such piece of research by Prof Robert L. Hardgrave of the University of Texas, *India Under Pressure*, was published in full in mid-1984. The research was carried out with the support of the U.S. State Department after a nationwide competition. That much criticised work sought to provide the State Department and the wider interested public with an objective, scholarly picture of the state of the Indian polity, and of American policy towards India. Like other scholars Hardgrave stresses India's importance in South Asia, and India's significance for American interests—it is a book that can only be described as sympathetic to Indian interests.

Another American group with interest in India includes American business firms with any investment in India or considering such a step. US firms are currently the largest foreign investors in India; and the US is India's largest trade partner. American business firms see India in the same category as China, as a very large

But they are also aware of the troubled history of past investments in India, including by IBM and Coca-Cola, and of the problems in investing in India—some real and some mythic. With India there is a long record of both investment and some frustration, and the level of excitement is low.

Two other groups have become somewhat important in influencing American perceptions of India. The first are various religious groups that claim to be offshoots of varieties of Hinduism. These religious groups have some appeal to individuals, especially younger people, who wish to escape the pressures of American life, especially its 'materialism', and who seek another set of values and ways of behaviour. The Krishna Consciousness Society and the Sree Rajneesh group attract individuals looking for a different life, but further convince non-adherents of India's exotic and other-worldly quality. They may in fact create some antagonism towards India from Americans because of the unusual behaviour of the devotees of those two sects.

The final group is the large number of Indians—certainly several hundreds of thousands—who are now living and working in this country. Some of these have become American citizens, and whether they are citizens or not, they are making significant contributions to business, science and scholarship in this country. Clearly they influence American attitudes towards India; their business firms are often interested in India; their contributions to scholarship and science are welcomed here and in India. It would be expected that their presence and influence by votes and contributions will affect the American sense of India and American policy towards India. Potentially this group may have the longest-run influence upon future American-Indian perceptions of each other.

But even recognising the existence of groups in the US with a strong interest in Indian culture, society and policies, the numbers in such groups are not large. One can expect that barring any crisis the American interest in contemporary India will remain at a low level, but with a slowly rising trend. The Festival of India celebration should widen interest somewhat. There is in the US a basic residue of support for India as a democracy, but interest in India is marginal, rather than central, to any major American interests, or to any large American constituency. Meanwhile the work of American scholars on India will continue, if it is permitted, and it is to be hoped that Indians regard this as a friendly rather than a hostile interest. It is that work that is one of the major ongoing means for achieving improved understanding of contemporary India in the US. ■

USA'S HUMAN RIGHTS STAND

The American Government, it seems, has taken upon itself the sole responsibility of protecting human rights. Consequently, it selects countries to censure where it feels the human rights are being violated. Besides censure by the national media, the US Congress holds hearings on sensitive internal matters of other countries, which should be none of its concern. However, the government conveniently forgets its own past and ignores the present.

Can the US afford to adopt a 'holier than thou' attitude? There are numerous incidents of human rights abuse in America and it is interesting to note that most of them concern non-whites. Here we will focus only on three groups: the Red or 'native' Indians, the blacks and the Japanese-Americans. Also important is the American behaviour during the Vietnam war.

When Columbus discovered the 'New' world, the 'virgin' country already contained nearly a million inhabitants whom they call "the native Indians". In a world where the population is always growing, they number only about 550,000 today, of whom 380,000 live in reservations, where the conditions of life do not compare with the rest of America. Their history, since the colonisation of America by the white race, is one of sorrow, dealings and betrayals. Between 1778 and 1871, a total of 389 treaties were made and remade in which the government set aside 'homelands' (reservations) for the tribes and took them over again, when they found that the land was suitable for settlement by whites. When the native Indians put up a fight they were felled by the superior white might. According to the Northwest Ordinance of 1787, it was promised that land and other property would not be taken from Indians without their consent, except in just and lawful wars authorised by Congress. Such wars were never declared but the Indian population was decimated. One must not forget that Andrew Jackson, one of the favourite Presidents in American history was worshipped as an "Indian killer". Even the reservations were not safe, as the 'Wounded Knee' incident on Pine Ridge Creek showed. In 1890, nearly 300 Indians were slaughtered and particularly horrifying was the sordid pursuit of fleeing women and children, who were shot and left to die in the snow.

Today, the Indians are among the most impoverished groups in the country, three-fourths of them being below the poverty level. Three-fourths of them also live in housing designated substandard.

The suicide rate among Indians is double that of non-Indians. The paradox is that while the US government employs 20,000 persons to promote the welfare of Indians and spends \$ 5,000 per family in allocated assistance on Indian reservations, the average income per Indian family is a mere \$3,000 per annum.

More alarming is the systematic effort by the government to curb the growth of the Indian population. Since the 1940s there has been rapid growth in their population and it has appeared easier for government financed medical personnel to sterilise poorly educated women rather than provide them with contraceptive devices. Indian leaders have charged that the federal government has been pursuing a covert policy of genocide through these sterilisations. Whether or not there is any truth in the claims, the frequency with which Indian women are coerced into sterilisation by hints that their welfare payments will depend on their cooperation, or are sterilised without their informed consent is another example of American attitude towards their non-white citizens. In fact, in 1977, several north American Indians argued before the non-governmental organisation of the UN in Geneva that the UN De-colonisation Committee should investigate the status of the native American peoples under the existing national government in America.

The condition of the black Americans, the only group in America, which came not by choice but via kidnapping and then forced to serve as enslaved labour is not much better. Even after the civil war, which was fought partly because of them, their conditions did not improve. The status of slavery was withdrawn but actual conditions of living remained the same, especially in the South. Segregation flourished through "Jim Crow" laws in the south, which made horrid education, public facilities—in fact every field of life separate for blacks and whites. Separation inherently meant inferior facilities and blacks were pushed into a much lower socio-economic status than would have been the case had there been no racial discrimination. What is worse, this kind of segregation was not a 19th century fester; it carried on into 1964, when the Civil Rights Act of 1964 gave them their civil rights. This, too, did not come of its own accord. They struggled for nearly a decade to attain it at the loss of many human lives. The southern blacks who had been given the right to vote earlier by the 15th amendment to the Constitution had lost it in the last three decades of the 19th century as a result of white intimidation

again. They won only in 1965, when the Voting Rights Act was passed.

As for methods of intimidation one need not mention just the white-hooded Ku Klux Klan. As late as 1920, 70 Negroes were lynched, many of them soldiers who had risked their lives during World War I. Their crime: their exposure to Western democracy had made them too "uppity". During the civil rights struggle of the 1950s and 1960s, the cases of human rights abuse are many. To cite one example, the retaliation of the segregation police force in Birmingham, Alabama, against the non-violent struggle led by Dr Martin Luther King Jr, was extreme in 1962-63. Children were beaten up, police dogs were set on women and children, who also had to face powerful water hoses.

The Japanese-Americans, are another case in point. The 19th century opposition to Asian immigration, one feels, culminated in the bombing of Hiroshima and Nagasaki, 16 hours after which President Truman instead of commiserating at the death of over 135,000 innocent civilians, said exultantly, "We have spent \$2b on the greatest scientific gamble in history—and won". Early in the twentieth century, the public school board in San Francisco prevented Japanese immigrants from sending their children to school. Shortly afterwards, the "gentlemen's agreement" was signed between Japan and America in which Japan agreed to keep Japanese emigrants from leaving for America. A Chinese Exclusion Act had earlier (1882) limited Chinese immigration. This was at a time when America was welcoming new immigrants of all types from the western world. During World War II, their attitude towards the Japanese-Americans speaks volumes. During World War I, German-Americans had not been considered suspects and put in camps but in 1942 a military order designated the West Coast restricted zone and imposed at 8 p.m. to 6 a.m. curfew on Japanese Americans.

To come down to even more recent times, American conduct in Vietnam in the 1960s is quite deplorable. As a result of fire-bombing and the use of napalm, numerous civilian lives were lost and millions of acres of land was laid waste.

After such incidents, the US hopes that the world will forgive and forget. It does its bit of token repentance—by elevating the native Indian to the status of a "noble savage" and inscribing him on a postage stamp, and by giving token jobs in government to its blacks, but do these token gestures excuse the deed? It is, however, the personal affair of the U.S. and it has to decide on how to solve its own problems. One can only wish that it would feel the same way about the rest of the world.

CURRENT EVENTS

PUNJAB

EXPLOSIVE ISSUE

The Punjab impasse has traversed a full circle and is almost back to the starting point. The feuding issues remain as unresolved as they were a year ago and several more have been added to the list to compound the problem. The mounting tensions, the insecurity and the entire pressure cooker atmosphere building up in the troubled state portend another explosion.

The government's conciliatory package for the agitating Sikh faction early this month was designed to create negotiable conditions at least if nothing more. But, far from doing that the package succeeded in making the Akalis more adamant about the acceptance of their remaining demands, in toto. The much demanded release of the detained SGPC President Gurcharan Singh Tohra turned out to be an unwise political gamble for the Centre. After being released Tohra took considerable pains to demonstrate his commitment to the extremists. The assassins of the late PM were glorified by him and described as martyrs. The tension further escalated when Tohra lobbed his bombshell on surprised political spectators when he announced imminent plans of demolishing the Akal Takht and rebuilding it. And his attitude remains as unrelenting on the remaining Akali demands, viz., pardoning and reinstatement of Sikh soldiers who deserted the army in the wake of Operation Bluestar, abolition of Special Courts; rehabilitation of not affected people; lenient treatment of detained members of AISSF and, above all, acceptance of the Anandpur Sahib resolution.

Even while Tohra and other Akalis were busy demonstrating their unyielding stance, terrorists in the state once again established their power to strike innocent victims with impunity and get away unscathed in the process. The abortive bid on the life of the AICC(I) General Secretary, R.L. Bhatia, by two unidentified assailants at his residence in Amritsar, in which one person lost his life, exhibited the fact that the basic organisational structure of terrorists remains intact even after their supposed flushing out by the army. The Punjab police, CRPF and BSF, in a massive combined raid on the Temple *sarais*, arrested three suspects including a *sevadkar* and a SGPC gunman. But the assassins are still at large—another one up for the terrorists and a major set back for the already terrorised people of the state.

Meanwhile the released Akali leader, Harchand Singh Longowal, visited the riot-affected victims in Delhi, hours after the Centre announced the appointment of Justice R.N. Mishra, Judge of the Supreme Court, as head of the commission constituted to hold a judicial inquiry into the Delhi riots. Upon his arrival in the capital on Apr 26, Longowal acted as Tohra's mouthpiece reiterating the Akali demands and the plan of demolishing the Akal Takht. And then soon after his return to Amritsar the Akali Dal surprised the government once again. On May 2, the Akali Dal factions led by Longowal and Tohra were dissolved in a bid to strengthen the unity of the Sikh Panth. In their place a nine-member ad hoc committee, headed by Joginder Singh, father of Jarnail Singh Bhindranwale, was formed, to run the affairs of Shiromani Akali Dal. The government, on its part, is now playing the waiting game to see what overture the Akalis will make and perhaps also to rectify to some extent the impression of subjugation it appears to have given the Akalis. The mood states once again appear to have taken the back seat in Punjab. With another Bhindranwale at the helm of Akali affairs it can only be hoped that it is not a case of like father like son.

For ever since he has assumed control terrorists have come back with a vengeance. They started off by gunning down Balbir Singh, President of the Punjab unit of the Lok Dal in Hoshiarpur on the morning of May 10 following which violence erupted in the city, compelling the authorities to clamp curfew for an indefinite period. And on the same day Delhi once again became the blood arena for the deadly games of anti-social forces. With a series of well-planned bomb explosions in the capital as well as in Haryana, Himachal Pradesh, UP and Rajasthan, the terrorists had the entire north reeling under a wave of shock, panic and hysteria. Duping unsuspecting victims by planting transistor-like bombs in buses, crowded places and even trains, they claimed over 70 lives, with more than 100 people on the critically injured list.

While the possibility of a foreign hand in the gruesome carnage cannot be ruled out—more specifically Pakistan's vendetta for India's role in the 1971 Bangladesh war—the master minds behind the whole show

are obviously Akalis. With the anniversary of Operation Bluestar just round the corner it may be their litmus test for assessing the overall situation before executing more dastardly outrages. But the authorities have taken prompt and timely action even calling the army in for assistance. Already over 1,000 suspects have been rounded up from Delhi and the other affected states. The fear psychosis instilled in the masses will, however, not be wiped out so soon. The entire Indian masses can only keep their fingers crossed in the hope that some sense prevails on the extremists and nothing untoward happens to further jeopardise the already bleak prospects of a solution to the Punjab imbroglio.

ANTI-RESERVATION STIR

COMPOUNDING THE PROBLEM

What started off as an anti-reservation stir two months ago has now become a mindless orgy of violence and destruction and the real issues have blurred into insignificance. Predictably pro and anti-reservationists continued to be at loggerheads throughout April and while the former announced plans to organise district level conventions to safeguard their constitutional right of reservation the latter gave a new turn to the agitation. Responding to a call given by the Akhil Gujarat Navrachna Samiti the anti-reservationists decided to court mass arrests in their *jail bhara* agitation.

Meanwhile incidents of arson, looting and sabotage continued unabated. A court room was set on fire in Rajkot and an abortive bid made to blow up a telephone exchange with detonators. Then, on Apr 19, the state government, in a bid to create an atmosphere congenial for meaningful negotiations announced its acceptance of the anti-reservationists' demands. These included release of detained student leaders, withdrawal of termination orders served on striking junior doctors and an inquiry into alleged police excesses. Surprisingly, however, the agitators preferred to turn a deaf ear to the government's offer.

The state government was presented with a dilemma. Its initial strategy of asking the police to go slow did not yield expected results and, in fact, resulted in an increase in violence. Anrt in these circumstances the jittery government decided to give the police forces a free hand. The police lined up to its notorious reputation and went berserk in Ahmedabad. Perhaps what it did was in retaliation against its being made the consistent target of attack of agitatinists. All the same it does not justify the virtual reign of terror policemen let loose in Ahmedabad. Atrocities were committed on innocent men, women and children. In the face of ensuing criticism against the state government, a two-man committee was hurriedly constituted to inquire into the alleged police excesses.

And, on Apr 22, strife torn Gujarat's pot of troubles boiled over, its police force rose in revolt and the protectors of law and order went on a rampage, indulging in large-scale violence. The Press was made the main target of police fury and newspaper offices were attacked with impunity. The offices of *Gujarat Samachar*, a leading vernacular newspaper were heavily damaged after they were set on fire. Mobs also attacked other newspaper offices resulting in the closure of many of them. Keeping the chaotic conditions in view the army was called in to restore the state some semblance of law and order and indefinite curfew was clamped in several areas of the state including Baroda and Sur.

The violent events in the state even prompted the anti-reservationists to call off their stir for an indefinite period of time. But the situation in the state was completely out of hand by then and violence continued unabated. Already a shockingly large number of people have died and a larger number lie in hospitals all over the state, critically injured. Hundreds have been rendered homeless as crazy mobs go about on house burning, pilfering and plundering sprees.

The anti-reservation stir turned class-caste war turned communal has rocked the foundations of the newly elected Solanki ministry. People are clamouring for CM Madhavsingh Solanki's resignation and the imposition of President's rule in Gujarat. So far PM Rajiv Gandhi has adamantly refused to consider either of the demands. By the looks of it then Solanki is stuck with a sticky problem which promises to get stickier. For, on Apr 30, an agitation against the caste-based roster system aggravated matters. State government employees demanding abolition of this system for promotion in government and semi-government organisations went on mass casual leave. This resulted in complete paralysing of work in several government offices. Senior officers of the level of deputy sec-

employees' demands included the Governor's intervention against alleged attempts to suppress this agitation by the ruling party and also publication of the Sachawani Committee report. This committee was appointed by the state government to review the caste-based roster system of education under which unfilled reserved quotas for promotions in government and semi-government employment are carried over till such a time as suitable candidates are found from the reserved categories of castes and tribes.

This system had been generating discontent for several years and its opposers could not have chosen a more inopportune moment to express their displeasure.
